Mr. President, I am firmly convinced that any man who believes in a protective tariff, in order to be consistent, must vote against a tariff duty of this kind. If one believes in a tariff for revenue and is opposed to protection here is a place to get it; but those of us who believe in protection and who have preached it and who have won battles in the political field upon that theory, now propose to turn around and do just what we have always condemned. In this case we are not going to get any revenue, if any Senator is basing his position on the revenue proposition, for the record shows that under the present tariff rate, which is lower than the rate proposed in the pending bill, there are no imports, and hence no revenue. So this duty can not be defended on the ground that it is a protective rate, and there can be no defense on the ground that it is a tariff for revenue, because it will bring in none.

Where is the legislator who advocates that kind of a tariff, whether he be Democrat or Republican? There can be no revenue and no protection. Therefore what is the effect of it? In this case, if the evidence so far as disclosed is reliable—and it

stands undisputed to date—there are practically only three concerns interested in this particular commodity. It would be a very easy thing for three concerns to say, "We will raise the price to the American people up to the level of the tariff wall and make the consumers of America pay the bill." Will not that happen? What else can we expect to happen? And are we going before the people, we protectionists, and defend that kind of a tariff? The argument, it seems to me, applies to all of the paint items, but it is particularly clear in this instance.

Mr. SMOOT. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Utah?

Mr. NORRIS. I yield to the Senator.

Mr. SMOOT. I presume the Senator gained the impression from what the Senator from New Mexico stated that there were only three concerns engaged in making this particular commodity.

Mr. NORRIS. I suppose there are more, but he said there were practically only three.

Mr. SMOOT. There are 229 of them.

Mr. NORRIS. He had a whole lot of them combining in one.

Mr. SMOOT. I simply say that is what the Tariff Commission says—that there are 229 of them instead of 3, and they could not get together so easily, could they?

Mr. NORRIS. They do get together, and under Mr. Hoover's administration he is getting them together right now. They will report to him, and he will tell them what to do, and they will get through flying. The Supreme Court will not get a fair opportunity to pass on anything, with his judgment against them.

But, Mr. President, if you admit that they will not combine, what is the natural result? What is it for? There is no revenue. You say it is a revenue tariff, but there are no imports now. If you are going to increase the rate, you will not get any imports. Who is going to get any benefit out of it? The Treasury gets no money. Nobody gets any protection, because we are exporting now, and nobody is importing. The only thing that can happen, if anything happens, is that the producers of this product are going to raise the price and the American people will pay it.

Mr. President, I have been wondering all day about the farm bloc. We have been dealing in products this afternoon that the farmer needs. We have had coloring in paints before us; we have had white lead; and we have been increasing the tariff on every one of them. Where, oh, where, is the farm bloc now that is going to defend the farmer who wants to paint his barn or his granary or his house?

What are you going to say to him when you go home? Why, this magnificent bloc that was organized to save the farmer from destruction has penalized him when he wanted to save his farm buildings or his farm implements from decay. You can not say to him: "That was necessary to get money into the Treasury," because it brings in none, and in almost every instance the concerns that are dealing in these products are exporting, sending the product out, competing in the world's markets; so you can not tell him that. You can not give him the excuse that it was a protective tariff that you were levying, because it is conceded that no protection is necessary, and yet he has to foot the bill.

Mr. President, we can not defend a bill built on these principles. You may get the votes and put it through, but I warn you now that we will be the sufferers. It almost commences to look as though those on this side who are organized to protect the farmer have some kind of a deal with somebody else by which they say: "We will vote for everything you ask." Strength is given to that kind of proposition from the fact that there is, as a rule, nobody here. There is the largest aggregation of Senators in the Chamber now that I have seen for three days, except for a few minutes after a roll call or during a roll call. Yesterday the debate went on for almost the entire afternoon, when on this side only the Senator from North Dakota [Mr. McCUMBER], who has always been here, and myself, and one other Senator, constituting the attendance, were listening to the argument.

I do not find fault with Senators for being absent. I know they have to be absent a good many times, and I know a lot of this debate on other subjects has a tendency to drive them away. I realize that; but are we going to come in here blindly when the roll is called and vote for increases of duty day after day and time after time that we know are increasing the expense that the people—the common people—of America must pay when there is no protection in it and when there is no revenue in it?

I can not explain it in any other way than to say that there must be an understanding to give this man what he wants and he will swallow the whole thing and give that man what he wants and he will do the same thing. Some man has an industry in his State that he wants to protect. Give him whatever he asks and you will get his vote for the whole bill and every item in it. It begins to look as though that were the deal.

Mr. President, it will not work. In the first place, it ought not to work, because it is not fair. In the next place, a bill based upon that kind of a bargain will bring about its own death and its own destruction. Senators who are going out before the people this fall in farming communities will not be able to defend the votes they have been casting here for two days that increase the cost of everything that enters into varnish or paint used on the farm. The farmer, in proportion to the money that he has in his business, has more to pay for paints than any other class of people on earth. He has all his farm implements, he has all his farm buildings, where the ordinary person has nothing but a house. He has ten times as much surface to cover with paint as a house amounts to, and he is being penalized in every one of these items. I do not see how you can escape it.

If you could say to the farmer, "We have been through the war; we have an enormous debt to pay; we must all pay our share, and we have levied this tax on you in order that you may pay your share," that would be a defense. But when he says to you, "Why, this is not going to bring in any revenue; even under a lower tariff there was no revenue on most of these items; it was only negligible," that argument is gone; and the fact that our manufacturers have been exporting in large quantities, in the millions of dollars, makes it impossible to say, "We want to protect the industry," because it has grown away beyond the limits of our country already.

Mr. President, I realize the difficulty that the committee has been under in drafting the bill. There is no man here who has had more sympathy than I have had for them in the work they have before them, and no man more willing to testify to their earnestness and their diligence in working on this bill. In my judgment they have worked harder than any other committee that ever drafted a tariff bill. The difficulty was that they were up against an impossibility in trying to draw a bill along protective lines. With the disjointed condition of the world to-day, I think it is an impossibility to draw a tariff on protective lines. With the changes that are going on all over the world, and that we know are continuing to go on, and that we want to go on until the world gets back to a normal condition, we can not expect to draft a tariff law to-day, even if we could draw one on scientific lines, that would not be out of joint to-morrow.

We hear it said in this debate, "This tariff was fixed according to the price that the articles sold for," and you had a price list that was given to you last August. Everybody knows that it is out of joint now. Everybody knows that a tariff bill drafted on a price list that was given out in August is no good now and does not apply to existing conditions. I have heard the argument made here on the floor of the Senate, "Why, that was when the bill was in the House. Conditions have changed since then."

Mr. NICHOLSON. Mr. President, may I ask the Senator a question in that connection?

Mr. NORRIS. Yes, sir.

Mr. NICHOLSON. Are prices lower now than they were in August, or are they higher, in the case of the price list the Senator is talking about?

Mr. NORRIS. I should judge that some of them are lower and perhaps some of them are higher. As a rule, perhaps they are lower.

Mr. NICHOLSON. As a general thing, are not prices much lower now than they were in August?

Mr. NORRIS. Perhaps; I should think so. That would be the natural thing to expect, because the prices before the war were lower than they were during the war.

Mr. NICHOLSON. If that is true, is it not necessary that higher rates of tariff should obtain now than obtained last August in order to protect American industries?

Mr. NORRIS. That is not the way to levy a tariff for protection, my dear friend; and if you had ever argued in a campaign for a protective tariff on that line you would have been laughed off of the platform. You would not have gotten to first base on that kind of a proposition. What did we say? What did we put in our party platform? Why, we said, "We will levy a tariff that will measure the difference in the cost of production here and abroad." That is the basis of the right kind of a protective tariff; and if you make it higher than that it is just as dangerous and just as injurious to the people of America as if you make it lower. In one case you drive men from employ-

ment and close down business. In the other case you build up monopolies which will crush out the life of the people.

This tariff bill is not built on that line. As the Senator says, if they had the cost in the House when they passed the bill it would not apply now, when we are passing it; and if we had it right to-day, by the time the bill was passed it would be out of joint.

I do not want to be understood as criticizing the men who are behind the bill or who drafted it. I think the mistake was made in trying to have a general revision now. However desirable it is, we ought to face boldly, it seems to me, the fact that it is an impossibility and can not be done, and especially ought we to be careful not to levy a tariff where there can be no revenue and no protection upon the things that the farmers of America must buy. If there is any class of our people who have been injured and hurt by the changing of conditions from war conditions back to normal, it is the agriculturists of the country, those who are engaged in the fundamental industry of all prosperity; and the thing that I particularly object to, that it seems to me indefensible, is the duty on the product under consideration now and which has been under consideration for a day or two, in which the farmer is more interested than any other class of material that he has to buy, and he is bankrupt, flat on his back. When you can not defend it on the ground that you are protecting an industry here or on the ground that we can produce the revenue, then you ought not to levy taxes against that class of people. I do not think you ought to levy them against any class of people whatever, but particularly against the farmer, in his practically bankrupt condition.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. McCUMBER. Mr. President, I am ready to vote upon the amendment, but I am not ready to concede the validity of the argument just made by the Senator from Nebraska. This is the first time I have ever heard it stated that the Republican Party was against a tariff for revenue. I never heard that any party opposed a tariff for revenue. I do insist that the Republican Party stands for a tariff for revenue, and also a tariff for protection. All we have ever condemned has been a tariff for revenue only.

In my State we have farmers, and merchants, and bankers, and professional men, though we manufacture nothing, and I have never heard a farmer in that State claim that he wanted everything he purchased upon the free list. All he has ever claimed was equal protection, so far as it is possible to give him that protection. We are trying to give him that.

I am well aware of the fact that where we have had a protective policy as applied to the manufacturing industries, with their higher labor wages, which they have increased from year to year, it is impossible at this time, and at one stroke, to balance evenly agricultural industries and manufacturing industries on the same basis, and with the same rates of duty. I think we have come as near to it this year as it is possible for us to come under the conditions which confront us in the country to-day.

The Senator states that he can not see why a tariff is levied for revenue on articles which everyone uses and which will result in keeping up the prices. The Senator from Utah stated, I think, that there were in the United States 229 manufacturers of these products. Of course, there is a possibility of their combining, but the probabilities are a thousand to one that where there are so many of them there will be competition in the trade.

We speak of 25 per cent as being a duty that is an imposition upon the American people. Do not our laborers get more than 25 per cent above what foreign laborers get? The American laborer gets all the way from twice to ten times as much as the foreign laborer. Are we not living upon a basis more than 25 per cent higher than the standard of living in any other country upon the face of the earth? If we are, can we complain because there is an ad valorem duty of 25 per cent upon these things, which we will admit, for the purposes of the argument, is for revenue only?

It may be that under present conditions no revenue is coming in. If none is coming in, with 229 establishments manufacturing in the United States, I deny that the rates are going to be raised 25 per cent to keep out the foreign article. But, measured by the conditions in competition which will come under this bill and the conditions in competition under the Underwood bill, we are giving less protection than we have under the present law. Under the present law you give a protection of 22 cents a gallon upon alcohol. In other words, you gave a protection of $1.32 per gallon when the internal-revenue tax upon alcohol was $1.10, thereby giving 22 cents per gallon protection on that alone. Then you add a 15 per cent ad valorem duty. That 22 cents, added to the 15 per cent ad valorem, is greater than the 25 per cent ad valorem which is given in the pending bill.

Mr. President, I do not think the farmers are going to complain. We have given absolute free trade on machinery. I think we have tried to do more for those engaged in farming in the country than for any other industry. I think more things important to the farmer, things which he must buy, are placed upon the free list than as to any other business in the United States.

So, Mr. President, I think we have not gone far afield in asking that practically all of the items in this chemical schedule shall bear a rate of duty equivalent to about 25 per cent ad valorem.

Mr. NORRIS. Mr. President, I want to claim the attention of the Senate for only a moment in reply to the Senator from North Dakota.

He has not disputed my statement, and it stands undisputed so far, that there are practically no importations of this article. The chairman of the committee says that this item of 25 per cent on varnishes is for revenue, but the record shows that there are no importations, even under a tariff that is less than 25 per cent. Hence can we expect to obtain a revenue by increasing the tariff? I submit that the American farmer, as well as the American business man, will be able to differentiate that proposition when you tell him, "This is a revenue proposition."

It may be that in other parts of this bill the farmer is given protection on what he produces, as the Senator from North Dakota says. I have not disputed that. We are now considering varnishes. We have been all day to-day and were all day yesterday considering paints and ingredients of paint which the farmer uses, and have been increasing the tariff right along on every one of them, and, with one or two exceptions, of all of those ingredients there were practically no importations, and hence there can be no revenue derived by increasing the tariff.

The Senator from North Dakota says we have put many of the articles used by the farmer on the free list; that farm machinery, for instance, is put on the free list. I doubt very much whether it would hurt the farmer any if you levied a tariff on farm implements. Farm implements are manufactured in the United States for the world. We are not importers of farm implements. Farm implements are on the free list now, and I doubt whether in North Dakota or in any other State you could find a single farm implement that is not made in the United States. So, if you give that to the farmer as an argument, he will be able to differentiate it mighty quickly, it seems to me.

We are down to this proposition on this particular pending item, varnishes: Should there be a tariff on it, and if so, how much? We find that under existing conditions no varnishes are imported, and yet we raise the tariff. We can not expect to get any money out of that.

We find that for years our manufacturers of varnish have been sending all over the world in open competition with an open world. Hence there is no question of protection involved. What is it for? It is not for revenue and not for protection. It can not do anybody good except the fellows who make varnish in America, and the Senator from New Mexico has shown that one of these great companies, with assets running away up into the millions, has been recently doling out stock dividends to its stockholders. The farmers have contributed their share. They will contribute their share, and more than their share, when those are continued under a higher tariff.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. McCUMBER. I ask that the committee amendment be disagreed to.

INTERIOR DEPARTMENT APPROPRIATIONS—CONFERENCE REPORT.

Mr. CURTIS. I ask unanimous consent to call up the report of the committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to House bill 10329, the Interior Department appropriation bill. The report was read last night and was laid over at the request of the Senator from Oregon [Mr. McNARY]. He has stated to me that he withdraws his objection, and I ask unanimous consent for the immediate consideration of the report.

There being no objection, the Senate proceeded to consider the conference report, as follows:

The committee of conference on the disagreeing votes of the two House on certain amendments of the Senate to the bill (H. R. 10329) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for

other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 70, 71, 74, 76, 77, 78, and 79.

Amendment numbered 43: That the House recede from its disagreement to the amendment of the Senate numbered 43, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$650,000"; and the Senate agree to the same.

Amendment numbered 75: That the House recede from its disagreement to the amendment of the Senate numbered 75, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$340,000, plus so much of $350,000 additional as the Secretary of the Interior finds to be available in the reclamation fund on March 1, 1923, in excess of all other appropriations from that fund"; and the Senate agree to the same.

Amendment numbered 80: That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$675,000, plus so much of $250,000 additional as the Secretary of the Interior finds to be available in the reclamation fund on March 1, 1923, in excess of all other appropriations from that fund"; and the Senate agree to the same.

Amendment numbered 82: That the House recede from its disagreement to the amendment of the Senate numbered 82, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$14,800,000"; and the Senate agree to the same.

Amendment numbered 91: That the House recede from its disagreement to the amendment of the Senate numbered 91, and agree to the same with an amendment as follows: Restore the matter stricken out by said amendment, amended to read as follows.

"Grand Canyon National Park, Ariz.: For administration, protection, maintenance, improvements, and the acquisition of lands for road and trail rights of way within the park, including not exceeding $2,000 for the purchase, maintenance, operation, and repair of motor-driven passenger-carrying vehicles for the use of the superintendent and employees in connection with general park work, $75,000: *Provided*, That no expenditure shall be made in the maintenance or improvement of any toll road or toll trail, or for maintenance or construction of physical improvements on the North Rim."

And the Senate agree to the same.

That the Senate agree to the amendments of the House to the amendments of the Senate numbered 53, 54, 56, 58, 59, and 113.

F. E. WARREN,
CHARLES CURTIS,
LEE S. OVERMAN,
Managers on the part of the Senate.

LOUIS C. CRAMTON,
BURTON L. FRENCH,
C. D. CARTER,
Managers on the part of the House.

Mr. WALSH of Montana. Mr. President, may I ask the Senator from Kansas what disposition was made of the amendment to the House provision in relation to the Milk River irrigation project?

Mr. CURTIS. The Senate conferees and the House conferees agreed that the amount directly appropriated should remain as placed in the bill by the House, but that there should be appropriated an additional sum of $360,000 for that project in case there was any sum left over after the other projects had been taken care of.

Mr. WALSH of Montana. I am not going to object to the adoption of the conference report because it would be useless to do so. I have no doubt the Senate conferees exerted themselves to the utmost to maintain the amendment put upon the bill by the Senate.

Mr. CURTIS. May I say to the Senator that it was the last amendment on which we reached an agreement? We contested it to the very last of the amendments and endeavored to the last minute to have the House conferees agree to the amendments of the Senator from Montana and the Senator from Wyoming.

Mr. WALSH of Montana. The facts about the matter are that the Milk River project is the first project undertaken under the act of 1902. Indeed, it was originated even before the act was passed and in anticipation of it, through the work of the Geological Survey. Unfortunately a controversy arose between this country and Canada concerning the division of the waters of the two rivers involved—the Milk River and the St. Marys River—which delayed the project for a number of years until a treaty was effected. Thereupon another controversy arose as to the interpretation of the treaty, the language of which was strangely ambiguous. That has been pending before the International Joint Commission for a number of years, but was determined within the last six months.

The appropriations have been relatively meager for this project during all of these 20 years, but those who have looked forward to the completion of the project pinned their faith upon more favorable consideration when the difficulty to which I have referred should be finally disposed of and out of the way. The Reclamation Service took the same view of it and made a generous recommendation for the project of $890,000.

The House, regardless of the recommendation of the Reclamation Service and of the Budget, took it upon themselves to cut that appropriation down by the sum of $550,000, so that there is a pittance for the work this year of $340,000. The excuse offered by the House, of course, was that the Director of the Reclamation Service had overestimated the revenues likely to come into the reclamation fund, and that it would be necessary to economize. Of course, Mr. President, inasmuch as these appropriations come out of a special fund, they do not in any very just way enter into the problem of economies upon which some of our statesmen have determined to enter. Yet, of course, the difference is shown in the aggregate appropriations that are made, and it is easy enough to say on the stump or on the platform that the appropriations have been $550,000 less this year than they were last year, among other deductions that are made.

Just exactly why the House took it upon themselves to visit the alleged shortage, which they insist will arise, upon the Milk River project I have never quite been able to discover. The State of Montana is accorded by the present bill, for reclamation work in the State this year, something less than $1,000,000. It is at the present time, as it has always been, the greatest contributor to the reclamation fund. The neighboring State of Idaho gets $3,000,000 for reclamation work during the present year. We get less than $1,000,000. We had $1,500,000 and we are cut $550,000. We get less than the State of Wyoming, and we get less than the State of Washington.

I merely desire to state these facts so that the public may understand the subject. Possibly the representative of our conferees on the committee will be able to state more definitely what reasons were advanced for this perfectly obvious discrimination against the State which I have the honor only in part to represent on this floor.

Mr. CURTIS. Mr. President, the House conferees took the position that a supplemental estimate had been sent in by the Reclamation Service in which all these projects had been pared down, and that they had made their reductions according to that estimate. When the bill reached the Senate, as the Senator from Montana will remember, we put in the amount of the original estimate for the project and also for the project in Wyoming and one or two others.

In considering the question in conference, the matter of the supplemental estimates was considered and the facts pointed out as have been pointed out here by the Senator. As I said a moment ago, the last two items agreed upon in conference were the items from the State of Montana and from the State of Wyoming. The Senate conferees tried to get the amount carried to the full extent which had been placed in the bill by the Senate. We were unable to get the $550,000 for the project in Montana but did get the $360,000. For the project in Wyoming I have forgotten the exact amount, but I think it was $250,000 that we secured.

Mr. WALSH of Montana. I thank the Senator. I am not able to regard this procedure on the part of the Congress as anything other than an attempt to make the State of Montana the victim of a desire to make a record for economy at the expense of the settlers under the Milk River project, who have suffered all manner of misfortunes during the last half dozen years. Of course, everyone must recognize that the overhead charge on a project that has been carried on for 20 years and is not yet anywhere nearing completion is something that is forbidding. It approaches a crime to conduct a work in such a way as to impose such an awful burden upon the people who settled under the project and took up their lands in the expectation that it was going on with reasonable celerity and at a reasonable cost. The fact about the matter is that the cost of the project to the settlers under it is mounting up to such a sum as to fill some of us with apprehension that it will be impossible to meet it. Congress appropriated $340,000 this year, which will merely carry along the work. The construction is inconsequential.

Mr. CURTIS. I wish to state that there was no intention upon the part of the Senate conferees to punish the State of Montana. We tried to get them all they were entitled to and made the same points that have been made by the Senator from Montana, that it was not an appropriation out of moneys of the Treasury but came from the fund that was paid into the Treasury, and really did not mean any question of economy, as the Senator has well said. I ask for the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

Mr. CURTIS. I move that the Senate agree to the amendments of the House to the amendments of the Senate numbered 53, 54, 56, 58, 59, and 113. These are items in reference to schools in the Indian Service, an item in regard to the Five Civilized Tribes, where an amendment was placed in the bill upon the floor of the Senate and the language was changed in conference to make it correspond with the existing law. Amendment No. 113 is in regard to the revolving fund for the Alaskan Railroad, fixing the amount at $200,000.

The PRESIDING OFFICER. The question is on the motion of the Senator from Kansas that the Senate agree to the amendments of the House to the amendments of the Senate.

The motion was agreed to.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 27, line 17, spirit varnishes.

Mr. NORRIS. I understood that the Senator from New Mexico made a motion to amend the committee amendment. If he has not done so, I desire to move an amendment.

The PRESIDING OFFICER. The Chair is advised that the committee amendment on line 17, page 27, is the pending question.

Mr. NORRIS. That is my understanding. I move to amend the committee amendment by striking out "35" and inserting "10," so that it will read:

> Spirit varnishes containing less than 5 per cent of methyl alcohol, $2.20 per gallon and 10 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I feel that I should say just a word in response to what was said by the Senator from Utah [Mr. SMOOT] and the Senator from North Dakota [Mr. MCCUMBER]. The Senator from Utah complained that I had been making the same objections right along as to the various items in the bill. In large measure that statement is true. They have been made from time to time because the provisions of the bill justified the criticisms which have been made.

I realize that the Republican Party stands for protection. I have assumed all along that whatever bill is written here will be written at least along protective lines. When the Senator from North Dakota presented the bill he stated that his object was to equalize the difference in the cost of production at home and abroad, the question of transportation being considered. I want to say that I have not proposed a single amendment which would do or offer to do less than that.

The Senator from Utah may look through the records of this debate, he may study the items which have been discussed, and he will not be able to find in all of the discussion and in all of the motions which I have offered—in fact, in all of the motions which have come from this side of the Chamber—one which would reduce the duty below protective lines as defined by the Senator from Nebraska.

Mr. SMOOT. Mr. President, I do not want to get into any discussion with the Senator from New Mexico, but in the case of litharge, for instance, the item which was voted on only a little while ago, the Senator from New Mexico offered an amendment to make the duty 1½ cents per pound. The Senator knows that with 2½ cents on lead bullion there could not be less than that on litharge, and yet the Senator desired to impose only a duty of 1½ cents on that commodity. That was not right.

Mr. JONES of New Mexico. Did I not announce at that particular time that if my motion prevailed I would offer an amendment to reduce the duty upon lead ore?

Mr. SMOOT. No; I never heard the Senator say any such thing.

Mr. JONES of New Mexico. I certainly did.

Mr. SMOOT. What duty did the Senator suggest he was going to propose on the lead content of the ore?

Mr. JONES of New Mexico. A duty of 1½ cents per pound.

Mr. SMOOT. The duty in this bill is 1½ cents per pound for the lead content in the ore.

Mr. JONES of New Mexico. But the Senator from Utah has just stated that the duty is 2½ cents a pound upon the bullion which would go into the manufacture of litharge.

Mr. SMOOT. The Senator from New Mexico said "ore"; that is not bullion. I do not think the Senator has studied the subject very thoroughly or he would not want to do what he suggests. I can point to other instances of the same character. However, I do not want to discuss the question at this time, but I thought the Senator from New Mexico ought to remember the amendments he offered to-day to paragraph 69.

Mr. JONES of New Mexico. The Senator from Utah doubtless overlooked the statement which I made, but the RECORD will show that the statement was made. I believe as to one amendment which was offered for me during my absence the statement did not accompany that amendment, but on the very next item, when I appeared in the Chamber and offered the amendment, the statement was distinctly made that it was in view of moving later on to reduce the duty upon the lead bullion to 1½ cents per pound.

The Senator from Utah knows that it would be wholly inconsistent to have a duty of 2½ cents a pound upon the metal out of which the commodity is made and then a duty of only 1½ cents upon the manufactured product. I would not be so silly as to propose anything of that kind, and I hope now the Senator from Utah will understand just what my position was. I made my motion with the statement of the Tariff Commission to support me, that a duty beyond that levied upon the ore would not be protective.

Mr. SMOOT. The Tariff Commission did not say that.

Mr. JONES of New Mexico. The Tariff Commission did say that.

Mr. SMOOT. The Tariff Commission said that with the ore at the smelters there was no difference between the cost of the treatment of the ore in a foreign country—in any country in the world—and in America; but the Tariff Commission did not say that the freight rates from a foreign country to the United States between the ore and the bullion made no difference, and, of course, the Tariff Commission would not say it, because it is not true.

Mr. JONES of New Mexico. Mr. President——

Mr. SMOOT. I know what the Tariff Commission said about it. It stated that when the ore was in the bins, when it was at the smelters—the Senator is right about that—as to the conversion of the ore then there was no difference; but the Tariff Commission never said that there was no difference between the ore in Mexico and the bullion in the United States.

Mr. JONES of New Mexico. Mr. President, I am going to read a few more extracts from the Tariff Commission's report which I did not read to-day, bearing chiefly upon the oxides of lead, the articles which we were considering. What I read related to the lead ore, the lead bullion, and a short statement with reference to the oxides; but I now want to read to the Senator from Utah what the Tariff Commission say, especially about the oxides:

> The domestic output of lead oxides increased nearly 50 per cent from 1900 to 1910, and before the outbreak of the war increased another 50 per cent. The production of all classes of lead oxides in the United States in 1914 was practically 93,000,000 pounds, valued at something over $5,000,000. The increased use of structural steel through the war period (especially for ships and shipyards) and the heavy demands from the glass and rubber industries called for larger quantities of these oxides than had ever before been produced. The output in 1916 was 121,548,000 pounds, valued at nearly $10,000,000. Over 62 per cent of the quantity and 60 per cent of the value of the 1916 output of these oxides was in the form of litharge; the remainder was almost wholly red lead, orange mineral not being made in important quantities in this country.

In regard to the imports of these oxides it is stated:

> All three classes of lead oxides are listed separately in the publications of the Department of Commerce. The imports for consumption show wide fluctuations from year to year, but as has been mentioned above very little litharge is imported, whereas red lead and orange mineral are imported in much larger quantities. The course of the imports can perhaps be best brought out by the following table:

The amount of imports of all three of those commodities is relatively insignificant as compared with the domestic production. Of litharge only 42,725 pounds were imported in the period from 1910 to 1914, the figures representing the average annual imports for the period; in the period from 1900 to 1909 76,611 pounds, the maximum annual import being 120,104 pounds. Of red lead, 635,980 pounds were imported in the 1910–1914 period and 812,760 pounds in the 1900–1910 period. Of orange mineral, for the 1910–1914 period 441,666 pounds were imported, and in the 1900–1909 period 801,000 pounds, showing a gradual diminishing of these importations.

During the war period the imports fell off very rapidly, and in 1918 (fiscal year) the imports were absolutely negligible, the largest being orange mineral to the value of $1,407, whereas the 5 pounds of red lead listed were valued at $1 and the 100 pounds of litharge were declared at a total value of $12.

The language implies that the Tariff Commission itself ridicules the idea of the importations being of any consequence.

On account of the comparatively small quantities of lead oxides imported into the United States in recent years, these imports have furnished little revenue. The maximum under the act of 1913 was during the nine months immediately preceding the outbreak of the war, when the duties collected on all classes of these oxides amounted to only $5,969.50, or less than $9,000 when calculated on a yearly basis. Over 80 per cent of this amount was collected on imports of orange mineral.

Proceeding, regarding the tariff, the survey gives the duties under the act of 1909, together with the corresponding ad valorem rates. Litharge had a duty of 2½ cents per pound, which amounted to an ad valorem rate of over 50 per cent. Red lead had a duty of 2⅝ cents, which amounted to an ad valorem of over 52 per cent. Orange mineral had a duty of 3½ cents a pound, which amounted to an ad valorem of over 50 per cent.

In 1913 ad valorem duties were adopted generally for all commodities in which the article of chief value was lead, and like other lead articles the duty on lead oxides (as well as that on white lead, which was included with these commodities in the same paragraph) was placed at 25 per cent ad valorem. Referring to the above table, it will be noted that the new duties were considerably less than under the act of 1909. Nevertheless the quantities imported did not increase. Due to conditions in no way related to the tariff, they continued to decrease.

There is a statement from the Tariff Commission that the tariff is not the controlling factor in the importation of oxides of lead. They continued to decrease, notwithstanding the tariff was reduced by one-half, from more than 50 per cent to 25 per cent ad valorem. Notwithstanding that fact, however, the importations continued to decrease. In the face of these facts, will any Senator talk to me about a tariff rate measuring the difference in the cost of production at home and abroad, when we have the direct statement that the reduction of the tariff by one-half had no effect upon the importation of the commodities and that the imports of all of these commodities continue to decrease?

I read further:

The competitive conditions with respect to the lead oxides are essentially those that concern the chief raw material, pig lead, and are altered in only slight measure by the consideration of fuel, which is generally cheaper in the United States than in other producing countries.

The Tariff Commission specifically says that only the duty upon the metal is to be considered, the product from which the oxide is made; and as to that it is proposed to put a duty upon it of 1½ cents a pound, not for the protection of the oxide but for the avowed purpose, as stated by the committee, of helping out the producers of the lead ore. It is clearly apparent that, given the raw material upon an equal basis with the world, the smelters of this country can produce these oxides and the other manufacturers of this country can produce any manufactured product of lead as cheaply as any concerns in the world; and under those circumstances how can a tariff be a protective tariff based upon the difference in the cost of production at home and abroad when, as I said this afternoon, there is no difference?

The Tariff Commission further says:

In the case of orange mineral the situation is complicated somewhat by the fact that white lead is an intermediate product in the manufacture, and that, being a higher-priced commodity, it is marketed on a basis more especially of quality than of price.

Clearly showing that it is not a matter of the lead content or the cost of manufacture; it is the quality that governs the price.

The position of the domestic manufacturer of oxides is therefore quite similar to the position of producers of other articles that consist largely of lead.

And all the way through this report we are told that all that is needed is to get the lead ore or the lead content on an equal footing with the rest of the world. When you levy a duty of a cent and a half a pound upon the importation of the ores and the bullion, if that product can be used in this country upon a manufacturing basis as low or lower than anywhere else in the world, why would an additional duty be a protective duty measured by the difference in the cost of production in the United States and abroad?

The Tariff Commission further says:

The oxides of lead introduce little of interest from a tariff standpoint except as products made from lead. This subject has been discussed at considerable length elsewhere. The few protests that appear in tariff hearings strike at the fundamental principle of protecting the metal and its products.

Mr. President, I repeat, realizing that we are going to have a higher tariff bill, I have tried to ascertain the basis for this bill. It was stated that the purpose of the bill was to equalize the difference in the cost of production in the United States and abroad; and I have never, knowingly at least, offered a single amendment which would reduce the tariff rates below that basis. I wanted to see if the Senators on the other side of the Chamber were willing to stand by such a proposition as that; but it has so happened that not in a single item which has been presented thus far has an amendment been offered from this side of the Chamber which would do less. On the other hand, time and again we have unearthed items here where the only purpose of levying an additional duty or maintaining the present duty would be to foster monopolies of these products; and that I have been unwilling to do.

Much has been said here about the protection this bill is going to give to the farmer. Mr. President, that is a broad field in which to enter. I do not want to enter it further than just to make one or two observations.

Some months ago—in fact, just about a year ago, May 21, 1921—we passed what is known as the emergency tariff bill. In that bill every agricultural commodity was included which could be thought of at the time and where anybody suggested that a tariff would help stabilize the situation or maintain the price of the product. Hides were the only important commodity left off. I wish the agricultural bloc on the other side of the Chamber would realize that that law is just as much a part of the law of the land to-day as the Underwood-Simmons law. There is no other limitation upon it than upon the Underwood-Simmons law. The Senator from North Dakota may talk about giving protection in this bill to the wheat growers, but I say that he is reducing the tariff on wheat by this bill. Instead of protecting the wool growers, as the persistent Senator from Idaho [Mr. GOODING] would declare, this bill reduces the tariff on wool, and so with many other farm commodities; but you can take this bill, at least as it has been considered thus far, and upon every item which enters into consumption—every item, I believe, without exception—there has been an actual increase of duty from those provided in existing law, generally the old Payne-Aldrich law being used as a minimum, and the increases being built upon that old law, which was so severely condemned by the people of this country.

Take the commodity which we are now discussing, varnish. You can not put a protective duty upon varnish, because it can not be protected. It needs no protection. No tariff can become effective as a means of protection. Under existing law none of this commodity is being imported. We are exporting it, and the only possible consequence of increasing the duty upon this item is to enable the American producer to increase the price to the American consumer. It induces monopoly, and when you talk about increasing the duty upon an item like this there can be no other purpose in view than that; and the same thing may be said in general as to the items of this bill which have been reached thus far.

The Senator from North Dakota again appeals to the laboring men of this country. In the name of high heaven, how is the laboring man to be benefited by a duty upon varnish when there are no importations of varnish into the country now? You do, however, make it possible to increase the price of varnish to the laborers upon the farms and to those laborers who have homes, who want to use paint and varnish; and then the Senator from North Dakota very complacently tells us that he is only asking for a duty of 25 per cent!

Has it come to this, that a duty of 25 per cent upon the things which the people of this country consume and must have is of no consequence? The distinguished Senator from North Dakota practically tells us in that language that they have considered a duty of 25 per cent an insignificant one; that they can levy that much without even any consideration as to why they do it. Twenty-five per cent is of no consequence. Only 25 per cent, they say. It seems to me that the guardians of the taxing power of this great Nation should figure more closely than that. Only 25 per cent. Is that what you are going to tell the people who reposed confidence in you and put into your hands this great power, that you could not figure below 25 per cent?

I do not want to delay the passage of this bill, but I would be derelict in my duty, I would feel that I had betrayed my trust, if I sat here quietly and permitted to become a law the drastic, unreasonable, extortionate provisions of this McCumber-Smoot bill.

The Senator from Nebraska has made a motion which is pending.

Mr. ROBINSON. The Senator from Nebraska [Mr. NORRIS] retired from the Chamber a few moments ago to get his dinner, and he stated that he wanted a record vote on his amendment. If the debate is exhausted, I suggest the absence of a quorum.

Mr. McCUMBER. I suggest to the Senator that he call for a record vote, and that will develop a quorum.

Mr. ROBINSON. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ball	Frelinghuysen	McCumber	Sheppard
Borah	Gooding	McKinley	Shortridge
Brandegee	Hale	McLean	Smoot
Broussard	Harris	McNary	Spencer
Bursum	Harrison	Moses	Stanley
Calder	Johnson	New	Sutherland
Capper	Jones, N. Mex.	Newberry	Swanson
Caraway	Jones, Wash.	Nicholson	Townsend
Colt	Kellogg	Norris	Wadsworth
Curtis	Kendrick	Oddie	Walsh, Mont.
Dial	Keyes	Overman	Watson, Ind.
Dillingham	Ladd	Pepper	Willis
Elkins	Lenroot	Phipps	
Ernst	Lodge	Ransdell	
Fletcher	McCormick	Robinson	

The PRESIDING OFFICER (Mr. LADD in the chair). Fifty-seven Senators having answered to their names, a quorum is present. The question is on agreeing to the amendment offered by the Senator from Nebraska [Mr. NORRIS] to the amendment of the committee substituting "10" for "25," in line 13, page 27.

Mr. NORRIS. I ask for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement that I made on the last vote, I vote "nay."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as on the previous vote regarding my pair and its transfer, I vote "yea."

Mr. LODGE (when his name was called). I have a general pair with the senior Senator from Alabama [Mr. UNDERWOOD]. I transfer that pair to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. NEW (when his name was called). Making the same announcement as on the previous roll call, I vote "nay."

Mr. McCUMBER (when his name was called). I transfer my pair with the junior Senator from Utah [Mr. KING] to the senior Senator from Maryland [Mr. FRANCE], and vote "nay."

Mr. OVERMAN (when his name was called). Making the same announcement as to my general pair and its transfer as on the previous vote, I vote "yea."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

The roll call was concluded.

Mr. DILLINGHAM. I have a general pair with the junior Senator from Virginia [Mr. GLASS]. In his absence, I transfer that pair to the junior Senator from Delaware [Mr. DU PONT] and vote "nay."

Mr. KELLOGG (after having voted in the negative). I transfer my pair with the senior Senator from North Carolina [Mr. SIMMONS] to the senior Senator from Minnesota [Mr. NELSON], and allow my vote to stand.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

The result was announced—yeas 17, nays 42, as follows:

YEAS—17.

Borah	Harrison	Overman	Swanson
Caraway	Heflin	Ransdell	Walsh, Mont.
Dial	Jones, N. Mex.	Robinson	
Fletcher	Kendrick	Sheppard	
Harris	Norris	Stanley	

NAYS—42.

Ball	Frelinghuysen	McCumber	Rawson
Brandegee	Gooding	McKinley	Shortridge
Broussard	Hale	McLean	Smoot
Bursum	Johnson	McNary	Spencer
Calder	Jones, Wash.	Moses	Sutherland
Capper	Kellogg	New	Townsend
Colt	Keyes	Newberry	Wadsworth
Curtis	Ladd	Nicholson	Watson, Ind.
Dillingham	Lenroot	Oddie	Willis
Elkins	Lodge	Pepper	
Ernst	McCormick	Phipps	

NOT VOTING—37.

Ashurst	Glass	Page	Trammell
Cameron	Harreld	Pittman	Underwood
Crow	Hitchcock	Poindexter	Walsh, Mass.
Culberson	King	Pomerene	Warren
Cummins	La Follette	Reed	Watson, Ga.
du Pont	McKellar	Shields	Weller
Edge	Myers	Simmons	Williams
Fernald	Nelson	Smith	
France	Norbeck	Stanfield	
Gerry	Owen	Sterling	

So Mr. NORRIS's amendment to the amendment of the committee was rejected.

The PRESIDING OFFICER (Mr. LENROOT in the chair). The question is on agreeing to the committee amendment.

Mr. McCUMBER. I ask that the Senate disagree to the committee amendment.

The amendment was rejected.

The next amendment of the committee was, on page 27, line 19, after the words "methyl alcohol," to insert "35 cents per gallon and 35 per cent ad valorem."

Mr. McCUMBER. I ask the Senate to disagree to the committee amendment.

The amendment was rejected.

The next amendment of the committee was, on page 27, line 20, to strike out the word "varnishes" and insert the words "varnishes, including so-called gold size or japan," so as to read:

And all other varnishes, including so-called gold size or japan, not specially provided for, 25 per cent ad valorem.

The amendment was agreed to.

Mr. McCUMBER. Mr. President, I ask that we may pass over temporarily paragraph 73, vermilion reds, on account of the absence of one of the Senators who desires to be heard upon that subject.

The PRESIDING OFFICER. Without objection, paragraph 73 will be temporarily passed over.

The next amendment of the committee was, in paragraph 74, on page 28, line 2, to strike out "1½" and insert "1¾," so as to read:

Zinc oxide and leaded zinc oxides containing not more than 25 per cent of lead, in any form of dry powder, 1¾ cents per pound.

Mr. McCUMBER. Mr. President, I think I shall make a very short statement as to what this amendment means.

Mr. WALSH of Montana. The Senator from New Mexico [Mr. JONES] has been giving some attention to this paragraph, and he has stepped down to the restaurant to get some dinner. Would it be agreeable to the Senator from North Dakota to let that stand over until he returns?

Mr. McCUMBER. I will make my statement, anyway, at this time. I do not think what I say about it will make much difference to the Senator from New Mexico, but I wish to place upon the record the reasons for the amendments that have been made here.

Mr. WALSH of Montana. It is not at all unlikely that the Senator from New Mexico will ask for a repetition of the statement when he returns. The next paragraph, No. 75, potassium, will probably not occupy a very long time. I suggest that we take that up, and the Senator from New Mexico will probably return by the time we get through with it.

Mr. McCUMBER. Two of the Senators have asked that paragraph 75 may be passed over, and I would rather not take that up at the present time.

Mr. FLETCHER. I think there will be no objection to the amendment proposed in paragraph 76.

Mr. SMOOT. No; because it is simply inserting a period.

Mr. McCUMBER. I am not certain whether there will be objection to it or not.

Mr. SMOOT. There may be a three-hour speech on it.

Mr. McCUMBER. I think we had better take it up if there is no one present who desires to speak on it.

The PRESIDING OFFICER. Does the Senator from North Dakota request that paragraphs 74 and 75 be passed over?

Mr. McCUMBER. Yes; just at present.

The PRESIDING OFFICER. Those paragraphs will be passed over. The next amendment will be stated.

The ASSISTANT SECRETARY. In paragraph 76, line 19, strike out the word "pound" and insert the same word in the same way with a period after it.

The amendment was agreed to.

The next amendment of the Committee on Finance was, in paragraph 77, page 28, line 22, to strike out "toilet, 30 per cent ad valorem," and insert "perfumed toilet soap, 50 per cent ad valorem; unperfumed toilet soap, 10 per cent ad valorem; medicinal soap, 20 per cent ad valorem," so as to read:

PAR. 77. Soap: Castile, 15 per cent ad valorem; perfumed toilet soap, 50 per cent ad valorem; unperfumed toilet soap, 10 per cent ad valorem; medicinal soap, 20 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. FLETCHER. Mr. President, it will be noted that this amendment proposes an increase of duty. Under the act of 1909 the duty was levied on a different basis. Castile soap was 1¼ cents per pound, medicinal or medicated soap 20 cents per pound, fancy or perfumed toilet soap 50 per cent ad valorem,

and all other soaps not specially provided for in the section 20 per cent ad valorem.

In the act of 1913 the law provided perfumed toilet soap 30 per cent ad valorem, medicinal soap 20 per cent ad valorem, castile soap and unperfumed toilet soap 10 per cent ad valorem, all other soaps and soap powders not specially provided for in the section 5 per cent ad valorem.

The committee proposes that castile soap now shall bear a duty of 15 per cent ad valorem instead of 10 per cent ad valorem, as under the act of 1913. Toilet soap is the same as under the law of 1913. There is no increase in the other soaps and soap powders not specially provided for, which carry 5 per cent ad valorem now, as under the act of 1913. The bill as it came from the House carried 20 per cent, but the committee proposes to reduce that to 5 per cent. They propose a rate on medicinal soap of 20 per cent ad valorem.

Mr. SMOOT. It is the same as the existing law.

Mr. FLETCHER. One is struck on examining the statistics applicable to this subject with the feeling that there would seem to be really no foundation for these proposed duties. The duties will not, apparently, limit or restrict importations, because there are practically no importations except as to castile soap. The duties proposed evidently will not produce much revenue.

Mr. SMOOT. The change which the Senate committee has made is on perfumed toilet soap, where we propose a duty of 50 per cent. I do think the Senator will not object to that. When anyone can pay $1.50 for a little piece of soap because the name "France" is on it, I do not care whether he pays 50 per cent or 60 per cent or 100 per cent duty. Anyone who can buy soap of that kind we are perfectly willing shall pay into the Treasury of the United States all that we can possibly make him pay.

There will not be a bar of that kind of soap less than is imported now, whether we make the rate 50 per cent or 60 per cent. It is for revenue entirely. The balance of the paragraph is exactly the same as the existing Underwood law, with the exception of castile soap, and that is 15 per cent instead of 10 per cent.

I desire to say to the Senator that olive oil is the raw product which forms the basis from which castile soap is made. The Senate has increased the rate on olive oil to 50 cents a gallon in bulk. If there is any paragraph in all the bill that meets the ideas of the Democrats it is this paragraph.

Mr. FLETCHER. I think, perhaps, that is scarcely quite accurate, because one of the contentions of the Democrats is that these duties should be imposed upon luxuries rather more than upon necessities, and I rather think soap is almost entitled to be classified as a necessity.

Mr. SMOOT. It is, and the ordinary soaps bear a rate of 5 per cent as reported by the committee, and they carry a rate of 5 per cent in the existing law.

Mr. FLETCHER. Of course, they may use olive oil in making it.

Mr. SMOOT. Yes; they have to use it.

Mr. FLETCHER. But there are various other oils and fats used in making it.

Mr. SMOOT. They can not make castile soap without olive oil.

Mr. FLETCHER. The tariff survey says that pure castile soap is supposed to be made from olive oil and soda lye only, but much of the soap marked as such is made from other oils as well.

Mr. SMOOT. But castile soap is not used for the fancy trade.

Mr. FLETCHER. I desire to refer further to the statistics rather briefly, to the effect that the value of the finished product in this country produced by our manufacturers in 1914 was $127,942,441. In 1919 the output of the soap industry reached $317,163,000.

The domestic production supplies over 99 per cent of the consumption, so that importations amount almost to a negligible quantity. That is the statement in the Summary of Tariff Information—that production supplies over 99 per cent of consumption. The imports have been valued at less then $850,000, about 50 per cent of the imports being castile soap. Perhaps the other 50 per cent is largely made up of perfumed toilet soap, which the Senator has mentioned; but, taken altogether, the imports have amounted to only $850,000 worth, according to this statement. Analyzing the statement, it will be found that the castile soap imported into this country in 1918 was only valued at $98,000, from which we obtained $9,816 of duty; in 1919 we got $22,270 of duty; in 1920 we got $40,000 of duty; and in 1921 the amount of duty received is not stated. We have derived, apparently, some revenue from the duty on castile soap, and we are obtaining that revenue when the duty on castile soap is 10 per cent ad valorem. Now it is proposed to make that duty 15 per cent ad valorem, and I very much question if that will produce any more duty than we are now obtaining.

From the perfumed toilet soap imported we derive some duty, but not a very great amount. The duty on that article has been 30 per cent, and we obtained in 1920 the sum of $54,000 of revenue out of that. I should be glad to see the Government continue to get revenue, but, if we raise these duties, the importations are so slight now that it is more than likely that we shall reduce the importations and thereby reduce the amount of revenue that will be received. Certainly there is no purpose in this legislation to protect the industry, because the industry does not need any protection.

Mr. McCUMBER. May I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from North Dakota?

Mr. FLETCHER. I yield.

Mr. McCUMBER. First, I ask the Senator if he objects to a 50 per cent ad valorem duty upon high-priced soaps—the perfumed toilet soaps?

Mr. FLETCHER. I think the duty is too high.

Mr. McCUMBER. Let us see if it is too high. I call the Senator's attention to the fact that perfumes run all the way in price from 50 cents an ounce up to $1.50 an ounce. I do not know what is the ordinary price of the perfume that is used in those soaps, but I do know that we had a 50 per cent ad valorem duty under the 1909 law, and that we collected $163,000 on the perfumed soaps alone. So it seems to me as though we would get a large amount of revenue from the perfumed soaps, and that it is worth while to tax them 50 per cent if we can get that much revenue.

From all of the soaps under the 1909 law we got about $250,000 of revenue, but the great bulk of it came from the high-priced perfumed soaps; so I hope the Senator from Florida will not object to the rate proposed.

Then when we get down to the next bracket, the castile soaps, as has already been explained by the Senator from Utah, we have raised the duty on the olive oil; that, of course, will increase the cost and we ought to make some allowance, but we have made an allowance simply of 5 per cent ad valorem. That certainly will not more than cover the differential growing out of the duty on the oil. When we come to the other bracket, which covers practically all the soaps in the United States which are used for general purposes, we fixed the duty exactly as provided in the present law, and if the present law is good and right I do not know why we should object to it.

Mr. FLETCHER. The committee does propose to impose on all these soaps not otherwise provided for, "and soap powder," a duty of 5 per cent, which is the same as the present law, and to that I think there can be no objection. It has, however, not yielded revenue to amount to much, and I think there are really no importations. I do not see that anything will be accomplished, one way or the other, by levying that duty. We shall get a little duty, probably a thousand dollars or $2,000; we shall get something out of that which perhaps we should not otherwise get; but the question in my mind is whether by fixing duties at the rate proposed of 15 per cent ad valorem on castile soaps and 30 per cent on the others we are not simply assisting the manufacturer here to raise the price. If the purpose were to keep out importations, so that the domestic producer could compete on the basis of the difference in the cost of the labor here and abroad, and that sort of thing, that would be one basis for levying a duty; but there is no question that the industry needs no protection, for we are exporting large quantities of these goods.

Mr. McCUMBER. Even according to the philosophy of the Senator from Florida, if we are exporting, of course, it will not make any difference whether there is any duty on the article at all, it certainly can not raise the price.

Mr. FLETCHER. That does not apply in all instances, but it shows that the industry is able to supply the domestic demand under present conditions and that it does not need any boosting or any artificial stimulation.

Mr. McCUMBER. If the Senator will allow me right there, I wish to say that we are not allowing anywhere near the protection upon the ordinary soaps that is given under the Underwood law, because while we are giving the same rate of duty, all of the things which enter into the manufacture of soap, such as oils, fats, and so forth, have been taken from the free list and a duty placed upon them. Therefore we do not give the manufacturer of soap anywhere near the duty that he is getting under the present law.

Mr. FLETCHER. I see that; but what I am contending for here is that in this instance the manufacturer in this country

does not need any protection; he does not need any assistance. If it can be shown that there will be paid into the Treasury of the United States some revenue by the imposition of the duty that, in my opinion, would justify it to the extent that it is a reasonable duty and to the extent that it adds to the revenue and does not restrict the revenue by being so high that it will keep out all importations.

We obtain a little revenue under the 5 per cent duty, which rate is to be continued under the pending bill, and that is reasonable, I think. On toilet unperfumed soaps the duty was only 10 per cent, but we obtained very little revenue from that. The duty on the perfumed toilet soaps has been 30 per cent, and we did not derive very much revenue from that, and it is now proposed to make that rate 50 per cent. I am not so sure but that it will simply enable the manufacturers of this country to increase the price of such soaps to the public without increasing the revenue of the Government at all.

The importation will probably be no greater under the duty of 30 per cent, or even under a duty of 20 per cent, and they will certainly be less under a duty of 50 per cent than they will be under a duty of 30 per cent, and, if the importations are less under the increase of duty than they are now, less revenue will come to the Government. The result will simply be to deprive the Government of revenue it is now receiving under the 30 per cent duty, in my judgment, if we raise the duty to 50 per cent, and it will enable the domestic manufacturer to charge an increased price to the consumers of this country. The fact that we are exporting such large quantities of soap should certainly be taken into consideration. In 1918 we exported of toilet soaps $2,567,614 worth. In the same year we exported of all other soaps to the value of $10,871,000. Our exports have increased, so that in nine months of 1921 we exported of toilet soaps $2,147,892 worth, and of other soaps $4,607,818 worth.

Mr. McCUMBER. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from North Dakota?

Mr. FLETCHER. I yield.

Mr. McCUMBER. The Senator just now stated that he feared we would not get as much revenue under a 50 per cent ad valorem rate as we are now obtaining under a 30 per cent ad valorem rate. Did I understand the Senator correctly?

Mr. FLETCHER. Yes.

Mr. McCUMBER. How are we to determine that except in the light of past events? Under the 50 per cent ad valorem rate in the 1909 law we obtained $163,000 of revenue, while in 1920, which was certainly a good year, under a 30 per cent ad valorem rate we only obtained $54,000 of revenue. Under the higher rate we got the advantage of the difference between $54,000 and $163,000. Is not that worth saving, especially as the high rate is only imposed on luxuries?

Mr. FLETCHER. I scarcely think that the year 1920 could properly be compared with the pre-war years, because we were then living under conditions which were altogether upset and abnormal, and it is entirely possible that the importations were diminished by war conditions rather than by reason of the duty. However, in any event, 50 per cent of the importations have heretofore been of castile soap and the duty on that commodity is not proposed to be increased beyond 5 per cent over and above what it already is, the duty now being 10 per cent and it being proposed to increase that to 15 per cent. On perfumed soaps it is proposed to raise the duty from 30 per cent to 50 per cent.

As I have said, I believe, Mr. President, that two results will follow: First, the increase in duty will enable the manufacturers of this country to raise the prices of these soaps to the public, which they will proceed to do. There are a few manufacturers who will not take advantage of the duties which are levied on these goods, but the great majority of the manufacturers of this country are going to avail themselves of the benefits and advantages of these duties and they will raise their prices on the products of their manufacture to the American people; there is no question about that. Wherever they have the opportunity of doing it they are going to do that very thing, and when that is done, without increasing the revenues which are intended to be provided by tariff duties generally, you are simply benefiting a few manufacturers in this country at the expense of the great mass of the people. That is not a sound policy. That is a very harmful sort of course to pursue.

I had a letter the other day just on that general principle which has a great deal of good, sound sense in it. This gentleman writes me from Los Angeles, Calif., and I venture to read his letter at this point. It is dated May 4, 1922. He says:

> You want the manufacturers and farmers of the United States to be prosperous; all of us do. If these two classes are prosperous, so is the general public and the entire country.
>
> The tariff bill that is now before you has a vital bearing on this and should have very close consideration.
>
> Most American manufacturers and nearly all farmers can produce their goods at a lower cost than they can be produced elsewhere, so they need no protection. Ask them, and if they are truthful, which I think they are, they will so tell you. Ask the steel manufacturers this question, and you will find that they can undersell the steel makers of any other country.
>
> It is essential that we have a market in foreign countries for our surplus farm products and manufactured goods, and if we put a tariff wall against the peoples who are in position to supply us necessary goods, they will refuse to buy from us. Many of my clients have so stated. The present Underwood Tariff Act is really too drastic at some points, and I urge you to vote against any raise in tariff rates whatever.
>
> I have been in the foreign-trade business for about 30 years and I have seen the effects of the various tariffs during that time, and it is a well-known fact that the general public pays the bill when a high tariff is effective. I venture to say that if this tariff bill passes there will be a general slowing up of business.
>
> Very truly yours,
>
> W. K. THOMPSON,
> *Importer and Exporter, Commercial Broker, etc.,*
> *Los Angeles, Calif.*

That sentiment is not confined to Mr. Thompson or to California. It is widespread over this country and is based on the experience and observation of intelligent, thinking, active business men. I say, Mr. President, that it is a mistake to lay duties the effect of which will simply be to enable manufacturers to raise the prices of their products to the people who consume them.

With regard to the act of 1913, some reference has been made to it; and this writer states that the Underwood bill—as he calls it, and not improperly—is too drastic in itself. That was not, strictly speaking, a revenue bill. The conditions under which that bill was made were that we had been living under a high protective tariff for a good many years. It was considered by the party then in power, the majority of the Democrats, that to drop immediately from a protective tariff basis to a revenue basis would very seriously interfere with business conditions and upset matters so that harmful effects would result from such a sudden and complete drop; so it was intended to come gradually down to a revenue basis, so far as possible. The Underwood bill was not, strictly speaking, a bill providing a tariff for revenue only. It did carry with it certain elements of protection. It was to some extent a protective tariff measure; and when we go now to raise duties far above those carried in the Underwood bill, the act of 1913, we are placing them purely and simply upon the protective basis and we are ignoring to a great extent this idea of raising money required by the Government for its economical administration through this process of levying duties. We need the money. We must raise money in this way. One of the ways of getting it is through the customhouses, through revenue duties.

This is a process of supplying the Treasury with needed funds to conduct the affairs of this Government. We must not lose sight of that. When we levy duties so high that imports will be diminished, and in that way revenue necessarily is not produced by the process of levying duties, we are simply levying duties which will enable the manufacturers of this country to raise the prices of their products and accumulate fortunes at the expense of the general public.

If, as a matter of fact, the manufacturer does not raise the prices of the goods which he produces as a result of the laying of duties and keeping out importations and preventing the competition of foreign goods with his manufactured goods, then the whole idea of levying these duties fails. There is no point in the process at all. Unquestionably, one result will follow from this bill just as surely and as certainly as it becomes a law, and when it becomes a law, and even before, if there is a fair prospect of its passing. Prices will go up in this country. That is the purpose of the bill. That is one effect that will inevitably and necessarily follow. Prices will go up, and when they begin to rise, as they certainly will, you will hear some expressions of dissatisfaction at this performance of levying duties which do not, can not, will not bring into the Treasury of the Government revenue which it needs, because the effect of them is to restrict and limit and reduce importations, and thereby the amount of money raised in the customhouses; and the further effect follows that the public will be charged not merely the increase in the price of the commodity measured by the amount of duty charged on the imported article, but by the time the article protected in that way reaches the consumer he will be paying out two and three times the amount of the protection intended to be afforded.

In other words, it is estimated by Mr. Miles and by some other experts on the subject that if the manufacturers of this country avail themselves of all the benefits that this bill is capable of affording them the amount of protection carried by the bill will be over $2,000,000,000, but the consumers of this country will pay in increased prices for their goods over $4,000,-

000,000. The tax levied on the consuming public by the bill will be over $4,000,000,000, and the amount of money which will go into the Treasury of the United States by reason of the levying of these duties, as estimated by the able chairman of the committee himself, will be only $350,000,000. In other words, in order to raise $350,000,000 by the passage of this bill, you are going to make the people of the United States go down in their pockets for over $4,000,000,000.

I really feel that it is a mistake to increase these duties above those carried in the act of 1913, and for that reason I move to amend in line 22 by inserting "30" instead of "50," so that the perfumed toilet soap will then carry a duty of 30 per cent instead of 50 per cent as provided in the committee amendment.

Mr. McCUMBER. Mr. President, before voting upon that amendment I desire to ask unanimous consent at this time that when the Senate closes its session for this calendar day it recess until to-morrow at 11 o'clock.

The PRESIDING OFFICER. Is there objection to the request of the Senator from North Dakota? If there be no objection, it is so ordered.

The question is upon agreeing to the amendment proposed by the Senator from Florida to the committee amendment.

Mr. McCUMBER. Does the Senator wish the yeas and nays?

Mr. FLETCHER. I will not insist upon it.

Mr. McCUMBER. Very well.

Mr. SMOOT. I should like to have the yeas and nays.

The PRESIDING OFFICER. The question is upon agreeing to the amendment offered by the Senator from Florida to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now is upon the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 28, line 25, to strike out "20" and insert "5," so as to read:

All other soap and soap powder not specially provided for, 5 per cent ad valorem.

The amendment was agreed to.

The next amendment was, on page 29, line 2, to strike out "five-eighths" and to insert "one-fourth," so as to read:

Bicarbonate or baking soda, one-fourth of 1 cent per pound.

The amendment was agreed to.

The next amendment was, on page 29, line 4, to strike out "10" and to insert "8," so as to read:

Bromide, 8 cents per pound.

Mr. WALSH of Montana. Mr. President, I have been endeavoring to get some information about sodium bromide and sodium potassium. I suppose this is not seriously objectionable. Will the Senator tell us the basis upon which the rate of 8 cents a pound on sodium bromide was reached?

Mr. McCUMBER. Now that the Senator from New Mexico [Mr. JONES] is here, may we not go back to the zinc-ore provision while the Senator from Montana is looking up the information which he desires to get? Is there any objection to that?

Mr. JONES of New Mexico. Is the Senator addressing an inquiry to me?

Mr. McCUMBER. I was addressing myself to the Senator from Montana, asking him if he has any objection to going back to paragraph 74, which we just passed over, now that the Senator from New Mexico has returned. I understood that we passed it over because of his necessary absence for a few moments.

Mr. WALSH of Montana. I suggest that inasmuch as we have entered upon the consideration of paragraph 78, perhaps we had better continue until we finish that, and then go back.

Mr. McCUMBER. Very well.

Mr. JONES of New Mexico. I think that would be better.

Mr. WALSH of Montana. What is the equivalent ad valorem duty of 8 cents per pound specific on sodium bromide?

Mr. SMOOT. The equivalent ad valorem duty on the bromide would be about 40 per cent at to-day's prices.

Mr. WALSH of Montana. That is the foreign valuation, of course?

Mr. SMOOT. Yes.

Mr. WALSH of Montana. What is the foreign price?

Mr. SMOOT. The list price is 16 cents a pound.

Mr. WALSH of Montana. Eight cents would be the equivalent of 50 per cent, then?

Mr. SMOOT. Yes.

Mr. WALSH of Montana. It is a compound which enters into chemical products of various kinds, is it not?

Mr. SMOOT. Yes. I can not say as to what strength this may be. The pre-war price was 44 cents. This product varies in strength, however. I am giving the very lowest price. If the pre-war price of the importation was 44 cents, 8 cents would be less than 20 per cent.

Mr. WALSH of Montana. It is used medicinally largely, is it not?

Mr. SMOOT. It is.

Mr. WALSH of Montana. The information given in the summary is exceedingly meager. It is found on page 128. It is as follows:

Production of bromine in the United States in 1913 was 572,000 pounds, increased to a maximum of 1,854,971 pounds, valued at $1,234,969 in 1919, and then decreased to 1,160,584 pounds, valued at $745,381 in 1920.

Mr. SMOOT. The greatest use for it is in photography, but it is used also as a medicine. During the war time it was used in gas warfare. The pre-war price was 44 cents, and the rate of 8 cents would be the equivalent of less than 20 per cent ad valorem. The House gave them 10 cents. Under the Payne-Aldrich bill the rate was 25 per cent, which would be 11 cents a pound on bromide, based on the pre-war price.

The Senator asked me the price, and I gave him the lowest quotation. I can not state what strength that represents, because this does not say. But I say to the Senator that the pre-war price, as he will find if he will look it up, was 44 cents a pound, and this is less than 20 per cent. It is 20 per cent less than the rate fixed by the House.

Mr. WALSH of Montana. It is not a matter in which I am particularly interested. The next item, however, touches a product which concerns us all, and it is exceedingly regrettable that there are not more Senators here to consider it. I have no objection to voting on this one.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 29, line 8, to strike out "11" and insert "20," so as to read:

Chloride or salt, in bags, sacks, barrels, or other packages, 20 cents per 100 pounds.

Mr. McCUMBER. I was going to ask that we pass over this amendment until the Senators from New York are present, but I understand that they will be here in a moment.

Mr. WALSH of Montana. Mr. President, this and the next item, which may very properly be considered with it, touch a most essential article of domestic economy, plain salt. It is proposed to impose upon this commodity a duty of 20 cents per 100 pounds when it is purchased in bags, sacks, barrels, or other packages, and a duty of 16 cents per 100 pounds when it is purchased in bulk. I do not notice any member of the farm bloc here, but it is an item that is of large consumption upon the farm, the ordinary household consumption, together with its use for many purposes in connection with the care and nurture of live stock.

Unless the reasons are overwhelmingly persuasive why this commodity should carry this extraordinarily heavy duty, I should confidently expect that every Member of the Senate would be disposed to see it on the free list. That is where it is now. It is admitted without the imposition of any duty. I want to submit some figures given us in connection with this item from the documents to which we have access.

The domestic production of this commodity in 1920 was 7,000,000 tons. The importations were only practically 100,000 tons, one-seventieth of the domestic production, less than 1½ per cent. We export more of this article than we import. During the year 1920 we exported $1,901,593 worth, and we imported $675,000 worth. Not only that, but the importations for the nine months ending March, 1922, indicate that the importations are not increasing at all.

Mr. BROUSSARD. Is not the Senator mistaken as to the year?

Mr. WALSH of Montana. I think not. These are the importations for 1920.

Mr. BROUSSARD. I think the Senator said 1922. As I see it in the summary, it is 1921.

Mr. WALSH of Montana. The summary says 1921; but I have before me the monthly summary of foreign commerce, which discloses that for the nine months ending with the month of March, 1922, the importations were 84,000 tons, making about 9,000 tons per month, or about 100,000 tons for the entire year, which is practically the same for the nine months of the year 1921.

I notice by the hearings that the committee was induced to put a duty upon this commodity upon the representation that

large importations of this commodity were coming in from Germany. Again Germany seems to be the dangerous source of supply of this commodity. Predictions were made that the market would be overwhelmed by importations from Germany. Those predictions have not been fulfilled, because the importations are falling off instead of increasing. The importations for the nine months ending with the month of March, 1921, were 2,073,000 hundred-pound packages, and for 1922, 1,684,000, a falling off of some 300,000 packages.

Mr. WILLIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Ohio?

Mr. WALSH of Montana. I yield.

Mr. WILLIS. I understood the Senator to say that it was his information that the importations from Germany were falling off. Did I correctly understand him?

Mr. WALSH of Montana. I did not intend to say from Germany; but the total importations are falling off.

Mr. WILLIS. I happen to have the figures of the importations from Germany. In 1919 there were 8,000,000 pounds imported; in 1920 there were 47,000,000 pounds; in 1921, the latest figures I have been able to get, there were 82,000,000 pounds; so it is very rapidly increasing.

Mr. WALSH of Montana. Will the Senator now give us the total importations?

Mr. WILLIS. I have not those figures before me. The matter to which I was referring was the matter referred to by the Senator from Montana.

Mr. WALSH of Montana. It makes no difference where the importations came from; the question is, What were the total importations?

Mr. WILLIS. If the Senator desires the figures as to the importations from the various countries, I have not gone over them, but he will find them in the hearings, about page 1316, if he has the hearings before him. Those hearings show the importations from the various countries, if the Senator desires to use them.

Mr. WALSH of Montana. It does not make any difference where the importations come from.

Mr. WILLIS. Of course I do not agree with the Senator about that. I think it makes quite a good deal of difference.

Mr. WALSH of Montana. The fact is that during the nine months ending March, 1921, the importations were 2,073,000 tons; and during 1922, for the nine months ending March, they were only 1,684,000 tons. But it does not make any difference what they are. The fact is that they constitute only a little over 1 per cent of the domestic production.

The duty is also asked for the purpose of taking care of the freight rate. The largest sources of supply are, of course, Michigan and New York; at least, for the consumption on the Atlantic seaboard. It would appear that the importations from Europe are for consumption along the Atlantic seaboard, and it is simply a question of the freight rates; that is to say, the freight by water from Germany enables them to get the sale upon the Atlantic seaboard, so that they are able to take the market to the extent of practically 1½ per cent. That is the justification for the imposition of a duty of 20 cents per hundred pounds on salt in packages and of 16 cents per hundred pounds on salt in bulk.

What does that mean ad valorem? The average foreign price of salt in packages during the year 1921 was 43 cents. A duty, therefore, of 20 cents per 100 pounds is just a little less than 50 per cent ad valorem duty on salt. The average foreign value in 1921 of salt in bulk—and, of course, that is the way it is used in manufacture and for live stock—was 18 cents per 100 pounds. It is proposed to impose a duty of 16 cents per 100 pounds, which, by easy calculation, is something over 80 per cent ad valorem.

I do not care to comment on these figures. If there is any Senator who cares to justify a duty of that character and of that enormous amount upon so necessary an article of food, as well as of manufacture, I am perfectly willing to yield the floor to him.

Mr. WILLIS. Mr. President, I desire to make one or two brief observations relative to matters touched upon by the Senator from Montana. In the first place, I think the Senator did not go fully into the figures when he made the statement about the comparatively negligible importations. I have before me the tariff hearings and refer just now to page 1316. First, let us refer to the salt imported from England. It will be known that the salt imported from England is of a high grade variety, most of it fine table salt. The figures show that in 1918 there were 34,000,000 pounds imported, a slight falling off in the next year to 18,000,000 pounds, but in 1920 it leaped up to 44,000,000 pounds. There is no decrease evidenced there. It is the fine high-grade table salt, which, of course, requires in its production the largest amount of labor.

On the next page, if the Senator has it before him, we find the salt imported from Spain. In 1918 there were 10,000,000 pounds; in 1919, 55,000,000 pounds; and in 1920, 65,000,000 pounds. There is evidently no decrease there.

Further down on the page is shown the salt imported from the Dutch West Indies, which is largely a very coarse variety of salt, sun evaporated, 4,000,000 pounds in 1918, 2,000,000 pounds in 1919, but increasing to 20,000,000 pounds in 1920. From the British West Indies there were 25,000,000 pounds in 1918, 41,000,000 pounds in 1919, and 74,000,000 pounds in 1920. The tendency is the same everywhere, to increase the importation of that which we ought to produce and can produce in this country.

Now, it has been said that it does not make any difference where this product comes from. I think it makes a very considerable difference whence it comes, because in very many of these great industrial transactions it must be evident that Germany is and is to be our very strong competitor. Let us see what the figures are touching the importations from Germany. In 1914 there were 4,000,000 pounds. For obvious reasons it fell off to 1,800,000 pounds in 1918 and down to a little over 1 ton in 1916, but in 1919 it had increased to 6,600,000 pounds, in 1920 to 47,600,000 pounds, the next year almost doubling to 82,000,000 pounds.

Mr. HARRISON. Mr. President, may I ask the Senator a question?

Mr. WILLIS. Certainly.

Mr. HARRISON. What percentage of the salt produced in the United States comes from Ohio?

Mr. WILLIS. I am not able to answer that question. I could get the information for the Senator, but I do not think that information would be important on this question, because I am not taking a position upon this or upon any other question because the article happens to be produced in the State that I have the honor in part to represent. My vision takes in the great State of Mississippi.

Mr. HARRISON. I hope the Senator does not think by my question that I am even insinuating that. I am sure the Senator would not. He is the exception to the rule in this case, but I am curious to know, because if I understand correctly salt has always come in free or at least it did come in free under the present law.

Mr. WILLIS. I can answer the Senator's question now.

Mr. HARRISON. It is something that is of common use and is a prime necessary of life, and I am wondering whether more salt comes from Utah than from Ohio. I thought the Senator might answer the question.

Mr. WILLIS. I have had the figures placed before me and I shall be very glad to give the Senator that information and to have it myself.

According to the Tariff Information Survey, in the year 1918 there were 2,130,000 tons came from the State of New York, 2,400,000 tons from the State of Michigan, and 1,089,000 tons from the State of Ohio, with very considerable quantities from Kansas, California, West Virginia, and Texas. The Senator referred to Utah. Utah does not seem to be a very prominent factor in salt production, having produced only 194,000 tons, and the other States together 390,000 tons, making a total production of 7,200,000 tons.

I regret to learn that Ohio is not the leading State in the production of salt but only third or fourth. But, as the Senator understands—and I agree with him—we do not care whether it is produced in this State or that State; we are interested in the welfare of the whole country.

The point I was proceeding to make was the fact that these importations are increasing, and they are increasing most rapidly from the country which is our most dangerous competitor. Why is it the most dangerous? If Senators will refer to the hearings at page 1319, they will find there a statement as to wages in Germany. In the evaporated-salt plants the rate of wages is 4 to 5 marks per hour. If anybody knows what the mark is at the present rate of exchange, he can figure that out. In the rock-salt plant the rate is 4 to 4½ marks above ground and 5 marks per hour below ground.

But, getting the question of wages in a more concrete form, I refer the Senator to page 1234 of the hearings, where it will be observed that the wages paid in our mines run from 40 to 50 cents per hour. Wages paid in Germany run about 75 cents a day, while our men are paid $5 a day. In other words, we are paying about six times the rate of wages that is paid in Germany. It is significant that the country from which the importations are increasing most rapidly is Germany, where the rate of wages is exceedingly low.

In answer to the Senator from Montana I call attention to the fact that the importations from Germany were increasing while the prices were constantly decreasing. In 1919 the salt was laid down at New York at $1.24 per hundred pounds, but the 47,000,000 pounds brought here in 1920 came in at 30 cents per hundred pounds, and likewise in 1921.

Mr. President, I do not desire to take more time on this subject. It must be perfectly obvious to anyone who will think of and look into the question that if we are to maintain in this country the scale of wages which we have heretofore maintained and are to continue the operation of this industry we must have a reasonable degree of protection. This is not a small industry. There are about 100 concerns in the country interested in the production of salt. There are over five or six thousand employees, and the annual wages paid run into the millions.

I think the committee amendment ought to be agreed to.

Mr. BROUSSARD. Mr. President, I think the question asked by my friend the Senator from Mississippi has demonstrated exactly the point I want to make. This is a cheap article of food and the freight rates absolutely control its distribution. The salt manufactured in New York or Ohio or Louisiana can not invade the territory of the salt from Utah. As a matter of fact, all salt is sold f. o. b. the mines for less than $5 per ton. The transportation charges to the Atlantic seaboard amount to about $7 per ton. We find on the seaboard ships coming in carrying rock salt as ballast and they are selling that salt much more cheaply than we can dispose of ours at the mines.

The result is that unless protection is afforded to the mines which are in operation and which, because of their geographical location and the transportation charges are limited to a certain territory, we must make up our minds that the money invested in that industry will be a total loss and that the mines will stop operation.

The item of 20 cents per hundred pounds on salt will not affect the price of salt, as I see it, in the interior of the country, because the transportation charges are prohibitive. It will save from annihilation, however, the salt mines which are near the Gulf coast, and whose territory heretofore has been the Atlantic seaboard. It is for that reason that I do not believe, for instance, that anybody in the Middle West or in the West will have the price of salt increased one copper per ton because of the duty proposed to be imposed here. The effect of it will be to put a duty upon the salt which comes in as ballast, produced with very cheap labor and sent across the Atlantic at possibly one-tenth of the rate that we have to pay the railroads of this country to transport it a much shorter distance.

We all have complained about the transportation charges and the way they have increased since the pre-war period. If we are producing an article that brings twenty or thirty or forty dollars per ton the transportation is not such a material item as is the transportation of an article which brings at the mine only $5 per ton. There the transportation is more important in the distribution of the article than is the cost of production.

Whenever we throw our ports open for free salt, the mines which are located near the Atlantic seaboard must entirely close down, because there is then no market for their product in the East, and they can not compete with the mines in Utah or Michigan. We have only a limited territory, and the transportation charges make it absolutely impossible to invade the territory of other mines. For that reason, Mr. President, I think the amendment reported by the Committee on Finance should be agreed to.

Mr. WALSH of Montana. Mr. President, this question, as I have said, and as the Senator from Louisiana [Mr. BROUSSARD] has elucidated, is very much more a question of freight rates than it is of the difference in the rate of wages as urged by the Senator from Ohio [Mr. WILLIS]; but the conclusion to which the Senator from Louisiana arrives can not be admitted at all.

Of course, it does not make a particle of difference to the consumer of salt in the intermountain region whether there is a duty on this commodity or not. That region does not get its supply of salt from the Atlantic seaboard nor from the mines in New York or Michigan. Its supply comes from Salt Lake or from the Pacific coast, but principally from Salt Lake. So likewise the Pacific coast is not interested in the question.

On the other hand, Mr. President, the foreign salt can not invade the interior at all; it can only reach the markets along the Atlantic seaboard, and it can not go beyond there. The freight rates are prohibitive; the freight rates afford a complete protection to the salt supply of New York and Michigan.

The important thing, however, Mr. President, is that the duty does affect the crowded industrial centers of the country, Boston and other manufacturing towns of New England, New York, and Philadelphia and the other places along the Atlantic coast; and it not only affects the cost of salt for household uses but salt, as is well known, enters into the manufacture of multitudes of articles, chemical and otherwise, as well as into the preparation of unlimited quantities of food of one kind or another. There it becomes operative; and there it will operate of necessity to increase the price which salt would otherwise command in that market.

What reason is there to apprehend a terrific influx, an overwhelming inundation, of salt from Germany? The conditions in Germany are, of course, slightly abnormal just at present but they are going eventually, and doubtless in a short time, to be very much as they were prior to the war, at least, so far as capacity to produce is concerned. Nobody need very greatly fear that wages are going to be permanently low in Germany or lower, at any rate, than they were in the pre-war times. The salt industry in the United States encountered that opposition prior to the war, and let us see what it did. In 1900 the production of salt in the United States was 3,000,000 tons; it increased to 6,000,000 tons in 1916, and to nearly 7,000,000 tons in 1920.

However, Mr. President, none of the Senators who have spoken about this matter has got around the proposition that we export more of the product now than we import, nor have they got around the fact, which is indisputable from the evidence that is before us, that the expected inundation from Germany has not ensued, the importations for 1921, at least, for the nine months ending with the month of March, 1921, being very substantially less than during the same period for 1920.

Mr. CALDER. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from New York?

Mr. WALSH of Montana. I yield.

Mr. CALDER. The figures which I have, Mr. President, seem to indicate that for the first three months of this calendar year 1922, our imports were 84,000 tons, as against 103,000 tons for the first nine months of last year.

Mr. WALSH of Montana. No; the Senator is quite in error about that. I have the figures right here, and I think I can give them to him.

Mr. WILLIS. Mr. President——

Mr. WALSH of Montana. I shall have first to answer the Senator from New York [Mr. CALDER] before yielding to the Senator from Ohio.

The importations of salt for the first nine months ending with the month of March, 1921, were 2,073,289 hundred-pound packages; for the first nine months of 1922 they were 1,684,042 hundred-pound packages, which makes 84,000 tons for nine months.

Mr. WILLIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana now yield to the Senator from Ohio?

Mr. WALSH of Montana. I yield.

Mr. WILLIS. If the Senator from Montana has completed his answer to the Senator from New York, I wish to supplement his figures touching the importations of salt for 1921. I think I can vouch for the accuracy of these figures. I once before quoted them, but I think they are in point just now in the remarks of the Senator from Montana.

The importations of salt from Germany in 1919, to be exact, were 6,613,800 pounds; in 1920 they were 47,669,300 pounds. There was an increase of about 500 or 600 per cent in the year. In 1921 the imports of salt from Germany were 82,712,743 pounds—double the amount of the preceding year.

In the first month of the current year 20,000,000 pounds of salt arrived at the Atlantic coast ports. I have no later figures, but in the first month of this year 20,000,000 pounds came in; in other words, in one month of this year, nearly four times as much salt came in as came in during the whole year of 1919. So it must be apparent that importations of salt from Germany are increasing very rapidly.

Mr. WALSH of Montana. That is getting around the figures which I have given here. I should like to reply now to the Senator from New York. I have gone over the figures again, and for nine months—not three months, but nine months—ending March, 1922, the imports were 84,000 tons.

Mr. WADSWORTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from New York?

Mr. WALSH of Montana. I yield.

Mr. WADSWORTH. Surely, the Senator does not contend that the importations are not increasing?

Mr. WALSH of Montana. Yes; the importations are not increasing. The importations for the year 1922 were 300,000 hundred-pound packages less than for 1921.

Mr. WADSWORTH. For 1922?

Mr. WALSH of Montana. Yes; for 1922 they were 300,000 hundred-pound packages less than for 1921; that is for nine months, comparing nine months of 1921 with nine months of 1922.

Mr. WADSWORTH. Is the Senator speaking of the calendar year?

Mr. WALSH of Montana. No; the fiscal year, of course, the computation being made down to the month of March for the nine months previous, which would indicate, of course, that the figures are for the nine months beginning from the fiscal year on July 1.

Mr. WADSWORTH. There is very apt to be considerable confusion if some Senators are quoting the figures for the fiscal year and other Senators for the calendar year.

Mr. WALSH of Montana. I am quoting the figures supplied by the Department of Commerce.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Utah?

Mr. WALSH of Montana. Yes.

Mr. SMOOT. Let us take the month of March, 1921, and the month of March, 1922, and see whether the imports are increasing or not. In the month of March, 1921, the importations were——

Mr. WALSH of Montana. That has been stated, I think, correctly; the importations of the month of March, 1921, were only 84,000 hundred-pound packages, and for the month of March, 1922, they were 150,000 hundred-pound packages.

Mr. SMOOT. That shows that the imports nearly doubled.

Mr. WALSH of Montana. Taking those two months alone, the imports were more in 1922 than in 1921, but when we take the whole nine months of 1921 and 1922 and compare them with the nine months of 1921 it is apparent that the importations have fallen off.

Mr. CALDER. I have not all the figures the Senator has been quoting, but in every one of the first four months of the present calendar year the imports were nearly double those in the corresponding four months of the calendar year 1921.

Mr. WALSH of Montana. If the Senator will compare the figures for the preceding five months, of necessity the imports must have been very much less, because the aggregate is as I have given it, and I have the figures right before me. So that the apprehended inundation of salt from Germany does not seem to have come on schedule time.

Mr. LODGE. Mr. President, am I right in thinking that returns only for four months of 1922 have been completed, including January, February, March, and April? I presume the department has prepared not a partial account for the month of May. The Senator referred a number of times to nine months of 1922. Of course there have not been as yet nine months in 1922.

Mr. WALSH of Montana. I referred, of course, to the nine months ending with the month of March, 1922, and beginning with the 1st of July, 1921—nine months of the fiscal year.

Mr. LODGE. I was listening, and I understood the Senator to refer to four months of 1922.

Mr. WALSH of Montana. Some Senators have said something about that, but the Department of Commerce furnished the figures in the way I have given them, and in no other way.

So, Mr. President, I can not conceive that Senators are going to impose any such duty as is suggested, of 20 cents a hundred pounds in packages and 16 cents a hundred in bulk. I think that, so long as we export more of the product than we import, there is scarcely a justification for putting a duty on the commodity ranging from 50 per cent to 80 per cent. In any case and under any circumstances and admitting anything that anybody can say about it, it must be conceded that the rates are utterly too high, and, accordingly, I move that the numerals "20," in line 8, be stricken out and the numeral "5" be substituted therefor.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Montana to the committee amendment. The Secretary will state the amendment to the amendment.

The ASSISTANT SECRETARY. In the committee amendment, on page 29, line 8, before the word "cents," it is proposed to strike out "20" and insert "5."

Mr. WALSH of Montana. I ask for the yeas and nays on the amendment.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as before, I vote "nay."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as to the transfer of my pair, I vote "yea."

Mr. KELLOGG (when his name was called). I transfer my pair with the senior Senator from North Carolina [Mr. SIMMONS] to the senior Senator from Minnesota [Mr. NELSON], and will vote. I vote "nay."

Mr. LODGE (when his name was called). I transfer my pair with the Senator from Alabama [Mr. UNDERWOOD] to the Senator from Maryland [Mr. WELLER], and will vote. I vote "nay."

Mr. McCUMBER (when his name was called). I transfer my pair with the junior Senator from Utah [Mr. KING] to the senior Senator from Maryland [Mr. FRANCE], and will vote. I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as on the previous roll call as to the transfer of my pair, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as hitherto, I vote "nay."

The roll call was concluded.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

The result was announced—yeas 12, nays 42, as follows:

YEAS—12.

Caraway	Harrison	Kendrick	Stanley
Fletcher	Heflin	Robinson	Swanson
Harris	Jones, N. Mex.	Sheppard	Walsh, Mont.

NAYS—42.

Ball	Gooding	McKinley	Rawson
Brandegee	Hale	McLean	Shortridge
Broussard	Johnson	McNary	Smoot
Bursum	Jones, Wash.	Moses	Spencer
Calder	Kellogg	New	Sutherland
Capper	Keyes	Newberry	Townsend
Colt	Ladd	Nicholson	Wadsworth
Curtis	Lenroot	Oddie	Watson, Ind.
Elkins	Lodge	Pepper	Willis
Ernst	McCormick	Phipps	
Frelinghuysen	McCumber	Ransdell	

NOT VOTING—42.

Ashurst	France	Norris	Stanfield
Borah	Gerry	Overman	Sterling
Cameron	Glass	Owen	Trammell
Crow	Harreld	Page	Underwood
Culberson	Hitchcock	Pittman	Walsh, Mass.
Cummins	King	Poindexter	Warren
Dial	La Follette	Pomerene	Watson, Ga.
Dillingham	McKellar	Reed	Weller
du Pont	Myers	Shields	Williams
Edge	Nelson	Simmons	
Fernald	Norbeck	Smith	

So the amendment of Mr. WALSH of Montana to the committee amendment was rejected.

Mr. HEFLIN. Mr. President, I never thought that the Republican Party would dare undertake to put salt—table salt, sack salt, and every kind of salt—upon the tax list. Through the years behind us it has been tax free—on the free list. The Bible speaks about salt having lost its savor, but under the reign of the Republican Party salt has lost its place upon the free list. Every man who kills a chicken, who butchers a pig or a lamb or a kid or a hog or a yearling, must have salt.

Mr. President, salt is something that we need and must have all the time. Hereafter every child, every boy, girl, man, or woman who takes up a saltcellar on the table and goes to season his or her food will say, "Think of it, the Republican Congress has placed a tax upon salt."

I saw you to-night, by a record vote, take salt off the free list and place a tariff tax of 40 cents a sack, or $4 per ton, upon it. Many men in the cattle business and hog business and sheep and goat business use many tons of salt every year, and you have increased their expense bill by your vote to-night. The cattleman with his great herds feeding this night on the western plains and the live-stock man everywhere, who uses salt to meet the needs of his cattle, horses, and mules, has been burdened by the vote that you cast a moment ago to place a tax upon salt. Nobody will escape the tax that you have just laid upon the backs of the consuming masses of America.

Oh, Mr. President, if the people out yonder could be here and see some of the Senators on the other side smile and some of them looking indignant at the suggestion that the people have any rights at all in these matters, they would yearn for election day, when they can visit upon them at the polls the punishment that they deserve. Think of it! The Senator from Montana [Mr. WALSH] has shown to-night by the figures in the record that we export more salt—to make it plain to some of my Republican friends on the other side, we send that salt

out of the country and sell it abroad—more of it than comes in from all the countries of the earth, and yet, I repeat, I saw you this night lay a tax of 40 cents a sack, $4 a ton, upon all the salt that will be consumed by the people of the United States.

Well, you may be doing this, Senator, upon the theory that you had better be getting while the getting is good, because your time for this sort of burglarizing business is short.

I was talking to-night to the able and distinguished Senator from New Mexico [Mr. JONES], who has made such an able and gallant fight against this terrible onslaught upon the American people. I said to him: "It reminds me of a man, who has been knocked down on the roadside and is dazed, and when he comes to and is regaining his senses he finds the robbers going in his trouser pockets and in his vest pockets and in his coat pockets, filching everything that he has, and he rises with what little strength he has left and fights to free himself from the clutches of those who struck him down and are seeking to rob him of his last penny." That is what you are doing to the American public, dazed, lying prostrate because of the feeble condition in which you left it with your murderous deflation policy. You come now with your band of tariff marauders, and you are going through their pockets and taking the little they have left, and I saw you to-night seeking to filch from them the last penny by taxing the salt that goes into their bread.

Senators, I know that some of you do not know how to appreciate what I am talking about, but the mass of the people out yonder, whose sense of honor, justice, and patriotism make this Nation the glorious thing that it is, know and understand; and they will understand more and more as the days come and go, and the daily CONGRESSIONAL RECORD finds its way into the precincts of 34,600 readers in the various sections of the country.

Some of the press is kind enough to give the facts to the country, although you have a great deal of it that you have bought and paid for, just like a man would buy a sheep in the market place, and you have your hired agents who suppress the truth and undertake to deceive the people as to what is really happening in Congress. Without any regard to the right or wrong of the question some of them do your bidding day in and day out. How long will the people submit to this kind of thing in the Capitol of the Nation?

The press ought to be free and fair and give the facts about public questions to the people of the country. It is enough to make the blood of a patriot boil to see how deception is practiced and the truth suppressed by some papers. I wish the people could know how hard and how ably the Senator from North Carolina [Mr. SIMMONS], the Senator from New Mexico [Mr. JONES], the Senator from Utah [Mr. KING], the Senator from Florida [Mr. FLETCHER], and the Senator from Montana [Mr. WALSH], and the minority leader, Senator UNDERWOOD, are fighting to defeat this tariff monstrosity. What is this Republic? For what was it ordained? Was it to be a place where millions of people would be scattered over the country to be fleeced by predatory interests as a shepherd shears his sheep? Was that the purpose of it, or was it the purpose of the founders of the Republic to see that justice was done to the citizen and fair play meted out to him, and that all should have a fair chance in the struggle for existence?

This was its high purpose, and by the help of God we will hold it to its true course.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

Mr. HARRISON. I ask for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. KELLOGG (when his name was called). Making the same announcement as to my pair and its transfer, I vote "yea."

Mr. MCKINLEY (when his name was called). I have a permanent pair with the junior Senator from Arkansas [Mr. CARAWAY] which I transfer to the junior Senator from Delaware [Mr. DU PONT], and vote "yea."

Mr. NEW (when his name was called). Making the same announcement as on the previous vote as to the transfer of my pair, I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as on the last roll call, I vote "yea."

The roll call was concluded.

Mr. COLT. Making the same announcement that I did before with regard to my pair, I vote "yea."

Mr. LODGE. Making the same announcement as to the transfer of my pair as before, I vote "yea."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH]; and

The Senator from Wyoming [Mr. WARREN] with the Senator from North Carolina [Mr. OVERMAN].

The result was announced—yeas 40, nays 11, as follows:

YEAS—40.

Ball	Frelinghuysen	McCormick	Ransdell
Brandegee	Gooding	McCumber	Rawson
Broussard	Hale	McKinley	Shortridge
Bursum	Johnson	McNary	Smoot
Calder	Jones, Wash.	Moses	Spencer
Capper	Kellogg	New	Sutherland
Colt	Keyes	Newberry	Townsend
Curtis	Ladd	Oddie	Wadsworth
Elkins	Lenroot	Pepper	Watson, Ind.
Ernst	Lodge	Phipps	Willis

NAYS—11.

Fletcher	Heflin	Robinson	Swanson
Harris	Jones, N. Mex.	Sheppard	Walsh, Mont.
Harrison	Kendrick	Stanley	

NOT VOTING—45.

Ashurst	France	Norbeck	Stanfield
Borah	Gerry	Norris	Sterling
Cameron	Glass	Overman	Trammell
Caraway	Harreld	Owen	Underwood
Crow	Hitchcock	Page	Walsh, Mass.
Culberson	King	Pittman	Warren
Cummins	La Follette	Poindexter	Watson, Ga.
Dial	McKellar	Pomerene	Weller
Dillingham	McLean	Reed	Williams
du Pont	Myers	Shields	
Edge	Nelson	Simmons	
Fernald	Nicholson	Smith	

So the amendment of the committee was agreed to.

The next amendment of the committee was, on page 29, line 9, to strike out "7" and insert "16," so as to read:

In bulk, 16 cents per 100 pounds.

Mr. WALSH of Montana. I move to amend by substituting the numeral "2" for the numeral "16" in line 9.

The amendment to the amendment was rejected.

The amendment was agreed to.

EXECUTIVE SESSION.

Mr. LODGE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After eight minutes spent in executive session the doors were reopened.

LANDS AT CAMP BENNING, GA.

Mr. BROUSSARD. Mr. President, I ask unanimous consent for the present consideration of the bill (S. 2853) for the relief of persons suffering damage by reason of proceedings for the condemnation of land for Camp Benning, Ga.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Claims with amendments.

The amendments were, in line 3, after the words "the sum of," to strike out "$40,717" and to insert "$49,901"; and, in line 11, after the word "determine," to strike out the period and to insert a comma and "including claims of John T. Davis and the W. C. Bradley Co. for losses suffered by reason of inability of these parties to remove their improvements from lands transferred by deed to the United States, although expressly granted such right of removal by the prior contracts of sale," so as to make the bill read:

Be it enacted, etc., That the sum of $49,901, or so much thereof as may be necessary, be, and the same is hereby, appropriated, out of any money in the Treasury not otherwise appropriated. The Secretary of the Treasury is hereby directed to pay out the same to such persons as the Secretary of War may designate, who were damaged by circumstances arising out of proceedings for the condemnation of certain lands near Camp Benning, Ga., and in such amounts as the Secretary of War may determine, including claims of John T. Davis and the W. C. Bradley Co. for losses suffered by reason of inability of these parties to remove their improvements from lands transferred by deed to the United States, although expressly granted such right of removal by the prior contracts of sale.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RECESS.

Mr. LODGE. I move that the Senate take a recess, the recess being under the order previously made, until to-morrow at 11 o'clock a. m.

The motion was agreed to; and (at 10 o'clock and 8 minutes p. m.) the Senate took a recess until to-morrow, Friday, May 19, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate May 18 (legislative day of April 20), 1922.

SUPERINTENDENT OF LIBRARY BUILDING AND GROUNDS.

Mrs. Harriet DeK. Woods, of Illinois, to be Superintendent of the Library Building and Grounds, vice Frank L. Averill, resigned, effective May 31, 1922.

UNITED STATES ATTORNEYS.

Thomas Williamson, of Illinois, to be United States attorney, southern district of Illinois, vice Edward C. Knotts, resigned, effective May 20, 1922.

A. V. McLane, of Tennessee, to be United States attorney, middle district of Tennessee, vice Lee Douglas, resigned, effective June 1, 1922.

APPOINTMENTS BY TRANSFER IN THE REGULAR ARMY.

ADJUTANT GENERAL'S DEPARTMENT.

Col. Archibald Campbell, Coast Artillery Corps, with rank from July 1, 1916.

Col. Albert Eugene Saxton, Cavalry, with rank from July 1, 1920.

Col. John Parsons Wade, Cavalry, with rank from July 1, 1920.

Col. Frederick Worthington Lewis, Infantry, with rank from July 1, 1920.

Col. Russell Creamer Langdon, Infantry, with rank from July 1, 1920.

Col. Harry Herbert Tebbetts, Infantry, with rank from July 1, 1920.

Lieut. Col. William Albert Kent, Infantry, with rank from July 1, 1920.

Lieut. Col. John Overton Steger, Coast Artillery Corps, with rank from July 1, 1920.

Lieut. Col. William Gaither Murchison, Infantry, with rank from December 23, 1920.

Maj. Clark Lynn, Infantry, with rank from July 1, 1920.

Maj. Irving Joseph Phillipson, Infantry, with rank from July 1, 1920.

Maj. Richard Rembert Pickering, Infantry, with rank from July 1, 1920.

Maj. Sherburne Whipple, Infantry, with rank from July 1, 1920.

Maj. Thomas Hixon Lowe, Infantry, with rank from July 1, 1920.

Maj. Byard Sneed, Infantry, with rank from July 1, 1920.

Maj. Frank Keet Ross, Cavalry, with rank from July 1, 1920.

Maj. Dupont Bayard Lyon, Infantry, with rank from July 1, 1920.

POSTMASTERS.

ARIZONA.

Samuel Simpson to be postmaster at Sonora, Ariz., in place of C. R. Rule, removed.

ARKANSAS.

Isaac J. Morris to be postmaster at Mountain Home, Ark., in place of M. D. Pattillo. Incumbent's commission expired January 12, 1921.

CALIFORNIA.

Rexford E. Morton to be postmaster at Dyerville, Calif. Office became presidential April 1, 1922.

GEORGIA.

Edwin L. Orr to be postmaster at Dublin, Ga., in place of V. L. Stanley. Incumbent's commission expired February 5, 1922.

Robert L. Ehman to be postmaster at Stone Mountain, Ga., in place of Vivian Humphreys. Incumbent's commission expired February 18, 1922.

ILLINOIS.

Jacob A. Hirsbrunner to be postmaster at Olivet, Ill. Office became presidential April 1, 1922.

INDIANA.

Percie M. Bridenthall to be postmaster at Leesburg, Ind. Office became presidential January 1, 1921.

Moody I. Massena to be postmaster at Medora, Ind. Office became presidential January 1, 1921.

Ira N. Compton to be postmaster at Hamlet, Ind., in place of H. C. Harness. Incumbent's commission expired March 8, 1922.

Chester M. Davis to be postmaster at St. Paul, Ind., in place of J. T. Cuskaden. Incumbent's commission expired January 24, 1922.

Edith A. Wetzler to be postmaster at Sunman, Ind., in place of V. W. Bigney, deceased.

KANSAS.

Minnie F. Miller to be postmaster at Barnard, Kans. Office became presidential October 1, 1920.

KENTUCKY.

Arta Henderson to be postmaster at Eubank, Ky. Office became presidential April 1, 1921.

MAINE.

Willis H. Allen to be postmaster at Columbia Falls, Me. Office became presidential January 1, 1921.

MICHIGAN.

Elmer L. Dalton to be postmaster at Leland, Mich. Office became presidential January 1, 1922.

Grace A. Grinnell to be postmaster at Centerville, Mich., in place of F. J. Kruger, resigned.

MINNESOTA.

William Perbix to be postmaster at Hopkins, Minn., in place of P. J. McCormick. Incumbent's commission expired January 24, 1922.

MISSISSIPPI.

Herbert B. Miller to be postmaster at Gloster, Miss., in place of O. O. Conerly. Incumbent's commission expired January 24, 1922.

MISSOURI.

Nellie Tomlinson to be postmaster at Morley, Mo. Office became presidential January 1, 1921.

NEW YORK.

Homer H. Thomas to be postmaster at Rushford, N. Y. Office became presidential January 1, 1921.

Charles H. Strong to be postmaster at Washingtonville, N. Y., in place of Frank Tamany. Incumbent's commission expired January 24, 1922.

OHIO.

Karl K. Witte to be postmaster at Elmore, Ohio, in place of A. G. Witte. Incumbent's commission expired January 31, 1922.

OREGON.

Herbert R. Satchwell to be postmaster at Shedd, Oreg. Office became presidential April 1, 1921.

PENNSYLVANIA.

Charles H. Myers to be postmaster at Wrightsville, Pa., in place of W. B. Reisinger. Incumbent's commission expired March 27, 1922.

RHODE ISLAND.

Wilfred R. Easterbrooks to be postmaster at Wakefield, R. I., in place of J. A. Wright. Incumbent's commission expired March 21, 1922.

SOUTH CAROLINA.

Lillian W. Ratchford to be postmaster at Hickory Grove, S. C. Office became presidential April 1, 1921.

TENNESSEE.

John S. Wisecarver to be postmaster at Mohawk, Tenn. Office became presidential October 1, 1921.

Jacob L. Shoun to be postmaster at Kingsport, Tenn., in place of J. E. Nelms, removed.

TEXAS.

Hazel B. Thomas to be postmaster at Gause, Tex. Office became presidential April 1, 1921.

James F. Rodgers to be postmaster at Harlingen, Tex., in place of H. H. Burchard. Incumbent's commission expired March 8, 1922.

WASHINGTON.

Charles N. Stutsman to be postmaster at Manson, Wash. Office became presidential April 1, 1922.

WISCONSIN.

Louis Baumgartner to be postmaster at St. Nazianz, Wis. Office became presidential April 1, 1922.

Aaron R. White to be postmaster at Wonewoc, Wis., in place of G. W. Bishop, resigned.

CONFIRMATIONS.

Executive nominations confirmed by the Senate May 18 (legislative day of April 20), 1922.

POSTMASTERS.

KENTUCKY.

Luther P. Maxey, Adairville.

James L. Blair, West Liberty.

MINNESOTA.

Will N. Bronson, Evansville.
Clyde W. Long, Osakis.
Henry M. Burtness, Spring Grove.
Anna O. Rokke, Strandquist.

MONTANA.

Margaret H. Lehmicke, Bigfork.
John E. Cameron, Bigtimber.
John C. Bebb, Lewiston.
William D. Tovey, Wisdom.

NEBRASKA.

Frank R. Morey, Gurley.

NEW JERSEY.

Frank E. Smith, Ridgefield Park.

SOUTH CAROLINA.

Paul F. W. Waller, Myers.

VIRGINIA.

William C. Crews, Madison Heights.
William R. Kindig, Stuarts Draft.

HOUSE OF REPRESENTATIVES.

THURSDAY, *May 18, 1922.*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O Lord, Thou art God, to whom yesterday, to-day, and to-morrow are one. Not by searching can we find Thee. Yet we offer Thee the tributes of our thankful hearts that there is a power divinely human and humanly divine that presides over time and life. If only in human thought there were confidence and hope, how vain and impoverished our longings and our visions. But Thou art God of infinite estate. O supply us with adequate knowledge and wisdom that our lives may be replete with usefulness and happiness. Temper our wills, harmonize our thoughts, and restrain our affections. Bless all institutions which express the ideals of our Republic, especially those which succor the poor and the unfortunate. Through Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

EXTENSION OF REMARKS.

Mr. ASWELL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an article by the gentleman from Alabama, Judge TYSON, on the constitutional rights of hotels to discriminate between their patrons.

The SPEAKER. The gentleman from Louisiana asks unanimous consent to extend his remarks in the RECORD by publishing an article by Judge TYSON on the right of hotel proprietors to discriminate in their patrons. Is there objection?

There was no objection.

The article is as follows:

[From the Birmingham Age-Herald, Sunday, April 3, 1921.]

(By Hugh W. Roberts, Washington bureau the Age-Herald, 500 Davidson Building.)

WASHINGTON, April 2.—(Special.)—At last there comes a man to Washington with sufficient temerity to beard the lion in the den.

As a result, Senator Penrose, the Republican boss, whose procedure has been characterized by arrogance and contempt for conventional opinion, must reckon with Judge JOHN R. TYSON, of Montgomery, who, on April 11, will take the oath of office as a Representative from Alabama.

In a statement issued to-day, Judge TYSON not only proves fallacious the legal argument of Senator Penrose that the negro is entitled to public entertainment and education on a basis of equality with the white man, but denounces as an absurdity the afterthought of the Senator that, despite his views, he does not believe in social equality.

PENROSE EFFUSIVE.

Some days ago Senator Penrose, in most fulsome language, welcomed pompous negro celebrities on the occasion of their visit to Washington. In the course of his speech he declared that the negro must be accorded equal privileges in hotels, cafés, restaurants, educational institutions, and places of amusement, and that such rights must be sustained by legislation providing heavy penalties for their denial.

Judge TYSON points out that the Constitution does not require a proprietor to entertain anyone who would be offensive to his other guests, and adds that the Supreme Court of Pennsylvania has held on two grounds the justice of a company in providing separate street car compartments for the races, the two grounds being the right that the company had its property in the public interests.

TYSON TO G. O. P. BOSS.

Says Judge TYSON to Senator Penrose:

"To permit negroes to be educated at white schools would necessarily bring about social intermixture, resulting in amalgamation, which is contrary to the law of races. Social equality can not be established, enforced, or maintained by legislation.

"The statement that Senator Penrose does not stand for social equality in face of the fact that he advocates establishing conditions by penal statutes which would enforce the intermingling of races, brings about a contact necessarily promotive of social associations, and, therefore, equality is an absurdity."

Judge TYSON is a former chief justice of the Supreme Court of Alabama.

RIVERS AND HARBORS.

Mr. DEMPSEY. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. STAFFORD in the chair.

The Clerk read the bill, as follows:

Be it enacted, etc., That the following works of improvement are hereby adopted and authorized, to be prosecuted under the direction of the Secretary of War and supervision of the Chief of Engineers, in accordance with the plans recommended in the reports hereinafter designated:

Pawtucket River, R. I., in accordance with the report submitted in House Document No. 654, Sixty-sixth Congress, second session.

Mamaroneck Harbor, N. Y., in accordance with the report submitted in House Document No. 651, Sixty-sixth Congress, second session, and subject to the conditions set forth in said document.

Harbor of New Rochelle and Echo Bay, N. Y., in accordance with the report submitted in House Document No. 110, Sixty-seventh Congress, first session, and subject to the conditions set forth in said document.

New York and New Jersey Channels, in accordance with the report submitted in House Document No. 653, Sixty-sixth Congress, second session.

Wilmington Harbor, Del., in accordance with the report submitted in House Document No. 114, Sixty-seventh Congress, first session, and subject to the conditions set forth in said document.

Locklies Creek, Va., in accordance with the report submitted in House Document No. 612, Sixty-third Congress, second session, and subject to the conditions set forth in said document.

Waterway connecting Core Sound and Beaufort Harbor, N. C., in accordance with the report submitted in House Document No. 88, Sixty-seventh Congress, first session.

La Grange Bayou, Fla., in accordance with the report submitted in House Document No. 111, Sixty-seventh Congress, first session, and subject to the conditions recommended by the Board of Engineers for Rivers and Harbors as set forth in said document.

Calcasieu River, La., in accordance with the report submitted in House Document No. 974, Sixty-sixth Congress, third session, and subject to the conditions set forth in said document: *Provided*, That no expense shall be incurred by the United States for acquiring any lands required for the purpose of this improvement.

Galveston Channel, Tex., in accordance with the report submitted in House Document No. 693, Sixty-sixth Congress, second session.

Sabine-Neches Waterway, Tex., in accordance with the reports submitted in House Document No. 975, Sixty-sixth Congress, third session, and the supplemental reports submitted by the Chief of Engineers under date of February 25, 1922, and subject to the conditions set forth in said reports: *Provided*, That no expense shall be incurred by the United States for acquiring any lands required for the purpose of this improvement: *Provided further*, That before entering upon the prosecution of the improvements herein authorized, local interests shall guarantee, in a manner satisfactory to the Secretary of War, that the United States will be held free from any claim for damages resulting from the execution of the work hereby authorized.

Tensas River, La., in accordance with the report submitted in House Document No. 95, Sixty-seventh Congress, first session, and subject to the conditions set forth in said document.

Red Lake and Red Lake River, Minn., in accordance with the report submitted in House Document No. 61, Sixty-sixth Congress, first session, and subject to the conditions set forth in said document.

Green Bay Harbor, Wis., in accordance with the report submitted in House Document No. 626, Sixty-fourth Congress, first session.

Milwaukee Harbor, Wis., in accordance with the report submitted in House Document No. 804, Sixty-sixth Congress, second session, and subject to the conditions set forth in said document.

Black Rock Channel and Tonawanda Harbor, N. Y., in accordance with the report submitted in House Document No. 981, Sixty-sixth Congress, third session.

San Diego Harbor, Calif., in accordance with the recommendation of the Board of Engineers for Rivers and Harbors in the report submitted in House Document No. 1000, Sixty-sixth Congress, third session.

Los Angeles Harbor, Calif., in accordance with the report submitted in House Document No. 1013, Sixty-sixth Congress, third session.

San Francisco Harbor, Calif.: The entrance channel, in accordance with the report submitted in House Document No. 124, Sixty-seventh Congress, first session.

Oakland Harbor, Calif., in accordance with the report submitted in House Document No. 144, Sixty-seventh Congress, second session, and subject to the conditions set forth in said document: *Provided*, That no expense shall be incurred by the United States for acquiring any lands required for the purpose of this improvement.

Coos Bay Harbor, Oreg.: Improvement of harbor, including Isthmus Slough, in accordance with the report submitted in House Document No. 150, Sixty-seventh Congress, second session.

Columbia and lower Willamette Rivers, below Portland, Oreg., in accordance with the report submitted in House Document No. 1009, Sixty-sixth Congress, third session, and subject to the conditions set forth in said document.

Willamette Slough, Oreg., in accordance with the report submitted in House Document No. 976, Sixty-sixth Congress, third session, and subject to the condition that local interests contribute the sum of $23,350 toward the cost of the work.

Clatskanie River, Oreg., in accordance with the report submitted in House Document No. 698, Sixty-fourth Congress, first session.

SEC. 2. That the Secretary of War is hereby authorized and directed to modify the plans for the existing works of river and harbor improvement hereinafter set forth and to prosecute the improvement of said

projects in the manner herein directed, or as recommended by the Chief of Engineers in the reports hereinafter designated, as follows:

Beverly Harbor, Mass., in accordance with the report submitted in Rivers and Harbors Committee Document No. 7, Sixty-sixth Congress, third session, and subject to the conditions set forth in said document.

Jamaica Bay, N. Y., and the entrance thereto, in accordance with the progressive project adopted by the river and harbor act approved June 25, 1910, with a view to securing a depth of 30 feet at mean low water as far as Mill Basin, subject to the conditions set forth in House Document No. 1488, Sixtieth Congress, second session.

Waterway from the Mississippi River to the Sabine River, La. and Tex.: The section from Calcasieu River to Sabine River, in accordance with the report submitted by the Chief of Engineers under date of August 13, 1921, and printed in Senate Commerce Committee document.

Mississippi River from the mouth of the Missouri River to Minneapolis, Minn.: Appropriations or allotments for general improvement or maintenance shall hereafter be available for the dredging of channels to landing places, whether on the main river or subsidiary sloughs: *Provided*, That satisfactory evidence is submitted by the localities concerned that such channels will be used by commerce to an extent commensurate with the cost, and that other landing places are not economically available to serve the same localities: *Provided further*, That preference shall be given to localities that give satisfactory assurances that they will maintain said channels: *And provided further*, That not more than $100,000 shall be expended for dredging of channels to landing places in any one fiscal year.

Alpena Harbor, Thunder Bay River, Mich.: The conditions precedent to the prosecution of the existing project are hereby modified in accordance with the report submitted in Rivers and Harbors Committee Document No. 1, Sixty-seventh Congress, first session.

St. Marys River at the Falls, Mich., in accordance with the report submitted to the Chief of Engineers by the district engineer under date of October 29, 1920.

Crescent City Harbor, Calif.: The conditions precedent to the prosecution of the existing project are hereby modified in accordance with the report submitted in Rivers and Harbors Committee Document No. 4, Sixty-seventh Congress, second session.

San Juan Harbor, P. R.: The Secretary of War is hereby authorized, in his discretion, to substitute for an area of approximately 68 acres to be dredged to 30 feet depth along the easterly and southerly sides of the anchorage basin, forming part of the project adopted by the river and harbor act approved August 8, 1917, an area of approximately 25 acres to be dredged to the same depth, extending easterly from the eastern end of the approved project in San Antonio Channel.

SEC. 3. That the provisions of river and harbor acts heretofore passed providing for the prosecution of work upon the following projects are hereby repealed, and any unexpended funds from appropriations heretofore made for said projects not required for the payment of outstanding obligations incurred in connection therewith are hereby made available for expenditure by and under the direction of the Secretary of War and the supervision of the Chief of Engineers for the preservation and maintenance of existing river and harbor works and for the prosecution of such projects heretofore authorized as may be most desirable in the interests of commerce and navigation, to wit:

Pearl River below Rockport, Miss.

Brazos River, Tex., from Old Washington to Waco, in accordance with the report submitted in House Document No. 298, Sixty-sixth Congress, first session.

Trinity River, Tex., from Liberty to Dallas, in accordance with the report submitted in House Document No. 989, Sixty-sixth Congress, third session.

Pier in Delaware Bay near Lewes, Del. And the Secretary of War is hereby authorized to dispose of the pier and such rights as the Government possesses in the land and the abutments thereof at public or private sale.

SEC. 4. Tampa and Hillsboro Bays, and Hillsboro River, Fla.: The four projects heretofore authorized for Tampa Bay, Hillsboro Bay, Tampa and Hillsboro Bays, and Hillsboro River are hereby consolidated to form a single project for Tampa Harbor.

Calumet Harbor and River, Ill. and Ind.: The two projects heretofore authorized for Calumet Harbor and Calumet River are hereby consolidated to form a single project for Calumet Harbor and River, Ill. and Ind.

Black River at Port Huron, and mouth of Black River, Mich.: The two projects heretofore authorized for Black River at Port Huron, and mouth of Black River, are hereby consolidated in accordance with the report submitted in House Document No. 436, Sixty-fourth Congress, first session.

SEC. 5. That the Secretary of War be, and he is hereby, authorized and directed to construct six seagoing hopper dredges for use in improvement and maintenance work on authorized projects on the Atlantic, Pacific, and Gulf coasts, the cost of said dredges to be paid from appropriations heretofore made, or to be hereafter made, for the preservation and maintenance of existing river and harbor works, and for the prosecution of such projects heretofore authorized as may be most desirable in the interests of commerce and navigation: *Provided*, That the limit of cost of each of the dredges herein authorized shall not exceed the sum of $750,000.

SEC. 6. That funds heretofore appropriated for improvement of rivers and harbors and which remain in the Treasury unexpended because the work or projects for which the same were appropriated have been completed, are hereby made available for expenditure by and under the direction of the Secretary of War and the supervision of the Chief of Engineers for the preservation and maintenance of any existing river and harbor works and for the prosecution of such projects of improvement heretofore adopted and authorized as may be most desirable in the interests of commerce and navigation.

SEC. 7. That hereafter the provisions of section 7 of the act of August 23, 1912 (37 Stats. L., p. 414), or any other law, prohibiting the expenditure of public money for telephone services installed in private residences, shall not be construed to apply to or forbid the installation and use of such telephones as the Chief of Engineers may certify to be necessary for the prosecution of Government business and as the Secretary of War may authorize in connection with the construction and operation of locks and dams in the navigable waters of the United States.

SEC. 8. That from the moneys available for the improvement of the Detroit River, Mich., not to exceed $45,000 may be expended by the Secretary of the Treasury for remodeling and flooring over the light well of the Federal building at Detroit, Mich., to better accommodate the demands for space and to enable the engineer department to remain in its present quarters.

SEC. 9. That the Secretary of War is hereby authorized and directed to cause preliminary examinations and surveys to be made at the following-named localities, and a sufficient sum to pay the cost thereof may be allotted from appropriations heretofore made, or to be hereafter made, for examinations, surveys, and contingencies for rivers and harbors: *Provided*, That no preliminary examination, survey, project, or estimate for new works other than those designated in this or some prior act or joint resolution shall be made: *Provided further*, That after the regular or formal reports made as required by law on any examination, survey, project, or work under way or proposed are submitted no supplemental or additional report or estimate shall be made unless authorized by law: *And provided further*, That the Government shall not be deemed to have entered upon any project for the improvement of any waterway or harbor mentioned in this act until funds for the commencement of the proposed work shall have been actually appropriated by law:

Saco Harbor and River, Me.
Summer Harbor, Me.
Dorchester Bay and Neponset River, Mass.
New Bedford and Fairhaven Harbor, Mass.
Newport Harbor, R. I.: That portion situated east of city wharf.
Thames River, Conn.
Great Kills, Staten Island, N. Y.
Glencove Creek, N. Y.
Flushing Bay, N. Y.
Huntington Harbor, N. Y.
Hudson River Channel, along the water front of Weehawken and Edgewater, N. J., with a view to providing a depth of 40 feet at mean low water or such lesser depth as may be necessary to serve the interests of navigation.
Delaware River, from Trenton, N. J., to Easton, Pa.
Essington Channel, Pa.
Big Timber Creek, N. J.
Salem River, N. J.
Fortescue Creek, N. J.
Hereford Inlet, N. J.
West Creek, N. J.
Double Creek, N. J.
Christiana River, Del., from Newport to Christiana.
Northeast River, Md.
Crisfield Harbor, Md.
Black Walnut Harbor, Md.
Cambridge Harbor, Md.
Southeast entrance to Milford Haven Harbor, Va.
Assateague Anchorage, Va., with a view to the establishment of a harbor of refuge.
Hoskins Creek, Essex County, Va.
Lewis River, Chincoteague Island, Accomac County, Va.
Piscataway Creek, Essex County, Va.
Channel connecting York River, Va., with Black Creek to Slaight's wharf.
Mattox Creek, Va.
Mulberry Creek, Lancaster County, Va.
Onancock River, Va.
Appomattox River, Va., up to Petersburg.
Norfolk Harbor, Va., with a view to providing an anchorage basin between Craney Island and the city of Norfolk.
Mattaponi River, Va., from Walkerton to Aylett.
Cape Fear River, above Wilmington, N. C., with a view to the construction of a lock and dam about 15 miles below Fayetteville.
Cape Fear River, below Wilmington, N. C., and between Wilmington and Manassa.
Pasquotank River, at Elizabeth City, N. C.
Yeopim River, Chowan County, N. C.
Mill Gut, North Harlowe, Craven County, N. C.
Pocahunt Creek, Camden County, N. C.
Wanchese Harbor, Roanoke Island, N. C.
Shipyard River, S. C.
Alligator Creek and Four Mile Creek, S. C.
Savannah River, below Augusta, Ga.
Cooper River, S. C., with a view to the removal of a shoal opposite the foot of Calhoun Street, Charleston.
Lake Worth Inlet, Fla.
Sarasota Bay, Fla.
Tampa and Hillsboro Bays, Fla.
Choctawhatchee Bay, Fla., and entrance thereto through East Pass.
Channel from the mouth of Dog River, Ala., to the ship channel in Mobile Bay.
Tombigbee River, Ala. and Miss., and canal connecting the Tombigbee and Mississippi Rivers.
Bayou St. John, La.
Bayou Bienvenue, La.
Bayou Lacombe, La.
Chefuncte River and Bogue Falaya, La.
Amite River and Bayou Manchac, La.
Cedar Bayou, Tex.
Goose Creek, Tex.
Rio Grande River, at El Paso, Tex.
Kanawha River, W. Va.
Tradewater River, Ky.
West Fork of White River, Ind., up to Martinsville.
Sheboygan Harbor, Wis.
Frankfort Harbor, Mich.
Escanaba Harbor, Mich.
Illinois River and tributaries, from the lower end of Lake Depue to a point opposite Goose Lake; also with a view to controlling the seepage from the Illinois and Mississippi Canal and opening Bureau Creek under said canal.
Saginaw River, Mich., and entrance thereto, with a view to securing a channel depth of 21 feet, with suitable width.
Toledo Harbor, Ohio, with a view to the construction of a breakwater and securing a depth of 25 feet in the harbor and channel.
Port Clinton Harbor, Ohio.
Wilson Harbor, N. Y.
Preliminary examination and report on a waterway from a point at or near Erie Harbor, Pa., by way of French Creek and Allegheny River, to the Ohio River.
Oak Orchard Harbor, N. Y.
Irondequoit Bay, N. Y.
Cape Vincent Harbor, N. Y.
Olcott Harbor, N. Y.
Great Sodus Bay Harbor, N. Y.
Buffalo Harbor, N. Y.
Black Rock Channel and Tonawanda Harbor, N. Y.

Niagara River and Tonawanda Creek, N. Y.
Los Angeles and Long Beach Harbors, Calif.
Newport Bay, Calif.
South San Francisco Harbor, Calif., and entrance thereto.
Pinole Shoals and Mare Island Channel and turning basin, Calif.
Sacramento and San Joaquin Rivers, Calif.
Umpqua River, Oreg.
Tillamook Bay and River, Oreg.
Siletz River, bar, and entrance, Oreg.
North Portland Harbor (Oregon Slough), Oreg., with a view to securing a channel 300 feet wide and 25 feet deep at low water from the Interstate Bridge to the main ship channel of the Columbia River at the mouth of the Willamette River, including consideration of any proposition for cooperation on the part of local interests.
Deer Island Slough, Oreg.
Entrance to Port Orchard Bay, Wash.
Everett Harbor, Wash.
Puget Sound and tributary waters, Wash., particularly in respect to the condition of the channels and mouths of such rivers, with a view to the clearing of such channels and mouths of sand bars and other obstructions by the use of a suction dredge or otherwise.
Bellingham Harbor, Wash.
Tolovana River, Alaska.
Yukon-Kuskokwim Portage, Alaska.
Gastineau Channel and adjacent waters, Alaska, with a view to improving the connection with existing steamship routes.

Mr. DUPRÉ. Mr. Chairman, I yield 15 minutes to the gentleman from South Carolina [Mr. STEVENSON].

Mr. STEVENSON. Mr. Chairman and gentlemen, I want to discuss for a few minutes the drawback feature of the tariff bill as it now appears in the Senate print. Section 313 provides:

SEC. 313. That upon the exportation of articles manufactured or produced in the United States by the use of imported merchandise, the full amount of the duties paid upon the merchandise so used shall be refunded as drawback, less 1 per cent of such duties, except that such duties shall not be so refunded upon the exportation of flour or by-products produced from imported wheat unless an amount of wheat grown in the United States equal to not less than 30 per cent of the amount of such imported wheat has been mixed with such imported wheat.

That is one of the jokers that it is supposed the farmer will swallow. Of course, the drawback feature has been in all protective tariff bills, because a protective tariff bill is for the benefit of the manufacturer and not for the producer of the raw material. The man who imports wheat or cotton and manufactures it into goods and then goes on the world market to sell it, if he has paid a high tariff on it, and meets the manufacturer of England who has paid no tariff on it, necessarily he can not sell it in competition, and therefore he is given a drawback when exported. That has always been the case, and is one of the things that demonstrates the fact that a protective tariff is merely for the benefit of the manufacturer.

But they imposed an emergency tariff of 35 cents a bushel on wheat last year, which did not put the price of wheat up, but put it down, or at least it went down, and they have attempted to rehabilitate the situation. What happened? Why, the miller in the Northwest went over into Canada, where the wheat market had been to a certain extent demoralized by cutting off the American market by a tariff of 35 cents a bushel, bought his wheat, imported it, ground it, and shipped it out again and bought it cheaper than he would have done if we had not imposed the emergency tariff. He imported, say, a thousand bushels of wheat upon which he paid $350 import tax. He shipped it out in the shape of flour and got a drawback of $346.50; or, in other words, he was out $350 on the operation. Therefore the farmer got no benefit from it; it did not help the American market one particle, and the result was some folks found out that this was not worth anything and they began to make a fuss about it. Now, what does the Senate undertake to do?

Mr. CAMPBELL of Kansas. Will the gentleman yield?

Mr. STEVENSON. Not now; I have not the time. The Senate undertakes to write in that they can get back the drawback, but can not get back any drawback unless they grind 30 per cent of wheat grown in the United States with that. Now, how does that work? It works this way: A man grinds 1,000 bushels of wheat.

He imports, if he wants to, 700 bushels of Canadian wheat. He runs that in the hopper, and runs in with it 300 bushels of American wheat, and then goes ahead and gets a drawback. That is what you call maintaining the American market to 30 per cent, I suppose. That is 30 per cent American protection of the market. In other words, everyone knows that there is a good deal more than 30 per cent of the wheat ground in this country and exported that is made in this country, and, consequently, into every bushel of wheat that the importer brings in from Canada and grinds he will be able to put 30 per cent of a bushel of American wheat, and he will get his drawback just the same, and the tariff does not cut any figure at all in so far as that is concerned.

You put a tariff on long-staple cotton, and they are maintaining it. What about that? Practically all of the products of long-staple cotton are exported, except the sewing thread. They are spinning it down in my district. There are mills there that do not spin anything else. They are paying $35 a bale import tax on the cotton; they spin it and export the goods and get $34.65 back. Let me show you what effect it has had on the long-staple cotton importations to this country. During the first eight months of the cotton year of 1921—that is, from August until April, and that was just before the emergency tariff went into effect—we imported of Egyptian cotton 70,145 bales. During the first eight months of this cotton year, during those corresponding months, under a 7 cents a pound tariff, we imported 214,071 bales. What effect did it have? Is that the direct result of your 7-cent tariff? Yet we have that and we have this drawback, and it is an illustration of the fraud that you perpetrate on the farmer when you try to fool him into believing that a protective tariff on cotton or a protective tariff on wheat the surplus of which goes abroad for sale is something to raise the price to him.

Mr. Chairman, I desire at this point to extend my remarks in the RECORD by inserting therein a record of the exports of cotton for the last 100 years.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. STEVENSON. That table I shall insert at this point:

Recapitulation of cotton exports for 100 years.

Decade.	Bales.	Tons.	Value.
1821–1830	4,071,687	1,017,923	$256,632,567
1831–1840	8,534,662	2,158,667	523,789,702
1841–1850	13,989,587	3,497,398	553,427,032
1851–1860	23,601,577	5,900,395	1,146,032,778
1861–1870	8,089,101	2,022,258	1,083,373,097
1871–1880	28,420,585	7,105,148	1,945,673,249
1881–1890	42,642,888	10,660,724	2,206,812,580
1891–1900	60,837,298	15,209,327	2,256,455,584
1901–1910	74,733,416	18,683,356	3,859,233,593
1911–1920	76,190,467	19,017,620	6,512,761,108
Grand total	341,211,268	85,212,816	20,349,251,320

Mr. Chairman, in the last decade in this country from 1911 to 1920, inclusive, we exported 76,190,000 bales of cotton. In other words, we exported in excess of 7,000,000 bales a year. The average crop has run about 12,000,000 bales a year. We exported seven-twelfths of the cotton made and spun only five-twelfths of it. Take the cotton market. A farmer goes to market. We use 5 out of every 12 bales made in this country. The farmer can get the market price in Liverpool for the other seven-twelfths and that is all. He goes to market to sell his cotton. The manufacturer says he can get in the free market in Liverpool only so much, and that he will give him that much less what it will cost to put it there and that if he does not take that he can keep his cotton. I have seen that in operation and so have you. In 1914 when the foreign markets were cut off there were 14,000,000 bales of cotton. Five million bales were needed here. There were 9,000,000 bales that were not needed here, and what was the result? They would not buy it at all, except at their own price, because there was no place else to sell it except here, and there was more than we needed here, and you have to stand on what you can get away from here, whenever it is exported in that way.

Mr. KINCHELOE. Mr. Chairman, will the gentleman yield?

Mr. STEVENSON. Yes.

Mr. KINCHELOE. Does the gentleman think that the American farmer knows that the price of his wheat is governed by the price fixed on the surplus product at Liverpool?

Mr. STEVENSON. I think the farmer is beginning to find that out, and if he is not, it is about time he should. I think his experience with the emergency tariff act last year has taught him some glimmering of comprehension, and that that is the reason they have gone and put in here the 30 per cent drawback provision.

There is another provision about that drawback business to which I desire to call your attention. It is provided in the bill that a man who manufactures ships for a foreign country or a foreign trade or a foreign purchaser shall have the same right of drawback, although the ship is not itself an export. What does that mean? They are asking us for a ship subsidy here in order that we may build up ships that can compete with the ships of the world, and yet they are carrying in this very bill a provision that our manufacturers when they manufacture for the foreign shipowner shall have an advantage of the tariff on the imported materials over the man who is manufacturing a ship for the home shipowner. In other words, if there is $100,000 of tariff paid on the materials that go into a ship,

the steel, the lumber, the other materials, the machinery, the engine, and so forth, if the ship be sold to a foreign purchaser, the manufacturer can get the drawback, but if the manufacturer sells it to our great merchant fleet that they are expecting us to tax our constituents to build up, then you can not get any drawback. Therefore, we have to tax our people more to pay heavier overhead charges because of the original cost of our ships. Is that dealing squarely with the American people? I say that it is not. Let me read you the provisions to which I refer:

The provisions of this section shall apply to materials imported and used in the construction and equipment of vessels built for foreign account and ownership or for the government of any foreign country, notwithstanding that such vessels may not within the strict meaning of the term be articles exported.

In other words, they want to tax the people of this country to build up the merchant marine, and they deliberately put into the tariff bill a provision which will induce shipbuilders in this country to build ships exclusively for foreign account, because they can get the drawback, and they can sell the ships more cheaply and still make larger profits than they can make by selling it to our own people here who want the ships to operate and to operate at a profit.

There is another provision right along in this drawback that is remarkable, and that is that the President can investigate, and when he, in his judgment, finds that the cost of production in other countries of certain articles is less than it is here he can raise or lower the tariff as the case may be within 50 per cent, and they cite the case of Field *v.* Clark (143 U. S.) as giving the authority to do that.

It is perfectly patent they can not do that. Let us see. This is a case in which he has got the right to fix the rate. The President is expressly given the right to fix the rate anywhere within the 50 per cent. In the Field against Clark case the President was given the right to declare a certain statute suspended on finding certain other nations had imposed a penal tariff on the products of this country, and if he so declared he had found the other nations acting so, then the tariff of a certain per cent on certain enumerated articles would go into effect, the per cent being fixed by the Congress.

The Supreme Court says:

That Congress can not delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of government ordained by the Constitution. The act of October 1, 1890, in the particular under consideration, is not inconsistent with that principle. It does not in any real sense invest the President with the power of legislation. For the purpose of securing reciprocal trade with countries producing and exporting sugar, molasses, coffee, tea, and hides, Congress itself determined that the provisions of the act of October 1, 1890, permitting the free introduction of such articles, should be suspended as to any country producing and exporting them that imposed exactions and duties on the agricultural and other products of the United States which the President deemed—that is, which he found to be—reciprocally unequal and unreasonable. Congress itself prescribed in advance the duties to be levied, collected, and paid on sugar, molasses, coffee, tea, or hides produced by or exported from such designated country while the suspension lasted. Nothing involving the expediency or the just operation of such legislation was left to the determination of the President. The words "he may deem," in the third section, of course, implied that the President would examine the commercial regulations of other countries producing and exporting sugar, molasses, coffee, tea, and hides, and form a judgment as to whether they were reciprocally equal and reasonable or the contrary in their effect upon American products. But when he ascertained the fact that duties and exactions reciprocally unequal and unreasonable were imposed upon the agricultural or other products of the United States by a country producing and exporting sugar, molasses, coffee, tea, or hides it became his duty to issue a proclamation declaring the suspension as to that country, which Congress had determined should occur. He had no discretion in the premises except in respect to the duration of the suspension so ordered. But that related only to the enforcement of the policy established by Congress. As the suspension was absolutely required when the President ascertained the existence of a particular fact, it can not be said that in ascertaining that fact and in issuing his proclamation in obedience to the legislative will he exercised the function of making laws. Legislative power was exercised when Congress declared that the suspension should take effect upon a named contingency. What the President was required to do was simply in execution of the act of Congress. It was not the making of law. He was the mere agent of the law-making department to ascertain and declare the event upon which its expressed will was to take effect. It was a part of the law itself as it left the hands of Congress that the provisions, full and complete in themselves, permitting the free introduction of sugars, molasses, coffee, tea, and hides from particular countries should be suspended in a given contingency, and that in case of such suspensions certain duties should be imposed.

"The true distinction," as Judge Ranney, speaking for the Supreme Court of Ohio, has well said, "is between the delegation of power to make the law, which necessarily involves a discretion as to what it shall be, and conferring authority or discretion as to its execution, to be exercised under and in pursuance of the law. The first can not be done; to the latter no valid objection can be made."

The CHAIRMAN. The time of the gentleman has expired.

Mr. DUPRÉ. I yield two additional minutes to the gentleman.

Mr. STEVENSON. And so by this proposed act they propose to say that the President shall say what the rates shall be, which is fixing the law and not fixing the execution of the law. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. DEMPSEY. Mr. Chairman, I yield 20 minutes to the gentleman from Missouri [Mr. NEWTON].

Mr. NEWTON of Missouri. Mr. Chairman, as a member of the Committee on Rivers and Harbors, I participated in the preparation of this bill. I come from a section of the country that is not interested directly in the projects involved in this bill. This, as you understand, is an authorization bill. It does not appropriate any money, but it adopts the projects and authorizes the Appropriations Committee to provide the funds. All of the projects in this bill are, in my judgment, most meritorious projects, and, being in a position to discuss the bill in the main impartially, I will say to you frankly that, having gone over in detail the various projects involved, I do not think you will find any project that is included in the bill that is not a meritorious project.

The only item in which my section of the country is directly interested would be the Galveston Harbor. There is an item of $500,000 for building a sea wall at Galveston. Most of the money that is authorized in the bill is for projects on the Pacific and Atlantic coasts, some are on the Gulf coast, and a few items along the Lakes. I desire to discuss for a moment, however, the Galveston sea-wall question, because I assume there are Members present who are more familiar with the various other items in the bill and who are more or less interested in these sections, and for that reason have the information and will discuss those various items.

The Government undertook some years ago to build a sea wall to control the floods at Galveston. The primary object was to protect the city of Galveston. We are authorizing in this bill an appropriation of something like two and a half million dollars at Galveston. Two million dollars, approximately, of the amount is provided for coping with the situation confronting the bay ports back of Galveston. We have built a great many hundred feet of sea wall at Galveston, but there are approximately 2,800 feet, as I remember it, not completed.

The wall has been built out beyond the city of Galveston. But in order to get the ocean steamers back into the harbor of Galveston and into the various harbors of the bay back inside the Government has constructed a channel that goes from the Gulf into the bay at Galveston. The purpose of the sea wall is to extend it out to the jetty, which helps to form the channel, and until that is done there is always danger, the engineers say, that when the flood comes it will fill up the present channel and thereby prevent ocean steamers from entering Galveston and other harbors around the bay. It is not the incoming effect of the flood that does the damage, but the water from the wind pressure out in the Gulf that piles the water up back in the bay until during a big storm the water is piled up about 14 feet just inside the channel and about 28 feet back at the upper end of the bay. Then when the storm subsides the water comes rushing out, but instead of it going through the channel, which is not in a straight line in the way the water wants to go, but is at a sharp angle, the water rushes across the sand bar where the additional sea wall is needed and cuts out holes, and silt settles in the channel and fills it up.

The result is that if we have another storm on the Gulf we will lose the use of the sea wall that now extends far beyond the city and all the money that has been appropriated and expended on harbors inside the bay. In this connection I want to read an extract from a letter written by the Chief of Engineers, dealing with this project:

This channel is absolutely dependent upon the jetties, which have made it possible to maintain a depth from the sea of 33 feet, where formerly only 12 feet existed. The port of Galveston serves the country as far inland as Iowa and Nebraska, and a loss of this port would be a national calamity. Furthermore, the present conditions would not be restored for probably some two or three years at least if the South Jetty should be destroyed.

This brings home to us the question that it is not merely the locality where a project is located that is interested in a proposition of this kind. You take the wheat and other farm products that are exported from Kansas and the western part of Missouri, and up in the Dakotas, and all that section, all these farm products now go down by railroad to Galveston and then out to sea.

Some of it goes down the Mississippi River and out through New Orleans, but the great portion of it has been going by rail to Galveston and thence abroad. Now, if a storm comes and stops up the channel for two years it will close Galveston and other harbors on the bay, and the Chief of Engineers says that will be nothing short of a calamity. It shows that we of the Middle West are all interested in keeping Galveston port open.

There is another question. Much discussion has been had in this House about the improvement of inland rivers, and in this subject I have been especially interested. In my candid judgment there is not a river in this country the use of which will more thoroughly justify the improvement than the Missouri River. Why do I say that? I am discussing the Missouri because an amendment will be offered here, which has been approved by the committee, providing for the survey of the Missouri River from Kansas City to Sioux City in order to determine whether or not that improvement is practicable.

I want to discuss, first, what I think has been a bad policy of this Congress with respect to river improvements. We undertake a project; we adopt it and spend millions of dollars on it; and after we have done all that we fail to complete it, so that we can get the benefit of the investment. Take, for instance, the Ohio River. I have heard a lot of criticism about the money that has been spent on the Ohio River, because we are not getting any substantial use out of it, and to the man who does not understand that situation that is a perfectly natural criticism.

On June 25, 1910, this Congress adopted the project of improving the Ohio River from Pittsburgh to Cairo, the mouth of the river, or to the Mississippi, at a cost of $63,731,000, insuring a 9-foot channel. They called on the engineers to make a survey and report in order to determine what it would cost to insure a 9-foot channel from Pittsburgh to the mouth of the Ohio, and when the survey was in they found the work could be done for $63,731,000, and the bill provided that that work should be completed in a period of 12 years.

The 12 years will be up on the 25th of next month, and the Congress during that 12 years' time, instead of completing the project has appropriated the net sum of $43,624,000, but the work is not completed. Down at the mouth of the river there are four or five locks and dams that ought to be built, but are not completed because Congress has not appropriated the money. We have $43,000,000 invested on the upper Ohio River, because that much has been expended, and yet you can not utilize it except in flood times because Congress has never completed that project. Suppose the Pennsylvania Railroad undertakes to open up transportation between St. Louis and New York City. You know as well as I do that they can not utilize the investment until the last tie has been laid and the last rail nailed down. And likewise we can not utilize the money invested in the Ohio project until the entire project has been completed, and you have $43,000,000 tied up now on the Ohio, and you can not utilize it, and the great territory from Pittsburgh to Cairo is not getting the benefit of that investment, and the Government is not getting the benefit of it, because Congress has not carried out the plan it adopted to make the appropriation and complete the improvement within a given time.

We adopted the Mississippi River project between Cairo and the mouth of the Missouri on June 25, 1910. Congress wrote into the law that that section of the river should be completed in 12 years. The report at that time estimated that it would cost $21,000,000. That 12 years will be up on the 25th of next month, and this Congress has appropriated on that project only $1,970,000 and the project is not completed, and yet the Mississippi River is operating the best it can over that unimproved section and making a good showing.

The trouble is we do not complete anything. We invest millions but fail to complete and the projects are criticized because they are not used.

Take the Mississippi River from St. Louis to Minneapolis. On June 25, 1910, in the same bill in which the Congress adopted these other projects they adopted one to make a 6-foot channel the year around from St. Louis to Minneapolis to be completed in 12 years and to cost $27,000,000. This Congress from time to time has appropriated to the total extent of $12,260,000, and you can not use it because there are still sand bars and bad places in that section of the river.

On July 25, 1912, Congress adopted a project for the improvement of the Missouri River, from Kansas City to St. Louis, at a cost of $20,000,000, to insure a 6-foot channel and to be completed in 10 years. That 10-year period will be up on the 25th of next July. Congress has appropriated and the engineers have expended $7,500,000 upon that section of the Missouri River since the project was adopted. But that vast investment can not be utilized because Congress has not appropriated enough money to complete the project. In other words, you have $64,730,000 invested in these projects that we can not use because you have never completed them.

I want to call your attention to this fact: There is no longer any question about the absolute necessity of using these rivers. Take the condition in Kansas, if you will. I got the figures the other day. I find that when the war was over Kansas farmers had about 150,000,000 bushels of wheat ready for the market. The price was good. Members of Congress from Kansas appealed to the Railroad Administration in order to get cars allotted there to carry the wheat to the market. They could not get them, because the pressure was too high from other shippers. There were not cars enough. So the wheat laid in the granaries and was held there until they could get cars sufficient to carry the wheat to the market, and by that time the price had gone down about a dollar a bushel.

Mr. STRONG of Kansas. Will the gentleman yield?

Mr. NEWTON of Missouri. I will.

Mr. STRONG of Kansas. I want to say it amounted to a good deal more than a dollar a bushel. It went from $2.65 to 90 cents a bushel.

Mr. NEWTON of Missouri. Did you have any trouble to get the cars with which to ship the wheat?

Mr. STRONG of Kansas. When we had it ready to ship we could not get the cars, and when we did get the cars wheat had gone down from $2.65 to $1 a bushel, and less, and all of this could have been avoided if the Missouri River project had been completed.

Mr. NEWTON of Missouri. I want to call your attention to this fact: The Mississippi barge line last year, a new experiment, had to have adjustments and improvements made, and yet at the end of the year when they made their total calculation they found the cost to the shipper for the service rendered was 3.86 mills per ton-mile. In other words, taking the total tons of freight and the total number of miles carried, and taking the total number of dollars collected and dividing them by the total number of miles a ton of freight was carried, the result was found to be 3.86 mills. I called on the Interstate Commerce Commission to find what the railroads had collected for the same kind of service. I got the report the other day. I find, as compared with 3.86 mills on the barge line, the railroads had charged on an average throughout the United States 12.74 mills per ton-mile for freight hauled. The Interstate Commerce Commission reported that the average charge made by the railroads in 1920 per ton-mile throughout the United States was 10.52 mills. In other words, the charge last year by the railroads was 2.28 mills more than it was the year before. I am not quarreling with the railroads for that. I know that they can not afford to carry freight much cheaper than they do carry it. At least, I do not believe they can. I do not believe they are making a great amount of profit. But here you have the possibility of water transportation for less than one-third the present cost by rail. Whatever the form of transportation, the shipper ought to pay the cost of the service and a reasonable dividend upon the investment of the carrier. If it costs 12.74 mills per ton-mile to carry freight by rail, the shipper who uses the rail line ought to pay that amount plus a reasonable profit. If the barge line, as has been demonstrated on the Mississippi last year, can carry freight for 3.86 mills per ton-mile and still make a profit upon the investment, then the shipper ought to be given the benefit of that cheap rate. In other words, the shipper ought to be given the benefit of the cheapest form of transportation available, and the railroads ought not to be permitted by cutthroat competition and unfair division of rates to destroy a form of transportation which can afford to haul the farmer's commodities for 3.86 mills per ton-mile, and then compel the farmers and other shippers to pay 12.74 mills per ton-mile for the same service. We ought to improve and make available for navigation the Missouri River from St. Louis into the heart of the wheat belt at Sioux City, so that the hundreds of millions of bushels of wheat and other farm products, which the railroads are now evidently carrying at a loss on a commodity rate, could be given the benefit of water transportation at the cheap rate which a barge line alone can afford to give.

Mr. TINCHER. Mr. Chairman, will my friend yield there?

Mr. NEWTON of Missouri. Yes.

Mr. TINCHER. The gentleman has mentioned one inconsistency on the part of Congress—that it is more interested in carrying out new projects than in finishing old ones.

Mr. NEWTON of Missouri. The truth of the mat is that before starting on new projects Congress ought to finish the old ones, but I think some of these new ones are just as important as the old ones.

Mr. TINCHER. Do I understand the gentleman to explain by a car shortage in 1919 the disastrous situation we had in Kansas accounting for it by the fact that we had not expended enough money on rivers and harbors?

Mr. NEWTON of Missouri. No; I do not account for it on that ground, except by the general fact that the commerce was greater than the transportation facilities. If the Missouri River had been improved barges could have hauled the freight

which the railroads could not take. The vice president of the Pennsylvania Railroad Co., Mr. Rea, is quoted as saying that the commerce of the country doubles about once in 10 years. He states that last year, 1921, 700 miles of railroad were abandoned in the United States, and only 400 miles built.

Mr. TINCHER. Prior to the serious car shortage that we had in 1919 there had been a war, and there had been no development and no progress made in keeping up the rolling stock of the railroads.

Mr. NEWTON of Missouri. That is true, and the railroads are not keeping pace with the commerce now, and you can not develop your commerce beyond your transportation facilities.

Mr. LAZARO. Mr. Chairman, will the gentleman yield?

Mr. NEWTON of Missouri. Yes.

Mr. LAZARO. The trouble with Congress is that we have always looked upon these waterways as the property of a few sections of the country instead of belonging to the entire Nation.

Mr. NEWTON of Missouri. Yes; absolutely. They ought to be a part of the great transportation system of the country. We ought to forget waterways and railroads and highways as separate institutions. It is not railways alone that we are interested in, and it is not waterways alone that we are interested in. What the business of this country must have is a great system of transportation, in whatever form it may be, at the *cheapest* price available.

Mr. LAYTON. Mr. Chairman, will the gentleman yield?

Mr. NEWTON of Missouri. Yes.

Mr. LAYTON. In other words, we shall never solve the problem of transportation until we unite all the various means of transportation.

Mr. NEWTON of Missouri. That is exactly what we must do. I have information to the effect that the commerce on the Great Lakes is carried for about 1 mill per ton-mile, and for 3 mills per ton-mile on the ocean. It has been conclusively shown that the cost of water transportation is only about one-fourth of the cost of transportation by rail. In Europe, I am told, water transportation is one-sixth of the cost of transportation by rail—that is, inland water transportation—and I have no doubt that in this country, when they get sufficient equipment on the Mississippi River and its tributaries, and it is operating, they will carry commerce at one-fifth or one-sixth of the rate at which the railroads can afford to carry it. The railroads should be relieved of those bulky commodities which they can not afford to carry at a profit. We must coordinate our transportation facilities. We want to pay the railroads a living rate of freight from the inland to the water points, and then turn that heavy, bulky stuff over to water transportation facilities and let the Government get the benefit of the commerce which will develop. If we are to pay taxes in the Middle West, our resources must be given a chance to develop, and we can not develop them with this high cost of transportation.

The other day I talked with a hay merchant from St. Louis, who told me he had been down in Cuba to find a market for hay. He found he could not deliver it profitably there. He said that hay was coming from Canada by water at a cheaper rate than he could compete with, and as a result the farmers of the valley are losing the Cuban hay market. He said that tremendous quantities of corn in the vicinity of St. Louis are going to Cuba. The barge line can not undertake to carry hay; its space is too limited; but it does carry corn. It is delivering the farmers' corn to Cuba and getting a market there, just the same as the hay merchant could do if he had cheap water transportation available on our inland rivers.

I assume the railroads are charging, or at least they ought to charge, a compensatory rate for the commodities hauled. Think of the freight they are collecting from the farmers for the hundreds of millions of bushels of wheat which go annually from Kansas, Nebraska, South Dakota, and western Iowa. If a barge line can afford to carry freight, as is being demonstrated in this country and Europe, for one-fifth or even one-fourth the rate which the railroads are compelled to charge for the same service, think what the improvement of the Missouri River, with barge-line facilities sufficient to carry the products of that great wheat belt, would mean to the farmers of that section. I can not conceive of how any farmer, or any farmers' Representative in Congress from that section, can rest until water-transportation facilities are made available and the farmers of this region are given the benefits of cheap transportation, which such facilities alone can afford.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. McDUFFIE. Mr. Chairman, I yield 10 minutes to the gentleman from Texas [Mr. Box].

The CHAIRMAN. The gentleman from Texas is recognized for 10 minutes.

Mr. BOX. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to revise and extend his remarks. Is there objection?

There was no objection.

Mr. BOX. Mr. Chairman and gentlemen, my first impulse is to express to the committee my own thanks and that of the people of my section for the thorough and friendly consideration given to the claims of the Sabine-Neches waterway project, serving a great section of the Southwest, through the cities of Beaumont, Port Arthur, and Orange. Lake Charles, La., is adopting measures to connect with this waterway and reach the sea by way of the intercoastal canal and Orange.

The service this waterway now renders the Southwest and the necessity for its improvement and enlargement were recognized by the committee, as shown by its report and the provisions of the bill.

We have the water, the commerce in existence, and in prospect in much larger volume. Vessels in greater numbers and of greater draft than the waterway and harbors will now safely accommodate now jostle each other, rub the shore, and drag the bottom trying to carry the commerce moving through these ports. The Board of Engineers for Rivers and Harbors and the committee find that the existing project does not meet the present needs of commerce and navigation there and recommend that the depth be increased to 30 feet and that other enlargement and improvements be made as provided in the bill.

This commerce consists of crude oil and refined oil products in great quantities. These reach the waterway from the adjacent shore and from many hundreds of miles inland. Spindletop is only a few miles from the Neches, and the new and great oil field at Orange is only 5 or 6 miles from the Sabine. Pipe lines, costing many millions of dollars and being common carriers, bring oil from Kansas, Oklahoma, Arkansas, Louisiana, and the many great fields of Texas. The region served by these lines is, by odds, the greatest oil region of America. A recent official estimate and report by the United States Geological Survey says that the Texas and Louisiana coastal field, which centers in that region, contains by itself America's greatest supply of oil stored in the earth and estimates the quantity by billions of barrels. New fields are being discovered almost daily in the great region served by these radiating pipe lines and this waterway. One great company recently contracted for the construction of a new line from central Texas to this waterway for the purpose of bringing it there for refining and export. They have acquired several hundred acres for a refinery and loading site, which they are now developing. Several others, employing thousands of men, have been in successful operation for years, and still others are in prospect.

But oil is not all. Texas, Louisiana, and Arkansas are great lumbering States. Texas stands about fifth or sixth among all the States in this business. There are 135 sawmills, many of them very large, within 200 miles of this waterway, and most of the export lumber from Western Louisiana, Arkansas, and Texas reaches the sea by this sea road.

Southwestern Louisiana and southeastern Texas are great rice growing and milling regions. Arkansas is developing this industry. Many hundreds of thousands of bags of rice move through these ports.

The Kansas City Southern, Santa Fe, and Southern Pacific railroad systems all tap the grain fields of Missouri, Kansas, Oklahoma, and Texas, and carry grain through these ports. The elevator capacity at Port Arthur is being doubled now. An indefinitely large increase in this traffic is in prospect.

Miscellaneous commerce of every kind is going there from the southwest and from central United States for export to Mexico, South America, Asia, and Europe.

Several great systems of railroad connect with these ports from the east, north, northwest, and west. The commerce is there and will increase indefinitely. In 1909 the tonnage of exports through Sabine Pass was a little over 2,000,000 tons. The figures on which the report of the engineers and this committee report are based are the figures of 1917, and show a tonnage of about 8,000,000, but those figures had increased to practically 12,000,000 tons by 1920. The best test of the value of a waterway project is the use made of it as far as it has been developed. Gentlemen, I have shown you in brief outline the use our people have made of their cramped harbors and their 25-foot waterways. We have filled those little harbors and those narrow, shallow waterways with commerce. The Board of Engineers and your Committee on Rivers and Harbors finds

that we should have 30 feet, and I have no doubt that you will adopt the provisions of the bill providing them. What is more, by the time we can get 30 feet of water, at the very earliest, we will fill that channel to its limit.

I am glad that we can pause in our appropriation of money for numerous other purposes, many of which are necessary but few of which are productive, long enough to make some provision for industrial and commercial development. We need to be doing things to help our people and our whole country to move their industries and their commerce so as to provide markets and marketing facilities for farmers, labor for wage earners, and legitimate opportunity for business men. Our people must live and develop, and America must be creating wealth after so long a period of spending.

Mr. Chairman, since I have been here I have heard several remarks made on this floor which showed that certain learned gentlemen from other sections of the country are badly in need of information as to what Texas and the South and Southwest are doing. A gentleman from Pennsylvania, Mr. Moore, in the Sixty-sixth Congress, deplored the fact that ours is a one-crop country. And another gentleman, Mr. FAIRFIELD, of Indiana, referred to that section as having been in a static condition for 50 years. Gentlemen, your engineers have found, your Committee on Rivers and Harbors has found, and now you are hearing what we are doing in that region. Not merely the district which I represent, but the neighboring districts and neighboring States, and our somewhat new waterway is not the only one in all that great region. Louisiana has hers. It is only 84 miles west of Beaumont to Houston, and only 60 miles south of that to Galveston and then along the west coast. It is not far to the district represented by the gentleman from Texas [Mr. MANSFIELD], and just west of that come Corpus Christi and Port Aransas, all ports of importance through which products from Texas and the Southwest, in great and ever-increasing volume, seek the markets of America and the world.

Texas is fifth—she is one of the big five among the 48 in population. She is first in the value of her farm products. She is among the first in the value of her oil. She is one of the leaders in the production of lumber. She is first in the number of her cattle and mules. She contests with four or five great leaders for the place of primacy in many great lines of production. Gentlemen, with our history, our present and our mighty future, in as clear, as plain, and as glowing outlines as the future ever presents itself to the eyes of men, we can smile while our friends talk of our industrial life being static, for we know that their information on this subject as concerning us has been stale for 50 years.

The gentleman from Ohio [Mr. BURTON] during this week, in a learned and able speech on this floor, illustrated one point by saying that as a remote possibility, in case a dire calamity, the United States might have to cede portions of Texas to some other country. Mr. Chairman, we regard the illustration as unhappy, and the other country which undertook to take possession of the ceded territory would find that the effort to deliver it was to them an unhappy one. We have the resources, the extent of territory, and the American spirit which within a few decades will give us the population and the wealth—and we already have the grit—to fight anything in Europe or Asia ourselves.

The German ambassador who talked of delivering Texas to Mexico a few years back showed that he was poorly informed. Had he been informed he would have known that Mexico thinks that she could whip the United States any time but for Texas. She has had that impression ever since the Texas revolution, and especially ever since the battle of San Jacinto our Mexican neighbors have had the idea that they did not want Texas. They need Texas as a possession just about as much as a Hottentot baby needs a bear cat for a pet. [Laughter.]

They are neighbors. We hope that order will soon be established among them and that they and we will remain friends. We hope they will make progress in the arts of peace and civilization along their own line.

In spite of the misinformation of gentlemen who talk of ours as a one-crop country, or our life as being static, we are going forward building roads, schools, colleges, universities, great harbors, great cities, and a mighty social and industrial life thoroughly American in character. We are American in population, American in origin. Our men and women came from Virginia, Georgia, the Carolinas, Alabama, Mississippi, Tennessee, Kentucky, Ohio, Pennsylvania, and the great American States. We are American in producing things the world needs to eat and wear and in building and maintaining its great present-day civilization. Our ambition is that the best American characteristics and impulses may dominate our great Commonwealth in the future as they have in the past. As a mighty member of the great Commonwealth we shall do our part to uphold Americanism at its best.

If our friends want to illustrate how parts of America might slough off we would prefer that they use some section less American in population, traditions, present development, and prospects than ours. If men want to talk inaptly about Texas, or parts of it, being ceded to other countries they would do well to avoid any stipulations as to delivering the ceded territory, for when Texas, in the spirit of the Alamo, Goliad, and San Jacinto, say to the would-be possessors, "Come and take it," the grantees will probably complain that title and possession failed.

This bill and the committee report shows that your Rivers and Harbors Committee and you fully appreciate the great part we are playing and will play in the industry and commerce of the America which will never hereafter know division. We appreciate the place we have won and the recognition accorded us. We expect to make the most of the opportunities and responsibilities now upon us and to come to us in the times ahead. [Applause.]

Mr. DEMPSEY. Mr. Chairman, I yield 30 minutes to the gentleman from Illinois [Mr. GRAHAM].

The CHAIRMAN. The gentleman from Illinois [Mr. GRAHAM] is recognized for 30 minutes.

Mr. GRAHAM of Illinois. Mr. Chairman, in recent utterances Mr. Cordell Hull, chairman of the Democratic congressional committee, has attacked the present Congress and national administration for alleged incompetency, and has insisted that conditions now existing in the country are due to the failure of this administration to function properly. Like criticism has been heard on the floor of this House.

In view of these constant and apparently concerted Democratic attacks upon the present Republican administration it becomes legitimate and necessary that the exact causes of the conditions which exist in our country to-day be well understood.

When President Wilson first assumed his office March 4, 1913, the total interest-paying indebtedness of the United States was $965,706,610, on which the annual interest charge was $22,835,330.40. Labor and money were employed; agriculture, labor, and manufacturing were protected by an adequate tariff law, and we were prosperous. The new Democratic administration enacted a free-trade measure, and by August, 1914, in a little over a year from the date the Democratic administration began, labor was unemployed and business depression and stagnation crept over the land like a cloud.

Then came the European war, and by means of it the industrial salvation of our country. Of our participation in the World War and the events leading up to it I shall not further refer, except incidentally to point out hereafter some of the problems we now have and their underlying causes.

It is sufficient now to say that we came out of the World War with an immense burden of debt, and that the interest-paying debt when President Wilson turned over the administration to his successor in March, 1921, was $23,820,073,464.45, the annual interest upon which is $1,001,620,434.62. We are confronted by the necessity of appropriating vast sums of money for the purpose of paying this annual interest. Our Democratic brethren, having contracted this indebtedness and being utterly incapable, in the estimation of the people, of offering any method by which the country can pay its debts and rehabilitate itself, have given up the reins of government to the Republicans and now shout their criticisms of the present administration because it does not immediately repair the damages which it took them eight years to do. Just what they spent, some of the items of expenditure that go to make up this vast sum, I shall attempt to now detail:

The War Department expended from April 6, 1917, to June 1, 1919, $14,544,610,213.65.

Of this vast sum, in itself over one-half of our entire interest-paying indebtedness, a large proportion was absolutely wasted. I have heretofore called the attention of this House in an address delivered on June 1, 1920, to the utterly wasteful and unnecessary improvidence of these expenditures. It is sufficient to summarize here: The Ordnance Department spent $3,991,489,570.48 and obtained 72 cannons and 20,000 shells. The War Department spent $116,194,974.37 on nitrate plants that produced no nitrates, $20,000,000 on by-product coke ovens that produced no war material, $35,000,000 on picric-acid plants that produced nothing, countless millions on tanks and produced no tanks, $116,000,000 for poison gas and obtained no gas, approximately $200,000,000 for powder plants that produced no powder, $127,661,000 for port terminals that were not used, $1,200,000,000 for camps in which the waste of materials and labor constituted more than one-half of the outlay, and $1,051,511,988 for airplanes and received no fighting machines.

It is entirely safe to say that of this vast sum of over fourteen billions more than one-half was wasted and given away to war contractors.

If this were all, we might wash our hands of the whole matter. But connected with these expenditures were thousands of unexecuted contracts and contingent liabilities of the Government. Also, many of these expenditures were made and contracts entered into after the armistice was signed and when there was every incentive for economy. For a year or more after the armistice many contractors were turning out vast quantities of contracted goods when there was no reason for so doing. To illustrate: After the armistice, in the period from November 14, 1918, to July 3, 1919, we had manufactured and accepted incredible amounts of war materials from American contractors, among other items being 903,886 37-millimeter shells, 1,798,096 75-millimeter high-explosive shells, 1,676,290 75-millimeter gun shrapnel, 182,393 155-millimeter gun gas, 822,796 155-millimeter howitzer high explosive, 115,366 155-millimeter gun and howitzer shrapnel, 88,882 3-inch Stokes shells, and vast quantities of other production. Even after July 3, 1919, American factories turned out for the Government large quantities of shells and war materials, as, for example, 50,000 3-inch high-explosive shells and 35,000 240-millimeter howitzer high explosive. Hundreds of cannon were accepted by the War Department even after July 3, 1919, as, for instance, one order of 345 240-millimeter howitzers, costing approximately $10,000 each. Several of the factories in England and France were kept running on American orders which our War Department would not cancel. We received in France after the armistice 944 75-millimeter guns and carriages of the old 1897 model; 198 155-millimeter guns, carriages, and limbers; 700 155-millimeter howitzers, carriages, and limbers; and 200 English 60-pound guns, 100 6-inch guns, 355 8-inch howitzers and carriages, and 40 9.2-inch howitzers and carriages. When one remembers that the cost of one 8-inch howitzer and carriage was $54,000 and the other materials above named in proportion, it can be appreciated what expenditures these contracts entailed.

Much of this war material was obsolete, and not such as had been perfected and was used in the last days of the World War. Col. G. J. Jenks, testifying before a congressional committee August 13, 1919, said about the artillery we had acquired: "None of the material that we have meets the present views of the service as to range." It is obsolete, "as far as design goes, as to power and range."

Mr. WILLIAMSON. Will the gentleman yield?

Mr. GRAHAM of Illinois. Yes.

Mr. WILLIAMSON. What became of those guns that were manufactured in England and France after the armistice?

Mr. GRAHAM of Illinois. I am going to tell you about that. The explanation that was given by the administration was that they did not want the factories of England and France to close down too quickly; that France and England did not desire it to be done because of the disturbance of their industry which would be caused thereby, and therefore these factories in England and France were permitted to run on American orders after the armistice was signed in order to keep a friendly feeling between the nations, although this was costing us hundreds of millions of dollars. These guns are now stored in various places in the United States, some of them—as, for example, the English 60-pounders—being practically useless for any military purpose of the United States.

Not only were these contracts continued, but moneys of the Government were used to continue and complete other projects, such as by-product coke ovens for private concerns. In some cases the contracts were so unskillfully drawn as not to be subject to cancellation when the war closed. In some cases the administration proceeded with the expenditures, fully intending to do so. A fair example of this is the Muscle Shoals project.

That plant was located by President Wilson against the protest of his scientific advisers. It was a political location. It was built with funds not intended for that purpose. A contract was made with the Air Nitrates Corporation for its construction which, if valid, puts the Government in the power of that corporation. Seven months after the first contract was made the War Department deliberately made a new contract in lieu of the first, raising the royalty if the Government should attempt to operate the plant, after the war, from 6 mills per pound of product to 1½ cents a pound, giving additional fees for construction and giving to the Air Nitrates Corporation the first right to purchase the property if the Government should decide to sell it after the war.

Mr. LONGWORTH. Would the gentleman mind stating at that point what was the capital of the Air Nitrates Corporation?

Mr. GRAHAM of Illinois. It was a Delaware corporation capitalized at $1,000.

Mr. COOPER of Wisconsin. Was all this under Secretary of War Baker?

Mr. GRAHAM of Illinois. Yes.

It made another with the Alabama Power Co. by which it expended $5,167,277.42 on land belonging to that company; the ordnance officers, acting directly under orders of the Secretary of War, finished an industrial village for this grasping corporation after the armistice was signed, and spent much of the sum above named when it was no longer necessary to do so. In order to fasten upon the country irretrievably the Government operation of this work, with feverish haste the War Department began the building of the so-called Wilson Dam across the Tennessee River at that place. Although work on this dam had been stopped, when the President saw that the war was over, on November 9, 1918, he issued an order that work be at once recommenced and rushed on this dam. Up to the time of the signing of the armistice only about one month's work had been done on the dam and only a small amount had been expended on this dam of the $13,385,000 allotted for that purpose. Work was rushed, and the entire balance unexpended, together with about $5,000,000 transferred from another fund, was spent so that there could be no going backward. Not only was this done but over $1,250,000 was spent in opening up a quarry after the plant was shut down and against repeated protests in Congress. Approximately $25,000,000 was spent at Muscle Shoals after the armistice. And to-day, entangled in this mess of bad contracts and inefficiency and waste, we are sending committees to Muscle Shoals, and the Republican administration is faced with the necessity of trying to find some way to solve these questions originating in the desire of President Wilson to build up one part of the country under the guise of a war necessity and at the expense of the Public Treasury.

All sorts of embarrassing and unfortunate situations arose out of this war, because of the failure of the last administration to observe even reasonable care to secure our national rights. A better example can not be cited than in our sale of surplus war material to France. We had over $2,000,000,000 worth of such material in France when the war closed and scores of millions of dollars worth of this was shipped to France after the armistice, such as 30,000 new automobiles. When we talked of moving this material home or selling it at retail, France informed us if we did we must pay $150,000,000 in import tariffs. No one in the administration apparently had ever had judgment enough to have it understood that we were not to be subject to such exactions. We had no understanding at all, and so we had to sell this material to France, on 10 years' deferred payments, for $400,000,000. Then France arranged a sale of part of it to jobbers, and they shipped it into the United States without paying any customs duty. When we passed a bill in the House to stop this importation, it met solid Democratic opposition, and its timely passage in the Senate was prevented by Democratic objections there.

Nor was this all of the War Department expenditures. There was a legacy of debts and claims which will plague us for a hundred years. In the closing days of the Democratic Sixty-fifth Congress, on March 2, 1919, the notorious Dent Act was proposed and passed. It was claimed it was necessary in order to permit a speedy settlement of war claims by the Secretary of War. After the passage of the act it was found that thousands of claims existed for which there was not a scratch of a pen as evidence. Over 30,000 claims were filed before a board set up by the Secretary of War, and as a result of the operations of the board up to January 4, 1922, $484,425,566.11 have been paid out, much of it without the existence of a contract, most of it without an accounting, and practically all of it without any legal justification at all, except in the language of the Dent Act itself. During the Sixty-sixth Congress the protests of the Republican majority in this House against the actions of the War Department on these claims were frequent, but the protests were unavailing. To illustrate the loose and grossly inexcusable way in which these claims were allowed, in a recent summing up by Brigadier General Lord, Chief of Finance of the Army, he finds on an audit of approximately one-tenth of these paid claims there has been overpaid, in these few settlements to war contractors, $46,000,000. There is but little doubt that on an audit of these claims vast sums will be found to have been paid either from carelessness or absolute collusion with war contractors. To see to the return of these sums unjustly paid is one of the tasks of the present administration.

Mr. JOHNSON of Mississippi. Will the gentleman yield?

Mr. GRAHAM of Illinois. Yes.

Mr. JOHNSON of Mississippi. What is the gentleman's idea of what we should do with the Muscle Shoals proposition—all this that he has been talking about is water over the wheel.

Is the gentleman in favor of giving the contract to Henry Ford, or is he against it?

Mr. GRAHAM of Illinois. I have not looked carefully into Mr. Ford's offer, but if it is in the same terms as when he first made it——

Mr. JOHNSON of Mississippi. It has been modified.

Mr. GRAHAM of Illinois. Well, as far as the first offer is concerned, I would not accept it. But that is not what I am talking about; I am talking about the charges you make that we are responsible for not doing all these things. I want to show that the things we have to do are things that were left over by the last administration.

Mr. JOHNSON of Mississippi. Will the gentleman yield again?

Mr. GRAHAM of Illinois. I will yield this time, and then I must refuse to yield further.

Mr. JOHNSON of Mississippi. Did not the gentleman's investigating committee disclose that these contractors were Republicans, who are liberal contributors to the campaign fund?

Mr. GRAHAM of Illinois. Not all; some of them are, but that makes it all the worse.

Mr. JOHNSON of Mississippi. Is not that the reason they were not prosecuted?

Mr. GRAHAM of Illinois. No; there was no such reason that I know of.

Mr. TINCHER. The Democrats on the gentleman's investigating committee filed minority reports.

Mr. GRAHAM of Illinois. Yes; that is the ridiculous part of all this flurry created in the House by our Democratic friends who want an investigation. While the investigation was going on the minority in every instance filed minority reports and did everything they could to obstruct the investigation and prosecution. When we put our finger on some scalawag who had defrauded the Government and ought to have been prosecuted, the minority came in with a minority report, and the Secretary of War appointed a committee to go out and whitewash him.

Mr. JOHNSON of Mississippi. Can the gentleman tell us now why it is that the gentleman from Kansas [Mr. CAMPBELL], of the Rules Committee, does not bring in a rule for the investigation?

Mr. GRAHAM of Illinois. I do not know; I am not immediately concerned in that matter.

Mr. JOHNSON of Mississippi. Is the gentleman in favor of an investigation?

Mr. GRAHAM of Illinois. I am in favor of the prosecution of the fellows who robbed the Government during the war; that is what I am in favor of. [Applause.] I always knew there were thieves, and I do not care whether they were Republicans or Democrats, if they are thieves they ought to be prosecuted, and I hope and believe they will be prosecuted. [Applause.]

Mr. JOHNSON of Mississippi. I agree with the gentleman. But is it not a fact that the Democrats voted for every investigation?

Mr. GRAHAM of Illinois. Oh, yes; they voted for it, but they never voted for any recommendation for prosecutions and the parties were whitewashed.

Mr. ANDREWS of Nebraska. Who had the power of prosecution prior to the 4th of March, 1921.

Mr. GRAHAM of Illinois. It laid with the Department of Justice and the administration, but you could not get anywhere; you could not get a prosecution started; there was not one. The way the records were left when this administration came in—a confused mass of intricacy—you could not start a prosecution without a very long research.

Mr. LONGWORTH. Were there not cases where important papers were missing?

Mr. GRAHAM of Illinois. Yes. But I did not intend to discuss this subject when I arose. Let me tell you one thing that happened. There were people brought before our committee and people brought before the grand jury out of the War Department who were concerned with the keeping of these records, who deliberately hid and lost papers for the purpose of keeping members of the committee and officers of the Department of Justice from examining them. I am not saying that the prosecution ought to be delayed, but I say that a reasonable time ought to be given for investigation, and then the law ought to be enforced as quickly as possible under the circumstances. A great deal is being said about the failure of the Department of Justice to prosecute. No lawyer, I care not what his ability or standing, could have gone into the Department of Justice when this administration did and, out of the utter confusion that reigned there, had any of these highly important war-fraud cases ready for trial before this time. But the country now expects vigorous action, and I have all confidence that the Department of Justice will respond readily and fully to that demand.

But I must proceed with these other matters.

Under various Liberty loan acts President Wilson was authorized to purchase bonds from the countries engaged in war with our enemies, bearing the same interest, of the same maturities and same conditions as the bonds we issued and sold to our people. Under this authority, President Wilson dispensed to our allies and to a flock of little nations whom he was seeking to incubate immense sums, which, with the interest accrued and unpaid, now amount to more than $11,000,000,000. The acts authorized loans to our allies. About $300,000,000 of that money was loaned to countries not in the war at all. One billion five hundred million dollars of it was loaned by the Secretary of the Treasury after the armistice, and when every reasonable man will concede he had no right to do so under the law.

Mr. JOHNSON of Mississippi. Does that include the Liberian loan of $5,000,000?

Mr. GRAHAM of Illinois. No; it does not; but the Liberian loan was like a lot of other things left over by the last administration. The faith of this Government was pledged by the last administration, and when the present administration came into power it had either to refuse to keep the promise that you fellows had made in the name of the Government, or go through with it.

Mr. JOHNSON of Mississippi. And yet the gentleman voted for it a few days ago.

Mr. GRAHAM of Illinois. No; I did not. I was not here. I have always been a great believer in standing by my promises if I make them myself, and by them if my Government made them. That is the way I felt during the war, when I did not believe the President was doing many things right. Yet I went along with him.

Mr. JOHNSON of Mississippi. And the gentleman's party claimed all of the time that that was an illegal authorization, and yet a few days ago it voted the loan.

Mr. GRAHAM of Illinois. The Republican Party never breaks the faith of the Nation when it is once pledged. It was intended by the Liberty loan acts that we should buy the bonds of foreign nations. Instead, all that the present administration found to show for this vast sum were memoranda of some diplomatic agents or officials. Not only was this true, but there was the general impression and belief existing in every country to whom this money had been advanced, induced no doubt by the conduct and public utterances of President Wilson, that the United States never intended to collect these amounts. The incoming administration and a Republican Congress has had, therefore, two things to do: First, to overcome the erroneous impression held by foreign countries and convince them of the necessity of paying these debts; second, to obtain from them the properly authorized bonds to represent these debts. Even after the almost inextricable confusion that had been created by the last administration in the matter, when a bill was brought in by the Ways and Means Committee to appoint a commission and adjust these debts, the Democrats of both House and Senate opposed the project almost to a man.

In 1916, as a part of the machinery for stimulating the building of a merchant marine by act of Congress, the Shipping Board was created. After the declaration of war Congress, by the urgent deficiency act of June 17, 1917, conferred vast additional powers upon the President to requisition and build ships. This power, by Executive order dated July 11, 1917, the President delegated to the Emergency Fleet Corporation. Thereafter occurred the monstrous expenditures of our shipping program. They cost us $3,306,000,000. Contracts were made with anyone and everyone who said he could build a ship, or anything for one, irrespective of price or quality. There was no uniform plan for these ships adopted. No thought was given to what use the ship might be put after the war. There were no cancellation clauses in the contracts, so that if the war ended the work might stop. Five hundred and eighty-nine wooden ships of 1,885,250 dead-weight tons were built, costing approximately $375,000,000, and which were absolutely worthless. Thirty concrete and composition ships costing about $27,000,000 more were equally worthless. Two thousand two hundred and eighty-eight ships altogether were built and delivered. Only about 450 of these were delivered before the armistice, and all the rest, or about 1,838, have been delivered since the war was over and the further necessity for them had disappeared. Because of the contracts which had no cancellation clauses and the incessant pressure of the Democratic administration, shipbuilding went on feverishly until the present administration came into power. One thousand one hundred and eighty ships were delivered in 1919 and 473 in 1920, the

most shameful part of which was that in 1919, 408 of these were wooden ships, and in 1920, 61 were wooden ships, conceded by all to be worthless.

When the present administration came in on March 4, 1921, it tried to take stock. It now finds about 5,000,000 tons of steel ships which are salable for approximately $150,000,000 and estimated other assets of $190,000,000. It finds claims pending against the Government of $298,428,845.59, which, if allowed in full, would just about wipe out all our assets and leave us nothing to show for our $3,306,000,000 of the peoples' money expended. Countless millions had been sunk in Hog Island and every other mudhole in the country. To show the rank incompetency of the preceding administration, it has been found that mortgages and other liens securing the Government for vast sums had not been recorded and the liens were lost. Liens for millions which should have been taken were not. Vast sums for repairs and reconditioning were charged against the corporation for things which the slightest care might have prevented; ships had been sold without a cent of deposit or a letter of security; vast contracts, uncancellable, for materials were found. To illustrate, a contract to take 40,000,000 barrels of fuel oil a year. The board is involved in 50 concerns which are in the hands of receivers. Three thousand five hundred lawsuits in the civil courts are pending and $62,739,315.76 of claims in the Court of Claims, and a business which is now losing $4,000,000 a month.

Now, we have this wreck to salvage. For 50 years the contingent liabilities of this experiment will haunt us. We have not only spent our three and one-third billions, but we must contrive some method of subsidy to keep what ships we have upon the sea. And in this last attempt to get something constructive out of this insolvent business, we are meeting the almost undivided opposition of the Democratic minority in the Congress.

Mr. ANDREWS of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. GRAHAM of Illinois. Yes.

Mr. ANDREWS of Nebraska. Did not the Government make a contract with Henry Ford to manufacture a large number of Eagle boats?

Mr. GRAHAM of Illinois. Yes.

Mr. ANDREWS of Nebraska. Were any of them furnished and put into service?

Mr. GRAHAM of Illinois. I do not know. I have seen some of them since. I doubt whether any of them were actually in service before the armistice.

Mr. ANDREWS of Nebraska. I have heard it stated that he made a profit of $30,000,000 and that he donated that back to the Government. Has any such fund been turned in?

Mr. GRAHAM of Illinois. I do not know as to that.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. GRAHAM of Illinois. Yes.

Mr. COOPER of Wisconsin. Does the gentleman have any information as to why a building 400 feet long and 200 feet wide, at Corliss, on the prairie 7 miles west of my city in Wisconsin, was filled as late as the fall of 1920 and the winter of 1921 with marine engines, stacked one above the other, the building full, and it about a thousand miles from the sea or any place where those engines could be used?

Mr. GRAHAM of Illinois. That is only typical of a lot of other things. I was down in Charleston, S. C., while our committee was doing its grinding work in 1919 and 1920, and they were then shipping stuff into that terminal, a terminal that had been built at an expense of $20,000,000, out of which not a pound of produce had ever been shipped or a soldier taken. Yet they were shipping stuff there long after the war was over.

And they were doing it all over the country. I do not know why they did it. I have not any conception, but it appeared that the administration representatives were trying with all their hearts to spend money and they did spend it. Now, just a word on the Railroad Administration.

Prior to the World War no country had a healthier railroad condition than did the United States. Service was speedy, rates for passenger and freight carriage low, and the roads were making fair returns upon capital invested. In the two and one-half years from the outbreak of the European war until our own entrance into that war this condition continued. In the military appropriations bill of August 29, 1916, a provision had been inserted authorizing the President, in time of war, to take possession and control of any system of transportation and to use the same as might be needful or necessary in the emergency. Immediately after the entrance of the United States into the war with Germany various semicivilian, semiofficial boards were set up which began to issue various and conflicting priority shipment orders. So great became the confusion and congestion that the ports of the East, notably New York, became blocked. The judgment of those with most intimate knowledge is that official inefficiency is solely responsible for this condition. President Willard, of the Baltimore & Ohio Railroad, President Wilson's appointee as chairman of the Advisory Commission of the Council of National Defense, now openly charges this to be the fact. Then President Wilson, by proclamation dated December 26, 1917, took over all the transportation systems of the country absolutely. The administration was not content to issue proper orders by which the activities of the transportation systems of the country could be coordinated under a proper governmental bureau and whereby they could be operated by their private owners but took over everything and started Government operation of railroads. That one act, with its natural consequences, has immensely added to our national indebtedness and has entailed consequences that are far-reaching and disastrous.

The Government operated the railroads until March 1, 1920. On December 24, 1919, the President issued a proclamation that 60 days thereafter, to wit, March 1, he would deliver back the roads to private control. Having involved the affairs of the railroads in inextricable confusion, having permitted their rolling stock and equipment to deteriorate, having inflated their pay rolls and maintenance charges by billions, having destroyed both the credit and the morale of the roads, the President, without the slightest opportunity for adequate preparation, said to the Congress and the country, "Here's the mess we have made; now you clean it up." In the two months remaining a Republican Congress, trying to do the best it could with a hostile administration, hastily wrote and passed the transportation act of 1920. During the 26 months of Federal control, the Congress, responding to the urgent and repeated requests of the administration, appropriated $1,750,000,000 from the Treasury for the railroads. In addition to this vast sum for the six months' guaranty period under the transportation act, $700,000,000 more will be required. In addition, $200,000,000 will be required to settle outstanding claims and $300,000,000 more has been provided to make loans to the railroads under the transportation act. Thus we find a total burden on the Treasury of $2,950,000,000 caused by the utter folly of the last administration in its railroad program.

Nor is this all. Thousands of lawsuits are pending in which the Government has a contingent liability. In Minnesota alone 6,000 lawsuits originated in one fire. Many of the equipment trusts and definitive obligations we have taken run for 10 years yet. We must maintain a railroad administration for at least 10 years to come and until its end, no one can tell what our obligations are.

Nor was this the worst. No sooner were the roads under Government control and operation than a systematic course of exploitation began for personal and party advantage. Wages were raised when requested and when not requested. The total additional annual wage burden caused by Government operation was $1,765,000,000. The prices of materials and repairs were boosted to the skies. Executive orders were issued with confusing frequency, almost all of which tended to destroy discipline and morale. Minimum wages were established for all branches of the service. A fair illustration of these orders was that of February 14, 1918, when Mr. McAdoo ordered: "Mechanics applying for employment will not be denied such employment for any other cause than inability to perform the work," and by which order any anarchist or I. W. W. who applied for work which he could do must be employed. When the Government took over the roads 80 per cent of the cars were upon their own roads; when the roads went back to their owners 80 per cent of the cars were on other roads, from which they did not return for long periods.

All this was done without any corresponding increase in rates to compensate for such additional burdens. Increased rates are not popular.

Finally, when the problem was turned over to the Republican Party on March 4, 1921, the number of railroad employees was largely increased, the general efficiency of the roads decreased, freight and passenger rates were raised to a point where traffic could not move, the credit of the roads was weak, and the Government with a staggering weight of financial obligation. Nothing can exceed the utter carelessness of the railroad administration during Government operation. Already, on a partial audit of claims and accounts, over $85,000,000 of errors and overpayments have been discovered, which the Government is now attempting to recover.

To-day we have no more serious problem than the question of the reduction of our railroad passenger and freight rates. The problem was created by the absolute lack of wisdom and horse sense characterizing the Wilson administration handling

of the railroad question. Now they loudly cry for a reduction of rates and vociferously denounce a Republican Congress for inaction. I am reminded of the man who deliberately fouls his water supply and then loudly abuses the board of health because his family gets typhoid fever.

Of our total debt, therefore, of approximately $24,000,000,000, five-eighths of it is attributable to the following causes:

Probable waste in war contracts	$7,250,000,000
Illegal loans to foreign countries	1,300,000,000
Shipping program	3,300,000,000
Government operation of railroads	2,950,000,000
	14,800,000,000

Mr. ANDREWS of Nebraska. Will the gentleman allow a question? How long could we have run the Government without raising a dollar by taxation if we had had all this wasted money to be used for that purpose?

Mr. GRAHAM of Illinois. If we had the money that was wasted in this war this country would be in excellent financial condition.

Mr. ANDREWS of Nebraska. Could not we have run it for over two and a half years?

Mr. GRAHAM of Illinois. Yes. At our present rate of expenditures under this administration, if we had the money absolutely wasted during and since the war by the last administration we could pay all the running expenses of the Government for four years without a cent of taxation.

Mr. JOHNSON of Mississippi. Was the gentleman opposed to loaning money to the Allies to help carry on the war?

Mr. GRAHAM of Illinois. If the gentleman means did I vote for the measure, I voted for the measure; and I did not know whether it was wise or not. Nobody knew except the President, and he was charged with the responsibility. He asked for the funds and he used them, but we have the right, however, if the gentleman from Mississippi will indulge me, to say to you and your administration now we shall hold you to a strict accounting for what you did.

Mr. JOHNSON of Mississippi. Will the gentleman tell the Congress how his own administration during the Spanish-American War acted in feeding the soldiers rotten meat and——

Mr. GRAHAM of Illinois. I am not going into the Spanish-American War or any other war. I am bringing up the issue of to-day, the issue you made through your National Democratic Committee and the other issues you are making on the floor of the House. It is time the people learn and know the truth, and when they do there will be no doubt about their attitude.

Nothing that our people have suffered as a result of the war has been more burdensome and oppressive than the high cost of living. During the war period, and since, and continuing to a considerable extent to-day, prices of the necessities of life have soared to the skies. While high prices came with war conditions, most of this stupendous increase is directly traceable to the last administration and its activities.

By the Sherman Act of 1890 we recognized the principle that a combination in restraint of trade was detrimental to our national welfare. For about 30 years we developed that principle and established it firmly, adding to it by other acts. Immediately upon our entrance into the war that act and all other similar acts became dead letters and never again, during the Wilson administration, was the slightest attention paid to them. Before the existence of war with Germany was declared, combinations of the industries of the country were being formed. At once after the declaration every class of labor, every trade, every interest, every branch of manufacturing were not only invited to, but forced to, combine. These combinations of industry fixed prices, regulated the amount of output, controlled the amount to be purchased by the Government. In the labor field every trade that was not organized was caused to organize, and these organizations had their seats in the national councils, controlled the output, and fixed the price of labor. Not only did these combinations exist, but they controlled the whole industrial conduct of the war. By them the industries made the requisitions and the plans, they did the buying, and after the armistice settled the claims. Large numbers of representatives of industries which were doing business with the Government had their agents wearing the uniforms of the military forces and drawing pay, both from their private employers and from the Government. The law required all contracts to be let by bidding, and all contracts to be in writing. Six days after the declaration of war the Secretary of War dispensed with the first provision by Executive order, and no one seemed to pay any attention to the second.

Soon after our entrance into the war some of the business interests connected with the Government suggested and put into operation the notorious cost-plus system of contracting, a system more productive of graft and fraud and corruption and waste than any other system ever devised. Cost-plus contractors, intent only on their percentage of cost, filled the markets of the country, and bid the cost of labor and materials to the skies. An orgy of waste and riotous profligacy followed unchecked by the Government.

When the war ended this Government policy, or lack of policy, had placed the price of labor and manufactured materials at the very highest figure ever known. Not only were these prices high, but the combinations which the Government had formed in violation of law, now fixed prices, obliterated competition, and boldly proclaimed that war prices should not be lowered. The farmer alone, who had no combination and could not fix his prices, found his prices tumbling about his ears; but the interest which had high-priced manufactures or labor to sell through its combinations, although the demand was lessened, limited its output and kept its prices up.

That is one of the legacies the last administration left to us. It will take a vigorous enforcement of the antitrust laws of the land and a most serious effort to undo the wrong which has been done to the country. It is one of the problems of this administration. While Democratic gentlemen declaim about high prices, we must seek a remedy for the condition their party has created.

It will therefore be seen that the great problems which are pressing for solution to-day, and which this Republican administration must meet, namely: Our immense public debt and interest charges, taxation, customs duties, railroad rates, foreign debts and entanglements, and high cost of living are left to us as the residuary legatees of the last Democratic administration.

Time will not permit me to go at length into many other matters which I might discuss. Therefore, I must content myself with but a brief mention of them. Let me summarize:

WHAT THE DEMOCRATIC ADMINISTRATION LEFT US.

We found a debt of $24,000,000,000, a major portion of which was due to Democratic incompetency, and an annual interest charge of $1,000,000,000.

In the first year we paid off $350,000,000 of the principal of this debt.

We found the most disastrous revenue system with which the country was ever cursed.

We passed a new law and reduced the burden of taxes upon the people by $819,000,000 a year.

We found the Liberty bonds selling for 85 cents on the dollar.

We brought them to par.

We found an Army of 230,000 men.

We have reduced it to 135,000.

We found a Navy of 133,765.

We have reduced it to 96,000.

We found total appropriations for 1920 of $7,348,259,415.37.

We reduced it in 1922 to $3,909,782,209.46.

We found 640,175 civil employees.

We reduced them in one year by 71,849.

We found the doors of our country open to the trade and cheap labor of the world.

We closed them by temporary tariffs and will regulate them by a scientifically adjusted tariff law.

We found the farmers of the country threatened with disaster as war contracts closed and deflation from Democratic waste and inflation came.

We aided them by timely legislation through the Federal farm loan system and the War Finance Corporation, until to-day farm prosperity is on the way.

We found a state of war with Germany.

We ended it.

We found an entangling League of Nations.

We gave the world disarmament and a dream of peace realized.

We found American prestige at its lowest ebb.

We placed it in the forefront of the nations.

We found waste.

We have brought economy.

We found inefficiency and noncoordination.

We enacted Budget legislation.

We found a maze of complicated obligations and contractural relations.

We are disentangling them and clearing the decks.

In all this we have had Democratic criticism and opposition.

But the light shines brightly before us and better days for the Republic are at hand. Under the guidance of a party which has never failed the Nation in its times of need, following the leadership of our sane, far-sighted, and right-thinking Presi-

dent, Warren G. Harding, the country may well be assured that the future is full of promise. [Applause.]

Mr. NEWTON of Missouri. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. DUPRÉ. Mr. Speaker, I yield to the gentleman from Mississippi [Mr. JOHNSON] such time as he may desire.

Mr. JOHNSON of Mississippi. Mr. Chairman and gentlemen of the committee. I sympathize with the gentleman, Mr. GRAHAM, of Illinois, who has just preceded me, in the predicament in which he and his party find themselves to-day. No doubt his state of mind is attributable to the results of the elections held in Pennsylvania and Indiana a few days ago, in which the reactionary Republicans and this administration were repudiated.

The gentleman complains grievously of the management of the World War by the Democrats and would cast aspersions upon the glorious victory achieved by this great Nation in that great conflict. He complains of the waste and extravagance during the war, but he forgets that in war time a nation, as an individual, can not stop to count the cost or reason or calculate coolly and calmly as in peace time.

Mr. BOX. Will the gentleman yield?

Mr. JOHNSON of Mississippi. I will.

Mr. BOX. Has the gentleman read the statement of President Roosevelt in his memoirs about Republican management during the Spanish-American War of 1898?

Mr. JOHNSON of Mississippi. I have.

But, Mr. Chairman, we should not go into a discussion of those things at this time. The mistakes that were made during the Spanish-American War and the mistakes that we made during the World War are overshadowed by the glorious achievements of this Nation.

No doubt the same pessimism the gentleman from Illinois feels is felt in most of the States where the reactionary Republicans are now in power. They are fearful that the end of time is near at hand.

To show you that the same feeling of pessimism and fear exists in the Harding family, I am sending to the Clerk's desk a clipping taken from the Washington Post, which I will ask the Clerk to read.

The Clerk read as follows:

WORLD'S END NEAR, SAYS DOCTOR HARDING—PRESIDENT'S BROTHER PREDICTS SECOND COMING OF CHRIST AT ADVENTISTS' CONFERENCE.

SAN FRANCISCO, May 17.—Dr. George T. Harding, jr., physician of Worthington, Ohio, and brother of President Harding, who is here attending the World Conference of Seventh Day Adventists, to-day predicted that the end of the world is close at hand.

"Indications from conditions in the world to-day all point to the fact that we are living in the time predicted by the prophets," said Harding. "This time will immediately precede the second coming of Christ, in which all Adventists firmly believe. 'No one knoweth the day nor the hour when the Son of Man cometh.'

"The end of this phase of our existence is so near at hand that we must work rapidly, for our time is short."

Doctor Harding refused to predict positively that the world would come to an end before President Harding finished his term of office. He indicated, however, that it is more than possible that such will be the case.

Mr. Chairman, I fear the gentleman confuses the end of the world with the end of Republican misrule. The air is so surcharged with a feeling of disgust toward this administration that even the brother of the President predicts that the world is likely to be destroyed before Mr. Harding finishes his term in office.

Mr. DUPRÉ. Mr. Chairman, I yield 15 minutes to the gentleman from Georgia [Mr. LANKFORD].

Mr. LANKFORD. Mr. Chairman, much has been said about preparedness for war. I wish to make a plea for preparedness for peace and for those things which make our Nation strong for all emergencies. There should only be such preparedness in the way of an Army and Navy as is necessary to maintain, if possible, the peace we now enjoy and to win at the earliest possible moment, with the least possible loss of life, any war into which we are drawn.

There should be no limit, though, to the preparedness which gives the common people of all sections a fair deal and insures to the producer a just return for his efforts and insures a production of the necessaries of life equal to every demand. Just as surely as a human being must have food, clothing, and shelter in order to live, so surely must our great Nation have these essentials or cease to exist. The individual as an act of preparedness provides food, clothing, and shelter for himself and loved ones. This Nation, if it is to endure, must, as an act of preparedness, help the common people get a fair deal in an honest effort to secure these essentials, and must help mightily the farmers of the Nation, who are doing so much along these lines for the good of all mankind. Preparedness for an era of prosperity, peace, and national growth hitherto unknown will be accomplished when we understand how absolutely necessary our farmers are and give them the laws and help which they so richly merit and which is so essential to the welfare of all.

The greatest preparedness is the production of food and clothing to the limit with a fair return to the producer and at a reasonable cost to the consumer. Help the farmer produce more at less cost. Help him get more for what he produces. Help the consumer have food and clothing more abundantly at less cost. These things are not inconsistent. They are consistent. The trouble now is that the farmer earns much more than he gets. Others get that which they do not earn. Let the fellow who earns a dollar have it. Let the fellow who does not earn a dollar do without it until he gets out and earns one.

I believe and truly hope that a better time is coming for the agricultural interests. Members of Congress are awakening as never before to the vital subject of helpful legislation for the farmers. I am sure, though, that there are many Members of Congress who place too low an estimate on the value of our farmers as a national asset and who do not realize how greatly they have suffered in the financial depression which is still gripping this country. Do you, my friends, realize that during the year 1920 the deflation of the currency and the decline in prices which followed caused a loss to the farmers of the Nation in a sum equal to nearly one-half of the value of all the railroads of the Nation? It is probably safe to say that the farmers have lost since the close of the war enough money to buy all the railroads in the United States. That such a loss has been borne by one group of our citizens is staggering to everyone who stops to think of the matter. No wonder the Nation is in a serious condition, with our most important industry suffering so much. We must save the farmers if we desire to save our Nation and make it steadfast and secure. The friends of the farmers here have made a noble fight during this period of depression and I do not mean to be impatient. I only wish the farmers had more true friends here and we could accomplish more without delay. I am truly glad that Members of Congress who are interested in legislation for the farmers are working in harmony, regardless of politics and regardless of whether they are from the South, the West, or some other section of the country. Fighting for a common cause makes brothers of us all and we will eventually prevail. Even now we are encouraged by what we have accomplished and by the plans and helpful legislation which we are working on and which we have most splendid hopes of rapidly bringing to completion and enactment.

What are some of the things we have done? I will name only a few of the most important. For nearly four years we have succeeded in keeping a tariff off of the potash which is shipped in from other countries and which is such an essential ingredient in fertilizer. Millions have been saved in this way, and yet fertilizers have been selling at an almost prohibitive price. There is yet an effort to provide for a tariff on potash in the permanent tariff bill now pending. I hope it is left on the free list.

A fight is still being waged for the farmers in this matter. I wish also to mention the farmers' relief bill, which was passed last fall enabling the banks of the country to borrow money from the War Finance Corporation on obligations of the farmers of the country. This bill proved to be very helpful, but I am anxious for us to give relief more directly to our farmers, and I have recently introduced a bill along this line.

We have passed several measures encouraging cooperative marketing and removing certain obstacles from the organization and operation of cooperative selling establishments of farmers; but, Mr. Chairman, I am extremely anxious for us to go much further and bring about, if possible, and I believe it is possible, the sale of farm products directly "from the producer to the consumer." I have now two bills pending which seek the establishment of "from the producer to the consumer" marketing. I am very much encouraged, and believe that in the very near future there will be evolved a very much better credit system for the farmers and a very much improved system of selling the products of the farm. A greater effort has been made during the last two years to give the farmers a fair deal in matters of tariff legislation than ever before. We are seeking with all our might as low a tariff as possible on what the farmer buys and a tariff on what he sells. In this way the friends of the farmers in both parties hope to offset what the farmers lose by the tariff on manufactured articles which they must buy. We certainly hope for a good rate on vegetable oils, peanuts, long staple cotton, and every farm product the price of which is injured by imports from abroad.

Mr. Chairman, there are those of us here who study every measure with a view of making it helpful to the farmers or defeating it. When we legislate for the farmers and for the common folks we legislate for all. Help the farmer produce more food and help him sell it at a living price directly "from the producer to the consumer" in a fresh, wholesome condition and you not only help the farmer, you help every one who eats. Help keep the country out of war and you help the farmer, and he and his folks living at home will help make the country prosperous. Think of the farmer's interest and you have in mind the best interest of all.

Mr. Chairman, I wish every Member here could see and feel the truth about this great producing group of our citizens as the friends here of the farmers see and feel the truth. I am so glad that the friends of the farmers, Democrats and Republicans, are laying politics aside when matters of interest to the farmers come up and are making a solid front. It means better legislation for the farmers and for our country. There are many other things, such as better freight rates, and so forth, we are working on, I would like to mention, but time will not permit now. I will mention another of special interest to the people of my district. I refer to the splendid unity of purpose which now exists between those seeking to get water on the dry lands of the West and those of us seeking to get the water off of our valuable lowlands along the Atlantic seaboard in the South and elsewhere. With a solid nonpartisan, nonsectional front put up by all who seek to reclaim lands from lack of water or from too much water we are bound to succeed. This alone means much to my section and to the whole Nation. Millions and millions of acres of very valuable land can be and must be reclaimed.

Mr. Chairman, as I see it there are three great objectives to be obtained by us for the farmers as soon as possible. Of course there are many others, but the obtaining of these three will be a most splendid beginning.

First, they must have a better system of credits, so as to better enable them to borrow the money they need. Second, they must have a better system of marketing their products and must more nearly get the value of the farm products which they sell. Third, they need very much and must have sufficient fertilizers for their farms at a reasonable price. We have been trying to help in this matter of cheaper and better fertilizer by keeping the tax or tariff off of potash and by trying to solve the Muscle Shoals problem, so as to furnish much cheaper nitrogen. Let us not let anyone make unreasonable profits out of the fertilizers our farmers use in producing the necessaries of life. They need and should have an abundance of potash and nitrates at the lowest possible cost. If we desire to embark upon a great program of preparedness, let us develop the best possible system of rural credits, the best possible system of marketing for the farmers, and give them the very best fertilizer in abundance at the lowest possible cost. To my mind, the greatest preparedness will come from truly helpful legislation of all kinds for our agricultural interests.

We should develop our water transportation. Our rivers and harbors should be improved and canals constructed wherever needed as measures of preparedness for an era of peace. All these things are not only good in time of peace but also in time of war, if we should be so unfortunate as to be plunged into war again. Along with other canals should be constructed one from St. Marys, Ga., to St. Marks, Fla., saving the distance around the Florida Peninsula. This canal would be invaluable in time of peace and in time of war may easily become more valuable than many mighty battleships or great armies of men and may even be the means of saving the Nation if it should become necessary to hurry a fleet from our Atlantic ports to our Gulf ports, or vice versa.

Why do we delay so great a preparedness? The construction of the St. Marys-St. Marks canal would be preparedness for war and peace in every sense of the term. It would give a direct outlet to the Atlantic from the entire Mississippi River Basin which would be open the year round. There would be no freezing up during winter, as is the case with northern routes. A sea-level canal here would aid mightily in the drainage of large, valuable areas of south Georgia and north Florida. I wish to say much more on this canal project in the near future.

Mr. Chairman, in the few minutes now allotted me I can only partially cover this great subject of preparedness. I can not now mention all the many, many things which we should do to make more inviting, more successful, and happier the farm life of our Nation. Neither can I at this time mention, much less discuss, the many things which are now done which hinder and retard the success and happiness of those who toil on the farm and elsewhere.

We should strive by every possible means to see that a fair deal is given to all our citizens, regardless of whether they are rich or poor and regardless of what section of the country they are from. To my mind, true preparedness, good in all events, will be obtained by the enactment of legislation which is nonsectional, nation-wide, fair to all; for people, not for moneyed interests; for producers, not for profiteers; for consumers of food, not for consumers of folks; for boys and girls and their fathers and mothers who live by their own honest toil, and not for the moneyed vampires of the human race, who do not produce and never expect to produce, but who live by the honest toil not of themselves but of others. True preparedness will come from the encouragement and support of every individual move or enterprise which has for its purpose the lifting of mankind, the serving of the human race, or the upbuilding of the Nation, and not help but opposition for the individual move, scheme, or plan which proposes to enslave the children of men, degrade a great people, or work the downfall of this mighty Nation of ours. [Applause.] True preparedness will spring from that performance of duty by those in authority which makes our people more united, more happy, more prosperous, more patriotic, more enlightened, more law-respecting and law-abiding, more assured of absolutely a fair deal in all matters, and more God-fearing and God-worshiping. The due and true performance by us and others of these most solemn and sacred obligations will usher in the great preparedness which is steadfast and everlasting. [Applause.]

Mr. DUPRÉ. Mr. Chairman, I yield such time as he may desire to the gentleman from Texas [Mr. BRIGGS].

Mr. BRIGGS. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. BRIGGS. Mr. Chairman and gentlemen of the committee, Hon. John W. Weeks, Secretary of War, in a communication under date of January 25, 1922, to Hon. S. WALLACE DEMPSEY, chairman of the Committee on Rivers and Harbors, indorsed and emphasized in strongest terms the necessity for the extension of the east end sea wall of Galveston to the south jetty at the earliest possible moment for the protection of Galveston Channel and Harbor and the commerce which flows through it:

WAR DEPARTMENT,
Washington, January 25, 1922.

Hon. S. WALLACE DEMPSEY,
Chairman Committee on Rivers and Harbors,
House of Representatives.

MY DEAR CONGRESSMAN: I am in receipt of your letter of January 11, 1922, inclosing a copy of H. R. 9549, Sixty-seventh Congress, second session, a bill for the improvement of Galveston Channel, Tex., and requesting the views and opinion of this department on the measure. The purpose of the bill is to authorize an extension of the present sea wall for the protection of the entrance to Galveston Harbor, in accordance with the report stated in the bill, which was submitted to Congress by this department. I presume that the bill will be considered by your committee with a view to its incorporation in a general river and harbor bill.

I most strongly commend to your favorable consideration the authorization of the work proposed in this bill. The city of Galveston, after the disastrous hurricane of 1900, constructed a sea wall for the protection of the city against future damage. Under the authority of the river and harbor act of July 27, 1916, the wall has been extended by the Federal Government in cooperation with local interests, but there still remains an unprotected space, 2,860 feet in length, between the end of the wall and the jetties at the entrance to Galveson Harbor. The wall already built will tend to increase the liability of the scouring action of the sea during a hurricane through this interval, and there is grave danger that a breach will be formed outside the jetties, and enormous quantities of sand carried into the harbor channels, blocking them to navigation.

The waters of the Gulf were raised as much as 14 feet above the usual sea level during the hurricane of 1900. The scour that would result from the rush of water under such a head through the funnel between the present end of the sea wall and the jetties, and the backwash of the water from Galveston Bay as the Gulf level receded, is too apparent to require elaboration. As a consequence of the hurricane of 1919, with a storm tide of but 8.8 feet in height, and with a free gap 4,300 feet in width, a hole was scoured at the end of the uncompleted wall some 950 feet long, 800 feet wide, and 18 feet deep. The importance of extending the sea wall to connect with the jetty at the earliest possible moment is emphasized in the report of the special board contained in the document cited in the bill. If this gap is not closed by the contemplated wall there is great danger of a severe storm destroying the south jetty, built at a cost of about $4,000,000, and obliterating the entrance channel to Galveston Harbor. This channel is absolutely dependent upon the jetties, which have made it possible to maintain a depth from the sea of 33 feet, where formerly only 12 feet existed. The port of Galveston serves the country as far inland as Iowa and Nebraska, and a loss of this port would be a national calamity. Furthermore, the present conditions could not be restored for probably some two or three years at least if the south jetty should be destroyed.

I inclose photographs showing the scouring that occurred during the hurricanes of 1900 and 1919, which indicate the violence of forces set loose at such times.

Sincerely yours,

JOHN W. WEEKS,
Secretary of War.

TREMENDOUS SAVING TO THE PEOPLE OF THE WEST AND SOUTHWEST, PARTICULARLY, BY THE DEVELOPMENT OF THE PORT AND HARBOR AT GALVESTON.

In December, 1908, Col. John C. Oakes, then captain, Corps of Engineers, United States Army, in a special report (H. Doc. 328, 61st Cong., 2d sess.), had the following to say concerning the port of Galveston:

The total amount expended by the United States on this work to January 1, 1909, is $10,419,673.59. A board of engineers stated in its report of December 19, 1902, that a saving of $10,000,000 per annum, as a result of the completed improvement, to the territory adjacent to the port would be a conservative estimate. The saving of that amount on the commerce passing through Galveston alone can be shown, without taking into consideration the saving resulting to the people by reduced rates to all other ports competing with Galveston. I have no doubt if a careful study be made of this question a saving of $20,000,000 per annum could certainly be shown, and possibly $30,000,000.

The effect of the development of this port and harbor through the construction of the jetties, which were completed in 1907, was soon shown in the tremendous decline in the freight rates, especially with reference to those on grain from Kansas City and Missouri River points.

Galveston Harbor is the outlet, too, for not only the great commerce passing through Galveston, but also for the commerce flowing through Texas City, Houston, and Port Bolivar.

PROPOSED FURTHER EXTENSION OF SEA WALL 2,860 FEET TO SOUTH JETTY.

The Secretary of War and Chief of Engineers, in House Document 693, Sixty-sixth Congress, second session, approved recommendations of Special Board of Engineers as well as the Board of Engineers for Rivers and Harbors for repairs and extension of the sea wall to the South Jetty at a total estimate of $670,000.

The Special Board of Engineers (p. 33, sec. 103, of report of special board) states:

The board is of the opinion that the present sea wall should be extended at the earliest possible moment in a straight line to the South Jetty, and that its junction with the South Jetty should be strongly protected. (H. Doc. No. 693.)

The special board further represented that—

This would appear to be a proper expenditure for the United States. It is therefore recommended that an appropriation be made immediately available in one sum in order that the work may be completed at as early a date as possible, and also in order that the organization and plant now in operation may be advantageously used in the new work.

REALIZATION OF THE DANGER TO THE SOUTH JETTY AND HARBOR.

It was sharply indicated by the 1919 board that—

72. Within the next year the construction of the sea wall extension will be completed. The end of this wall will be opposite Battery Hugh Mercer, and there will be left between it and the nearest point of the south jetty a gap 2,860 feet wide. The average level of the ground over this gap is about 3 feet above mean low water, and there is a low sandy foreshore in front of it from 3,000 to 4,000 feet wide. All the batteries and structures at Fort San Jacinto are directly behind this gap. The extension when completed will reduce the capacity of the main flood passages by about 15 per cent for a tidal height of 15 feet, which would probably increase both the velocity and duration of the flood flow. (Sec. 72, p. 28, H. Doc. 693.)

75. Jetties: The United States Army Board of 1912 recognized and emphasized the danger of a breach through the south jetty. The very great scour around the end of the uncompleted wall in 1919, as contrasted with the small effects in the much more severe storm of 1915, shows the danger to which the reservation and the harbor may be exposed if the wall is not extended to a junction with the south jetty. It is thought that possibly the proximity of the Atlantic's Hole to the end of the wall may have had a considerable influence in promoting the scour in the recent storm. Upon completion of the present project the end of the wall will occupy a somewhat similar position with respect to Bolivar Gorge.

76. These various considerations point to the advisability and necessity for protecting the reservation at this time. Furthermore, the effect of leaving open the gap between Battery Hugh Mercer and the south jetty will be to subject all the batteries at Fort San Jacinto to serious scour and possible destruction in time of hurricanes, and to subject Galveston Channel to the danger of again being blocked by sand carried over from the reservation. In addition, it would appear that there will be the even more serious risk that the south jetty may be breached or flanked and a new entrance channel opened through the San Jacinto Reservation. (H. Doc. 693.)

VALUE OF RESERVATION.

Special attention is also called by the board in its 1919 report to the great value of this reservation to the Government. The board says:

If in the future it should be desired to replace them by modern batteries or to install new elements of defense, the reservation, properly protected and filled, will provide ample room for sites and is the only Government reservation which can furnish such additional room. Both Fort Crockett and Fort Travis are now crowded and could be extended only by purchasing additional land, which would require protection by building a sea wall and would also require filling. (Sec. 73, p. 29, H. Doc. 693.)

The board further says:

If it is desired hereafter to build batteries or other works on this reservation, the construction of the 2,860 feet of sea wall now will obviate the necessity of constructing an expensive sea wall around each work. Such individual walls would in the end not only cost much more than will a single wall across the gap, but would intensify the scouring action on the balance of the reservation. (Sec. 74, p. 29, H. Doc. 693.)

Size and condition: By closing the 2,860-foot gap named—

the Government will also secure a reservation nearly 800 acres in extent, protected against serious damage by storms, suitable for wharves, storage, assembly of troops, and other Government purposes. If the wall be completed now the reservation can be gradually raised by pumping in such material as may be excavated from time to time in the ordinary course of harbor maintenance work in the vicinity. (See 74, p. 29, H. Doc. No. 693.)

The 1913 board reported, as follows:

At the time of the great storm of 1900 the water rose from 12 to 14 feet above its usual level, and this storm tide was accompanied by wind of hurricane velocity. Waves and currents swept across the east end of Galveston Island, badly wrecking the shore arm of the south jetty and making a large fill in the easterly end of Galveston Channel. This caused an immediate and serious obstruction, and it became necessary at once to procure such dredges as were available and at such terms as could be had to dredge a channel through the deposited material so that the commercial business of the port could be continued. The restoration of this channel to its original dimensions required months, and this with the repair of the shore arm of the south jetty has once more produced normal conditions in this locality. (Sec. 48, p. 21, H. Doc. No. 1390.)

Meanwhile the city of Galveston has protected itself with a sea wall and has raised its grade so that, with a recurrence of such a storm as that of 1900, water forced across the east end of the island will be unable to find relief by spreading over the city, and its force will be concentrated more strongly than in 1900 upon this narrow neck where once existed the Hospital Channel. The shore arm of the south jetty while now somewhat stronger than in 1900 can not form an efficient obstacle to this increased force that might thus come against it, and the result might easily be disastrous to the inner harbor and by possible resultant flanking of the jetties to the entrance channel between them. The situation while satisfactory under normal conditions is far from safe in the event of the repetition of a storm approaching in violence that of 1900. (Sec. 49, p. 21, H. Doc. No. 1390.)

From the foregoing expression it is to be observed that the board in 1913 found that the more the opening over the east end flats was narrowed by the extension of the wall, without the gap being closed between the end of such extension and the south jetty, the greater was the danger to the shore arm of the south jetty and to the harbor, with a probable blockade of the commerce of the port. (Secs. 48 and 52, 1913 Report, H. Doc. No. 1390, and secs. 72 and 76, H. Doc. No. 693, Report of Engineers, 1919.)

The 1913 board found that the 1900 storm had badly wrecked the shore arm of the south jetty and made a large fill in the easterly end of Galveston Channel. A restoration of this channel to its original dimensions required months. The cost of repairing the damage done to the jetties and channel was in excess of $1,000,000.

As confirming the prediction of the 1913 board of the danger to the shore arm of the south jetty and harbor by a channel being cut through the east end flats, and probably effecting a breach in the south jetty, attention is called to the finding of the 1919 board that in September of that very year the coast of Texas was again visited by a severe hurricane which struck at Corpus Christi, and that though the effects of such storm at Galveston only produced a tide in front of the city to a maximum elevation of 8.8 feet, yet the scour that took place on the east end flats was one of the most interesting manifestations of the storm. Beyond the end of the incompleted sea-wall extension a channel was scoured connecting the Gulf with the Atlantic's Hole. This channel, measured along the line of the sea-wall extension, was 2,000 feet wide, with depths varying up to 19 feet, requiring considerable time and expense to fill so that the extension of the sea wall might proceed. (Secs. 46–49, p. 23, H. Doc. 693.)

On June 22, 1921, there was also a tide at Galveston of 5 feet, which scoured a hole at the end of the sea wall of a maximum depth of 7.6 feet for some little distance, although the wind velocity was comparatively low both in 1919 and in 1921.

It is therefore apparent that the statement of the Army engineers is true, that the existence of a gap between the end of the sea wall and the south jetty becomes more and more menacing to the shore arm of the south jetty and the harbor as such opening is narrowed. Had the disturbance of 1919 at Galveston or that of 1921 been of the same intensity as the storm of 1900 or that of 1915, it is apparent that there would have been a catastrophe to the south jetty similar to the experience and wrecking in 1900.

The wind velocity at Galveston in the September, 1919, disturbance was only 55 miles per hour, while the velocity of the wind in 1900 was 120 miles an hour and in 1915, 93 miles per hour. (P. 17, H. Doc. 693.)

ORIGINAL GALVESTON SEA WALL.

The original Galveston sea wall was built by the county of Galveston and cost $1,500,000. The special board of engineers stated:

Construction of a sea wall to protect the city was commenced by local interests in October, 1902, and completed in July, 1904. The embankment behind the wall and the fill throughout the city were not completed until much later. Construction of a wall in front of Fort

Crockett Reservation was commenced by the United States in December, 1904; the wall itself was finished in October, 1905; the filling and sodding were completed in January, 1909. The work done by both the county and the Federal Government followed the general provisions of the Robert Board report, but differed in minor particulars from it.

The Robert Board considered that in addition to the sea wall the proper protection of the city required certain filling. Its recommendation was for a fill, aside from the embankment directly behind the wall, that varied from an elevation of 8 feet along the wharf front to 14½ feet at Thirty-ninth Street and sea wall. The Fort Crockett Reservation was entirely filled to a grade of 14½ feet; the city was only partly filled. (Secs. 30 and 31, p. 20, H. Doc. No. 693.)

It was built at a time when the confidence of the public was pretty much at its lowest ebb in the security of the city, and therefore a most difficult time to solve the bond question, but the people took the bonds, the people and the public utilities there. The wall was constructed. Later on Congress approved the project for carrying on this wall 10,300 feet to the eastward, which has now been constructed, the county paying for 3,300 feet of the wall. The county did pay for 3,300 feet as now built, something like $500,000 or more. The remaining 7,000 feet was to be constructed by the Government at its own expense. In addition to that the Government stipulated 600 acres should be deeded to the Government, which land appears on the map, House Document No. 693, to which reference has been made.

That property was deeded, and the Government now owns that in addition to the military reservation; the Government owns the eastern end of the island. Not only does it give the Government between 700 and 800 acres in that reservation but it gives it a frontage on the channel itself, practically, which makes it of the greatest value, and the Government can use it at any time.

The sea wall is nearly 6 miles long; 17 feet high above mean low tide; 16 feet wide at base; 5 feet at top; rests on piling for the most part from 40 to 44 feet deep.

The citizenship of Galveston County, in addition, made expenditures and incurred obligations for the following purposes:

Grade raising	$3,000,000
Raising 2,156 buildings	1,500,000
Causeway	3,000,000
Extension sea wall from original county wall terminus	1,200,000

EAST END SEA-WALL EXTENSION.

Actual construction of the east end sea-wall extension began June 20, 1918, and 10,300 feet of actual wall was completed in December, 1920. (Report of Chief of Engineers for 1821, p. 1023.)

In the 1900 storm more than 6,000 people lost their lives, and the property damage in the city alone is estimated to have been $17,000,000. More than 3,600 houses in the city were absolutely destroyed, which sheltered from 15,000 to 16,000 persons.

The 1900 storm did not endure for more than 24 hours, but was of the greatest intensity during such period.

The 1915 storm lasted for two days. It began on the 16th of August and ended on the 17th. Owing to the construction of the Galveston sea wall around the Gulf side of the city in 1904 and the filling of the grade of the city, there were practically but few, if any, instances of loss of life within the city proper during the 1915 storm.

The report of the special board of engineers of 1919 showed that in the 1900 storm the wind rose at Galveston about 2 o'clock on the morning of Saturday the 8th, blowing at first from the north, but shifting to the eastward. Later it shifted to the southeast and appeared to have greater fury than before. The wind then shifted to the south about 11 p. m. and steadily diminished in force. (P. 39, sec. 153, H. Doc. No. 693.)

Wave action: Great damage was done to the city by the direct impact of waves. This was made possible by the extreme high water in the Gulf. The very high water—14½ feet—allowed the seas to reach and undermine the buildings along the shore. (Sec. 221, p. 47, H. Doc. No. 693.)

Scouring: Both the outer parts and the shore arm of the south jetty were seriously injured during this storm, both by wave action and currents. A very strong current scoured out a considerable quantity of material from Fort San Jacinto Reservation and deposited it in Galveston Channel. (Sec. 225.)

The erosion of San Jacinto tract was so extensive and the weakening of the shore arm of the south jetty so material that had this storm been followed within a year or two by another approximating it in intensity the south jetty might have been flanked and another entrance to Galveston Bay been formed. (Sec. 226, p. 48, H. Doc. No. 693.)

As indicating the direction of the wind during these tropical storms, it is noted that the direction of the wind in the storm of 1909 was northeast. This direction gradually shifted to east and from east to southeast. The tide rose about 10 feet. The highest wind velocity was 69 miles an hour. (Secs. 157–158 and 51, H. Doc. 693.)

In 1919 the maximum tide was 8.8 feet, with maximum wind velocity of 53 miles an hour. (Sec. 256, p. 52, H. Doc. 693.)

Attention has previously been called to the channel cut at the end of the sea wall to the point to which it had then been extended, a channel of about 2,000 feet wide, with varying depths up to 19 feet.

The Board of Engineers also find that the east-end flats during hurricanes may become flooded to maximum depths of possibly 12 feet and more, as in the 1900 storm, when the tide reached an elevation of 14½ feet. (Secs. 69 and 23, H. Doc. 693, pp. 28 and 18.)

The height of the tide in 1915 was also about 14 feet. (P. 50, sec. 244, H. Doc. 693.)

The Army engineers have particularly stressed in the different surveys and examinations made of conditions at Galveston that interruption of the flow or spread of the sea water at times of storms will make for dangerous currents across the east-end flats and threaten the safety of the south jetty, the shore arm, and the harbor.

HOSPITAL CHANNEL.

Prior to the construction of the jetties a channel, known locally as the Hospital Channel, from time to time existed across this neck, and vessels occasionally used it in passing between the bay and Gulf of Mexico. (Sec. 46.)

When the jetties were built a long extension was made to the south jetty, known as its shore arm, practically at right angles to the general direction of the jetty and extending to comparatively solid ground in the city of Galveston. This shore arm crossed the old Hospital Channel, causing it to fill, and thus in a measure protected the jetties from being "flanked" by the enlargement of a channel to the south of them, which would have produced shoaling in the main entrance. (Sec. 47, p. 21, H. Doc. 1390.)

The city of Galveston having protected itself with a sea wall and having raised its grade so that with a recurrence of such a storm as that of 1900 water forced across the east end of the island will be unable to find relief by spreading over the city, its force will be concentrated more strongly than in 1900 upon this narrow neck where once existed the Hospital Channel. The shore arm of the south jetty, while now somewhat stronger than in 1900, can not form an efficient obstacle to this increased force that might thus come against it, and the result might easily be disastrous to the inner harbor and by possible resultant flanking of the jetties to the entrance channel between them. (Sec. 49, H. Doc. 1390.)

The Chief of Engineers describes the gap as leaving a great funnel threatening to breach the south jetty and block and destroy the harbor. Galveston Harbor and Galveston Channel form one of the great outlets for the commerce of the Southwest. They have been doing so ever since deep water was given to the port in 1907. Through that harbor last year, according to the report of the Chief of Engineers for the fiscal year ending June 30, 1921, flowed over 10,000,000 tons of commerce. Ninety million bushels of grain from the fields of Texas, Oklahoma, Kansas, Nebraska, and other territory, and more than 3,000,000 bales of cotton, passed through the port of Galveston. The necessity for this improvement is so extremely great and so urgent that it prompted the Secretary of War to send the communication which he did to Congress. The following data are taken from—

Report of Chief of Engineers, United States Army, 1921.

	Commerce.	Value.
	Tons.	
Galveston Harbor	10,609,583	$999,271,796
Galveston Channel	8,002,981	839,101,811

TERMINALS.

The terminal facilities at Galveston are the most extensive on the Texas coast. (Rept. Chief Engineers, 1921, p. 1024.)

Galveston is the largest and most important port on the coast of Texas.

Classification of commerce of Galveston, 1920.

	Tons.	Value.
Animals and animal products, except wool and hair	500,335.5	$4,636,166
Vegetable food products, oil seeds, expressed oils, and beverages	1,852,957.1	204,587,387
Other vegetable products, except fibers and wood	4,020.8	1,467,421
Textiles	946,092.2	483,803,785
Wood and paper	207,222.1	16,934,612
Nonmetallic minerals	3,962,345.0	68,737,198
Ores, metals, and manufactures of, except machinery and vehicles	501,294.4	39,079,305

Classification of commerce of Galveston, 1920—Continued.

	Tons.	Value.
Machinery and vehicles	12,841.3	$3,676,939
Chemicals	12,152.5	14,711,807
Unclassified	3,720.6	1,467,240
Total	8,002,981.5	839,101,811

The calendar year 1921 showed enormous increases through this port of cargoes in the foreign import and export trade. According to the Galveston Daily News of January 1, 1922, the grain shipments from Galveston for this year amounted to 76,340,188 bushels; from Texas City, 12,900,193 bushels; a total of 89,240,188 bushels exported, being an increase of about 45,000,000 bushels over the year 1920. Corrected figures for Texas City, according to the report of the Texas City Board of Trade, were 15,304,325 bushels exported in 1921.

No commerce through any ocean port, perhaps, is probably of greater importance or of more value, with the exception of the port of New York, than that which flows through this great harbor. The adoption and completion of this project should be carried out at the earliest possible moment, as recommended by the Secretary of War and Chief of Engineers, and thereby insure the safety of a channel and harbor in which the Government and people of the whole Central and Southwest are so vitally interested. [Applause.]

Mr. DUPRÉ. Mr. Chairman, I yield 10 minutes to the gentleman from North Carolina [Mr. LYON].

Mr. LYON. Mr. Chairman and gentlemen of the committee, I shall support the pending bill with a great deal of pleasure, but what I especially want to talk about in the few minutes allotted to me is to explain the amendment that I shall offer when the bill is read under the five-minute rule. I think my amendment will be in the interest of economy, and certainly from a business standpoint ought to be approved, and I hope the committee will see fit to accept it.

It is as follows:

Amend by adding new paragraph reading as follows: "Cape Fear River below Wilmington, N. C., in accordance with report submitted in House Document No. 94, Sixty-seventh Congress, first session."

Mr. Chairman, my amendment if adopted would not authorize any new project, but would simply modify an existing project relating to the bar at the mouth of the Cape Fear River, N. C. This modification has been approved by the Secretary of War, the Chief of Engineers, General Beach, and the Board of Engineers for Rivers and Harbors, and is included in Senate bill 3017, introduced by Senator JONES, chairman of the Senate Committee on Rivers and Harbors.

Before discussing my amendment it might be of interest to briefly explain the location and present condition of the bar where the work proposed is to be done.

The Cape Fear River empties into the Atlantic Ocean about 5 miles northwestward of Cape Fear, and the ocean bar is about 2 miles seaward of the river mouth. A vessel entering the river finds itself in a commodious land-locked harbor, and it frequently happens that vessels take refuge here in case of storm at sea rather than attempt to round Cape Hatteras.

About 30 miles from the mouth of the river is the city of Wilmington, having a population of about 40,000, and the chief seaport between Norfolk and Charleston. Here is the largest privately owned cotton exporting firm in the United States. The terminal facilities are adequate to take care of the present and future commerce of the port. There are 73 wharves, 7 of which are owned by the city, and these are open to all free of charge. Here are 20 warehouses, with a million and a quarter square feet of floor space. The city of Wilmington has recently purchased from the Shipping Board the old Liberty shipyard site, and this property is to be converted into free municipal terminals and warehouses.

There has been a gradual increase in tonnage of vessels entering the port, from an average of 421 tons per vessel in 1886 to 2,275 tons in 1920. There was collected through the customhouse at this port in 1921, $3,425,955.16, at a cost of less than 5 mills per dollar, making the cost of collecting $1 at this port less than one-fourth of the cost of its nearest competitor.

The principal products entering and leaving this port are cotton, lumber, naval stores, fertilizer, and fertilizer material, and in 1920 amounted to 605,179 tons, valued at $66,261,143.70, and steadily increasing.

The importance of this port is summed up by the district engineer in his report to the Chief of Engineers on February 28, 1920 (H. Doc. No. 94, 67th Cong., 1st sess.), in these words which I quote:

Wilmington is the natural gateway to middle and western North Carolina and northeastern South Carolina, being nearer in mileage to this great productive section than any competitive port, so that the question of adequate depth of water for lower Cape Fear River is not only of local interest but virtually affects a vast area and a large population.

Now, Mr. Chairman, the existing project that my amendment seeks to modify was adopted by the act of July 25, 1912 (H. Doc. No. 287, 62d Cong., 2d sess.), which provides for a depth of 26 feet from the ocean to Wilmington, and modified by act of March 2, 1919 (H. Doc. No. 746, 65th Cong., 2d sess.), which provided for increasing the depth across the bar to 30 feet at mean low water and providing a channel of this depth 400 feet wide.

Mr. McDUFFIE. Mr. Chairman, will the gentleman say how much would be saved annually by the shifting of this channel?

Mr. LYON. I will in a minute.

The channel has been practically completed from the mouth of the river to Wilmington, but the trouble has been in obtaining the depth and width provided for at the bar. This is fully set out and explained by the Report of the Chief of Engineers for Rivers and Harbors of May 10, 1921—House Document No. 94, Sixty-seventh Congress, first session—and is as follows:

Since the earliest records the line of deepest water over the bar has gradually moved westward and current observations show that the present channel, which after passing Baldhead Point turns sharply to the west, is not favorably located with reference to the tidal currents. It has been observed for some time that a cutting action is taking place on a line extended straight out to sea from Baldhead Point, as shown on the map. Consideration has been given in a previous report to a change of location of the channel to this line, and the district engineer now deems this advisable in view of the increasing difficulty experienced in recent years in maintaining the channel. From 1895 to 1900 the small dredge *Cape Fear* succeeded in increasing the channel depth over the bar from 14 feet to 21 feet, but since 1916 this dredge, assisted for nine months by the dredge *Absecon*, has not been able to maintain the channel properly, and no advance has been made toward securing the existing project depth of 30 feet.

This report further says:

The present channel over the bar has shown a decided tendency to drift as a whole to the west, except that just off Baldhead Point a small portion of it has been forced toward the east by a movement of sand in that direction. This shifting of the thread of the channel has resulted in more difficult maintenance, and it has been found impracticable to make any advance toward the 30-foot depth even with the use of two dredges. The existing project dimensions are considered adequate, and the question now involved is how these dimensions may best be insured. With the shifting of the channel referred to there has been a growing tendency for the water to deepen in a straight line out from Baldhead Point, and it would cost but little more to dredge a 30-foot channel here than to secure that depth by following the present project channel, and subsequent maintenance of the new channel would probably be considerably less. The natural tendency to scour along the line of the proposed new channel and to fill in the present channel suggests quite forcibly the advisability of making the change. * * * The board is therefore of opinion that it is advisable to modify the existing project so as to provide for a new channel across the bar, 400 feet wide and 30 feet deep at mean low water, from Balhead Point in a southwesterly direction, approximately as shown on the accompanying map, at an estimated cost of $420,000, and, in addition, $105,000 for maintenance of the existing channel during construction.

This report was submitted to the Chief of Engineers, who, in his report to the Secretary of War, says:

After due consideration of the above-mentioned reports, I concur in the views of the Board of Engineers for Rivers and Harbors and therefore report that it is deemed advisable to modify the existing project to the extent of providing a new channel across the bar 30 feet deep at mean low water and 400 feet wide from Baldhead Point in a southwesterly direction, approximately as shown on the accompanying map, at an estimated cost of $420,000 for dredging the new channel and $105,000 for maintenance of the existing channel during construction. Subsequent maintenance is placed at $30,000 a year as the minimum. The full amount of the estimate, $525,000, should be made available in one appropriation. A new dredge should be made available for this work, whether or not the proposed change of project is adopted. The cost of the dredge is not included in the above estimate.

My amendment, you will notice, proposes to authorize the modification of the present project as recommended in the above-mentioned reports and will cost little, if any, more than to complete the existing project at the present location.

At the hearings before the committee on Tuesday, May 9, 1922, General Taylor, Assistant to the Chief of Engineers, testified as follows:

That at the present time there is a bending of the channel making two very difficult angles, two very conclusive turns in the channel, and that it is difficult to maintain, and we are afraid if we do not have the channel on the new line that it will be impossible to maintain the old channel in a navigable condition. The new channel would be easier of navigation and easier of maintenance and there would be a saving of expense.

It will probably be cheaper to provide a channel along the new line, rather than to get a channel according to the demand along the old line, and in my opinion it is advisable to make the change for the reason that the present channel is narrow, crooked, and consequently very difficult of navigation even when in the best condition that we can get it in.

Mr. Chairman, the original estimate of the cost to complete the present bar project was $303,625 and $95,000 annual maintenance. The estimated cost of the change of channel provided by my amendment is $420,000 and $30,000 annual main-

tenance, making a difference of only $116,375 in cost of construction, but providing a saving of thousands of dollars each year in maintenance cost.

Now, I want to call your attention further to the fact that, although there has been expended, according to the report of the district engineer, which is to be found on page 10 of Document No. 94, on the present project, adopted in 1912 and modified in 1919, $553,326.65 for new work, and $701,397.13 for maintenance, making a total of $1,254,723.78, the project is just 63 per cent completed. The part completed is that leading from the mouth of the river to the city of Wilmington. The part that is uncompleted is the channel across the bar, because the report shows that the channel is not to-day in as good condition as it was in 1916. Although they have spent in construction work more money than the proposed change will cost, the channel is not in as good condition as it was then. In view of these facts I hope the amendment that I shall offer will be adopted. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. DEMPSEY. Mr. Chairman, I yield to the gentleman from North Dakota [Mr. YOUNG].

Mr. YOUNG. Mr. Chairman, the bill to extend the life of the War Finance Corporation should be included in the program of bills to be passed during the next three weeks.

Bills to extend the loaning period of the corporation were introduced in both the Senate and the House. In the judgment of the committee the Senate bill did not go far enough, so they struck out all after the enacting clause and substituted my bill in full without change. In that form the bill stands for passage on the House Union Calendar.

The chief change proposed in my bill is that it provides an orderly method for winding up the affairs of the corporation. The law as it now stands provides that no advance of money shall be made after June 30, 1922. If this date were only changed to June 30, 1923, it would mean that there might be a wild scramble to obtain payments covering loans before June 30. There would be many loan applications pending, and there would naturally be high pressure both in and outside of the offices of the corporation to complete them before the final date limited by the law. That would probably result in some worthy applications for loans being rejected for lack of time to consider or possibly some being accepted which ought to be rejected because of lack of time to investigate.

In asking to have the life of the War Finance Corporation extended, it does not necessarily mean that the provisions of that law, as originally enacted, were satisfactory to the agricultural population of the West. It is well known that the sections of the law to authorize aid to agriculture were passed quickly to meet an emergency. For that reason, in the judgment of Congress, there was not sufficient time to set up the extensive and elaborate administrative machinery which would be necessary to make loans direct to individual farmers. The Anderson Commission has been working on a scheme for permanent legislation to take care of financing the production of farm commodities for periods of from six months to three years, depending upon the length of time necessary to mature the product upon which credit is asked. A committee of the farm bloc is working on it also, and we hope for permanent legislation on this subject before many months, such as will adequately deal with the whole subject. If the War Finance Corporation were to cease operations at this time, the large cash capital which it now has would be transferred into the general fund of the Treasury and later there would be increased difficulties in having such funds made the basis of a permanent farm-credit system.

The present law is temporary. While it has been criticized, there has also been quite general recognition of the fact that it has done much good, and all agree that if there has been disappointment it has not been caused by any lack of effort or lack of ability or lack of enthusiasm upon the part of the administrative board. These men have done splendidly, and where disappointments have occurred they have been occasioned by reason of limitations in the law itself.

The corporation has loaned over $341,000,000 to banks in agricultural communities, live-stock loan companies, and cooperative marketing associations. More than $21,000,000 were loaned in the State of North Dakota.

BIG LOAN TO EQUITY.

Mr. Chairman, one of the first loans authorized was that of $15,000,000 to the Equity Cooperative Exchange, at St. Paul, the greatest grain cooperative organization in the United States, with over 23,000 farmer stockholders.

Among those who believe that the War Finance Corporation has been of value to the farmers is this great Equity organization. I submit for printing in the RECORD an article which appeared in the Cooperators' Herald, their official paper, and later will submit some letters and editorials.

The CHAIRMAN. Is there objection to the extension of remarks in the manner indicated?

There was no objection.

The article from Cooperators' Herald is as follows:

During a 10-year contest with highly organized and resourceful competitors President John M. Anderson has at times been moved by powerful emotions both of disappointment and victory, but the greatest thrill of his young life was when Vice Managing Director McLean of the War Finance Corporation said:

"Gentlemen, our board of directors has decided to make a loan of $15,000,000 to your organization, the Equity Cooperative Exchange."

The gentlemen addressed were John M. Anderson, president, and Benjamin Drake, attorney for the Equity Cooperative Exchange, St. Paul, and Congressman GEORGE M. YOUNG, second district, North Dakota. They had just come back to get the verdict after having spent the forenoon presenting the claims of the Equity organization to recognition by Uncle Sam's great War Finance Corporation.

The advisability of making a loan had been under consideration by the War Finance Corporation for months, and the officials of the Equity and Congressman YOUNG had been furnishing all information asked for and losing no opportunity to get their case fully and completely before the board of directors.

The final presentation of the matter was made at the directors' room of the War Finance Corporation, Washington, on Thursday, September 22. Statements were made by Anderson, Young, and Drake, which, when they had finished, covered completely every phase of the history, development, character of business done, financial condition, and training and experience of the officers of the great farmers' cooperative sales agency.

The making of this large loan is a great compliment to the Equity Cooperative Exchange. It is one thing for a Government agency to pass favorable judgment as to the financial soundness and competent management of an institution. It is a decidedly different thing to back up that favorable judgment by loaning $15,000,000 of good, hard, honest American money.

President Anderson was found at his hotel before his departure for the West and shown a press copy of the statement issued by the Finance Corporation telling of the big loan to his company. Mr. Anderson appeared highly elated over the successful results of his negotiations. He spoke in terms of high appreciation of the directors of the Finance Corporation. He said:

"I am especially grateful to Congressman GEORGE M. YOUNG for the valuable assistance given us throughout the entire negotiations both before coming here and while we were here.

"The loan made us by the Government will enable us to give a greater service to our patrons whether stockholders or not. It will put us in a position to sell to the best possible advantage, because we can meet the requirements of the biggest operators whether foreign or domestic.

Mr. YOUNG. The Fargo Courier-News, October 2, 1921, said:

Doubtless it was as much a surprise to the chamber of commerce as it was to the Courier-News when the War Finance Corporation made this loan. Doubtless the chamber of commerce had thought, as the Courier-News confesses it did, that the War Finance Corporation could be counted on to do nothing displeasing to the big bankers. And here its first action was to lend $15,000,000 to the Equity.

Mr. Chairman, this legislation, enacted last year and which we now propose to renew, stands to the credit of the farmers' bloc. It is one of a number of bills, some bearing directly on agriculture and some not, sponsored by them. The farmers' bloc, I fully recognize, is on trial, particularly in those areas of our country where there is little farming done. People of those areas are apt to take a short-sighted view. They do not seem to realize that the prosperity of the farming industry is at the base of all prosperity in our country. It is fundamental. The members of the farm bloc have been strong not so much on account of their numbers as on account of the justice of their cause. Their leadership is producing better government and better things for all the people.

Mr. Chairman, whatever the views of eastern people may be regarding the farm bloc, it is here to stay. If you could look over the mail of the average member of the farm bloc you would be convinced that the next Congress will see them all back here, and perhaps more along with them.

Perhaps the letters to me and newspaper comment regarding me are not much different from that of other Congressmen of the farm bloc. Believing they are typical, I submit for printing in the RECORD, for reading by those who may be interested, some letters and editorials.

The Woodworth (N. Dak.) Rustler says:

There are a number of things which ought to be considered in choosing the one to support for Representative in the United States Congress, but probably all will agree the most important question is: Has he been loyal to the great basic industry of our State?

Fortunately, so far as Representative YOUNG is concerned, there are men who are entirely disinterested and who are in every way qualified to speak impartially, who know his record.

The Washington representatives of three great national agricultural organizations joined in selecting from the bills before Congress a list from which it would be possible to reach accurate conclusions as to the extent to which the various Members of Congress have been loyal to the farm industry, and after this list of bills had been selected a careful tabulation was made of the record votes of every Congressman. Those friendly to agriculture were divided into two lists: First, those Members whose voting records showed them to be at all times consistent supporters of the agricultural interests with voting records 100 per cent right; and

Second, those Congressmen who by their records had shown that they could ordinarily be counted upon to support the agricultural interests.

Congressman YOUNG was placed in the first class, with a 100 per cent voting record in favor of agriculture.

This is not at all surprising to those who have followed YOUNG's record in the past. In our opinion YOUNG's 100 per cent record will appeal strongly to the people of this great agricultural district. His majority of 2,900 of two years ago will doubtless be pushed up to over 10,000.

The Binford (N. Dak.) Times says:

United States Senator ARTHUR CAPPER, head of the farm bloc, says GEORGE M. YOUNG should be reelected to Congress because he is an important member of the farm bloc. We of the great wheat State agree with the Senator. And we believe YOUNG will be reelected by a greatly increased majority.

FOR THE FARM BLOC.

The Willow City (N. Dak.) Eagle says:

The Equity Cooperative Exchange, the greatest cooperative grain marketing organization in the United States, with a membership of over 22,000, is not a political organization. The members are free to give a disinterested expression of their views. This great organization at its annual meeting in Fargo last winter adopted a resolution highly commendatory to Congressman YOUNG, a member of the farm bloc.

Many other expressions commendatory of Congressman YOUNG could be quoted from leading men and from farm journals.

Is there any better way to encourage and strengthen the farm bloc than to see to it that every member of it is reelected?

VIEWS OF FARM BUREAU.

NORTH DAKOTA FARM BUREAU FEDERATION,
Fargo, N. Dak., November 28, 1921.

Hon. GEORGE M. YOUNG,
Washington, D. C.

DEAR SIR: I note in the vote in the House on the question of keeping the surtax charge in the tax bill at 50 per cent that you voted "yea." I want to thank you for your vote and the interest that you took in this matter.

Yours truly,

NORTH DAKOTA FARM BUREAU FEDERATION,
By H. B. FULLER, *Secretary.*

—

AMERICAN FARM BUREAU FEDERATION,
Washington, November 25, 1921.

Hon. GEORGE M. YOUNG,
Washington, D. C.

DEAR SIR: The American Farm Bureau Federation wishes to express the appreciation of farmers for your support of the 50 per cent surtax provision of the tax bill.

Our farmers are confident that their Representatives realize the importance of considering these questions from the farmer's viewpoint, and that by united action they can greatly hasten the return of a more happy situation in the farm communities and thereby restore national prosperity more quickly.

Assuring you of our continued best wishes, I am

Very truly yours,

AMERICAN FARM BUREAU FEDERATION,
GRAY SILVER, *Washington Representative.*

—

WASHINGTON HEADQUARTERS FARMERS' NATIONAL COUNCIL,
Washington, December 23, 1921.

(Herbert F. Baker, president; George P. Hampton, managing director till his death, June, 1921; Benjamin C. Marsh, managing director. Directors: H. Q. Alexander, director, North Carolina Farmers' Union; F. B. Wood, vice president National Nonpartisan League; William Bouck, master Washington State Grange; W. M. Burlingame, president Montana State Union A. S. of E.; John J. Farrell, president National Creamery Butter Makers' Association; H. A. Fuller, director Minnesota State Union United Farmers of America; C. H. Hyde, member Board United States Grain Growers (Inc.); F. F. Ingram, chairman Farmers' National Committee on Postal Reform; Ed C. Lasater, member Farmers' National Committee on Postal Reform; J. Weller Long, secretary-treasurer United Farmers of America; Martin H. Meyer, secretary-treasurer National Creamery Butter Makers' Association; George L. McKay, secretary American Association of Creamery Butter Manufacturers; A. C. Welch, president Minnesota State Union United Farmers of America; Western Starr, member governing board Farmers' National Headquarters; Grant Slocum, president National Gleaner Federation; C. E. Spence, master Oregon State Grange; R. W. H. Stone, president North Carolina Farmers' Union.)

Hon. GEORGE M. YOUNG,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN YOUNG: We are very prone to forget and ignore the work which is being done by Members of Congress for the farmers. I feel, therefore, that I am not going a bit out of my way in expressing to you my appreciation of the fight which you have made for taxation of wealth, particularly of the stand you made to retain the maximum surtax of 50 per cent on incomes, and also the splendid fight which you made as a member of the Ways and Means Committee, as well as on the floor, against levying the skyscraper duties upon manufactured products under the so-called American valuation plan, the almost inevitable result of which would have been to permit some of the big manufacturers to make the same profits in the future as they made during the war.

Yours sincerely,

BENJAMIN C. MARSH,
Managing Director.

The National Wool Grower says:

The business difficulties of recent months have given prominence to a number of men having the ability and the courage successfully to attack the problems confronting the Nation and affecting the welfare of all American citizens. The December Wool Grower presented photographs and short sketches of the work of the United States Senators and Congressmen who were fitted to serve in the proper consideration of the sheep industry in relation to national policies.

Congressman GEORGE M. YOUNG, of Valley City, N. Dak., is not particularly identified with sheep matters, but he is one of those whose ability and courage have made him prominent at Washington, particularly since December 1.

Early in December it seemed that the question of protecting American producers from a flood of imports would not be acted upon by Congress. Mr. YOUNG was the leader of a group of Congressmen from the West and South who appreciated the seriousness of the situation and were resolved to provide the most effective remedies possible.

Mr. YOUNG, it has been announced, will be in charge of the farmers' emergency tariff bill when it is reintroduced in the special session of the Sixty-seventh Congress. He is a member of the Ways and Means Committee and his assignment to this place permits Chairman FORDNEY and other members of the committee to complete the writing of the regular bill and at the same time have an experienced, most able Representative on the floor to present and urge the necessity of the Nation's protecting itself by action that is adequate to sustain farming and live-stock interests.

YOUNG'S FARMER TARIFF BILL.

[From the Red Polled Journal.]

Under the caption "Young's farmer tariff bill" in the daily press on April 9 were given for the first time some clear, sound reasons for an emergency tariff on farm products. The statement published was made by Congressman GEORGE M. YOUNG, of North Dakota, who pointed out, as a salient feature of the present situation, that "Our country alone, among the large consuming countries of the world, is able to pay for imported commodities. In this country is found the one market where cash and credit conditions and exchange rates make it possible to buy and hold the world's surplus until consumptive demands can absorb them or until these can be sold abroad." Under this extraordinary condition of buying power and credit large quantities of wheat have been admitted to our country, which has absorbed a large amount of ordinary money. Over 39,000,000 bushels of wheat have been imported from Canada, and it was estimated that there are 35,000,000 bushels more at Fort William awaiting the opening of navigation to be shipped to American ports. Mr. YOUNG pointed out that 90 per cent of the 1920 wool clip in America was still in the sheep raisers' hands, with no sale for it, and that there was then in this country two years' supply of wool for the manufacturers and 100,000,000 pounds more was headed for our ports; also millions of pounds of frozen lamb have been imported and are now in cold storage in our country. According to his figures the citizens of the United States last year bought nearly $900,000,000 worth of farm products from foreign countries.

It will be noted that the situation is most remarkable and without precedent. Consequently, whatever one's opinion may be with regard to the value of protective duties to the producer under normal conditions and over a long period, it must be apparent to every fair-minded man that the present extraordinary situation is unique and requires special emergency treatment.

—

WHAT IS A "PROTECTIVE" TARIFF?

[From the Chicago Tribune, June 18, 1921.]

The assertion of Representative YOUNG, of North Dakota, a Republican member of the Ways and Means Committee, that many of the proposed rates in the permanent tariff schedule are too high ought not to subject him to a charge of party irregularity. Charges that his views indicate development of insurgency in the Republican ranks in Congress are ill-founded.

The tariff question to-day is not what it was at the time of the adoption of the Payne-Aldrich bill nor in the time of any previous administration since Washington. What were once clearly defined Republican policies are now affected by completely altered conditions of international trade, and by the change in the position of the United States from that of a debtor Nation to the world's chief creditor, it is possible that new or slightly altered policies may be in process of formation. Until policies are revealed in the completed bill no comment or suggestion can properly be construed as irregular.

The Farmers' National Magazine says:

GEORGE M. YOUNG, Representative in Congress from North Dakota, is best known in Washington as the author of the emergency tariff act, a measure designed for the relief of agriculture. An examination of Mr. YOUNG's record discloses that he has never failed to vote for measures demanded by the great self-help farm organizations of the United States. As a member of the Ways and Means Committee of the House his influence on legislation is by no means inconsiderable. He is a hard and effective worker.

Mr. DEMPSEY. Mr. Chairman, I yield five minutes to the gentleman from Delaware [Mr. LAYTON].

Mr. DUPRÉ. Mr. Chairman, I yield five additional minutes to my colleague.

The CHAIRMAN. The gentleman from Delaware is recognized for 10 minutes.

Mr. LAYTON. Mr. Chairman and gentlemen of the committee, in preparing the bill now before the House, the Committee on Rivers and Harbors gave all the time and thought consistent with their duty to themselves and to the taxpayers of the country. In the very beginning, I desire to say that for once, at least, a rivers and harbors bill is presented to the House without a pound of pork in it, and without, in fact, even the semblance of a barrel, and I might say, not a visible stave thereof.

ECONOMY.

The animating thought of the committee was economy—a resolve to cut out every project that after careful consideration was regarded as useless or of such little usefulness as to justify the committee in leaving them out of temporary consideration. Primary attention was given to those projects where commerce was already established, and which possessed the certain evidences of growth and development, to secure the best water transportation possible under present conditions, in order to relieve as much as we could the congestion in transportation everywhere existing.

SELF-DEPENDENCE.

Especial consideration was also given to those projects which had local backing—where the people themselves who were asking for Government aid were not only willing but were actually putting their own money into the project, and so justifying their own faith, as well as the judgment of the committee, in granting their demands.

In this connection it would be well to call the attention of the House and the public to the fact that a material change has taken place in the manner in which localities approach the Rivers and Harbors Committee when seeking to have their projects authorized by law. Formerly, while most localities asked for Government assistance without any effort on their own part to aid in a development sought for, now it is getting to be the usual thing for the people of these localities to base their requests upon what they have already done themselves, or have practically undertaken to do. The very great portion of the projects sought to be established in this bill, including authorizations for those already established, are where the people themselves have spent far more of their own money in these improvements and aids to water commerce than the Government itself. To be discriminatory and, therefore, more accurate, I might say that nearly all improvements on the Atlantic, on the Gulf, and on the Pacific, are of this self-sustaining character, including as well the harbors on the Great Lakes. Of course, the people living along the Ohio and the Mississippi, using them as illustrations of many internal waterways, could not in the nature of things do what cities like New York and San Francisco, Galveston, or Boston could do, where the financial power necessary is concentrated and vested in one concrete body. To get proper accord and necessary coordination for such a purpose along a river over a thousand miles long, like the Mississippi, flowing by the shores of a dozen States, with a multitude of municipalities of varying interests and divergent desires, would involve such a problem in the hopeless clutch of endless time before that coordination could be secured. But even here there is a growing willingness manifested, a fine display of self-help in the expenditure of money by these municipalities in the building of wharves and docks and terminals and warehouses for the purpose of facilitating trade and commerce pari passu with the development of the waterways.

SOURCES OF INFORMATION.

As to the manner of arriving at the conclusions expressed in the bill, I desire to say that two principal sources of information were utilized—the long and technical experience of the Government engineers and the testimony of the representatives of the people of the localities who came before the committee asking for its consideration. I think the hearings will show conclusively that there was no careless acceptance of any statement made by either the engineers or by the proponents of the projects, but that the committee, by searching interrogation and analysis, sifted the evidence carefully and made its own conclusions.

PROJECTS SELECTED.

It is proper to say that the bill does not contain all the projects that commended themselves as meritorious, but only those which the committee deemed to be paramount and indispensable to the immediate welfare of the country, and, therefore, those which should be at once approved of.

ABANDONED PROJECTS.

An examination of the bill will disclose further the abandonment of three waterway projects, namely, the Pearl River project below Rockport, Miss.; the Brazos from old Washington to Waco, Tex.; and that part of the Trinity River project which lies above Liberty, Tex. These projects were abandoned upon the advice of Colonel Taylor as being useless and impracticable. A further Government project, known as the iron pier, near the town of Lewes, Del., has also been recommended for abandonment; the reasons for which will be found in the Annual Report of the Chief of Engineers for 1921, page 419.

CONSOLIDATION OF PROJECTS.

Section 4 of the bill provides for the consolidation of four projects for Tampa and Hillsboro Bays, and Hillsboro River, Fla.; and the consolidation of Calumet Harbor and Calumet River, Ind. and Ill.; and the consolidation of Black River at Port Huron and mouth of Black River, Mich.

These consolidations were determined upon through the advice of the Chief of Engineers for the purpose of economy and efficiency in administration.

HARMONY IN THE COMMITTEE.

I desire, also, to observe that in all the deliberations of the committee, the utmost harmony was observed among its members. The questions of political faiths or of geographical sections never presented themselves. Whether the project under consideration was in the East or in the West, in the North or in the South, upon an ocean front or a gulf littoral, or within the interior of the continent, the same earnest, impartial, and patriotic consideration was given to each project upon its merits without regard to its geographical situation. It gave as equal and unbiased consideration to the Galveston problems as it gave to those of the city of New York; to Savannah, in Georgia, as to Los Angeles, Calif.

As a member of a committee of such inestimable importance to the real welfare of the people, I can not fail to declare that it has been actuated by an altogether unselfish purpose, and as long as I have been a member of it it has studiously endeavored to protect the public interests, keeping in mind the tremendous burden under which the taxpayer was laboring, adhering to the most rigid economy during the war, and long after the war, until in this session of Congress, after obtaining abundantly reliable information concerning the needs of waterway improvement, the committee was impelled by a profound sense of national duty to advocate an appropriation in excess of that of the Budget in order to preserve projects already in process of construction where further delay in construction would result in great Government loss, and to extend the scope of projects already adopted in order to increase their utility in the inerests of the national welfare.

In the bill there is no project that should not be authorized if transportation is a matter of public concern. Some time ago the very able gentleman from Ohio, the Hon. THEODORE BURTON, whose experience in river and harbor work is probably as great as that of any man in the present Congress, practically advocated the abandonment of internal waterway improvements except in an extremely few cases, alleging that a study of this matter by European comparison led him to this conclusion. Without in any way attempting to place my judgment against that of the honorable gentleman from Ohio I would come to another conclusion, and that is that Congress, on the contrary, should take steps at the very earliest and most practicable moment after our present financial and industrial depression is removed to push to completion the great projects already authorized. I agree with the honorable gentleman from Ohio that small and piffle appropriations for continuing projects that seem to have no definite end is senseless and wasteful, and does not give that consummation to the great problem of water transportation which is demanded. We are pursuing a policy in which we appropriate a little this year and a little next year, all of which practically amounts to nothing definite and beneficent as far as results are concerned. Take, for instance, the Ohio River project. A mere moment of reflection will reveal the necessity for the completion of this project by reason of the tremendous industrial and other interests involved. This project has been authorized for years. The sum of money sufficient for its completion has also been authorized, and yet the money for its completion has not been appropriated. The result is that until finished this great waterway affords practically no relief or no benefit to the millions of people who are dependent upon it for the purposes of trade and commerce. In other words, until all the locks and dams upon the river are completed according to the plans of the engineers of the Government little benefit can accrue upon what has already been expended. It is plain that a railroad complete from New York to San Francisco, except a space of a hundred miles only out of the three thousand would be a very annoying, unsatisfactory, senseless, and incomplete proposition.

Expressing my own views only, I desire to go on record as firmly believing that river and harbor improvement is of the utmost value to the Nation, and will become more so as the population of the country increases, and therefore to its trade and commerce. I also desire to be recorded as firmly convinced that no waterway enterprise which lies largely outside of the territory of the United States should be undertaken until our own internal rivers and canals and the harbors upon our seacoast, upon the Great Lakes, and upon the Gulf, are adequately and abundantly cared for and converted into complete and actual utility.

No doubt these improvements will cost money. All earthly things do that are worth anything. The difficulty is we expend vast sums upon perfectly visionary and unnecessary things for the sake of the so-called public welfare, which in no wise, however, concerns the public welfare, but rather interferes with it, instead of real and practical expenditures that will result in good business—human employment—the one divine means for securing happiness and prosperity for everyone. A greatly less number of foolish bills—bills like the maternity bill, those for the nationalization of education, and that acme of fantastic conception which has for its purpose the teaching of little boys

and girls how to play, is fine—a lot of other measures to control every activity of our individual life, devoting the money expended therefor to practical purposes, for practical good, would soon show beneficent results in a restored national welfare.

Before I leave the field of general observation upon the measure now before the House I desire to briefly comment upon a matter germane to the bill, inasmuch as my comment will relate to the subject of transportation generally.

There are three fundamental problems, national in character, which concern most deeply all the people of the United States. Those three problems are production, transportation, and distribution. No President, no statesman, no Member of Congress, as far as I know, has attempted as yet to consider these three plain facts in our national life in respect to their absolute unity. And yet they are most intimately connected, and will become more and more so as time goes on. It is inevitable that it should be so from their very relations with each other. To solve one of these three problems will not solve the other two. They must be somehow solved together. Up to this hour Congress views them as absolutely distinct and separate. To show the lack of coordination as far as Congress itself is concerned, I desire to call your attention briefly to one only of these problems—the matter of transportation.

Congress assumes jurisdiction over legislation concerning railroads, jurisdiction over the matter of their credits, the fixing of freight and passenger rates, wages, and the bookkeeping. And yet Congress does not attempt to control the credit of ship lines or barge lines, or to dictate the rates of freights and passengers conveyed on the water. Congress appropriates large sums of money also for rivers and canals, and very appropriately, too, but thereby raising up intense competition with the railroads and adding to the difficulties of both. Congress also appropriates millions for public highways, and they become also rivals and competitors of the railroads and of the rivers and canals in all freight and passenger service. Thus Congress heartily, and with hardly a murmur, gives money, large sums of money, to embarrass and injure the railroads by increasing competition, but froths at the mouth and raises a horrible clamor if aid is asked to be extended to the railroads. This condition is a senseless one and not justified by a glimmer of reason. If Congress had set out to produce confusion, to sow the seeds of discord, and to entangle and embarrass this great national function of transportation it could have found no more effectual way of doing it. Some time—I am not a prophet—but some time, and soon, too, I know without being a prophet, that every means of transportation will be by necessity considered as one problem, for a growing population and a growing national need will compel it.

WILMINGTON HARBOR.

I desire now to speak upon an item of this bill which engages my deepest interest. I refer to the development of the port of Wilmington, Del. This is the one large city of the State of Delaware. Around it is comprised largely the industrial activity of the State.

The city of Wilmington was settled in 1638 by the Swedes and is one of the oldest American cities on the Atlantic seacoast. At one time in its history imports and exports comprised its largest and most important item of industry. Later in the history of the city industrialism developed to the obscuring of her former activities in this direction. To-day the activities of this city are varied and large. Her leather industry has an invested capital of nearly $35,000,000; iron and steel of $13,500,000; gas, nearly $8,000,000; pulp goods, $6,500,000; foundry and machine products, $4,500,000; and the canning and preserving industry of fruits and vegetables of more than $4,500,000.

The annual value of all manufacturing products amounts to over $121,000,000, with an added value of $60,000,000 for finished products. The number of her manufacturing establishments is 262; the average number of wage earners employed therein nearly 21,500. To show the varied character of her local industries I will mention railroad cars; car wheels; iron, steel, and brass casting; wooden and steel ships; plate and sheet steel; machine tools; boilers, engines, and specialized machinery; vulcanized fiber; paper; wood pulp; cotton goods and other textiles; leather, especially glazed kid, which latter is practically centralized within her limits; and explosives. The city lies within a mile of the Delaware River, at the head of Delaware Bay, but has depended up to this time for water transportation upon what is known as the Christiana River, a small stream that runs in from the Delaware River up into the interior about 12 miles. Wilmington has outgrown the facilities afforded by the Christiana River. It desires to extend itself to the Delaware River, where a depth of water and an amplitude of space is found to satisfy all the requirements of her future large development. With this end in view the city has bonded itself for $3,000,000 for the purpose of constructing near the Delaware River, at the mouth of the Christiana, wharves, docks, piers, warehouses, and railroad terminals. Those who have this projected improvement in hand have visited the principal ports upon the Atlantic seacoast with the view of obtaining a knowledge of the latest improvements in all matters concerning dockage, wharfage, storage, and the most expeditious means of loading and unloading freight. Having resolved to embark upon this enterprise, the city determined to have the best. There are three great trunk-line railroad systems that pass through the city, thus affording ample facilities for making the port both a fine export as well as an import point. These three railroad systems have already entered into an agreement to extend their tracks to the wharves when completed. For the purposes of imports and exports, this projected improvement, when complete, will furnish water opportunity greater than that of any other port upon the Delaware River, for it will be in proximity to one of the largest populations in the United States, as well as open to an industrialism unsurpassed by any river in the country.

I not only regard this contemplated improvement as being of great benefit to the State which I represent, but I consider it will be of national benefit, by affording new facilities for trade and commerce at a point most advantageously situated upon the Atlantic seaboard.

It is not necessary for me to call the attention of the Members of this House to the fact that the Government has already taken over the Chesapeake & Delaware Canal, with an immediate view of connecting with each other these two well-known bodies of water—the Chesapeake Bay and the Delaware Bay—for strategic and defense purposes in time of war, and which, when constructed, will bring the great cities of Baltimore, Wilmington, Chester, and Philadelphia into a close economic, industrial, and commercial union in times both of war and of peace.

Gentlemen of the House, the Wilmington Harbor project has been approved by the Board of Engineers of the Federal Government. It is regarded by them as not only a feasible project but a most valuable one. Accordingly the State whose interests I represent is asking you to approve the project, and confidently expects your support, because of the fact that the money that the State of Delaware pays into the Federal Treasury for the benefit of the Nation and for the benefit of other States in matters separately considered entitles the State to this measure of justice, especially when the taxes levied and collected from her resources and distributed for Federal purposes come back to her in a portion far less than she contributes to any national-welfare project.

By unanimous consent Mr. LAYTON was granted leave to revise and extend his remarks in the RECORD.

Mr. JOHNSON of Mississippi. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from Mississippi makes the same request. Is there objection?

There was no objection.

Mr. DEMPSEY. Mr. Chairman, I yield 10 minutes to the gentleman from Iowa [Mr. GREEN].

The CHAIRMAN. The gentleman from Iowa is recognized for 10 minutes.

Mr. GREEN of Iowa. Mr. Chairman, one of the pleasurable and delightful features of being a Democratic Representative at the present time is that such a person is enabled to take almost any position he may desire, provided it is against something that he thinks the Republican Party is going to do or something that it has done. The Democratic Party itself having at this time no platform, and I might almost say no definite principles, inconsistencies do not disturb the leaders or the speakers upon the other side.

Not long ago I heard one distinguished gentleman upon the Democratic side severely criticizing the Republicans because they had not yet passed the complete tariff bill. To-day I heard the gentleman from South Carolina [Mr. STEVENSON] criticizing the Republicans, in substance, because they had passed an emergency tariff bill and were going to pass another tariff bill with certain provisions in it that he did not like. He seemed to have a profound insight into what that body at the other end of the Capitol was going to do with the tariff—an insight that I wish I had myself—and I fear his insight may not be entirely correct. But the general tone of the gentleman's criticism was with reference to the tariff as it affected the farmer, and among other things he said that we would not be able longer to fool the farmer by putting a duty upon wheat, that the price of wheat was regulated entirely by the export value,

and consequently it was entirely useless to put any duty on wheat.

Well, my friend from South Carolina does not come from a wheat-raising region; otherwise I think he would understand the wheat situation better. I do not myself come from a district where wheat is an important crop, and I am compelled to get my information elsewhere as to the effect of a duty upon wheat.

If the gentleman from South Carolina will go to a North Dakota farmer, who can not be fooled about the effect of a duty upon wheat, he will find that it has an effect. To-day, under the emergency tariff, it has an effect. Before the emergency tariff bill was enacted, when wheat flowed freely from Canada into this country, the price of wheat was the same in Canada as it was here. But always when a tariff prevails the price has been higher in the past on this side of that invisible line that marks the boundary between Canada and the United States. I am informed by the gentleman from North Dakota [Mr. YOUNG] that during the time when the Payne tariff was in force scarcely a term of the Federal court was held when somebody was not indicted for smuggling wheat across the border from Canada. It is perfectly obvious to anyone that that would not have been done unless the price was higher on this side, for who would subject himself to a criminal penalty for nothing?

The fact is there was not only a difference, but a very considerable difference. The farmers along the border, the farmers in the wheat region, the farmers with whom wheat is a great crop, know quite well that it makes a difference whether or not there is a tariff on wheat, and the reason to my mind is quite obvious. Nowhere else in the world have they the facilities for grinding wheat that they have in this country. Nowhere else in the world is there such a market as there is in this country. To throw our market open to an adjoining country has the effect of keeping the price the same there as it is here. The farmers know that the effect of the duty is to make the price higher on this side.

Mr. CONNALLY of Texas. Mr. Chairman, will the gentleman yield?

Mr. GREEN of Iowa. Yes.

Mr. CONNALLY of Texas. If the purpose of levying a tariff duty on wheat is really to benefit the farmer, why does the gentleman and his party always put in a drawback clause, whereby the miller who brings in from Canada wheat and pays the duty, in exporting the same amount of flour gets the tariff drawback on wheat?

Mr. GREEN of Iowa. I had always supposed the reason was so plain that it needed no explanation to one so shrewd as the gentleman from Texas.

Mr. CONNALLY of Texas. It is not so plain if the purpose is to really benefit the farmer or benefit the miller.

Mr. GREEN of Iowa. The purpose of the drawback——

Mr. CONNALLY of Texas. Is to give the money back.

Mr. GREEN of Iowa. The purpose of the drawback, if they export flour made from Canadian wheat is to enable our mills to compete with the Canadian mills on the export trade. It is perfectly obvious that our mills could not compete with the mills in Canada unless they had this drawback. The Canadian price of wheat is less than ours when there is a duty, and the Canadian mill would have the advantage in export trade if our mills did not get the drawback. And why should they not have it on wheat, as they have it on everything else? It was contained even in the tariff that the gentleman's own party drew and put through this House and through Congress. It has always been in every tariff bill, that where a duty was levied upon an article that was imported, and that article was afterwards manufactured into goods which were exported, there should be a drawback of the amount of the duty less 1 per cent, or some similar amount, when the article was exported.

Mr. YOUNG. On all commodities?

Mr. GREEN of Iowa. On every commodity; it makes no difference whether wheat or what it is.

The fact is that the emergency tariff has immensely benefited the farmers of this country, and by reason of it they are getting on their feet to-day. They were on the verge of ruin, and many of them were actually ruined at the time the emergency tariff was passed. It has saved the sheep farmer; it has saved the man whose industry was centered largely on raising live stock. It has helped the wheat farmer on the border and the wheat farmer farther south. It has benefited the whole agricultural region, and we proposed to make those benefits permanent in the complete tariff bill.

The gentleman from South Carolina [Mr. STEVENSON] alluded to the duty upon long-staple cotton of 7 cents per pound contained in the emergency tariff bill but not contained in the bill that passed the House, which duty, however, has subsequently been restored by the bill as reported by the Senate committee. I confess that, so far as I was concerned, I was not in favor of the Senate provision; and yet as I have seen something of its workings, as the emergency tariff has continued and is still in force, I am not prepared to assert absolutely that it is not of some benefit to the cotton grower. I do not believe it will restore the growing of long-staple cotton in the South. By long-staple cotton I mean cotton 1⅛ inches in length or longer.

Mr. CARTER. Does the gentleman contend that long-staple cotton has to be 1⅛ inches in length?

Mr. GREEN of Iowa. It is just a question of name.

Mr. CARTER. It is not anything of the kind. Long-staple cotton is just as staple as anything can be.

Mr. GREEN of Iowa. If my friend from Oklahoma objects to my calling it long-staple cotton, I will not call it long-staple cotton.

Mr. CARTER. Every man in the country who knows anything about cotton at all knows what long-staple cotton is.

Mr. GREEN of Iowa. I will call it Egyptian cotton, then.

Mr. CARTER. That is an entirely different thing.

Mr. GREEN of Iowa. I am talking about cotton 1⅛ inches in length or greater.

Mr. CARTER. Of which there is practically very little raised in the South.

Mr. GREEN of Iowa. Almost none now, although in 1900 it exported over 18,000,000 pounds. A considerable amount has been raised in the Salt River Valley of Arizona on irrigated land, but its culture there is expensive.

I hope that our Agricultural Department and the enterprising farmers of the State which my friend represents in part will be able to develop a cotton which has a staple of 1⅛ inches or upward, and it is possible that the tariff may benefit them somewhat in that way. But the principal benefit would be in this, that if this long-staple cotton is somewhat kept out as a result of the tariff there will be a greater effort on the part of manufacturers—and that effort is being made all the time—to use the shorter-staple cotton for the same purposes for which they are now using the long-staple cotton. It has the effect to increase the use of cotton having a shorter staple and decrease the amount of Egyptian cotton imported. Cotton having a staple of 1⅛ inches and upward is used for automobile tires, and is a necessity for the finer grades of cotton goods, such as fine muslins and lace, and is generally used in making mercerized hose and mixtures with silk. We import an average of over 100,000,000 pounds a year, mostly from Egypt. At 7 cents a pound the revenue is large enough to be considered, and the additional cost to the consumer by reason of the duty would be very small.

The pending tariff bill is the only one in which the farmer was looked after as well as the manufacturer. Many Members on the Democratic side have seen the light. Why should the others cling to a policy which their constituents are discarding?

Mr. DUPRÉ. Mr. Chairman, I yield one minute to the gentleman from Texas [Mr. BOX].

Mr. BOX. Mr. Chairman, I ask leave to extend my remarks in the RECORD by inserting a statement made by former President Roosevelt concerning the management of the Spanish-American War by the administration then in power.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD by inserting the statement of former President Roosevelt. Is there objection?

There was no objection.

Mr. DUPRÉ. Mr. Chairman, I yield five minutes to the gentleman from Mississippi [Mr. QUIN]. [Applause.]

Mr. QUIN. Mr. Chairman and gentlemen, the bill before the House is entitled "the river and harbor bill." I have not heard anyone discuss it yet, but I am in favor of this bill, though there is not one dime in it that goes to the State that I in part represent, except for a few yards on the Tombigbee River and a few rods on a canal connecting those two streams down there between Alabama and Mississippi.

Four counties of the district that I have the honor to represent border on the greatest river in the world, the Mississippi River, that rises away up in Lake Itasca, in the State of Minnesota, going clear down through the heart of the United States to the Gulf of Mexico. Since the forests have been cleared away all the tributaries of that great stream pour their waters into the Mississippi, and at certain seasons of the year after the flood passes Memphis, Tenn., down clear to the coast of the Gulf there is too much water for the banks to contain. The Congress of the United States in years past has adopted the policy of building a levee system to protect the fertile lands

on either side of that great stream. It happens that on one side or the other where there are foothills they do not build any levee. In the counties of Wilkinson, Adams, Jefferson, and Claiborne, in the State of Mississippi, there are no levees, but on the western side of that stream splendid levees have been constructed under the supervision and by the help of the Federal Government, and as the water rises higher and higher it must inevitably find some place to go over on the eastern side, and there it devastates in these four counties thousands and thousands of acres of the finest land over which a crow ever flew.

The Supreme Court of the United States, in the celebrated case of the Government against Jackson, decided that the people who own that land can not recover damages. It appears to be a case of damages without a remedy, and the only recourse these people have is at the door of Congress. I have been here with measures asking Congress to do justice by these people, but up to this hour nothing has been done. Before the Flood Control Committee, one of the new committees of this House, I introduced a resolution asking that a committee be appointed to investigate conditions in the riparian section of those four counties in my district now inundated by water from the flooded Mississippi River, caused by great levees being constructed under Government supervision on the Louisiana side, and report to the December term of the Congress. The Flood Control Committee promised as soon as that committee returned from the excursion down the Mississippi River that they would give a hearing, but up to this good hour no hearing has been had on that resolution.

I submit that in fairness to these people whose property has been not only damaged but in many instances ruined, the Congress of the United States owes a debt to these people that it should pay. Not only in these counties I have mentioned but in other portions of the United States similar conditions exist. Is it possible that the United States Government, constructing under its supervision great levees on one side of the Mississippi River in order to protect the property on the other side, and by doing that damages the property on the eastern bank of the river, should not pay the people the damages that they suffer? If the United States should construct a canal it would proceed under condemnation proceedings and condemn the land and pay damages therefor. The Government can not in law or morals confiscate private property without making therefor a fair, just award and compensation.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. QUIN. Can the gentleman from Louisiana give me some more time?

Mr. DUPRÉ. I gladly yield the gentleman two minutes more.

Mr. QUIN. Thank you. Here the United States Government under its supervision has erected a great levee on the Louisiana side of the Mississippi River, and when this great flood came, the mightiest in the history of that stream, it broke right above the city of Natchez on the Louisiana side and overflowed four parishes of fertile land. Notwithstanding the direct volume of water that came down the stream was so great that it could not escape below, it found its way to the eastern side, covering these fertile farms 10, 15, and 20 feet deep, running the inhabitants who cultivated this rich land away from their farms, and doing damage to such an extent that these people will not be able to make a crop this year. In justice to these citizens we owe it as a Government to pay them the damages that have been done there. Is it possible that the Flood Control Committee will not under these circumstances even give a hearing, that we may produce the evidence before that committee and let them investigate it and make a report at the next session of Congress whereby it will be up to the Congress to do justice to that great class of citizens. [Applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. DUPRÉ. Mr. Chairman, I yield such time as he may desire to the gentleman from Alabama [Mr. JEFFERS].

Mr. JEFFERS of Alabama. Mr. Chairman and gentlemen, I am sure we have all listened with a great deal of interest to the gentleman from Illinois [Mr. GRAHAM] and the gentleman from Iowa [Mr. GREEN], who have spoken here this afternoon, as they have so laboriously made out their arguments in favor of their party, which is now in power. They have vainly tried to clear their skirts at the expense of the Democratic Party. In connection with the speeches they have made, I think it would be interesting to the Members, and apropos at this time, to listen to this little verse that I hold in my hand, and which I will ask the Clerk to read at this time.

The CHAIRMAN. Without objection, the Clerk will read.

Mr. WALSH. Reserving the right to object, what is it all about?

Mr. JEFFERS of Alabama. It is in my time.

Mr. WALSH. But it can not be read without unanimous consent. I would like to know on what subject it is.

Mr. JEFFERS of Alabama. It pertains to the present situation and the subject matter of it is right along the line of the subject matter of the speeches made here this afternoon by the gentlemen on the Republican side, to whom I have referred. If the gentleman objects to the Clerk reading it, I will read it myself within my time.

Mr. WALSH. I simply desired to know what it was about; I have no objection.

Mr. DUPRÉ. If the gentleman had waited he would have found out.

Mr. JEFFERS of Alabama. I think the gentleman will see that it is very appropriate at this time, if he will listen.

The CHAIRMAN. Without objection, the Clerk will read.

There was no objection.

The Clerk read as follows:

WE WANTED A CHANGE.

We were getting a dollar six bits for our corn,
We could sell every hide from the hoof to the horn;
But we wanted a change, and we got it.

Now we're getting a quarter for corn—it's so cheap
That we burn it for fuel, our toes warm to keep;
We can't sell the hides so we bury them deep,
But we wanted a change, and we got it.

The poor workingman pulled down eight bucks a day,
Now he's darn glad to work for half of that pay;
But he wanted a change, and he got it.

There was work and a plenty for every man's son,
And warm food and shelter when that work was done.
Now millions are idle, where before there were none;
But we wanted a change, and we got it.

Mr. Wilson spent quite a long time over there,
For peace he was fighting, but what did we care?
We wanted a change, and we got it.

We were prosperous and happy, well fed and gay;
Now millions of children go hungry each day;
But we wanted a change, and we got it.

Meanwhile we hear this: "It was certain to come—
Reaction from war time"—and war three years done!
If we wanted a lemon we sure did pick one.
Well, we wanted a change. Now we've got it!

Mr. DUPRÉ. Mr. Chairman, may I inquire how much time remains?

The CHAIRMAN. The gentleman from Louisiana has 11 minutes and the gentleman from New York 22 minutes.

Mr. DUPRÉ. Mr. Chairman, I yield to myself the balance of my time.

Mr. Chairman, I think it is well to recall the attention of the committee—those who have not gone to Quantico, and personally I do not miss them [laughter], although I am not mentioning any names—I desire to call the attention of the committee to the fact that the debate on this bill now under consideration, as I said in a colloquy with my friend from Massachusetts [Mr. WALSH], has taken such a wide range that unless one has been in steady attendance here for the last three hours it really would be difficult to know what was under consideration. It happens to be a bill introduced by the chairman of the Committee on Rivers and Harbors on construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes. Incidentally, there are no other purposes beyond that previously mentioned.

Under the new dispensation, for which I did not vote and for which I am glad I did not vote, appropriations for rivers and harbors emanate from the Committee on Appropriations. I see the distinguished minority ranking member [Mr. BYRNS of Tennessee] in the offing. They bring in such appropriations for this purpose as they see fit. Very few of them know anything about the matter, so they save their faces by bringing in a lump-sum appropriation, leaving it to the Chief of Engineers and the Secretary of War nominally to distribute the funds. However, even the Secretary of War and the Chief of Engineers can not allot any of this lump sum to any project that has not yet been authorized by the Congress, and up to the present time, although the Appropriations Committee has grossly deviated from its functions and brought in many legislative provisions, it has not yet sought to insert in its rivers and harbors item authority to spend any money on any particular project in the country. Therefore, the only way that any new project for rivers and harbors can be cared for under the benevolent system to which I have heretofore referred is by Congress sanctioning the authorization of certain new projects.

The bill in question, which has the ardent support of the members of the committee of both parties, seeks to include some 25 new projects, the total cost of which would be about $37,000,000, whenever the Committee on Appropriations thinks they can find money enough to pay for those items. However,

sufficient unto the day be the evil thereof. We are now authorizing these new projects, and we hope some day to have enough money to have them paid for and work begun on them. The projects included have been very carefully pruned by the committee. The report of the committee says that the two prime considerations on which the bill is based are, first, the necessity for the development of water transportation facilities to relieve the throttling railroad congestion of normal times, both at terminals and on tracks and to cheapen transportation costs, and, second, the obligation of selecting from many meritorious projects only those whose development is most necessary and beneficial, in keeping with a proper regard for economy in Government expenditures.

If there should be criticism that the bill contains too many new projects, I would call the attention of the committee to the fact that there has been no appropriation bill from the Committee on Rivers and Harbors since 1919, where an itemized attempt was made to prorate the money appropriated to the particular projects. In 1920 we had a lump-sum appropriation of $12,400,000. That could be expended only on projects that had been previously authorized by Congress. In 1921, through the grace of the steering committee of the majority party, that magnificent sum was increased to $15,250,000, not a cent of which could be used for any new project. Therefore, it seems to me that this committee, of which I have the honor to be a member, has been very careful in restricting the bill to the items included. As I say, the bill as reported authorized appropriations of $31,000,000. Since then an emergency has arisen, and the chairman of the committee, with full authority from his colleagues, will introduce an amendment adding $6,000,000 to that amount for the Monongahela River.

A number of surveys are authorized in this bill. The cost of them is comparatively negligible. Most of them can be disposed of with the data already on hand by the district engineer, the division engineer, and the Chief of Engineers. However, Congressmen are continually being asked to have these surveys made, and it was my belief, and I so expressed it in the committee and I reiterate it here, that the best way to dispose of these things was to have the surveys authorized. About three-quarters of them will be reported adversely without much cost to the Government, and that will dispose of these pending surveys.

I am very glad to say that the minority members have worked in harmony with the gentleman from New York, chairman of the committee [Mr. DEMPSEY], and I desire, for my own part, to express my appreciation of his individual courtesy to me.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. DUPRÉ. Yes.

Mr. WALSH. The gentleman referred to the various new projects authorized in the bill.

Mr. DUPRÉ. Yes.

Mr. WALSH. As I recall, when the appropriation bill of the War Department was before the House an item was carried which was increased, I think, by the Committee of the Whole——

Mr. DUPRÉ. Very wisely.

Mr. WALSH. To $42,000,000.

Mr. DUPRÉ. Yes.

Mr. WALSH. Does not that cover any of the projects carried in this bill?

Mr. DUPRÉ. Not unless the bill should become a law before the appropriating bill shall become a law.

Mr. WALSH. What will be the effect if that bill becomes a law first? Will it require an additional appropriation of $37,000,000 to take care of these projects?

Mr. DUPRÉ. The gentleman knows better than that. He knows that all that will be appropriated through the military bill, if the Senate has the good sense to follow the action of the House, will be $42,000,000, and that is all that can be expended. Whether that will be expended on projects already authorized or whether an attempt will be made to utilize that sum for the projects authorized in this bill remains to be seen, but I believe, in view of the fact that the $42,000,000 sought to be appropriated covers projects already authorized, that the Secretary of War and the Chief of Engineers will apply that sum, should it become available, to those things that have been pending for a long time and will not seek to divert it to any of these new projects, if they should be authorized finally by law.

Mr. WALSH. Then, in the gentleman's opinion, it will require further appropriation, if the military appropriation bill becomes a law before the pending measure, to take care of these new projects?

Mr. DUPRÉ. Next year that may be necessary, if the $42,000,000 which is going to be appropriated for the purposes of existing projects has not been sufficient to wipe them out and let us start next year with an appropriation to cover these authorizations.

Mr. WALSH. Will the work on these new projects have to be delayed until next year, in the gentleman's judgment?

Mr. DUPRÉ. It will, until the money is available.

Mr. WALSH. How much in addition to the $42,000,000 will be necessary in order that work might be begun on the new projects carried in this bill?

Mr. DUPRÉ. Of course, I can not forecast what is going to be the outcome of this bill, but it is my hope and judgment that as it leaves the House it will carry authorizations amounting to some $37,000,000.

But it will be up to my economist friend from Massachusetts in the next short session to give us as much or as little as he sees fit. We are so dependent upon his mercy in those matters.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WALSH. Has the gentleman any more time at his disposal? I want to ask him to answer another question.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WALSH. Well, that is a national calamity. [Laughter and applause.]

Mr. DUPRÉ. Well, I should prefer a national calamity to a local calamity like the gentleman's presence from the State of Massachusetts.

Mr. WALSH. Mr. Chairman, I make the point of order that there is no quorum present. There is nothing further to be done.

Mr. DEMPSEY. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. STAFFORD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill (H. R. 10766), had come to no resolution thereon.

ADJOURNMENT.

Mr. DEMPSEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 3 minutes p. m.) the House adjourned until to-morrow, Friday, May 19, 1922, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. BURROUGHS: Committee on Interstate and Foreign Commerce. H. R. 11674. A bill for the purchase of the Cape Cod Canal property, and for other purposes; without amendment (Rept. No. 1016). Referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. LOWREY: A bill (H. R. 11696) to provide for additional appropriation for the erection of a Federal building at Holly Springs, Miss.; to the Committee on Public Buildings and Grounds.

By Mr. SWANK: A bill (H. R. 11697) to amend the act of May 27, 1908, entitled "An act for the removal of restrictions upon part of the lands of allottees of the Five Civilized Tribes, and for other purposes" (35 Stat. 312); to the Committee on Indian Affairs.

By Mr. KRAUS: A bill (H. R. 11698) to credit "General account of advances" with moneys heretofore advanced to the midshipmen's store fund at the Naval Academy; to the Committee on Naval Affairs.

By Mr. KAHN: A bill (H. R. 11699) relating to the appointment of the Chief of Staff of the Army; to the Committee on Military Affairs.

By Mr. GREENE of Massachusetts: Concurrent resolution (H. Con. Res. 57) authorizing an expenditure of not to exceed $500 from the contingent funds of the Senate and House of Representatives for the purpose of preparing an index of the hearings on the bills to amend the merchant marine act of 1920; to the Committee on Accounts.

By Mr. RAMSEYER: Resolution (H. Res. 349) providing for the appointment of a special committee, to be known as the "War Finance Committee," which shall consist of 15 Members of the House, to be appointed by the Speaker; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROWNE of Wisconsin: A bill (H. R. 11700) granting a pension to Sarah Jane Warren; to the Committee on Invalid Pensions.

By Mr. LANGLEY: A bill (H. R. 11701) granting a pension to William D. Miller; to the Committee on Pensions.

Also, a bill (H. R. 11702) granting a pension to John S. Combs; to the Committee on Pensions.

By Mr. MUDD: A bill (H. R. 11703) granting a pension to Rosanora Capito; to the Committee on Invalid Pensions.

By Mr. NEWTON of Missouri: A bill (H. R. 11704) for the relief of Charles T. Grady; to the Committee on Claims.

Also, a bill (H. R. 11705) for the relief of Eugene Henry Lever; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5661. By Mr. FULLER: Petition of the Peoria (Ill.) Farm Bureau, the Pekin (Ill.) Association of Commerce, the Tazewell County (Ill.) Farm Bureau, and the American Distilling Co., favoring a duty of 10 cents per gallon on blackstrap molasses; to the Committee on Ways and Means.

5662. Also, resolutions of the Associated Cooperage Industries of America for legislation to abolish the Railroad Labor Board; to the Committee on Interstate and Foreign Commerce.

5663. Also, resolutions of Homestead Aerie No. 769, Fraternal Order of Eagles, favoring modification of the Volstead Act; to the Committee on the Judiciary.

5664. Also, petition of the Illinois League of Women Voters favoring House bill 11490 to enlarge the powers and duties of the Department of Justice, etc.; to the Committee on the Judiciary.

5665. By Mr. GALLIVAN: Petition of Mrs. George R. Fearing, 168 Beacon Street, Boston, Mass., and George Washington University, Washington, D. C., recommending passage of House bill 11490; to the Committee on the Judiciary.

5666. Also, petition of Joseph Middleby, jr. (Inc.), Boston, Mass., recommending certain changes in House bill 7456; to the Committee on Ways and Means.

5667. By Mr. KISSEL: Petition of Graham Talking Machine Co., Brooklyn, N. Y., relative to the Kelly-Stephens better business bill; to the Committee on Interstate and Foreign Commerce.

5668. Also, petition of Lawrence W. Luellen, New York City, N. Y., relative to the patent laws; to the Committee on Patents.

5669. Also, petition of Mississippi Valley Association, St. Louis, relative to certain public projects; to the Committee on Appropriations.

5670. By Mr. TAYLOR of Colorado: Petition from freight shippers of Leadville, Colo., protesting against passage of the Sweet-Capper bills; to the Committee on Interstate and Foreign Commerce.

SENATE.

FRIDAY, *May 19, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

NAMING A PRESIDING OFFICER.

The Secretary (George A. Sanderson) read the following communication:

UNITED STATES SENATE,
PRESIDENT PRO TEMPORE,
Washington, D. C., May 19, 1922.

To the Senate:

Being temporarily absent from the Senate, I appoint the Hon. GEORGE H. MOSES, a Senator from the State of New Hampshire, to perform the duties of the Chair this legislative day.

ALBERT B. CUMMINS,
President pro tempore.

Mr. MOSES thereupon took the chair as Presiding Officer.

PETITIONS AND MEMORIALS.

Mr. ROBINSON. I present a petition from citizens and business men of Jonesboro, Ark., protesting against the proposed tax on kid gloves and urging a reduction in the duty. I move that it be referred to the Committee on Finance.

The motion was agreed to.

Mr. CAPPER presented resolutions adopted by the Central Reading Club and the Visiting Nurse Association, both of Kansas City, Kans., favoring the enactment of legislation creating a department of education, which were referred to the Committee on Education and Labor.

Mr. TOWNSEND presented petitions of sundry citizens of Beaverton, Carson City, Middleton, Ithaca, Davison, Flint, Gagetown, Pigeon, Bay Port, Owendale, Elkton, Swartz Creek, Durand, Turner, Au Gres, Mason, Twining, Saginaw, Fairgrove, Akron, Gilford, Reese, Bay City, Caseville, Unionville, Carleton, Waltz, Mount Clemens, Essexville, Hampton, and Linwood, all in the State of Michigan, praying for the imposition of a tariff duty of $2 per hundred pounds on Cuban sugar, which were referred to the Committee on Finance.

He also presented petitions of sundry citizens of St. Johns, Lansing, Williamston, Elsie, Ovid, Potterville, Charlotte, Eaton Rapids, Grand Ledge, Perry, Fowlersville, Mason, Flint, Dansville, Leslie, Eden, Olivet, Vermontville, Bellevue, Webberville, Oakley, Chapin, Vernon, Corunna, Owosso, Carland, Burton, North Star, Ashley, Bennington, Laingsburg, and Flushing, all in the State of Michigan, praying for the passage of an adequate tariff law protecting farm products with duties at least as high as those contained in the so-called emergency tariff, which were referred to the Committee on Finance.

Mr. WILLIS presented the petition of Florence Maurer and sundry other citizens of Canton, Ohio, praying for the imposition in the pending tariff bill of only a moderate duty on kid gloves, which was referred to the Committee on Finance.

He also presented the petition of Jake Bauman, of Perrysburg, and sundry other citizens of Perrysburg, Walbridge, and Lime City, all in the State of Ohio, praying for the imposition of a tariff duty of $2 per 100 pounds on Cuban sugar, which was referred to the Committee on Finance.

Mr. SUTHERLAND presented a petition of sundry citizens of Salem, W. Va., praying for the prompt passage of an adequate protective tariff law based on American valuations, which was referred to the Committee on Finance.

He also presented a memorial of sundry citizens of Elm Grove, Wheeling, Wellsburg, Bridgeport, Martins Ferry, Moundsville, Brookside, Bellaire, and Warwood, all in the State of West Virginia, remonstrating against proposed increased duties on household and dress linens, which was referred to the Committee on Finance.

BILLS AND JOINT RESOLUTIONS INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. McCUMBER:

A bill (S. 3626) for the relief of Clement A. Lounsberry; and

A bill (S. 3627) for the relief of Michael Maher (with accompanying papers); to the Committee on Military Affairs.

By Mr. JOHNSON:

A joint resolution (S. J. Res. 200) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

TARIFF BILL AMENDMENT.

Mr. MOSES (Mr. CAPPER in the chair) submitted an amendment, intended to be proposed by him to House bill 7456, the tariff bill, which was referred to the Committee on Finance and ordered to be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the House had passed a bill (H. R. 11152) to authorize the Bear Mountain Hudson River Bridge Co. to construct and maintain a bridge across the Hudson River near the village of Peekskill, State of New York, in which it requested the concurrence of the Senate.

AFFAIRS IN HAITI.

Mr. BORAH. Mr. President, I ask permission to have printed in the RECORD in 8-point type a statement by a distinguished Haitian lawyer upon the Haitian situation. The article is very brief. I will not ask to have it read, but simply that it may be inserted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD in 8-point type, as follows:

HAITI'S APPEAL TO AMERICANS.

(By Prof. Pierre Hudicourt.)

This article embodies the more important parts of an address delivered by Professor Hudicourt at a Popular Government League luncheon in Washington, February 2, 1922. The Advocate of Peace prints it in justice to the Haitian people, who are under obvious handicaps in presenting their side of the debate on conditions in Haiti to the American people.—The Editor.

Mr. Chairman, ladies, and gentlemen, it is my privilege to express to-day before an American gathering the sentiments of the entire Haitian people toward the people of America. This sentiment is entirely one of confidence and friendliness. Living on the same hemisphere, having enjoyed, like you, the benefits derived from an independence conquered at the high price of prolonged suffering and bloodshed when we threw off the yoke, not of one, but of three Old World powers who were successively determined to keep us enslaved, the Haitian people have always had the same aspirations as yourselves and the same love of liberty and independence. Six and a half years ago this liberty, achieved by our forefathers not long after your own, was taken from us by the military forces of the United States.

Well, to date, the Haitian people have never held the American people responsible for the miseries inflicted by your military forces, acting, as we have always believed, under the inspiration of commercial and financial interests and not authorized by the Congress of the United States. And it is for this reason that the Haitian people have not hesitated to appeal to what they still believe is the tradition and the heritage of your country. And in this connection a few words about our own history may be pertinent.

EARLY DANGERS NUMEROUS.

The day after the proclamation of independence of the Republic of Haiti, on the 1st of January, 1804, our country, ravaged by 14 years of bitter struggle, was confronted with all kinds of financial difficulties, which seriously handicapped our economic development. We were in constant fear of invasion by France, and our difficulties with that country were only solved by the payment of the heavy indemnity of 90,000,000 francs, the interest of which proved a heavy burden. For the following 100 years Haiti continued more or less isolated. Your country itself did not recognize our independence until the administration of that immortal friend of mankind, Abraham Lincoln. We had our internal dissensions and our revolutions, and candor compels me to admit that in a few years before the American occupation they were frequent. But, nevertheless, they were Haiti's own affairs, because in these disturbances no foreigners were ever injured. We are proud and happy to say that under Haitian governments no American life was ever lost. It is important to remember also that throughout all these years the Haitians scrupulously paid the interest on their external and internal debt; that is more than several of your own Southern States did. I think I am not mistaken that a number of them repudiated their financial obligation some years after your Civil War. Please always remember this when you hear talk of anarchy in Haiti.

PEOPLE PROTESTED AMERICAN ACTIONS.

Now, whatever the conditions were in Haiti, the Haitian people are united in protesting that there was no justification for the landing and maintenance of American forces on Haitian soil since 1915; for the seizure by American marines of our customhouses, and indeed of all our revenues; for the dissolution of our legislative bodies; for the use of coercive measures to force an unwelcome and undesired treaty upon the country; and to compel us to adopt a constitution by totally illegal means. Under Haitian civil law, and I am sure under American law, as indeed under law everywhere, an agreement between individuals is not binding unless the consent of both parties has been freely obtained. Three causes are recognized by jurisprudence as vitiating the consent, viz, violence, error, and fraud. If one of these causes exists the agreement is null and void. These same conditions which apply to a civil agreement are required also by international law for any international agreement. It is our contention and our belief, therefore, that the convention of 1915 which holds Haiti to-day is null and void, and should be so declared.

THE FACTS.

It is not my desire or my purpose as a guest in your country to be critical of its actions. The facts themselves tell what has occurred; but I think I am justified in pointing out that these facts indicate that America's action in Haiti was contrary, first, to the formal agreement signed on the 18th of October, 1907, at the second Hague Peace Conference, of which Haiti is a signatory, relating to the necessary formalities which are to be carried out in case of a declaration of war, for America's acts against Haiti, while never so declared, were in reality acts of war.

Second. America's action was contrary to the formal agreement signed on October 18, 1907, at the second Hague Peace Conference, of which Haiti is also a signatory, relating to the peaceful settlement of international disputes.

Third. Contrary to the special agreement entered into on the 7th of January, 1909, between the United States of America and Haiti, providing for the submission to the permanent court of arbitration established at The Hague by the convention of July 26, 1899, of all differences of a legal nature which may arise between the two countries.

Fourth. It is contrary to the entire spirit of the Monroe doctrine, the first purpose of which was to defend the weaker nations of America from attack by the stronger.

America's action is contrary to the immortal principles laid down in the American Constitution, which constitutes for the present time the vade mecum of all democracies.

AMERICAN VIOLATION OF AMERICAN PRINCIPLES.

America's action against Haiti's independence and sovereignty is contrary to the decisions of America's Supreme Court, based upon certain fundamental principles of international law, as set forth in the declaration of the rights and duties of nations adopted by the American Institute of International Law on January 6, 1916, as follows:

1. Every nation has the right to exist and to protect and to conserve its existence; but this right neither implies the right nor justifies the act of the State to protect itself or to conserve its existence by the commission of unlawful acts against innocent and unoffending States.

2. Every nation has the right to independence in the sense that it has a right to the pursuit of happiness and is free to develop itself without interference or control from other States, provided that in so doing it does not interfere with or violate the right of other States.

3. Every nation is, in law and before law, the equal of every other nation belonging to the society of nations, and all nations have the right to claim and, according to the Declaration of Independence of the United States, "to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitle them."

4. Every nation has the right to territory within defined boundaries and to exercise exclusive jurisdiction over its territories and all persons, whether native or foreign, found therein.

5. Every nation entitled to a right by the law of nations is entitled to have that right respected and protected by all other nations, for right and duty are correlative, and the right of one is the duty of all to observe.

6. International law is at one and the same time both national and international; national in the same sense that it is the law of the land and applicable as surely to the decision of all questions involving its principles; international in that sense that it is the law of the society of nations, and applicable as surely to all questions between and among the members of the society of nations involving its principles.

DOUBTFUL GOOD FAITH OF DECLARATIONS.

Now, what are the motives behind the American occupation? Not being in touch with the State Department and the Navy Department of your country, I can not say. The treaty which was imposed upon Haiti against its will specifically states:

That the United States has no aim except to insure, establish, and help maintain Haitian independence and the establishment of a firm and stable government by the Haitian people.

Well, gentlemen, to date there has not been the slightest evidence in Haiti of any such purpose. Not only has the United States failed to carry out a single provision of the treaty which it composed and imposed, but every move has been contrary to Haiti's interests, contrary to the fundamental ideas of democratic government, and designed apparently merely to aid American investors. If it were the intention of the United States to "aid the establishment of a firm and stable government" by the Haitian people, why did the United States dissolve and abolish all forms of representative government in our country? Does anyone here think that the Haitian people would be aided by holding them under martial law, by preventing elections, and by giving us every day visible proof of the utter contempt for the laws which the United States itself was responsible for at the hands of its military and civil officials? Indeed, an election of a president under the constitution which was written for us, according to his own boast, by Franklin Roosevelt, has been due, but by orders of the Marine Corps no such election has been held. The president who has been elected with the assistance of the Marine Corps should end his term next May, and no one in Haiti to-day among the Haitians knows whether it is the purpose of your Government illegally to extend his term, illegally to appoint another president to office, or, indeed, has the slightest inkling of what the future holds.

AMERICANS SEEK CHEAP LABOR.

We are a conquered and helpless people. The United States has abolished every real form of self-government. The presi-

dent himself is a mere figurehead, a device of the occupation to give an appearance of legality and of democratic sanction to its own acts. We are at the mercy of the arbitrary acts of every marine private, of every small civil official. We have neither recourse in law nor the right of appeal, even to higher authorities in the United States. Why do the American interests want Haiti? For one thing, labor is cheaper there than almost any other place on earth. It can be obtained for the sum of 20 cents a day, a fact enthusiastically boasted of in a recent prospectus of the Haitian-American Sugar Co., when it was trying to float a loan in the United States. This prospectus pointed out that the average daily wage in Cuba was $1.75; in Haiti, 20 cents. The president of the United West Indies Corporation, another large American development company, which has acquired vast tracts of land since the Franklin Roosevelt constitution permitted strangers to acquire it, testified recently before the senatorial commission of inquiry:

We would not invest capital in Haiti if we could only get 9 or 10 per cent out of it. We believe that the prospects for investment of capital in Haiti are far in excess of 10 per cent.

Now, what are these development companies doing and planning to do? They are planning by one means or another to push the little Haitian landowner off his land, the land that he has held and cultivated from father to son since our war of independence, when the great slave-holding estates were distributed among the peasants.

Having deprived them of their land, they will force these people, who have always been happy and contented, who by virtue of having a little piece of land all their own have never known want—to force these people, I say, to become homeless itinerant day laborers, working at the glorious wage of 20 cents a day in the seasons when work is provided—that is to say, for only 6 months out of the 12. During the other six months, robbed of their little property, God knows what they will do. You will, therefore, you who have supposedly come to help us, have introduced the American wage system and American unemployment in Haiti.

HAITI OPPOSES PROPOSED LOAN.

In this connection I want to say a final word on a matter which I consider of paramount importance in obtaining a just settlement of the Haitian situation. While a senatorial commission of investigation was still on its way to Haiti on what purported to be the first serious investigation of the events of the last six years, and while a resolution, I am happy to say, has been introduced by Senator KING, of Utah, who was formerly a member of that commission, calling for the withdrawal of the American occupation and the abrogation of the treaty which gives America complete financial control of the island, the American occupation is negotiating with American bankers for a large loan with Haiti. Under the terms of this loan, which is made subject to the convention of 1915, the Haitian finances will be subject to American control for 30 years. I think I may say that it is the hope of those Americans who desire to perpetuate the American hold on Haiti to have this loan an accomplished fact at the earliest possible moment, so that the question of abrogation of the treaty will be still further complicated. Haiti does not want this loan. Haiti does not need this loan. But in any event I desire to protest emphatically against the consummation of that loan while the entire Haitian question is sub judice. The Haitians desire the immediate return of their independence and sovereignty. Let them, then, if they feel that they need a loan, negotiate it freely upon such terms as they are able to secure. If the free Haitian Government should be willing to pledge a certain part of its revenues against such a loan, it can do so. But the loan now contemplated, like every other action based upon the illegal occupation, we repudiate in principle, and we object to it vehemently as an attempt to perpetuate the conditions which now exist. To these conditions the Haitian people will never consent. We have been a patient people. We have waited for six years in the hope and belief that the United States would render justice. We have not yet abandoned that hope, and we shall never abandon our determination to regain the freedom which is our birthright.

THE M'CORMICK COMMISSION.

Now, finally, I want to protest with all the emphasis of which I am capable, in the name of your own immortal principles, against the decision rendered recently by a senatorial commission which went to Haiti supposedly to investigate conditions there. That commission had spent some weeks in the United States listening to the testimony of marine officers and bankers interested in Haiti. When it came to hear the Haitian side, to hear the story of six years of tyranny, it spent actually only five days on the island, of which but one and a half was devoted to taking testimony. The rest of that time was largely spent in the company of the Marine Corps and of American investors. Immediately on its return, although the commission had announced in Haiti that the case was by no means closed and that hearings would continue, it rendered a decision in a preliminary report. This report recommended that the marines stay in Haiti; that there be no abrogation of the convention; that a high commissioner, who would be a virtual dictator, should coordinate the various civil and military functions; and that the loan must be put through at once. Now, if this is "the establishment of a firm and stable government by the Haitian people," I leave it to your sober judgment. For my part, if the United States desires to annex Haiti, to make it an American colony, of which America's every single act affords convincing evidence, why not say so? Why continue the sham and the hypocrisy of pretending, against the will of the entire Haitian people, that you are there for philanthropic reasons? As I said, the Haitian people have been a patient people. They are a good and kindly people. But once they lose all hope in the honor of the United States I do not know what may ensue. I ask those of you who believe in the rights of liberty and independence for small countries what your course would be?

ADJUTANT GENERAL PETER C. HARRIS.

Mr. SHEPPARD. Mr. President, Maj. Gen. Peter C. Harris has about completed his term of four years as Adjutant General of the United States Army. During that time he has labored most devotedly, working day and night, including Sundays, and has made a most enviable record.

I have here a statement by the War Department relative to his service, a memorandum which he submitted prior to his retirement, and a memorandum covering his service, based on the records, which I have had prepared. I ask to have these printed in the RECORD.

There being no objection, the memoranda submitted by Mr. SHEPPARD was ordered to be printed in the RECORD, as follows:

WAR DEPARTMENT STATEMENT RELATIVE TO RETIREMENT OF MAJ. GEN. PETER C. HARRIS.

The application of Maj. Gen. Peter C. Harris for retirement under provisions of law upon expiration of his four-year detail as Adjutant General of the Army on August 31, 1922, has been approved. General Harris has also been granted leave of absence with permission to go abroad from April 1, 1922, until the date of his retirement.

* * * * * * *

General Harris was assigned to The Adjutant General's Department in 1912 and appointed The Adjutant General on September 1, 1918. For his services in this department during the World War, he was awarded the distinguished service medal by our Government, the Legion of Honor (commander) by France, and the Order of the Crown (commander) by Italy. The citation of the distinguished service medal follows:

"For exceptionally meritorious and conspicuous service. During his service in The Adjutant General's Department, his zeal, energy, and judgment have been made manifest by the reforms accomplished in record-keeping systems in the War Department and in the Army."

When General Harris took over the office of The Adjutant General of the Army, August 26, 1918, the daily average number of pieces of mail of all classes received in the office was something over 100,000. This daily average rose to more than 200,000 before the signing of the armistice, and during the demobilization period the number received on a single day reached 546,986. The daily average for the fiscal year ended June 30, 1919, was 297,366, as against 75,286 during the fiscal year ended June 30, 1918. For the fiscal year ending June 30, 1916, the last during which normal conditions prevailed, the total number of pieces of mail received was 925,930, a daily average of only 3,025.

To handle work of this magnitude General Harris reorganized his offices and inaugurated a new system of record making and record keeping. As a result, the Government has been saved millions of dollars and The Adjutant General's Office, with a clerical force only twice that authorized for the fiscal year 1917, is to-day handling nearly five times as many letters and memoranda requiring investigation and correspondence as were handled in the office before the World War.

The records of the World War to-day, three years after the signing of the armistice, are far more nearly complete than were those of the Civil War 30 years after its close and are equally as accessible as were the records of the Civil War after they had been carded and assembled in individual jackets at a cost of many millions of dollars.

During the Spanish-American War General Harris was nominated by the President for brevet captain for gallantry in battle at Santiago de Cuba, July 1, 1898.

In addition to duty with troops and in The Adjutant General's Department, General Harris has served on the General Staff and represented the War Department at the Buffalo Exposition.

General Harris was born at Kingston, Ga., graduating from the United States Military Academy in 1888, from the Infantry and Cavalry School in 1895, and from the Army War College in 1908.

* * * * * * *

STATEMENT TO THE SECRETARY OF WAR BY GENERAL HARRIS ON THE CONDITION OF BUSINESS IN THE ADJUTANT GENERAL'S OFFICE UPON HIS LEAVING.

APRIL 6, 1922.

Memorandum for the Secretary of War:

On the conclusion of my active charge of The Adjutant General's Office I deem it appropriate to advise you briefly of the condition of the work therein.

The number of communications requiring investigation and correspondence remaining on hand at the close of office on March 31, 1922, was 7,853, which is only slightly in excess of the number disposed of daily. The work is thus practically current, it being considered uneconomical to have on hand at the close of a day less than about the number of cases disposed of daily. If all the work were disposed of each day there would be a period at the opening of the following day during which a portion of the office force would not be occupied.

The clerical force (1,053) now employed in the office is less than twice the number (583) authorized for the fiscal year 1917, while the number of communications received daily requiring investigation and correspondence is nearly five times as great as the number of such communications received daily prior to the World War.

In that branch of the office which handles all requests for information from the records of soldiers of the World War there was on hand on March 31 actually less than one day's output, and among the cases on hand was only one that had been received prior to March 31. Contrasting that condition with the condition of work in the branch of the War Department that had custody of the Civil War records after the close of that war, it will be seen that the present system of making and handling records is far superior to that in use during and after the Civil War. On July 8, 1889, 24 years after the close of the Civil War, there remained on hand in that branch of The Adjutant General's Office which corresponds to the branch referred to above 40,654 unanswered requests from the Pension Office, the second auditor's office, and other agencies, and nearly 30 years after that war over 800 clerks were still employed on those records. Although less than three and one-half years have elapsed since the close of the World War, the force of clerks handling similar work has been reduced to 369 and the work itself is current. This condition becomes especially significant in view of the fact that the number of soldiers in the World War was twice as great as the number in the Federal service during the Civil War, and the number of organizations in the World War was approximately as large as the aggregate number of organizations in service during all the other wars in which the United States has participated.

In closing I desire to commend and thank the officers and clerks, without whose intelligent and energetic cooperation the accomplishments referred to would have been impossible.

P. C. HARRIS,
The Adjutant General.

MEMORANDUM ON SERVICE OF MAJOR GENERAL HARRIS AS ADJUTANT GENERAL.

When General Harris came to Washington in 1916 the record-keeping system of the Army and the War Department was substantially the same as in the Civil War.

When the National Guard was called into the service that year for Mexican border duty it took the companies several days, and in some cases weeks, to prepare the muster-in rolls and records in use at that time.

General Harris at once began a study looking to a revision of the records, and as a result of his work the National Guard when called into the service in 1917 were able to prepare in a few hours records that required as many days the year before.

In 1917 General Harris began a revision of the record-keeping system of the Army, beginning with the records of the soldier draft in the company. He extended his system up to and including The Adjutant General's office. To-day, with only twice the number of clerks that were in The Adjutant General's office in 1917, he is handling five times as many communications requiring investigation and correspondence as were handled in The Adjutant General's office in 1917, and this because of the changes in the record-keeping system conceived and put into operation through his individual efforts.

The records of the World War, three years after the signing of the armistice, are more complete and accessible than were the records of the Civil War 30 years after its close.

Thirty years after the close of the Civil War the Congress was still appropriating annually about $1,000,000 for work on the Civil War records, while to-day the amount available for the World War records is about one-third that amount. This is rendered possible through the changes made by General Harris. These changes also make it possible for The Adjutant General's office, immediately after the close of the World War, to furnish to the Bureau of War Risk Insurance, Auditor for the War Department, Army finance officer, and other relief agencies of the Government information necessary to adjudicate claims of soldiers of the World War. Much of the information now furnished for the soldiers of the World War was not accessible for soldiers of the Civil War until 30 years after its close.

General Harris has made extensive changes and improvements in the system of promulgating orders and instructions to the Army.

The records of The Adjutant General's office to-day are in better shape in every way, and the work is performed more economically than at any other time in the history of the War Department.

Contrary to the general impression, the volume of work in The Adjutant General's Office the last few months of the war and during the period of demobilization greatly exceeded that during 1917 and the early part of 1918.

When General Harris took over the office of The Adjutant General of the Army, August 26, 1918, the daily average number of pieces of mail of all classes received in the office was something over 100,000. This daily average rose to more than 200,000 before the signing of the armistice, and during the demobilization period the number received on a single day reached 546,986. The daily average for the fiscal year ended June 30, 1919, was 287,266, as against 75,286 during the fiscal year ended June 30, 1918. For the fiscal year ended June 30, 1916, the last during which normal conditions prevailed, the total number of pieces of mail received was 925,930, a daily average of only 3,025.

The volume of work handled during the first fiscal year of General Harris's administration was therefore nearly ninety-five times as great as that handled during a normal year, and on several occasions the quantity of mail received on a single day approximated two-thirds of that received during the entire fiscal year ended June 30, 1916.

It soon became evident to General Harris that a radical and immediate reorganization of the office was needed to handle the enormous and rapidly increasing volume of mail.

To illustrate: (1) Enlistment papers or records of enlistment; (2) reports of physical examinations at enlistments; and (3) daily reports of changes which had superseded the bimonthly muster rolls were filed separately (in different rooms) in the basement of the State, War, and Navy Building; (4) medical cards or record of sickness or disability while in the service were filed in a building on the Mall; (5) the correspondence in one great consolidated file was on the fourth floor of the State, War, and Navy Building; and (6) the reports of casualties and all records and correspondence relating thereto were filed in the Emery Building, First and B Streets NW.

Thus to obtain the complete military and medical record of an enlisted man it was necessary to examine records located, as already stated, in various parts of The Adjutant General's Office; to be exact, in four widely separated rooms of the State, War, and Navy Building and in two other buildings, one on the Mall and the other at First and B Streets NW., each a mile and a half away from the main office.

The several records relating to officers were similarly filed in widely separated rooms of the State, War, and Navy Building and the buildings on the Mall and at First and B Streets NW.

The necessity for segregating the records and correspondence relating to enlisted men in one file and those relating to officers in another file was apparent, and General Harris immediately set to work to bring this about. While he had the assistance of able and faithful clerks of long experience and of two civilian efficiency experts from New York City, General Harris personally directed and supervised the reorganization of the offices, and the system which he installed was conceived and developed by him.

So long as the several classes of records were filed separately, it was necessary that each should contain information duplicated on some or all of the others. After they were segregated, the duplication was eliminated, and two of the records—enlistment paper and report of physical examination—were consolidated. This revision and consolidation, made by General Harris personally, not only increased the efficiency of The Adjutant General's Office but greatly reduced the amount of clerical work involved in the preparation of these records by the Army.

Soon after the reorganization of the offices, the work became and has continued current, notwithstanding the unprecedented number of calls for information from the records received from the Bureau of War Risk Insurance, the Auditor for the War Department, Army finance officers, the Federal Board for Vocational Training, the American Red Cross, and from many other sources, both official and private. As a result of General Harris's work, the records of the World War, to-day, less than three years after the signing of the armistice, are far more nearly complete than were those of the Civil War 30 years after its close, and are equally as accessible as were the records of the Civil War after they had been carded and assembled in individual jackets at a cost of many millions of dollars.

"It is no exaggeration to state that the changes in the record-keeping system, made upon recommendation from this office after the declaration of war, have saved the Government millions of dollars, and, through making it possible to furnish information promptly to the Bureau of War Risk Insurance and other relief agencies previously referred to, have spared our disabled soldiers and the dependent relatives of those who sacrificed their lives in their country's cause untold suffering, misery, and want." (Extract from the Report of The Adjutant General of the Army to the Secretary of War, 1920.)

The efficiency and economy of the new system devised and inaugurated by General Harris is also shown by the fact that with a clerical force of only twice that authorized for the fiscal year 1916, The Adjutant General's Office is handling five times as many letters and memoranda requiring investigation and correspondence and more than 18 times as many reports and records required to be examined and filed as were handled before the World War.

* * * * * * *

IMPROVEMENTS IN METHOD OF PROMULGATING REGULATIONS, ORDERS, AND INSTRUCTIONS.

In addition to reorganizing The Adjutant General's Office, General Harris has made important and extensive improvements in the method of promulgating regulations, orders, and instructions to the Army. These have greatly reduced the cost of publication and have made more readily accessible the regulations and instructions which officers must consult in the performance of their duties. The change in the method of publishing special orders, for instance, made on November 1, 1918, reduced the cost of printing these orders from $10,000 per month in September and October to $3,000 for the month of November, representing a saving of $7,000 per month. This change also rendered it unnecessary to send advance copies of special orders by telegraph, except in most urgent cases, thus reducing the War Department telegraph bill several thousand dollars per month.

REDUCTION IN PAPER WORK.

General Harris has also revised, in fact revolutionized, the record-keeping system of the Army and has done more to reduce Army paper work than any other person since the establishment of our Government.

HUDSON RIVER BRIDGE.

The bill (H. R. 11152) to authorize the Bear Mountain Hudson River Bridge Co. to construct and maintain a bridge across the Hudson River near the village of Peekskill, State of New York, was read twice by its title.

Mr. CALDER. Mr. President, the Senate has already passed a bill of like character, and I ask unanimous consent that the bill may be considered now.

There being no objection, the bill was considered as in Committee of the Whole, and was read as follows:

Be it enacted, etc., That the consent of Congress is hereby granted to Bear Mountain Hudson River Bridge Co., a corporation incorporated by act of the Legislature of the State of New York approved March 31, 1922, its successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Hudson River, at a point suitable to the interests of navigation, near the village of Peekskill, County of Westchester, State of New York, in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That this act shall be null and void, if actual construction of the bridge herein authorized be not commenced within three years and completed within seven years from the date of approval hereof.

SEC. 3. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THOMAS B. FELDER.

Mr. WADSWORTH. Mr. President, I am in receipt of a communication from Mr. Thomas B. Felder. It seems that Mr. Felder, although a former resident of the State of Georgia, has been for the last three or four years a resident of the city and State of New York. In the Senate debate several days ago some very serious accusations were made against Mr. Felder's character and record. The letter which he has addressed to me in a sense, and I think in a very true sense, is a reply to some of those charges and contains certain data concerning his record and efforts while a resident of the State of Georgia.

In view of the fact that the charges against him have been printed in the CONGRESSIONAL RECORD and have had that very large distribution of the publication, I think it only fair that his answer to them be given equal publicity; otherwise he is quite unable to defend himself. I ask unanimous consent that his letter may be printed in the RECORD.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New York?

Mr. CARAWAY. Mr. President, I shall not object, but I wish to ask the Senator from New York if he personally indorses the statements in the letter?

Mr. WADSWORTH. I have no method of ascertaining the truth or falsity of any statement that Mr. Felder has made in his letter. Mr. Felder is a constituent of mine, and I met him for the first time about a week ago.

Mr. CARAWAY. Whether his statements are true or false, the Senator does not know?

Mr. WADSWORTH. I have no personal information concerning the controversy whatsoever.

Mr. CARAWAY. I shall not object, but I shall have something to say about it at a later time. I hope the Senator from New York will be present when I do it.

Mr. POMERENE. Mr. President, I of course have not seen the letter which is presented for the RECORD, but there came to my office a letter purporting to have come from Mr. Felder. I believe it was in the nature of a circular letter, typewritten. I know nothing about the controversy in the letter which the Senator presents. The letter which came to my office contained very serious reflections upon two Senators now Members of this body.

Mr. WADSWORTH. I have examined with great care the letter which I have presented, and it mentions no Senator and makes no reflection upon any Senator by inference or otherwise.

Mr. POMERENE. I am quite sure that if the letter presented contained the statements that were in the letter I received no Senator would present it on the floor of the Senate.

Mr. CARAWAY. I wish to say, as I have said to the Senator from New York privately, that to-morrow some time after 12 o'clock I shall have something to say about the matter.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New York? The Chair hears none, and the letter will be printed in the RECORD as requested.

The letter referred to is as follows:

FELDER, CHOROSH & MCCROSSIN,
New York, May 12, 1922.

Hon. JAMES W. WADSWORTH, Jr.,
Washington, D. C.

DEAR SIR: Charges were recently made against me on the floor of the Senate by Members of that body under the protection of senatorial immunity, as follows:

1. That I am a lobbyist for the liquor ring.
2. That I was indicted in South Carolina.
3. That I was run out of Georgia.

These charges appear in the CONGRESSIONAL RECORD. In the years to come my posterity may be told that the CONGRESSIONAL RECORD shows that their ancestor was guilty of these charges. As an American citizen I am entitled to have the truth appear in the CONGRESSIONAL RECORD.

On the eve of my departure from Georgia to take up my residence in the city of New York there was gathered in the Auditorium in the city of Atlanta more than 5,000 people, including the governor of the State, the United States Senators, and the members of the general assembly, which was about to adjourn after enacting a bone-dry law which I had prepared and which I assisted in putting into effect in Georgia. The meeting was called to celebrate the victory and as a "farewell" to me. Since I took up my residence in New York I have been appointed a coreceiver for the Savannah & Atlanta Railroad and for the Port Wentworth Terminal Co. I still hold these positions of trust and emolument.

Immediately after the charges were made against me on the floor of the Senate I received the following letter from former Gov. N. E. Harris:

"DEAR TOM: I have seen the gratuitous attack on you which occurred yesterday in the United States Senate.

"It was certainly unexpected, so far as I am concerned.

"If you need any word from down this way to show how utterly unjust was the criticism, write or telegraph me at Hampton, Carter County, Tenn., where I go to-morrow. I will return here on the 17th and can see all of our friends to set this matter right.

"You put prohibition into effect in Georgia.

"Yours sincerely,

"N. E. HARRIS."

I spent 12 months in the city of Washington working for the enactment of the eighteenth amendment, after having devoted years to the prohibition cause in my State and other States of the Union. After the adoption of the amendment I received a letter from Bishop H. M. Du Bose, one of the most distinguished bishops of the South Methodist Church, from which I quote:

"I shall always be happy to hear from you and shall not forget to pray for you and for the success of your labors. That you are a God-called man and that He will guide and direct you and give you courage and peace in your work I have no manner of doubt. Your life and loyalty have been an inspiration and comfort to me.

"H. M. DU BOSE."

When the war was declared against Germany, prompted by an intense spirit of patriotism and loyalty, I requested the then governor of my State to appoint me colonel of the Third Georgia Regiment; that I intensely desired to fight for my country; that he had offered me positions of honor and trust which I was forced to decline; that I would like to command the Third Georgia Regiment and go over with the Roosevelt expeditionary forces. I was assured that I would receive the commission if the fighting units were raised by the volunteer system. They were not so raised, and I was told thereafter that I was "too old to fight."

* * * * * * *

Either of the two Senators from South Carolina will verify the statement that I was never indicted in the State of South Carolina. When I left the State of Georgia to take up my residence in the city of New York, "without my knowledge, consent, or procurement," the governor of the State, every judge in the city of Atlanta, including the circuit, city court, and Federal judges, and all of the judges of the supreme court and court of appeals gave me letters from which I quote:

From Governor Harris:

"I have known Colonel Felder for many years. He is regarded in Georgia as one of the ablest lawyers at our bar, a fine advocate, an eloquent, forceful speaker, and is fully competent to handle any case that may be intrusted to him or any matter that may come before him for attention.

"I would have been willing at any time to have given him any appointment within my power, whether on the supreme court, court of appeals, or any other position. On one occasion I offered to give him a place on the court of appeals, but he declined to even consider the same, though I felt that he was fully able to meet any requirement that it would make upon him."

From a letter of Hon. Benjamin H. Hill, now judge of the court of appeals, then judge of the circuit court of the county of Fulton, city of Atlanta:

"I regard him as a very able lawyer, well versed not only in the fundamentals of the profession but abreast of all the important modern decisions.

"As a practitioner in court he has few equals in our State, fluent as a speaker, logical in the presentation of facts and accurate in the apprehension and citation of legal principles governing the issue in cases. He has impressed me as a lawyer of high professional ideals who endeavored to live up to them, thoroughly conscientious in the positions that he takes, and courteous in his deportment to the bench and the bar.

"He has long been regarded by the bench and the bar of this State as deserving confidence and admiration. If he leaves the State of Georgia, I think there will be very universal regret, and his going will be a distinct loss to the profession.

"BENJ. H. HILL."

Letter from Hon. A. E. Calhoun, judge of the city court of Atlanta:

"It gives me pleasure to testify to his splendid character and personal integrity as a man and his high standing in this city and State. As a lawyer he is energetic, able, resourceful, and well equipped. In the courthouse he is especially strong—an eloquent and convincing speaker, and a skillful examiner of witnesses. I consider him one of the best, if not the best, trial lawyers at the Atlanta bar.

"A. E. CALHOUN."

Letter of Hon. William T. Newman, judge of the United States district court:

"He has practiced for a number of years in the court over which I preside, and he is a good lawyer and has maintained an excellent character as a lawyer in this court at all times. I have come to know Mr. Felder very well, both personally and as a lawyer, and have come to like him very much, both in the courthouse and out of it, and I take pleasure in commending him to the consideration of all with whom he may come in contact.

"WM. T. NEWMAN."

Letter from Hon. William H. Fish, chief justice of the Supreme Court of Atlanta:

"I have known Hon. Thomas B. Felder, of Atlanta, Ga., for 20 years, and more. * * * He has practiced regularly in the Supreme Court of Georgia during the entire time that I have been a member of that court; that is, for more than 20 years. My opportunities for forming a correct estimate of Mr. Felder's character and legal ability have therefore been good. He bears the reputation of a gentleman of the highest character, is a lawyer of eminent attainments, and I am sure will most faithfully and efficiently represent any cause which may be intrusted to him.

"WM. H. FISH."

Letter from Hon. Beverly D. Evans, United States district judge for the southern district of Georgia:

"I have been associated with him in the trial of cases; I have presided as judge in the trial and appellate courts where he frequently appeared as counsel. I take pleasure in testifying to his ability as an advocate, his skill as a lawyer, and general trustworthiness. I commend him as a careful, competent, and energetic lawyer.

"BEVERLY D. EVANS."

Letter from Hon. M. W. Beck, judge of the Supreme Court of Georgia:

"He is a distinguished member of the Atlanta bar and has appeared before this court as counsel in numerous cases of importance, and has always represented his clients with marked zeal and ability.

"His distinguished career at the capital city of the State has made him known throughout the entire State of Georgia and the adjoining States. He is a lawyer of wide experience and ability, and now, in the ripeness of his powers, is prepared to render able service in any matters in which he may be retained as counsel.

"M. W. BECK."

Letter from Hon. Peyton L. Wade, chief judge of the Court of Appeals of the State of Georgia:

"My acquaintance * * * has extended over a period of more than 30 years, and it affords me sincere pleasure to bear witness to the deservedly high position he has long occupied at the Georgia bar, and to myself testify to his known legal ability, as exemplified in the trial of many important cases in the Supreme Court and the Court of Appeals of Georgia, as well as to his enviable reputation as an advocate of no mean power in the trial courts.

"PEYTON L. WADE,
"Chief Judge Court of Appeals of Georgia."

Letter from Hon. Jefferson B. Browne, chief justice of the Supreme Court of Florida:

"I have a very warm friend who moved from Atlanta to New York two years ago, Mr. Thomas B. Felder * * *. I have known Felder intimately for the last 20 years, and he is a man of exceptional ability and industry and of the highest integrity.

"JEFFERSON B. BROWNE,
"Chief Justice of Supreme Court, Florida."

Letter from Hon. George L. Bell, judge of the Superior Court of Atlanta, Ga.:

"Mr. Felder has practiced law before all of the courts of the South for a number of years and by his ability, energy, and eloquence has secured a large and varying clientele.

"I bespeak for him the kind consideration of the bench and bar of any locality in which he may cast his lot. He has demonstrated that he is not only an able lawyer but a man of affairs, and has taken a wide interest in the civic development of this State, and wherever he goes his influence for good will be felt.

"GEO. L. BELL."

Letter from Hon. H. M. Reid, judge of the city court of Atlanta:

"Thomas B. Felder, Esq., is a prominent member of the legal profession in this State, resident in this city.

"Mr. Felder's practice has been varied and extensive and he has established a reputation as a lawyer of ability and great resourcefulness in court trials, and occupies a position of eminence in his profession. He is well known throughout the State and is recognized as a man of high character as well as a lawyer of high standing

"H. M. REID."

I quote from a letter from J. T. Pendleton, circuit court judge:

"Mr. Thomas B. Felder, an able attorney of this bar, is removing to the city of New York for further prosecution of his profession.

"Mr. Felder is an attorney of ability, and will, I am sure, represent with ability any business which may be intrusted to him. He is perhaps entitled to more credit for the recent prohibition laws of Georgia than any other one man in the State.

"J. T. PENDLETON,
"Judge Superior Court, Atlanta."

I quote from Hon. W. D. Ellis's letter:

"Hon. Thomas B. Felder has for many years been a prominent member of the bar of this circuit. He has been connected with several prominent law firms, and has from time to time been engaged, both in the State and Federal courts, in very important litigation. He is an attorney of ability and is very energetic in anything he undertakes to do.

"I am informed that he is about to engage in the practice of law elsewhere, and I wish for him eminent success.

"W. D. ELLIS,
"Judge, Superior Courts, Atlanta Circuit."

I quote from a letter written by Hon. H. Warner Hill, justice of the Supreme Court of Georgia:

"Hon. Thomas B. Felder, of the Atlanta (Ga.) bar, has been personally known to me for many years. He is a member of the bar of this court in good standing, is a gentleman of high character, and an able and distinguished lawyer. He has appeared in many cases before this court, some of which have been of great importance, and he has handled them with skill and ability.

"I am informed that Mr. Felder contemplates opening a law office in the city of New York. I cheerfully recommend him to anyone desiring the services of an able and painstaking attorney.

"H. W. HILL."

I quote from a letter written by Hon. Samuel C. Atkinson, associate justice of the Supreme Court of Georgia:

"I have known Hon. Thomas B. Felder, of the Atlanta bar, for many years, and take pleasure in saying that he is a gentleman of high character and well-recognized legal ability. He is attentive to business intrusted to him and is especially strong as a trial lawyer.

"I understand that he contemplates extending his field of practice to other States. If he does so, he will carry my good wishes and I will confidently expect to hear of his success.

"SAMUEL C. ATKINSON."

I quote from a letter from Price Gilbert, associate justice of the Supreme Court of Georgia:

"I have known Mr. Felder well since his graduation at college, and it gives me pleasure to say that he has been a prominent and successful practitioner in the courts of Georgia for many years. He is a man of splendid ability and industrious, and in the trial of cases is of unusual resourcefulness.

"PRICE GILBERT."

I quote from a letter from Walter F. George, of the Court of Appeals of Georgia:

"* * * This contemplated change of residence by Mr. Felder has been noted generally in the press of this State.

"I have known Mr. Felder for many years. He occupies and holds an enviable position at the Georgia bar. He is recognized as a lawyer of ability and force, fully competent to handle any class of litigation and to perform any legal service. He has been quite active in directing legislation, both through the legislature of this State and in the National Congress, respecting the question of prohibition. His ability, experience, and learning have been most helpful in shaping this legislation, particularly in this State, and his removal from the State is a matter of general and genuine regret. It is my pleasure to commend Mr. Felder as citizen and lawyer in the highest terms.

"WALTER F. GEORGE,
"Of the Court of Appeals of Georgia."

I quote from a letter from Hon. O. H. B. Bloodworth, judge of the Court of Appeals of Georgia:

"I have known Hon. T. B. Felder for a number of years. He is a lawyer of recognized ability, an advocate of power, and has been quite successful in his practice. I am informed that he contemplates opening an office in New York, and I predict that his legal ability will soon cause him to have a place among the leading lawyers in America's greatest city.

"O. H. B. BLOODWORTH."

I quote from a letter written by Hon. W. F. Jenkins:

"* * * It is with pleasure that I commend Mr. Felder as a member of the bar of this court, who is regarded as a lawyer of most exceptional attainments and capacity, and who has always commanded a large practice, and who has conducted himself worthily in his profession.

"W. F. JENKINS."

I quote from a letter from Hon. Nash R. Broyles, judge of the court of appeals:

"* * * and has practiced his profession with great success in all the courts of the State.

"The judges of the various courts and his fellow lawyers commend him to the kindly consideration of their brethren of the bar in the metropolis of America.

"NASH R. BROYLES,
"Presiding Judge."

I am, very truly yours,

THOS. B. FELDER.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. CALDER. Mr. President, I present a memorial addressed to the Senate by the joint legislative committee on housing of the Legislature of the State of New York, which I ask unanimous consent may be read and then referred to the Committee on Finance.

There being no objection, the memorial was read and referred to the Committee on Finance, as follows:

Memorial to the Senate and House of Representatives of the United States:

The undersigned, acting as counsel for and under the instructions of a joint legislative committee on housing of the Legislature of the State of New York, herewith presents this petition and memorial.

The committee is now, and has been for upward of two years last past, engaged in investigating housing conditions in the State of New York under various mandates from the legislature of this State in the form of joint resolutions of the senate and assembly, copies of which will be found in the intermediate report of the committee, to which reference will hereafter be made.

In brief, this investigation (which is still under way) has disclosed an alarming and increasing shortage of housing accommodations throughout the State, and more particularly in the city of New York, due in large measure to the operations of illegal combinations among manufacturers of and dealers in well-nigh all the various lines of building materials and supplies that are necessary in construction, and in no small measure to corruption among labor leaders and to illegal rules, regulations, and practices of labor unions.

These illegal combinations among manufacturers, dealers, contractors, and other employers and among labor unions having their headquarters mainly in New York, Chicago, Indianapolis, and Cleveland have been and are in many instances nation wide. Criminal prosecutions have been inaugurated at the instance of the committee by State and Federal authorities, resulting in many convictions, but these convictions, especially of employers, have in most instances resulted in the imposition of mere fines that have been insufficient to serve as an effective deterrent.

The principal intermediate report of the committee, outlining the result of its investigations to the end of January, 1922, is herewith submitted, from which a fair conception may be gathered of the outcome of its activities up to that time. Following the presentation of that report to the Legislature of the State of New York, accompanied by proposed legislation embodying the recommendations therein set forth, part of the program there recommended was enacted at the session that ended in March last.

On account of the inability to present the report until shortly before the close of the legislative session, and for other reasons, the balance of legislation failed of passage, although its most important features passed the senate and were approved by the governor.

The committee is now still engaged in conducting the taking of testimony at its public hearings, and finds the following situation has developed and is now existing, which requires immediate attention at the hands of the Congress:

A comprehensive program of housing construction has been perfected, part of which is under way, for which many millions of dollars have already been provided. A considerable part of this program is now activeiy under way which, if permitted to continue, will go far toward correcting the housing shortage not only in the city of New York and throughout the State but throughout most of the great cities of the country, the majority of which are affected by the housing emergency, but in a lesser degree than in the city of New York, where there is a present shortage of housing accommodations of the cheaper class for about 400,000 people among the masses of the workers, all of which is set forth in detail in the accompanying report.

The result of this shortage has been an abnormal increase in rents which the workers are unable to pay, and there have been and are consequent overcrowding and insanitary and unlivable conditions. It was hoped and expected that the carrying out of the program of new construction would relieve this critical situation. The committee now finds that there is a famine in the basic materials required in building construction, such as bricks, sand, lime, cement, etc. The supply of these materials has been restricted in many cases through the operation of these unlawful combinations and in other instances by reason of the phenomenal demand due to the increase of building activity that is essential to meet the emergency.

The exactions of manufacturers and dealers in building materials due to this scarcity of supply have resulted in abnormal price increases, and in some instances in the inability to meet the demand on any terms. Manufacturers and dealers are either unable or unwilling to satisfy these demands upon a basis of reasonable prices over and above the actual cost. This situation prevails not only in the city of New York but in many of the cities throughout the country, and for the same

reason. Unless corrected it threatens to paralyze the efforts to correct the present crisis.

As illustrative of the extent to which oppression has been practiced by these combinations above referred to, it appears from the evidence that at a time when the price of building sand was abnormally high, largely as the result of a monopoly in the transportation facilities, a trans-Atlantic steamer of the Munson Line brought as ballast into the port of New York a cargo of high-class sand, which it endeavored to market. Because of the then existing combinations on the building materials market, no dealer or builder dared buy the sand, although it was of high quality, was greatly needed, and could have been had for less than one-quarter of the price that was then being charged for a similar product. The steamship company was finally compelled, at considerable expense, to take the sand out to sea and there to dump it, because of the grip of this monopoly.

In this connection attention is also called to the incongruous fact that the Government of the United States, through the United States Shipping Board, is said to be itself a party to arrangements with foreign steamship lines to maintain exorbitant freight and passenger rates in the trans-Atlantic trade, and as a result of these combinations there have been various increases in such rates, that are now being maintained to the detriment of the building industry throughout the country.

Unless this situation is corrected the continuance of these arrangements will materially interfere with the importation into this country of building materials, unless Congress will, in fixing the tariffs, make such reductions as will take into account the added cost of transportation, due to the fact that our Government is a party to combinations against which its antitrust laws are directed.

The only immediate remedy in sight is to permit the prompt importation into this country of building materials of the classes that are now excluded through prohibitive tariffs, under cover of which the present profiteering demands are being exacted. The added cost of freight upon such importations due to combinations between the steamship companies increases the burdens to that extent.

The committee would not favor and does not ask that the tariffs be fixed at a rate that will not yield the domestic manufacturers and dealers a reasonable profit over and above the present costs of production, but it has been demonstrated that the prices demanded have been grossly exorbitant, that they are the direct result of a series of criminal conspiracies between former competitors, and that the prices now exacted under stress of the present emergency are in some instances at least 50 per cent above such reasonable profit.

No relief that is not immediate will meet the situation. It can not await the slow processes involved in the pending tariff revision by Congress. The committee asks that the subject be dealt with as an emergency measure, and that it shall be confined to the basic materials entering into housing construction, which will involve a comparatively simple problem that can be readily dealt with.

Respectfully submitted.

SAML. UNTERMYER,
Counsel for the Joint Legislative Committee on Housing of the State of New York.

Mr. ROBINSON. Mr. President, the memorial just presented by the Senator from New York discloses a condition respecting building materials that is of very great importance. It states that after an exhaustive investigation of those conditions applicable particularly to the city of New York, the entire industry affecting construction in that locality is controlled, mercilessly controlled, by close organizations within the industry.

I have before me the report of the Lockwood committee touching that indispensable construction material, brick. In a few hours the Senate will proceed to the consideration of the schedule in which is included brick. Under the rates now imposed, 10 per cent on fire brick not glazed, 15 per cent on glazed and similar brick, and 10 per cent on other bricks, not including bath brick, upon which there is a rate of 15 per cent, there are substantially no importations and the brick industry in the large centers is controlled by combinations to the detriment of the public.

The intermediate report of the Lockwood committee shows that for the first six months of 1920 brick delivered at the job in New York City cost $11.25 and that the selling price there was $28.75.

Mr. CALDER. The Senator, I think, means the manufacturing cost of brick.

Mr. ROBINSON. The cost of the brick. The cost included the delivery of the brick on the job, $11.25, according to the Lockwood report. The selling price on the job was $28.75.

Now, in spite of those conditions, the Finance Committee has brought into the Senate amendments to the brick schedule in the tariff bill increasing the existing rate from 25 to 225 per cent on brick. I desire to ask the Senator from New York, who presented the memorial, if, in his opinion, any increase in the rates on brick is justified.

Mr. CALDER. Mr. President, in my judgment the duty on brick does not affect the price to the consumer in the city of New York or any of the large cities in the East to the extent of 50 cents a thousand or in any degree at all. The freight rates from Europe or wherever brick may be made outside of this country are so great as to make it impossible for them to compete with brick produced along the Hudson River and in New Jersey. For my part, I would place brick absolutely on the free list.

Mr. ROBINSON. Accepting the conclusion of the Senator from New York as in entire accord with my own, I wish to call his attention to the fact that the only justification for any tariff on brick is claimed by the manufacturers of brick in New York City and near the Canadian border line, that importations occur across the Canadian border and on the Atlantic seaboard, particularly in the State of New York and along the New Jersey coast. The only importations that have ever occurred have been at those points and, as implied by the Senator from New York, those importations have been quite small. So that while they can not result in material revenue or any other benefit to the public, these duties have resulted, and increased duties must accentuate that result in enabling the domestic manufacturers to control absolutely the price of their product and to charge extortionate and unreasonable prices.

Mr. CALDER. Mr. President, let me again say, in response to the Senator's statement, that a duty of 10 per cent or 25 per cent or even 50 per cent will not, in my judgment, affect the price of brick to the consumers in the city of New York or thereabouts, nor did the brick manufacturers of the country adjacent to the city of New York ask for this duty. The request for the duty came from the men along the border. Because of the fact that Canada charges a rate of duty of 25 per cent against our brick, it was the disposition of some people in this country to have the same duty against Canadian brick that was levied against ours. I believe that the duty may be taken off, Mr. President, and not do any great injury to the manufacturers of brick; nor do I believe, either, I will say to the Senator from Arkansas, that it would be of very great benefit to the consumers of brick.

Let me add that we have had indictments and prosecutions of and heavy fines levied against brick manufacturers in and about the city of New York as the result of the investigation of the Lockwood committee. I am informed by people who claim to know that the combinations uncovered by that committee do not now exist. I do not know whether that is true or not; but if they exist, the people of New York City desire them prosecuted and the men responsible punished. The difficulty, however, is that we are to-day having a tremendous boom in building in and about New York City, and the men who manufacture brick have taken advantage of that great demand to raise prices unduly, and, in my judgment, I will say to the Senator from Arkansas, outrageously.

Mr. ROBINSON. Mr. President, again agreeing with the conclusions of the Senator from New York that no justification exists for even the present duty on bricks, and that, therefore, there is much less justification for the proposed increases in these duties, I call his attention to the fact that my first statement respecting this subject was absolutely correct, namely, that the demand for an increased duty comes chiefly from two localities in the United States. One of them, according to the record, is New York City, and the other is from the manufacturers of brick near the Canadian boundary line, particularly in the State of Washington. While importations have been merely nominal, the manufacturers of refractory brick in New York and vicinity have claimed that the preservation of the industry is absolutely dependent upon an increase in the tariff.

To show the Senator that this declaration is true and that there has been a request, and an urgent one, from his city for an increase, particularly on refractory brick, I refer him to page 376 of the House hearings before the Committee on Ways and Means on Schedule B, in which is printed a long brief on behalf of the Refractory Brick Manufacturers' Association of New York, in which the contention is made and repeated that unless Congress imposes an increased duty on this particular class of brick dire results to the industry may be expected. It is also claimed in that brief that unless the increase be granted the capital invested in refractory brick manufacturing in the United States, amounting to $220,000,000, will be sacrificed and that many of the laborers employed in the 200 plants manufacturing refractory bricks will become idle. The point is that with appalling conditions respecting building materials prevailing in New York, those representing the organizations which control the industry, while they were charging enormous profits upon their product, were appealing to the Congress for an increase in the tariff duties on their product, on the theory that unless Congress granted that increase their industries would be destroyed.

Mr. CALDER. Mr. President, if the Senator from Arkansas will permit me, a request for the increased duty on refractory brick refers, of course, to brick that are used for lining furnaces. Refractory brick, as I understand, are not used for building purposes.

Mr. ROBINSON. I understand that perfectly well, but a furnace is a structure, and refractory brick which are used for many purposes constitute one of the principal branches of the brick manufacturing industry. There has never been a time when ordinary structural brick have been imported into the United States from any source in any important quantity.

So I ask the Senator from New York: Why does his party insist upon an increase in the duty now imposed on common brick?

Mr. STANLEY. Mr. President——

Mr. CALDER. I will say to the Senator from Arkansas, if he will permit me——

The PRESIDING OFFICER. Does the Senator from Arkansas yield; and if so, to whom?

Mr. ROBINSON. I yield first to the Senator from Kentucky.

Mr. STANLEY. Mr. President, while I am not a brick expert, nevertheless I think it will not do to say that the use of refractory bricks is confined to the construction of furnaces. The fire clay which is used for making furnace brick is also used for making a thousand other kinds of material. In my opinion the greater part of the output from all the establishments making refractory brick is used in making tiling, sewer pipe, in building, and in paving streets, and all that sort of thing. If the Senator from New York will go to New Cumberland, in West Virginia, he will find the streets there are paved with refractory brick, and that houses are built of it.

Mr. ROBINSON. Mr. President, the Senator from Kentucky is correct. Refractory brick are used in all construction work which requires the exposure of the materials to high degrees of heat. The value of refractory brick lies in its resistant power to the action of heat, and it is used for very many purposes. The industry is quite a large one. Fire brick were produced in 32 States in 1916, and the total value of the product was $30,800,000. The average importations of fire brick do not exceed $100,000 worth per year, and they are probably very much less than that.

To illustrate the absurdity of this attempt to increase the tariff on brick, there is in the RECORD a brief filed by a distinguished statesman representing in another body the State of Idaho, and he makes the declaration in his brief that—

> There are two small plants producing fire brick, located in my home county in Idaho, and these plants are in competition with fire brick produced in Scotland, England, and elsewhere, where wages and conditions are not at all adequate for the American laborer.

In a thousand years brick produced in Scotland could not reach Idaho because of the character of the commodity, its weight, and the necessary charges incident to its transportation. Yet we have Idaho appealing to the Congress of the United States for the protection of its refractory brick manufacturing industry by increasing to a very large degree the tariff on this necessary and indispensable product.

Mr. WALSH of Massachusetts. Mr. President——

Mr. ROBINSON. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. I understand the figures to indicate that the imports were one-third of 1 per cent of the domestic production.

Mr. ROBINSON. The average imports are less than one-third of 1 per cent, and in a sense the importation is not competitive, but is supplemental to American production. In a very important sense refractory brick which have been brought into the United States from foreign countries have not come in spite of American production, but they have come supplementary to American production, because of peculiar shape or character of the brick, or something else pertaining to their manufacture which is not easily supplied by the American industry.

The industry of manufacturing common brick is not subject to the competition of foreign importations, but under the provisions of this bill it is proposed, as I read the paragraph, to levy a tax of 25 per cent ad valorem on common brick, which, as I have said, are not the subject of importation. Therefore the only effect of the proposed duty will be to give greater power to the combinations and trusts that are already controlling the right and privilege of the American people to build homes at a reasonable cost. I challenge Senators in the majority—and they can take their time while the brick schedule is under consideration to consider the matter—to give a reason for increasing the tariff on common brick. The manufacturers of common brick in this country have never been and can never be by the nature of the industry in competition with foreign manufacturers. If there is any purpose in the proposed increase, if it is to have any effect, it will accomplish the purpose of enabling the American manufacturers to enter into combinations among themselves to do elsewhere what they have done in New York City—rob the public.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. The Senator from North Dakota.

Mr. SIMMONS. Mr. President, I will add, if the Senator will pardon me——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from North Carolina?

Mr. McCUMBER. Mr. President, I merely yielded, as I supposed, for a question or a suggestion, but it appears that we are going off into a subject which we will reach in due time. I should like to get back to the pending question.

Mr. ROBINSON. Mr. President, I think I ought to thank the Senator from North Dakota for yielding to me, and I do so.

Mr. McCUMBER. Mr. President, there are two things that our good friends on the other side seem to rail against most vigorously and viciously. The one is the duty on fire brick and the other is the duty on asbestos.

Mr. President, it is true that we have recommended in this bill a 25 per cent ad valorem duty upon brick. Let us see who is asking for it—not those who are in this combination to furnish brick for the city of New York at five or six times what it costs them, but along the Canadian border, where they are using and making brick upon both sides. The Canadian can bring his brick into the United States free, while if we desire to export a few bricks into Canada we have to pay an ad valorem tax of 25 per cent, as I now remember.

Now let us see what the brickmaker along the border has to contend with.

The scale of wages is perhaps known by the Senator from New York [Mr. CALDER], who is also a builder, better than by any other man in that section of the country. He pays his bricklayers $12 a day, with a limited amount of work that must be performed. He pays his plasterers $15 a day.

Mr. ROBINSON. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Arkansas?

Mr. McCUMBER. Will not the Senator allow me to finish?

Mr. ROBINSON. I should like to ask the Senator a question. I want to know what the wages paid to bricklayers have to do with the cost of the manufacture of brick?

Mr. McCUMBER. Let us consider the situation.

The Senator from New York pays $15 a day for his plasterers. Then there is a combination on the part of those who furnish building materials, and they get enormous prices. That does not stop just with the city of New York, but it reaches into other sections to such an extent that building to-day is getting so terrifically expensive that people have to cease building homes. The prices not only of the bricklayer and the plasterer but the prices of the material, fixed by a combination, are so extraordinarily high compared with the earnings of most of the people that they are forcing people to live in little stalls and apartments in all our cities. The cost of building is out of proportion to the cost of anything else in the country. The result is that the brickmaker who has to live in a house which is built by carpenters at $12 a day and plasterers at $15 a day feels that he has to have a pretty good profit upon his brick in order to live, and I think he has some justification for it. I think the difference in the price because of the duty upon brick would not amount to a bagatelle in the matter of the cost of building any kind of a structure in the city of New York, and the Senator from New York, who is a builder himself, admits that that is true; that it is fixed by combinations, and not by inherent value of the material that goes into it.

But, Mr. President, we are coming to the brick schedule in a short time, and we may have it passed over for the day; but right now we are upon another feature of the tariff bill, on which I hope we can get a vote soon. I ask that the next amendment be stated from the desk.

Mr. STANLEY obtained the floor.

Mr. McCUMBER. Mr. President, I believe I have the floor yet.

The PRESIDING OFFICER. The Chair thought the Senator had asked for a vote on the amendment.

Mr. McCUMBER. No; I asked that the amendment be stated because I wanted to offer an amendment to it.

The PRESIDING OFFICER. The amendment will be stated.

The ASSISTANT SECRETARY. The next amendment is on page 29, beginning on line 10, where the committee proposes to strike out "25 per cent ad valorem" and to insert in lieu thereof "1 cent per pound," so that, if amended, it will read:

> Formate, 1 cent per pound.

Mr. McCUMBER. Mr. President, on a reconsideration of this schedule the committee will make several recommendations, some lowering the duties proposed, and in this particular instance raising the duty from 1 cent per pound to 2 cents per pound. That ought to have been done in the committee before, because after the 1 cent per pound rate had been fixed the

duty had been made 4 cents per pound on formic acid. It takes two pounds of formate to make one pound of formic acid. We have already agreed to the formic-acid duty of 4 cents per pound. We ought, therefore, to have 2 cents a pound as the proper differential between formate and formic acid. Otherwise, of course, the formate comes in instead of the formic acid.

The PRESIDING OFFICER. The question is on the amendment proposed by the committee.

Mr. STANLEY. Mr. President, I presume I have the floor this time. I rose simply to make an observation.

The argument on the brick schedule made by the Senator from North Dakota is most significant—more significant than even a useless rate upon an article not imported to any appreciable degree, for the sole and manifest purpose of protecting a voracious trust, admittedly devouring the substance of an almost homeless people. With such a situation before him, with that condition undenied, with these appalling crimes against men seeking to live under their own vine and fig tree openly established, the Senator from North Dakota shows a cavalier unconcern that is as instructive as it is appalling.

It is said, Mr. President, that the immortal daring of the only troops that ever withstood Pickett's boy brigade, the stubborn courage that enabled them from behind a stone wall to stay the furious charge till the immortal heights were strewn three deep with the picked troops who were to the Army of Northern Virginia what the old guard was to the grand army of Napoleon, it is said, Mr. President, their valor was inspired by the cry, "We are fighting on our own home soil!" and that many of those who fought and bled upon Seminary Ridge could almost see the lights from their own cottage homes upon the hills round about them.

There is nothing in all this world that so stabilizes government, so inspires industry, so safeguards virtue, so spreads happiness in time of peace and daring in time of war, as the ownership of his home by the citizen. Give me a community anywhere made up of individual owners of their own cottage homes, and I will show you a community thrifty, virtuous, and martial; and the man who goes into a conspiracy to profiteer upon the hearthstones of America is guilty of a kind of treason. Yet when the Senator from North Dakota is advised, when the report is read, when the profiteering is admitted, what is his answer? Is it like that of the Senator from New York [Mr. CALDER], that possibly we had better revise this schedule? Oh, no! What is his answer? That it would be well to see whether this duty would act simply as a guaranty of securities to a trust in the pursuit of its nefarious business? Oh, no! "The laboring man," says the Senator from North Dakota, "is getting too much. Bricklayers are getting rich in New York"; and great scalding tears flow down his cheeks when he tells of the prosperity of the bricklayer, and the danger of profiteering by the plasterer. "Plasterers," he cries in alarm, "are getting over a dollar an hour. My God! What is the country coming to? Let us do away with the plasterers' union while you wait." It means that or it means nothing. If plasterers and bricklayers are not overpaid, his argument is a mere rhapsody of words. If they are overpaid, and there is a labor trust, what does his argument amount to? Why, where one trust exists, another must be tolerated; that is all.

He says the laborers are getting too much; they are guilty of extortion; therefore we ought to help the brickmaker to be guilty of further extortion. The poor, downtrodden millionaire, owner of this costly apparatus for making refractory brick, in which there are hundreds of millions invested, has had to pay too much for plastering a room and therefore he shall be given immunity in his nefarious business, and to plunder the community at large, because a hod carrier overcharged him.

Is it possible that with his long and distinguished service in this body, with his splendid equipment as a legislator, with his magnificent power of debate, with his fine imagination and wealth of diction, he can nowhere see anything else in this thing but the narrow personal interest of a brick mason and a brick maker? Oh, if the Senator from North Dakota and those who are associated with him could realize that there is another quantity, an unknown quantity, in this equation, that there are men who live in homes as well as men who plaster them, and as well as men who make the brick that go into them. How about the millions who pay the plasterer and buy the brick? Have they no rights? Is it to be said that any old trust shall escape if you can find another trust, especially a labor trust, just as bad?

Is it possible we have resolved ourselves into a solemn moot court, and when it is shown that a duty is unnecessary, that it makes it harder to secure a home, that it goes into the polluted coffers of an admittedly insatiate, grasping combine making from 200 to 300 per cent, shall we permit them to go scot free if their apologists can only find some other combination just as bad, and disregard the rights of the voiceless millions of America, who to-day are crowded into unwholesome tenements, who sleep in tents or wander upon the highways? What of the thousands just starting out in life, Mr. President? To me there is no more beautiful sight than a strong youth and a loving girl building, in fond fancy, a vine-clad cottage somewhere on a hillside or in a quiet street. But they are not to have their own little home. They are never to build their own love cot. They are never to raise their little brood under their own vine and fig tree. They are to remain tenants. They are to be crowded into unwholesome places, children are to be born in darkness, where consumption devours their lungs, and ophthalmia eats out their eyes, in order, according to the Senator from North Dakota, that the Brick Trust magnates may be compensated for having paid too much to a brick mason or a plasterer.

Mr. McCUMBER. Mr. President, I have generally tried to be fair in my arguments. I have never put up a straw man and proceeded to knock him down, no matter how eloquent I might have been in attempting to do so; but not being an eloquent speaker like the Senator from Kentucky, I have never tried to erect such an individual and then proceed to knock him to pieces. I have tried to deal with facts, and when I called attention to the fact that in the city of New York those who control the building material were reaping enormous profits, and that enormous wages were being paid as compared with what were paid a few years ago, while men who had earned a meager living digging the clay to make bricks in Idaho were out of employment, I did not think that I had said anything in favor of the great combinations. But I want to ask my good friend from Kentucky in all earnestness, if he does not think that the man out in Idaho, who is a laborer, walking the streets to-day looking for a job because the mill that was making his fire brick has been shut down, is just as much entitled to his little love cot as the man who is receiving $15 a day in the city of New York, and as much as the profiteer who is raising the price of his product ten times over is entitled to occupy his love cot?

I brought up this disparagement in the cost of making a home in New York and the cost of employment and the cost of building material to show that the brickmaker and the man who is digging the clay to make the bricks are also entitled to some protection, and entitled to the same protection as citizens in any other section of the country.

If that is offensive to the Senator from Kentucky, I am sorry to find him that sensitive. I think that the people of all sections of the country have a right to have their products protected to such a degree that the American laborer can get a job and hold it in every State of the Union.

Mr. STANLEY. Mr. President, the Senator from Kentucky was not at all offended, of course, by anything that was said by his esteemed friend from North Dakota. There was nothing personal in it one way or the other. I was simply grieved to hear so great a statesman give utterance with such unconcern to such an appalling political heresy and to show such indifference to so great a number of his fellow citizens. I was rather voicing my surprise and my grief than any sensitiveness.

Mr. McCUMBER. Mr. President, I thought I condemned, in as strong language as I could, the combinations which had fixed prices of building material so high that people were compelled to live in stalls, and I felt that that was sufficient to indicate my disapproval; but the Senator from Kentucky seems not to have so much objection to that as to the man out in Idaho who is making some fire bricks being able to supply his section of the country as against the Canadian imports.

Mr. GOODING. Mr. President, the discussion of this brick schedule, like the discussion of all the other schedules in the tariff bill so far, has shown how little Senators on the other side of the Chamber know about what conditions the industries of this country have to meet from Canada and from other countries.

I have here a short letter I want to read, which tells very well the story of the difference in conditions in the brick-making industry in Canada and Scotland and in this country. In Scotland they make brick and ship them around through the Panama Canal, taking up the markets of brick which is manufactured in Idaho. This tells the story very briefly and very well. It is the same story that could be applied to every other industry in this country; it tells of the same conditions which laboring men have to meet everywhere and which protection is designed to improve.

You have never given any consideration to the thought of a protective tariff for the American laborer. You hold that it is unconstitutional and morally wrong, and for that reason, of course, you have never even given it a passing thought.

This is a letter from J. B. Watson, of Troy, Idaho, manager of the Idaho Fire Brick Co., in which he says:

TROY, IDAHO, *April 3, 1922.*

Hon. F. R. GOODING,
Senator, United States Senate, Washington, D. C.

DEAR SENATOR: We believe the new tariff bill has passed the House of Congress and is now up for discussion in the House of Senators. We do not know whether the import tariff on imported fire brick has been increased from 10 per cent, as it was, or not. We earnestly ask yourself to use your best efforts to have this tariff increased from 10 per cent to 25 per cent.

We are selling very few brick in Everett, Seattle, Tacoma, or Portland. Any business we are getting is from inland points.

FACTS TO BE REMEMBERED.

Ocean freight rate from the Clyde River in Scotland and the Tyne River in England to Seattle and other Pacific coast ports is only a few cents more per ton than the railroad freights are from Troy, Idaho, or Spokane, Wash., to Seattle and other Pacific ports. Then, in Scotland a very great deal of the labor necessary in manufacturing the brick is done by females.

As to fire brick imported from Clayburn, British Columbia: The railroad freight Clayburn to Seattle is 17 cents and to Tacoma is 18 cents per hundredweight. Our rate to Seattle and Tacoma is 21½ cents per hundredweight, a difference of $3.15 to Seattle and $2.45 to Tacoma per 1,000 brick in favor of Clayburn, British Columbia. Besides this, this Clayburn company uses cheap Hindu labor at their plant, and further, on account of Hindu and Chinese labor in the coal mines, their coal is much cheaper in price than our coal is.

Again, the Canadian import tariff on fire brick, United States manufacture, is 22 per cent, with 2 per cent sales tax; total 24½ per cent. * * *

That is on brick from Canada into the United States. So that is the condition the brickmakers in my State have to meet. The manufacturers in Canada employ Hindu labor not only in the brickyards but in the coal mines. Women laborers are employed in Scotland, and that is what the brick plants of the West must meet. The freight rate the foreigners have to pay is about the same or a little more than we have to pay in Idaho. That is the condition which confronts the two little manufacturing plants we have in our State, and that is the real issue before Congress and before the Senate to-day, whether we will fix a rate which will equalize the difference which exists in the costs of production of any product, whether it is brick or anything else, and give us a chance to work our factories. The other side is not even willing to give our citizens the same protection that Canada gives theirs as against the United States. It is a simple, plain story, but it presents the whole tariff question as to protection, and it will be found to apply to every industry and every case, if Senators on the other side will just take the time to make an honest investigation, instead of casting insults across the aisle to this side, talking about the bill having been framed behind closed doors in the interest of predatory wealth, in all of which they know there is no truth at all.

I gave up a great deal of time while this bill was being framed and saw a great deal of the efforts of the committee. No men ever worked harder than they did, and this is the best tariff bill that has ever been presented to Congress protecting the interests of this whole country.

The PRESIDING OFFICER. The question is on agreeing to the amendment as modified by the committee.

Mr. JONES of New Mexico. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Harrison	Myers	Shortridge
Borah	Heflin	Nelson	Simmons
Bursum	Jones, N. Mex.	Newberry	Smoot
Calder	Jones, Wash.	Nicholson	Spencer
Capper	Kellogg	Norris	Swanson
Caraway	Kendrick	Oddie	Townsend
Colt	Keyes	Overman	Underwood
Culberson	Ladd	Page	Wadsworth
Curtis	Lodge	Pepper	Walsh, Mass.
Fletcher	McCumber	Phipps	Warren
Frelinghuysen	McKinley	Pomerene	Watson, Ga.
Glass	McLean	Ransdell	Watson, Ind.
Gooding	McNary	Rawson	Williams
Hale	Moses	Sheppard	Willis

Mr. CURTIS. I was requested to announce the absence of the Senator from Indiana [Mr. NEW] on official business.

The PRESIDING OFFICER. Fifty-six Senators having answered to their names, a quorum is present. The question is on the amendment as modified by the committee.

Mr. JONES of New Mexico. Mr. President, the amendment proposed by the chairman of the committee is found in line 11, page 29, in which it is proposed to increase the duty on formate from 1 cent per pound to 2 cents per pound. The only reason given for the proposed increase is the fact that the duty heretofore fixed upon formic acid was 4 cents a pound and it takes 2 pounds of the formate to make 1 pound of the acid. Therefore the committee is going to increase the duty from 1 cent per pound to 2 cents per pound on formate, the material from which formic acid and oxalic acid is made.

It seems to me unless a better reason than that can be given we should go back and reduce the duty on formic acid from 4 cents a pound to 2 cents. Merely because we find an inequality in the gradations of the duty from one material to another, we are complacently told that this duty should be increased 100 per cent higher than the committee originally thought it should be. It is a very simple process to increase the duty in that way, and it may be satisfactory to some people who have no other reason than that to give. I believe that the Senate is entitled to know why the duty on formic acid and oxalic acid should not be reduced rather than arbitrarily to increase the duty on this item from 1 cent to 2 cents per pound. Unless there is some other excuse for it than that, I do not see how it can be justified by anyone.

If it were the other way, if we had found that the rate on the material out of which the so-called finished product is made was too high, we might reduce it; but here, simply because a duty has been fixed at 4 cents per pound on formic acid and a similar duty on the oxalic acid, both of which are made from formate, we are now asked to increase the duty on formate, the raw material, to correspond with what has been put upon the so-called finished product. I do not think it can be justified.

The PRESIDING OFFICER. The question is on agreeing to the amendment as modified by the committee.

The amendment as modified was agreed to.

The next amendment of the committee was, on page 30, line 1, paragraph 80, after the word "potato" and the comma, to strike out "1½" and insert "2," so as to read:

Starch: Potato, 2 cents per pound.

Mr. FLETCHER. Mr. President, this paragraph refers to potato starch and other starches. The proposal is to strike out "1½ cents" per pound, as carried in the House text, and insert "2 cents." I am unable to see any sound reason for the amendment. The record in the matter discloses the following state of facts:

Under the act of 1909, the Payne-Aldrich law, the duty was 1½ cents a pound on potato starch. Under the act of 1913, the Underwood law, it was made 1 cent a pound. The Ways and Means Committee reported the pending bill to the House, and it passed the House carrying the original Payne-Aldrich duty of 1½ cents per pound. The Finance Committee of the Senate now proposes to increase that to 2 cents per pound.

It is unnecessary to do that on any basis or idea of protection. The industry, in the first place, does not need it. The most valiant protectionist, it would seem, would not urge the duty upon that basis. If we consider it from the standpoint of raising revenue, the statistics are rather enlightening in that they show the effect to be just the contrary.

Mr. SMOOT. Mr. President, does the Senator say the article does not need a protective duty?

Mr. FLETCHER. A duty of 1 cent per pound is the proper duty, from my standpoint.

Mr. SMOOT. If the Senator will read the report of the Tariff Commission, he will find that that is not sufficient, and that this is one of the items on which they say absolutely that the present rate is not sufficient.

Mr. FLETCHER. The statistics show that the imports of starch for 1909–1913 averaged 13,730,665 pounds, valued at $375,767. That was under the Payne-Aldrich Act of 1909, when the rate was 1½ cents a pound. In 1913 the rate was changed to 1 cent a pound, and what followed? From 1914 to 1918 the imports averaged 15,143,778 pounds, valued at $684,714, and approximately 95 per cent of those importations being potato starch. So under the act where the rate was 1 cent a pound we imported more of the starch—it is true of a higher value—and we got much more revenue out of it.

Mr. SMOOT. But that was potato starch, and that is exactly where the competition is so severe, as the Tariff Commission state.

Mr. FLETCHER. That is true; the larger proportion of those importations was of potato starch. But the value increased from $375,767 in the period 1909 to 1913 to $684,714 in the period 1914 to 1918, showing that we derived a great deal more revenue under a 1-cent duty than we did under a 1½-cent duty.

Mr. SMOOT. The Senator knows very well that the price of potatoes during the war was exceedingly high, and that is why the revenue was increased; but under the specific duty the price of the commodity made no difference in the amount of the revenue. Under a specific duty of so much per pound, whether it is a dollar a pound or 2 cents a pound, the price of the commodity makes no difference as to revenue.

Mr. FLETCHER. The unit value of the importations under the 1-cent-a-pound rate decreased from 8 cents in 1918 to 4 cents in 1921, according to the statistics.

Mr. SMOOT. That is a decrease of 50 per cent, but the specific duty was 1 cent a pound on the number of pounds imported; it made no difference what the price was.

Mr. FLETCHER. In 1918 the number of pounds imported was 20,416,589; in 1919 the number of pounds imported was 2,121,403; in 1920 it was 14,134,454, and for the first nine months of 1921 it was 4,101,561.

Mr. SMOOT. In other words, about 60 per cent of our consumption of potato starch was imported, all of the importations coming from Germany. However, I shall not interrupt the Senator from Florida now, but shall give the figures later.

Mr. FLETCHER. Very well. I shall be very glad to continue so that I may present the matter in a logical order, if possible.

Before the World War, as the Senator from Utah has suggested, Germany and the Netherlands supplied practically all, but in the last two years some of these importations have come from Japan. The fact is also that the important industry of this country is the cornstarch industry. The potato-starch industry is not very important to us, although it is the most imporant branch of the industry in Europe. Our manufacturers of cornstarch are developing processes whereby they are very largely substituting the cornstarch for the potato starch. In the Summary of Information the Tariff Commission says:

> Means have been found to make varieties of cornstarch suitable for use in the textile industry; these are severally competitive with potato starch.

Of the output in 1914 approximately 93 per cent of our production was from corn and only 3.8 per cent from potatoes. The remainder was obtained from wheat, rice, and cassava.

> Cornstarch is by far the most important industry in this country; potato starch, the most important in Europe, ranks second in consumption.

We are finding a way to make cornstarch serve the purposes of potato starch. We do not really need a very great deal of potato starch apparently, and our production is largely of the cornstarch rather than of the potato starch.

As I have said, the figures show that we derived a greater revenue from potato starch under the 1-cent-a-pound duty than we did under a 1½-cent-a-pound duty. Now, the committee proposes to make the duty 2 cents a pound. I think we are proceeding in the wrong direction.

As to our exports, we have exported very largely starch. From 1914 to 1918 we averaged 122,848,429 pounds, valued at $3,913,104. Practically all of that was cornstarch. Over one-half went to England and Scotland, while before the war the Netherlands and Belgium also took large quantities. In 1918 we exported 33,619,821 pounds, valued at $1,758,557. That was cornstarch. Of other starch, which would include potato starch, if we export much of that—and perhaps we export very little of it, although we did export starches of other kinds than cornstarch—we exported 16,083,388 pounds in 1918; we exported 89,703,821 pounds in 1919; 31,480,284 pounds in 1920; and for the first nine months of 1921 we imported 21,580,140 pounds. It appears, therefore, that we are exporting very largely starches other than cornstarch.

I have mentioned the great quantity of cornstarch which we export. As I have said, we have developed the industry, chiefly along the lines of the cornstarch product, and we are making use of cornstarch in many cases where formerly we used potato starch.

It seems also from the statistics that, while potato starch is the important industry in Europe, it is not so important in this country, and we are very largely substituting for potato starch the product of the corn. Therefore we are not very greatly concerned about the potato-starch production, which is already small and growing smaller by reason of our ability to substitute cornstarch for potato starch, as well as for other reasons.

The record also shows, as I have stated, that we got more revenue for the Treasury under a 1-cent-a-pound duty than we did under a 1½-cents-a-pound duty. I think, therefore, it would be a mistake to increase the rate from 1½ cents to 2 cents a pound as is proposed by the committee. I offer an amendment to strike out "2 cents a pound" and to insert "1 cent a pound," so as to make the duty 1 cent a pound.

Mr. HALE. Mr. President——

The VICE PRESIDENT. Does the Senator from Florida yield to the Senator from Maine?

Mr. FLETCHER. I yield.

Mr. HALE. Does the Senator mean to imply that we do not have any use for potato starch in this country?

Mr. FLETCHER. We have use for it, but it is not a very extensive product, and we derive a certain amount of revenue by imposing a duty, and I am therefore in favor of the duty. However, our principal starch product is cornstarch.

Mr. HALE. But there are certain uses for potato starch which cornstarch can not possibly supply. Is not that true?

Mr. FLETCHER. I presume that is so. In the textile industry and in the manufacture of dextrine potato starch has certain advantages which give it a market even at a higher price.

Mr. HALE. So that there is still the same market that there always has been.

Mr. FLETCHER. I am not advised as to whether the market for potato starch has increased. I presume, however, that the demand for it has not really increased over what it has been heretofore, but, rather, it has gone the other way, I take it, from the fact that the production of potato starch is only 3.8 per cent of the production of cornstarch in this country.

Mr. HALE. That has nothing to do with the potato-starch industry. What the Senator has said is simply in relation to cornstarch. The cornstarch item is not now up for action. We are dealing merely with the question of potato starch.

The Senator has said that we derived more revenue from a duty of 1 cent a pound than we did from a duty of 1½ cents a pound. That may be true; but if there was any increase of revenue, it was entirely at the expense of the potato-starch industry in this country. In my State in 1894 there were 75 starch mills in operation, producing from twenty to thirty million pounds of potato starch. At the present time we have 45 such mills, and most of them are not in operation, although they do certain desultory work, and can be placed in operation at any time.

The potatoes used in the making of starch are not the highest grade of potatoes. The starch is made from the culls, from the potatoes which have been affected by rust, and from rotten potatoes. It is a very important matter to the people of Maine that the starch industry should be kept alive, because when a crop is poor and there are many potatoes of inferior quality, we can take care of those potatoes by making potato starch. If, on the other hand, the crop is a large crop and can not find a market, we can use the surplus in making starch.

If we have a duty of 2 cents a pound we can carry on the business, as was the case under the duty which prevailed before 1894. In 1894, however, the duty was cut down to 1½ cents, and in 1913 to 1 cent, and as a result of the duty of 1 cent a pound our potato-starch business has been greatly damaged.

We are simply asking for the lowest rate of duty under which the industry can live. We are not asking for an increase above 2 cents, despite the fact that the wages of labor have doubled, despite the fact also that coal, which is used in drying out the starch, has also gone up, and that railroad rates have doubled. Nevertheless we are asking only for 2 cents, and we hope to get along with that. It seems to me that such a rate is not very exorbitant.

Mr. FLETCHER. Mr. President, of course a rate of 2 cents a pound is an increase of one-half cent a pound above the Payne-Aldrich rate, which was always regarded as highly protective. The present duty of 1 cent a pound is equivalent to an ad valorem rate of about 20 per cent, and now the proposal is to double that or to make it 40 per cent, for that is what it will amount to in the ad valorem equivalent. In my judgment, we will lose revenue by increasing the duty to that extent, and there is no justification for it on any other ground.

Mr. HALE. But if we do not increase the duty the business will be driven out of existence. We are compelled to meet Japanese competition, for, as the Senator has already shown, in 1918, 21,000,000 pounds were brought into this country from Japan. The Japanese starch can be delivered at 4¾ cents on the east coast at the mills. We are compelled, as I have said, to meet that competition in some way, and unless we get a proper duty we can not possibly meet it, and the industry will be compelled to go out of existence.

Mr. FLETCHER. Mr. President, I will simply state that there will be a falling off in the revenue if we increase the duty, and that it is proposed to increase it 100 per cent above the present duty, which will make an equivalent ad valorem rate of 40 per cent. Of course, that will also mean a very great increase in the price of the article.

Mr. SMOOT. Mr. President, I want to say, as far as potato starch is concerned, that there are certain of the textile industries that can use only dextrine made from potato starch. Every textile industry would prefer to have dextrine made of potato starch. It makes a better sizing; it is better for the purposes for which dextrine is used in the textile industry; and with the finer threads, particularly in the woolen schedule, I do

not care what price they had to pay, they would still use dextrine made from potato starch. It is true that in the ordinary, common use of dextrine for the purpose of sizing they can use dextrine made from cornstarch.

As to the falling off of the importations, the only reason why the importations fell off in the latter part of the year 1921 was that only 15 per cent of the looms in the woolen mills of the United States were running, and of course they did not purchase the dextrine, because there was no use for it while the looms were idle.

Mr. FLETCHER. Mr. President, has the Senator the figures—or can the Senator from Maine help us out on that—as to what it is costing our manufacturers here to produce this starch? The Senator said it could be delivered from Germany at 4 cents per pound. What does it cost our manufacturers?

Mr. HALE. In the hearings before the House committee a brief was filed by one of the starch manufacturers showing that the starch they had on hand now cost them 6 cents a pound to produce. That, of course, is more than it ordinarily costs.

Mr. SMOOT. And I will say to the Senator that the domestic price to-day is 5 cents a pound and the pre-war price was 5½ cents a pound. Of course, I recognize that the price is very low to-day because of overproduction, because the woolen mills have been closed, and that the domestic price to-day is a quarter of a cent less than the pre-war price.

I want to say also that the very next amendment that we intend to offer will be offered to paragraph 81, which is based upon potato starch. Under that paragraph dextrine made from potato starch or potato flour is given a duty of 1⅝ cents a pound. It takes 100 pounds of potato starch to make 80 pounds of dextrine, so that with the duty of 2 cents a pound on potato starch the duty on dextrine ought to be 2½ cents. In other words, if the Senator desires to figure it out, it would be as 80 is to 100, say, or as 2 cents is to x—that is the way we used to figure it in school—and that means 2½ cents; and the committee intended to make that change in reporting the bill to the Senate. We will have to offer that amendment as soon as this amendment of 2 cents a pound on potato starch is agreed to, if it is agreed to.

Mr. FLETCHER. I had not contemplated that, because the bill as reported does not show that the committee proposed that amendment and it does not appear, so far as we can judge from the bill, that the purpose is to change paragraph 81 at all. What the Senator says now is that he proposes to amend the bill on page 30, line 4, by changing "1⅝" to what?

Mr. SMOOT. To "2½." In other words, it takes 100 pounds of potato starch to make 80 pounds of dextrine made from potato starch, and as the bill is reported the duty on potato starch is 2 cents a pound and the duty on dextrine made from potato starch is only 1⅝ cents a pound; and the differential, as I say to the Senator, is equal to the difference between 1⅝ and 2½.

Mr. FLETCHER. Mr. President, my disposition is to proceed as rapidly as we can with this bill. I do not want to take up any unnecessary time. I am perfectly willing to consider both these paragraphs as we go along now; and in that connection I will say that if this motion is made it means that there will be a very great increase over the act of 1909, because under that act dextrine carried a duty of 1½ cents per pound.

Mr. SMOOT. The duty on dextrine in the act of 1909 was 1½ cents a pound, as the Senator says; but I want to call the Senator's attention to the fact that the Tariff Commission state that very thing and what the result was. They say:

> In the conversion of starch to dextrine 80 to 88 parts of dextrine are obtained from 100 pounds of starch. In some of the previous tariff acts starch was made dutiable at a higher rate than the dextrine made from it, but the act of 1913 provides a one-fourth cent greater duty on dextrines than on the corresponding starches. The difference in price between starch and the dextrine made from it is usually between 1 and 2 cents.

The Senator can see, of course, that that is the case, and the mistake was made in 1909, and the Tariff Commission refers to it. It is perfect nonsense to try to give a duty upon dextrine and have it the same rate as on potato starch, because it does not balance at all.

Mr. FLETCHER. I am inclined to think there is merit in that suggestion. Nevertheless, I was a little surprised when I read paragraph 81 as proposing to carry only a duty of 1⅝ cents a pound on dextrine, whereas it is proposed to make the duty 2 cents a pound on potato starch; but that would be, as I suggest, a very great increase, and I believe that increase is unwarranted, as I believe this increase is unwarranted.

As I say, under the act of 1909 dextrine carried a duty of 1½ cents a pound. Under the act of 1913 it carried a duty of 1¼ cents a pound. The statistics show that the production of dextrine in 1914 was 18,931,641 pounds, valued at $705,584. Domestic production of dextrine has increased greatly since 1914, the United States now having the largest plants and producing more tapioca dextrine than foreign countries; also large quantities from potato starch and cornstarch.

The equivalent ad valorem under the duty of 1¼ cents a pound is about 13½ per cent. This would make it something like three times as much, or nearly 40 per cent ad valorem on dextrine, instead of 13½, and 40 per cent ad valorem on potato starch, instead of 20 per cent ad valorem. It would seem that the industries have prospered greatly, increasing in number of plants and output under the duty of 1¼ cents a pound on dextrine. Why should we feel it necessary now to increase that two or three times?

I believe that there would be no advantage as far as our revenue is concerned in either of these increases, and no need for them even for the protection of the industries.

Mr. SMOOT. Mr. President, just so that the RECORD will show the facts, the duties on all the dextrines named in paragraph 81, with the exception of dextrine made from potato starch, are exactly the same as in the act of 1909, namely, 1¼ cents a pound. The differential is not required there, as it is in the case of potato starch.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Florida to the committee amendment, which will be stated.

The ASSISTANT SECRETARY. It is proposed to strike out the figure "2" before the word "cents" on line 1, page 30, and in lieu thereof to insert the figure "1."

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Florida to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question now recurs on the committee amendment.

The amendment was agreed to.

Mr. McCUMBER. Mr. President, on page 30, line 4, the committee desires to substitute "2½" for "1⅝" cents.

Mr. SMOOT. I will say to the Senator that I have already explained the reason for that, and I think the Senator understood that that was necessary, since we have raised the rate on potato starch.

Mr. FLETCHER. Does the Senator say "2¼"?

Mr. SMOOT. "Two and one-half." That is just the differential between the 100 pounds of potato starch and 80 pounds of dextrine.

Mr. FLETCHER. I can not agree to that increase. I ask for a vote on it; that is all.

The VICE PRESIDENT. The amendment, as modified, will be stated.

The ASSISTANT SECRETARY. The committee now proposes, on line 4, to strike out "1⅝" and in lieu thereof to insert "2½," so as to read:

> Dextrine, made from potato starch or potato flour, 2½ cents per pound.

The VICE PRESIDENT. The question is on the committee amendment, as modified.

The amendment, as modified, was agreed to.

The ASSISTANT SECRETARY. On line 8, it is proposed to strike out "25" and insert "50."

Mr. McCUMBER. Mr. President, on page 30, line 8, I move to strike out "50" and insert in lieu thereof "40."

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. In lieu of the sum proposed to be inserted, "50," it is proposed to insert "40," so as to read:

> Strontium: Carbonate, precipitated, nitrate, and oxide, 40 per cent ad valorem.

Mr. WILLIS. Mr. President, a parliamentary inquiry. I understand that the Senator from North Dakota has modified the committee amendment, so that it is now subject to amendment.

The VICE PRESIDENT. If he proposes it as a modification, it is subject to amendment.

Mr. WILLIS. Then, Mr. President, I move to amend the committee amendment by striking out "40" and inserting "20."

The VICE PRESIDENT. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. It is proposed to strike out the modified figure "40," and in lieu thereof to insert "20."

Mr. WILLIS. Mr. President, I think my votes here make it clear that I am a rather enthusiastic protectionist. I think I can prove that even by my friend from New Mexico [Mr. JONES]; but I believe that even the modified rate which the committee proposes is not justified in this instance.

My reason for believing that is this: So far as I have been able to find out, there is only one manufacturer of strontium

nitrate in this country. It is not necessary to name the concern, because I do not think this is the proper place for advertising businesses or attacking individuals or corporations; but it is a fact that there is only one important manufacturer of strontium nitrate in the country. It is also a fact that there are some five or six manufacturers of railway signals in the country. It is also a fact that this one company that manufactures the strontium nitrate sells its product to one of the signal companies at a very much lower rate than that at which it is willing to sell it to any of the other companies. I am advised also that the transaction to which I have just alluded is under investigation by the Federal Trade Commission now, but that is not important as to this rate.

There are no considerable deposits of strontium in this country, so it can not be said we are going to develop any industry. The raw material is very largely imported from England. There is practically no production here. The rate under the present law is 15 per cent. Under that rate the independent companies have been able to get along and to buy their strontium nitrate to manufacture their product, namely, railway signals. If the rate shall be materially increased it will not only perpetuate a monopoly to this one company, which has a practical monopoly of the manufacture of strontium nitrate in this country, but through an arrangement which it has with one of the signal companies, it will give to that signal company a practical monopoly of the manufacture of railway signals in the country.

I am in favor of protection, as I have suggested, and my votes prove that; but I do not believe it is wise or defensible to adopt a rate which will make possible, if it does not invite, that sort of an arrangement. The rate under the present law is 15 per cent. I think, perhaps, the industry might stand an increase of 5 per cent, and, therefore, the amendment I have proposed would fix the duty at 20 per cent, 5 per cent lower than that which is fixed in the House text.

So, in the interest of independent production in this country, I do not believe the Senate wants to do a thing which will practically centralize this business in the control of one corporation in the country, which, I feel very certain, even the modified rate proposed by the committee would do. Therefore, I have moved to substitute 20 per cent in place of 40 per cent, as now proposed by the committee, which is 5 per cent more than the rate in the present law and 5 per cent lower than the rate adopted by the House.

Mr. McCUMBER. Mr. President, of course, in fixing these rates as a rule we have to be governed by the matter of the cost of production, the amount of imports, and many other considerations. I have not in my mind now how much of this article is manufactured by one concern and how much by another, and it is impossible for us always to know whether a concern sells its product to one person at a lower rate than to another. Ordinarily such abuses in trade will take care of themselves in a short time. But I wish to present some of the details as expressed on page 244 of the Summary of Tariff Information:

> The production of strontium salts increased from 2,006,000 pounds in 1916, the first available figures, to 4,927,000 in 1918, and then decreased to 1,971,519 in 1919. The output in 1920 by two firms only exceeded that of any previous year, except 1918. Domestic manufacture is chiefly from imported materials, principally celestite from England.
>
> Imports prior to the war, chiefly from Germany, supplied the requirements of the United States for strontium salts. In 1914, the only year figures are available, there were imported 1,941,103 pounds of strontium salts, of which 1,834,733 pounds were strontium nitrate and 52,179 pounds strontium carbonate.
>
> Later statistics of imports of strontium nitrate and precipitated strontium carbonate are not available, but it is known that considerable quantities have been brought in during 1921.
>
> Imports of strontium oxide are combined with those of the strontium minerals (par. 1622).

Mr. WALSH of Massachusetts. Mr. President——

Mr. McCUMBER. We have the statistics in the Reynolds report, which give some indication of the comparative selling price of this commodity in the United States and abroad. I yield to the Senator, if he desires to ask a question.

Mr. WALSH of Massachusetts. I was just about to ask the Senator what is the selling price?

Mr. McCUMBER. Let us take strontium nitrate, pure: The Reynolds report gives the foreign value in United States currency at 15 cents per pound, the landing charges at 1½ cents per pound, and the selling price of the foreign article at 30 cents a pound; in other words, just double what it costs in the foreign country. The selling price of the domestic article, which is reported as comparable, is 52½ cents a pound. So when we take the foreign selling price at 15 cents a pound and the American article at 52½ cents a pound we see that there would have to be about 300 per cent to equal the difference.

Let us take strontium nitrate, technical, which comes from England. The price of the foreign article is 9.6 cents. The selling price of the same article is 11.5 cents and the selling price of the American article is 16½ cents. So it will be seen that even a 50 per cent duty would not take care of the present differences in prices. I think that we can assume that the present cost of the article in the United States must necessarily go down, and for that reason the committee has made the differential very much below that which would be required for protection under the prices given here, and even under the prices prior to the war.

Mr. POMERENE. Can the Senator advise us as to where and by whom strontium nitrate is produced, and the amount of production in this country, as well as the amount of the importations?

Mr. McCUMBER. I do not know that I can just at this moment. I can undoubtedly get that information for the Senator in a short time. The junior Senator from Ohio has stated that there are practically only two concerns producing it in the United States.

Mr. SMOOT. There are four concerns in the United States producing it, and about 3,000,000 pounds of nitrate and carbonate are produced in the United States.

Mr. WALSH of Massachusetts. What are the imports?

Mr. SMOOT. The figures as to the imports are not available. They come in the basket clause, and the Tariff Commission can not give us the number of pounds imported.

Mr. McCUMBER. The Senator can see that until lately practically all of the product was imported.

Mr. SMOOT. All of it.

Mr. WILLIS. I desire to ask the Senator from Utah if it is not a fact that the great bulk of this product is manufactured by one company in this country, and that it is a by-product?

Mr. SMOOT. Oh, no; it is not a by-product; but the Senator's statement that the great bulk of it is manufactured by the Du Ponts is true. There are three other companies in the United States, however, which make it.

Mr. WILLIS. I do not desire to take more time, but I want to read one paragraph from a letter of a citizen of Ohio, a man who represents a very modest concern. This is his statement, and I think it reflects the exact facts:

> With the present duty of 15 per cent (foreign valuation), these five manufacturers have been able to purchase strontium nitrate and compete favorably—

With the one company which has been getting the favors from this other concern, which manufactures practically all the strontium nitrate made in the country. This writer said further:

> Should the new tariff bill pass, which we understand increases the duty to 25 per cent and based on American valuation, which would mean an increased duty of from 15 to 50 per cent, you will readily see that it will place these five manufacturers in a very unfavorable position.

There is no doubt about that, because they are practically shut out. If this goes through, it will mean that not only the production of strontium nitrate but the production of railway signals will be centered in one company, and I think it would be unwise to bring about that result. I think the 20 per cent rate will permit fair competition and furnish a proper degree of protection.

Mr. WALSH of Massachusetts. Will the Senator be kind enough to name the five companies which produce this product and tell us where they are located?

Mr. WILLIS. Perhaps I may be wrong about it, but I have always taken the view that this is not the proper place either to make attacks upon individuals or corporations or to advertise their products by name. So far as possible I have always sought to keep from doing that.

Mr. WALSH of Massachusetts. I am not making any attack upon them; I am simply asking for information.

Mr. WILLIS. I understand, and I shall be very glad to give the Senator the information privately; but it is a fact that there is one great company which manufactures nitrate, and it has a private arrangement with one of the signal companies in this country which gives that one company a tremendous advantage and shuts out the other five. If we fix this rate at 20 per cent, we shall give a fair protection to the manufacturer and at the same time permit these independent concerns to live.

Mr. WALSH of Massachusetts. Will 20 per cent be satisfactory?

Mr. WILLIS. As a matter of fact, the independent concerns are opposed even to the 15 per cent rate. The present rate is 15 per cent, and they are even opposed to that; but I am a protectionist, and I think in fairness we ought to give a rate of 20 per cent. I therefore have moved to amend the amendment and make it 20 per cent, instead of 40, which the committee now proposes.

Mr. WALSH of Massachusetts. The only reason I had for asking for the names of those companies was because these items will have to be considered later when we come to go over the House text, and I, as well as the other minority Members, want to know who are producing these commodities or products, so that we can get some information about the prices.

Mr. WILLIS. I shall be very glad to give the Senator the names of the persons and firms in this country producing railway signals, five of them discriminated against by the chief producer of strontium nitrate.

Mr. WALSH of Massachusetts. Day before yesterday we had a controversy here about prices, and I sent a telegram to one of the companies named and got some valuable information as to the price for which the product is selling in the domestic market. So if the Senator would give us the names of those companies it might assist us in getting the facts.

Mr. WILLIS. I will give the Senator the names privately.

Mr. SMOOT. I will give the Senator the name of the one which manufactures the most of it, the Du Pont Co., as I said a few moments ago.

Mr. WALSH of Massachusetts. I had no idea whether it was Du Pont or Smith or Jones or Brown, but I do want to know where we can get some information as to the domestic price. So the Du Pont Co., of Delaware, produces this product?

Mr. SMOOT. It does.

Mr. POMERENE. There is another question I would like to have some information upon. My colleague made the statement that there are four companies which are making these railway signals.

Mr. WILLIS. I meant to say six. There are six companies manufacturing them.

Mr. POMERENE. If I understood the balance of my colleague's statement correctly, it was that if this high rate prevails, then five of those companies will be ruined financially.

Mr. WILLIS. Practically so. It will center the business in the one company, which has the understanding with the producer of strontium nitrate.

Mr. POMERENE. Where are these five companies located, and what are their names?

Mr. WILLIS. As I stated a little bit ago, I have always made it a rule in this body, and in the body at the other end of the Capitol, never to give the names of persons or corporations, because I do not desire to make an attack on them or to advertise them. I shall be glad to give the names to my colleague privately.

Mr. POMERENE. I would not ask it if I did not think it was a matter of legitimate information.

Mr. SMOOT. Let me ask the Senator a question to find out just exactly what he did state. I may have misunderstood him. Does the Senator say that the five railway signal companies will go out of business under this rate?

Mr. WILLIS. Of course I do not know that they will go out of business, but I do know that it will be a tremendous burden on them, and it would give a very distinct advantage to the one company that has a private arrangement with the producer of strontium nitrate.

Mr. SMOOT. There are six purchasers of this article in the United States and four factories in the United States making it. There is one company, a signal company, that has a contract, I think, with the du Pont Co., and that is the company to which the Senator refers.

Mr. POMERENE. What is the company?

Mr. SMOOT. I have not the name of the company right now, I will say to the Senator, but I will give it to him. The name, however, does not make any particular difference.

Mr. POMERENE. Let us have the names of the other companies.

Mr. SMOOT. I do not even remember the names of the other companies, but they purchase this article which is used for pyrotechnics and for producing red lights along the railroad lines. That is what the article is for.

Mr. POMERENE. I assume that the Senator gets his information from the hearings before the Finance Committee. Am I right about that?

Mr. SMOOT. No; the information I get is from the reports of the hearings before the Ways and Means Committee, page 19, Schedule A. There will be found the brief of the Columbia Railroad Signal Co., which made the protest against the rate of duty upon this product.

Mr. POMERENE. May I see that?

Mr. SMOOT. Certainly.

Mr. LENROOT. Mr. President——

The PRESIDING OFFICER (Mr. MOSES in the chair). Does the Senator from Ohio yield to the Senator from Wisconsin?

Mr. POMERENE. I am not prepared to take the floor. I yield the floor.

Mr. LENROOT. I have before me the statement of the signal company referred to by the Senator from Utah, and I think it ought to be read into the RECORD in this connection. I read from page 19 of the House hearings:

> A well-known Delaware company is the sole manufacturer of this chemical in the United States and already our company is at a disadvantage in the purchase of this highly essential and very necessary material which we buy in carload lots, and for these reasons: It is true that we can, if need be, purchase this chemical from the sole maker, but our past experience has demonstrated that when we do so, we are forced to pay 4½ cents to 5 cents or possibly 6 cents a pound more than our competitor pays, with the result that our purchase from this source becomes prohibitive since we absolutely can not purchase strontium nitrate at any such excessive and arbitrarily increased prices and then meet the competition we are forced to meet in the open market when it comes to the sale of our own manufactured products.
>
> Moreover, as we understand it, strontium nitrate is produced from the raw celestite and strontianite, i. e., each being possible sources from which to manufacture the finished strontium nitrate. We also understand that this raw material is brought into the country as ship ballast and that a plant with a capacity of 5 to 8 tons per week and furnishing employment to only six or eight men and requiring a plant investment of not exceeding $35,000 is quite sufficient for all practical purposes.

Then, on page 346, will be found a protest from the Victor Sparkler Co., of Elkton, Md. It would seem that the price which prevails in this country to-day is by virtue of monopoly and not by virtue of cost of production.

Mr. SMOOT. Taking that statement into consideration, that would be true, because it says there is only one manufacturer, but that statement is not true.

Mr. LENROOT. I only stated what appears in the hearings.

Mr. SMOOT. I know the Senator did; and I say, taking that statement into consideration, it would be true; but the statement is not true. The Geological Survey, on page 24, in making their report upon this product, said:

> According to the Geological Survey, in 1917 four companies reported sales of strontium nitrate and carbonate amounting to about 3,000,000 pounds, of which the nitrate constituted by far the larger part.

I have sent to the telephone to get from the Tariff Commission the names of the four companies, and I shall put them in the RECORD later, if I can not get them before the debate on this item closes.

Mr. POMERENE and Mr. WALSH of Massachusetts addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Utah yield; and if so, to whom?

Mr. SMOOT. I yield first to the Senator from Ohio.

Mr. POMERENE. Is it true that the producer of strontium nitrate makes one price to one consumer for use in the making of railway signals and different prices to others?

Mr. SMOOT. I can not say as to that, because I never had any investigation made, and I do not think the Tariff Commission made any investigation.

Mr. POMERENE. The brief from which the Senator from Wisconsin read seems to indicate that there is a very material difference in the prices.

Mr. SMOOT. If there is no more truth in the one statement than there is in the other, then, of course, we need not give very serious consideration to it.

Mr. POMERENE. It is hardly fair to make a statement that the brief does not contain the facts. It may not, of course.

Mr. SMOOT. I do not say that that is not the case, because I do not know, and I am not going to make any statement on the floor of the Senate about which I am not sure.

Mr. POMERENE. Of course, the Senator would not do it intentionally.

Mr. SMOOT. I do not see why they should go to one firm to buy when there are three others in the United States from which they can buy. The only reason why they would go to the Du Ponts would be because they could get better terms than from the other producers.

Mr. POMERENE. I understand there is only one producer, but there are five or six different manufacturers of railroad signals.

Mr. SMOOT. They are purchasers of the material.

Mr. POMERENE. If I understand my colleague correctly, they would be compelled either to purchase from this domestic producer or to purchase abroad. That seems to be the situation. It does seem to me, looking at this matter even from the standpoint of the most ardent protectionist, all must admit the eminent unfairness of this rate if it is going to enable the producer to play favorites among the other companies. That is not a square deal.

Mr. SMOOT. I agree with the Senator, and certainly I would not agree to any rate that would bring it about; but the rate

applies to the other three producers as well, and the other three producers are certainly looking for business.

Mr. POMERENE. There seems to be a difference of opinion between the Senator from Utah and my colleague. My colleague says there is only one producer.

Mr. SMOOT. I think the Senator's colleague took that statement from the witness.

Mr. POMERENE. Does the Senator from Utah say that that is not correct?

Mr. SMOOT. I say it is not correct.

Mr. POMERENE. Who are the other producers?

Mr. SMOOT. I have just stated that I sent to the telephone to see if I could learn the names of the other producers.

Mr. POMERENE. In asking the question I had in mind the manufacturers of railroad signals rather than the producers of the product.

Mr. SMOOT. There are six of those.

Mr. WALSH of Massachusetts. Mr. President, I wish to say to the Senator from Ohio [Mr. WILLIS], in view of the information which has been given to the Senate by the Senator from Wisconsin [Mr. LENROOT], that I think he was absolutely right in withholding the names of the companies to which he referred. It is quite apparent that it is not safe for small concerns, dependent upon monopolies in America, in any way to interfere with the demands and exactions of the monopolies for high protective rates.

Mr. McCUMBER. Mr. President, I understand that there are four or five different concerns which are manufacturing this product.

Mr. SMOOT. Four.

Mr. McCUMBER. Four, the Senator from Utah says. I also understand that one of these firms does not deal fairly with all purchasers, but gives some an advantage. It seems that there is a desire to punish the other three because the one firm does not deal equitably with all who may desire to purchase the products of that firm.

The only question, it seems to me, is to ascertain whether the other concerns outside of the Du Ponts need the protection we have given them here. If they need it, we ought not to deny it to them because one concern does not deal fairly with all customers or would-be customers.

Mr. SMOOT. All the information the committee could gather from the Reynolds report and all the other sources of information as to importations and local prices and import prices would justify a very much higher rate than 40 per cent. The committee decided that they would not give more than 40 per cent on this article. Of course, it is a relatively new industry.

Mr. POMERENE. Does the Senator say that the Reynolds report would justify more than 40 per cent?

Mr. SMOOT. Oh, yes.

Mr. POMERENE. It was based upon prices as they were on August 1.

Mr. SMOOT. I am aware of that.

Mr. POMERENE. I understand that; but it is also in evidence here in the debates thus far that the foreign prices have very substantially changed.

Mr. SMOOT. And so have the domestic prices.

Mr. POMERENE. I think that is true; but whatever may have been the relative prices on August 1 might not be determinative of the question of duty from any standpoint as of this date.

Mr. SMOOT. That could happen, I will say to the Senator; but generally, I think, the prices in this country and the prices abroad have either increased or decreased relatively compared with what they were on August 1. There may be cases where that would not happen, where some particular cause would bring about a different situation.

Mr. McCUMBER. If the Senator from Utah will allow me, I have rather late figures upon the selling prices and the present quotations of only a few days ago.

The imported selling price is 7½ cents per pound. The domestic selling price is 12 cents per pound. That is on the strontium nitrate. Strontium carbonate is 10 cents a pound. The prewar price of strontium carbonate was 7 cents per pound. So we are getting down very closely; but we see, taking as a basis the 7½ cents for foreign and the 12 cents for domestic, that even a 50 per cent ad valorem rate would not take care of it; it would take almost 100 per cent.

The PRESIDING OFFICER. The question is on the amendment offered by the junior Senator from Ohio [Mr. WILLIS] to the committee amendment.

Mr. POMERENE. On that I ask for the yeas and nays.

Mr. JONES of New Mexico. Mr. President, I would like to say just a few words before the vote is taken.

Mr. SMOOT. Mr. President, will the Senator yield a moment that I may put in the RECORD the information I got by telephone?

Mr. JONES of New Mexico. I yield for that purpose.

Mr. SMOOT. The Geological Survey reports that the three principal manufacturers of this product are the Du Pont Co., the Mallinckrodt Chemical Works——

Mr. POMERENE. Where are they located?

Mr. SMOOT. A very large concern, located in St. Louis. The third one is the Powers-Weightman-Rosengarden Co., at Philadelphia. Those three concerns manufacture nearly all of this product. There is just one small manufacturer outside of those three. Each one of them, as the Senator knows, is a very large concern.

Mr. WILLIS. Can the Senator state the percentage of the product put on the market by each one of those three companies?

Mr. SMOOT. No; I can not.

Mr. WILLIS. That is really the meat in the coconut. The fact is that the first is the one which handles practically all the business.

Mr. SMOOT. I said, and so does the Tariff Commission in its report say, that the Du Pont Co. makes a large proportion of the product. I made that statement in answer to the Senator when the Senator from Ohio made an excuse for not stating even the name of the company.

Mr. WALSH of Massachusetts. All of the other companies produce other products besides this?

Mr. SMOOT. Certainly.

Mr. WALSH of Massachusetts. But the largest quantity of this product is produced by the Du Pont Co.?

Mr. SMOOT. That company produced the largest quantity. The only reason for that, I suppose, is that they have more customers, or reach the trade better, either by being able to furnish a lower price or otherwise. It is not because the other two companies can not produce all of it that is desired in the United States.

Mr. WALSH of Massachusetts. Are the three companies actually competing with each other?

Mr. SMOOT. I should judge so from the way the prices have fallen during the last six months.

Mr. JONES of New Mexico. Mr. President——

Mr. McCUMBER. Mr. President, the Senator from New Mexico [Mr. JONES] desires to speak on the amendment, but I wish to ask him to yield to me in order to make a statement.

Mr. JONES of New Mexico. I yield.

Mr. McCUMBER. The Senator from Alabama [Mr. UNDERWOOD] the other day asked that if at any time the Committee on Finance desired to have the tariff bill laid aside for any purpose we would give due and timely notice of that fact. I do not desire that the bill be laid aside at any time between our regular hour of meeting at 11 o'clock in the morning and 10 o'clock in the evening, if I can possibly help it; but I am informed that the Army and Navy pay bill should be disposed of before further headway can be made in the consideration of some of the appropriation bills; that the Committee on Appropriations are waiting for the Senate to act upon the pay bill. So I am going to suggest, and I desire to give notice at this time, that the Senate meet on Monday next at 10 o'clock a. m. instead of at the usual hour of 11 o'clock; that then the tariff bill may be temporarily laid aside in order to consider the Army and Navy pay bill. It is hoped that we may get through with that bill in an hour, or a little more than an hour, and that we may then go on with the tariff bill without the loss of any time.

Mr. JONES of New Mexico. I merely wish to say, in reply to what the Senator from North Dakota has said, that I believe if we work 11 hours a day that is all we should be called upon to do. I have not been making any complaint about the long hours; I have been here all the time; and I have been trying to do my share in the discussion of the very important subjects which are involved in the pending bill. If the bill to which the Senator from North Dakota has referred is not going to take up more than an hour, I do not see why we should meet at an early hour and be in session for 12 hours on Monday. I am very anxious to proceed with the pending bill as rapidly as may be within reasonable limitations, but it strikes me that to ask us to stay here continuously for 12 hours a day, without any intermission for lunch or dinner or any other reason, is asking too much.

Mr. McCUMBER. I desire to say to the Senator from New Mexico that each day the Committee on Finance is meeting at 9 o'clock in the morning and working until 10 o'clock at night. That makes 13 hours a day. If we can stand that and be here continuously, it seems to me that other Senators might, for one

day, meet an hour earlier for the purpose of considering the bill to which I have referred. I wish we might avoid evening sessions, but we are making such slow progress with the bill that they seem to be indispensable if we are going to get the bill through this summer.

Mr. JONES of New Mexico. I will state that other Senators are not idle until the hour of meeting at 11 o'clock in the morning. While the Senator from North Dakota may be meeting with the other majority members of the Finance Committee for the purpose of revising the pending bill, there must be work done by other Senators in order to prepare for the duties of the day.

Mr. McCUMBER. I hope the Senator from New Mexico did not think that I even had an idea in my mind that other Senators were idle.

Mr. JONES of New Mexico. In this connection I think it is not out of the way to make the observation that if the majority members of the Finance Committee could have additional hours for further consideration of the pending bill it would result in great benefit to the country. Since this debate has commenced here the majority members of the Finance Committee have discovered their own errors in a large number of cases, resulting, doubtless, from the discussion. When the bill was first brought before the Senate not a word could be heard from any of the majority members of the Finance Committee regarding any item of the bill; they declined to explain anything; but now they are not only explaining, but they are reconsidering and they are bringing in amendments of their own here greatly reducing the exorbitant duties first proposed by the majority members of the committee; and I think, in the interest of the country, it would be advisable to let the majority members of the Finance Committee have more time than they have been having.

Mr. CARAWAY. Mr. President, if the Senator will allow me, they will probably have more time after the next election.

Mr. JONES of New Mexico. That is far away and can not affect this bill.

Mr. DIAL. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from South Carolina?

Mr. JONES of New Mexico. I yield.

Mr. DIAL. Mr. President, I am a great believer in work; in fact, I have always been looked upon as an extremist for work. I must confess, however, that recently it seems we are getting a kind of an overdose of it. As to the long sessions of the Senate now being held, until 10 p. m., I am not making any great kick, but we are making the day longer at both ends. I do most earnestly protest against this hour-earlier business which has recently been inaugurated in this city. If people want to get up early and go to work, I have no objection; in fact, I think it is very commendable to start early; but when they do so, I do not see any reason why they should want to discommode everybody else. If it suits the storekeepers to open their stores at 8 o'clock or 7 o'clock or 6 o'clock, and the clerks agree to it, that is a matter for them; but things have gone so far now that everything in the city is getting out of joint.

The housekeepers are almost prostrated and there is great difficulty in trying to get the little fellows to school. I am fortunate enough to have a large crowd at my house; I patronize three schools, having five children to send to them; and it is a hard matter to get them off in the morning. It is much like trying to catch an early train; in fact, we got in such a big hurry yesterday that we turned over the coffee pot and spilled the coffee. [Laughter.]

Seriously, Mr. President, I think it time for people to become sane. We had some of this so-called daylight-saving business during the World War. At that time we tried a good many experiments and nobody kicked; we accepted anything anybody said would help to "win the war" and speed the good cause along; but there is no sound or sensible reason now why we should try to conduct any such experiments.

As I have said, if people in various occupations want to have different hours, they can accommodate themselves to their own desires; but let us go along and try to help the ladies and the people who are burdened with housekeeping so that they may have whatever comfort they can get out of life. The new arrangement of opening the schools at 8 o'clock is disconcerting and entirely unwarranted, and no doubt is a hardship on the teachers. There is no good reason for it. I can not find where it originated; I can not find any sponsors for it. It disconcerts the servant population and inconveniences everyone else.

We are going to have a great howl about new hours after a while. There is some talk here now about extending the hours of work for Government employees, and I want to commend that proposal highly. If the people who claim that they are not able to work eight hours a day, sitting in turn-around chairs under electric fans and with all other conveniences, would go down to my section of the country and see what some of my constituents go through they would come back with a different idea. Some people are even going so far as to talk about a six-hour day. We had a little hint along that line yesterday when I heard witnesses make such suggestions.

I want to say, Mr. President, that I wish, so far as the women and children are concerned, that no man's child and no man's wife would ever have to be compelled to hire themselves to anybody; but I can see no good reason why everybody in the world should not work for themselves. There ought not to be any law limiting the hours of work for grown men. Women and children, of course, are exceptions, but if any young man is not able to work over six hours a day he ought to be sent to a hospital.

We are going to disarrange the whole industrial ideas of this country if the present course be continued. Living costs are now so high that a man of ordinary means does not know which way to turn. So I must insist that Congress do not follow this new fangled "ism" of trying to change the time. I hear some talk of making the effort to do it here. While I am not a very long-winded talker, yet I talk pretty fast; I certainly could say a good many words against such a change; and when that kind of a proposition is brought forth, if it shall be, I will occupy much more time of the Senate than I have in the past.

Mr. FRELINGHUYSEN. Mr. President, the Senator from New Mexico has very kindly yielded to me for a moment to discuss briefly the item now under consideration. As a member of the committee, in placing this duty on this commodity, I was not governed by considerations affecting any manufacturing concern in this country. I had no information as to who were manufacturing the product, nor did I care. That is not the question, and in this argument we are drifting far afield from the point. If any concern in this country has a monopoly or is guilty of any unfair practices, there are ample and sufficient laws on the statute books to prosecute them. The question before the committee was, and the question before the Senate is, What is the proper duty to protect the American industry? And that is the question we are trying to solve. In placing a duty of 40 per cent upon this product we were trying to fix a differential between the American price here and the competitive price of the imported article. The information which the committee had was that 12 cents was the manufacturing cost of the American product, and that Germany could land the product here at 7½ cents. With those figures before us, even a 40 per cent duty was not sufficient.

What is the situation? Prior to the war the imports were chiefly from Germany. That country supplied the requirements of the United States for strontium salts. In 1914 there were imported 1,941,000 pounds of such salts. Later statistics of imports of strontium nitrate, precipitated and carbonate, are not available, but it is known that considerable quantities have been brought in during 1921.

These salts were not produced in the United States prior to the war, but we imported them from Germany. We are now supplying the domestic market with these salts. Germany can land them here at a much less cost; her wages are much lower than ours, as Senators on the other side know.

The question is, Are we willing to give a sufficient duty to protect the American industry, in view of the difference between the cost of production here and the cost of production in Germany? If we are not, cut the duty down to 20 per cent. If we are, give a 40 per cent rate and protect American labor. The whole debate on the other side has been an attack upon American labor and in favor of protecting labor on the other side of the Atlantic.

Mr. JONES of New Mexico. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from New Mexico?

Mr. FRELINGHUYSEN. I will yield in a moment. The object of the committee is to protect the American workingman, and that has been the impulse of the committee in fixing the rate—an effort to cover the difference in costs of production here and abroad. Germany enjoyed the full benefit of the American market prior to the war. We have learned to make this product, and we are making it now; but unless you protect it with rates based upon the differential between the costs here and abroad you will destroy this industry and turn the business over to Germany. Now, the question is, Which do you want to do?

Mr. JONES of New Mexico. Mr. President, I hope the Senator from New Jersey will not leave the Chamber just for the moment. I should like to ask him how much labor is involved in the production of these salts?

Mr. FRELINGHUYSEN. Mr. President, that is not the question.

Mr. JONES of New Mexico. The Senator has just said that it was.

Mr. FRELINGHUYSEN. Wait a minute; that is not the question, because probably the same amount of labor is employed on the other side. The question is whether you are going to protect American labor, whether it is more or less, in a manufacturing process here or whether you are going to yield by giving the business to Germany and giving German labor the benefit of the business. That is the question.

Mr. JONES of New Mexico. Mr. President, I hope still the Senator will not leave the Chamber.

Mr. FRELINGHUYSEN. I do not intend to leave the Chamber under any circumstances while this debate is going on.

Mr. JONES of New Mexico. You are asking here for a 40 per cent ad valorem duty. That is 40 per cent upon the finished product?

Mr. FRELINGHUYSEN. Absolutely.

Mr. JONES of New Mexico. What per cent is that on the labor involved?

Mr. FRELINGHUYSEN. The difference between the American wages paid and the German wages paid.

Mr. JONES of New Mexico. Mr. President, as a matter of fact, the Senator does not know anything about what wages are paid, either in Germany or in this country, so far as this industry is concerned.

Mr. FRELINGHUYSEN. I know this: I know that in every conversion-cost investigation that was made it was found that the German labor cost was not 20 per cent of the American labor cost. If the Senator wishes to go into that question and debate it on this amendment we will ascertain the wage scale in this industry and put it into the RECORD, and if he is willing to accept that as a final decision and will be convinced by it, I venture to say that if that investigation is made he will find that the differential between the cost of American labor and the cost of German labor is greater than the 40 per cent ad valorem.

Mr. JONES of New Mexico. But the Senator does not keep in mind the fact that the 40 per cent ad valorem is upon the finished product. It is not simply representative of the difference in the cost of labor.

Mr. FRELINGHUYSEN. Why, certainly I understand that, Mr. President. I understand that it makes no difference whether the conversion cost is 80 per cent raw material and 20 per cent labor or whether it is 80 per cent labor and 20 per cent raw material. That 40 per cent covers the difference in the cost of labor here and abroad.

Mr. JONES of New Mexico. And what else? It covers also the difference in the cost of raw material, does it not?

Mr. FRELINGHUYSEN. Certainly it does—everything that goes into it.

Mr. JONES of New Mexico. And the profit, also, does it not?

Mr. FRELINGHUYSEN. No; it does not cover the profit.

Mr. JONES of New Mexico. Then, unless the Senator knows the amount of labor necessary to the production of a commodity, I should like to know how he can say that 40 per cent is necessary for the mere protection of that labor.

Mr. FRELINGHUYSEN. I can not say that 40 per cent is necessary; neither can the Senator say that 40 per cent is necessary; but that is the basis upon which the tariff is made. That is the basis upon which the Underwood tariff was made—the cost of the finished article here and the invoice price of the finished article imported. If the Senator wants to go into the question of a proper basis of fixing scientific tariff duties he must change the whole policy of tariff making, and I will join him in such a policy. If he will agree to give a tariff commission or a governmental body sufficient powers to investigate and make studies of the difference between the conversion costs here and abroad and write that as the basis of the future tariff policy of this country I will join him; but neither his party nor mine has ever adopted that policy.

Mr. JONES of New Mexico. Mr. President, we had a good illustration yesterday of how such a policy as that would work. I will say to the Senator from New Jersey that for a considerable length of time on yesterday I called attention to the fact that the present Tariff Commission had reported that upon the oxides of lead, which we were discussing yesterday, there was no difference in the cost of production in this country and abroad; and notwithstanding that, the Senator from New Jersey flouted the Tariff Commission in the face, and voted to put a high duty upon these oxides of lead when the Tariff Commission had reported that they were not necessary, that there was no difference in the cost of production here and abroad. That shows the sincerity of people who talk about some theory, but when we come to put into practical operation the identical thing they simply repudiate the doctrine which they profess in the open in order to increase the prices and the benefits of some special concerns in this country.

Mr. FLETCHER and Mr. FRELINGHUYSEN addressed the Chair.

The PRESIDING OFFICER. Does the Senator from New Mexico yield; and if so, to whom?

Mr. JONES of New Mexico. I yield first to the Senator from Florida.

Mr. FLETCHER. I just want to make this suggestion, as it may help this discussion along. The point is, Can the Senator from New Jersey tell us what is the total labor cost in the production of this item abroad, and what is the total labor cost of its production in this country? Unless he can give us those two items, the duty levied here is a mere guess. We must know what the total labor cost is abroad, what the total labor cost is here, and ascertain the difference, and then we will be able to say whether 10 per cent or 40 per cent ad valorem is necessary.

Mr. FRELINGHUYSEN. Mr. President, of course I can not give the difference between the——

Mr. FLETCHER. Then the argument all amounts to nothing.

Mr. FRELINGHUYSEN. Will the Senator do me the courtesy to listen to my reply without trying to wave it aside?

Mr. FLETCHER. I am not waving it aside; I am listening.

Mr. FRELINGHUYSEN. Of course, I can not give, in this specific instance, the difference between the labor cost of manufacturing strontium salts in this country and manufacturing them in Germany; but I can give the Senator the information that the wages in Germany are from 50 to 80 per cent below what they are in this country in every line of industry.

Let me say to the Senator from New Mexico, in response to his criticism, his sarcastic reference to my sincerity, that he will have the opportunity of voting for a bill which I have introduced giving the Tariff Commission power to make a study of the difference between the conversion costs here and abroad, taking into account the cost of labor in every product as well as the cost of raw materials, and report rates to this body; and I shall be very glad to have his support for that measure. The Senator knows that there is such a bill before this body.

I am perfectly willing to admit that our present system of tariff making is unscientific. It is the best we have had; but if you are going to have a scientific tariff you will have to give a governmental body the time, the authority, and the money to study these questions properly, and you will have to lay down a fundamental policy as to how the tariff shall be made. That is the policy that was adopted in Germany itself. It took the Germans three years to build their tariff. They did it on the basis of the difference between the conversion costs in Germany and abroad plus a reasonable profit to the German industry. They called in committees from the different industries, who served without pay, and upon that basis the German tariff was built—the difference between the conversion costs at home and abroad—but it took time, and it took authority, and it took money.

I am perfectly willing to accept a policy of that kind in this country if you will empower somebody to make those studies and submit to Congress the findings, calling in the industry, calling in all related interests, the transportation companies and those who furnish the raw materials, and lay down a fundamental policy of tariff making; but we have never pursued that policy in this country. It has always been either a tariff for protection or a tariff for revenue, and we have always adopted ad valorem rates rather than specific rates, and we have never empowered anybody to make complete studies.

As far as our committee have gone, we tried to make every investigation on the basis of the difference between the cost of production or the cost of the domestic article here and abroad. With all the information procurable within the limited time we had, I say to the Senator that in my effort to place a duty of 40 per cent upon this product, showing the cost of the product here as 12 cents, and 7½ cents in Germany, I was impelled by one purpose, and that was to keep in this country that industry which was created here during the war, because prior to that time Germany produced all of the strontium salts which we used. Is it worth while to impose a duty, and keep that industry here, and employ American labor, or must we take the risk and the chance of imposing a duty so low that we will destroy the industry here and give Germany a monopoly of the market again?

The Senator knows perfectly well that in my effort I am trying to protect American industry. I do not care anything about the question of whether or not one company is engaged in a strife with other companies. If they are doing anything wrong, if they have a monopoly, it is the duty of the courts to inter-

fere, and we have sufficient law. The great principle that I have tried to follow in my efforts, meager as they are, in the Finance Committee, has been to protect American industry and hold our trade here; and in fixing this rate of 40 per cent, which is hardly sufficient, I have tried to protect the American industry.

Mr. FLETCHER. Mr. President, will the Senator from New Mexico yield to me for just a moment?

Mr. JONES of New Mexico. Certainly.

Mr. FLETCHER. I just want to say one word to make it clear that making the general statement that wages are 50 per cent or 60 per cent or 75 per cent or 80 per cent, if you please, higher in America than in Germany, does not answer the question at all; it does not contribute toward a proper determination of what the duty should be on the article here, because the labor cost involved in the production of an article may not be over 10 per cent of the value of that article. Do you want to impose a duty of 40 per cent to cover a total labor cost of 10 per cent in the production of an article? That may be the case in this instance; and therefore I say that we can not tell whether or not this is a just and proper duty to levy unless we know the total labor cost entering into the production of this article in Germany and the total labor cost entering into its production here. The total labor cost in either instance may not exceed 12 per cent of the value of the product, and yet you propose to levy an ad valorem duty of 40 per cent.

Mr. FRELINGHUYSEN. Before the Senator takes his seat I would like to ask him a question.

Mr. FLETCHER. If the Senator from New Mexico will permit. I am trespassing on his time.

Mr. FRELINGHUYSEN. If the Senator had been a member of the Finance Committee, and it were shown that the American production cost was 12 cents, and that Germany was landing the article here at 7½ cents; and having no further information upon wages, although knowing generally that wages in Germany were probably 20 and in some cases 10 per cent of our American wages, what duty would the Senator put on this product? How would he fix the duty?

Mr. FLETCHER. I submit, in the first place, that there has been no information furnished, as far as I am advised, and none exists, as to what the cost of the production of that article here is. Merely stating what the price is does not give us any information as to the cost of the production. The price may be fixed by one factor or another.

Mr. FRELINGHUYSEN. In the absence of that information, although knowing generally that most of the cost of production in this country of this chemical is labor, I still ask the Senator the question, What duty would he fix on this article, which Germany lands here at 7½ cents, and which he says we can not manufacture at less than 12? What duty would the Senator put on it? Is he in favor of protecting American industry, or does he want to turn it back to Germany?

Mr. FLETCHER. That, of course, is not involved here. I would not levy any duty unless I had the facts upon which to base it, unless I had some reason for placing the duty. The first question appealing to me would be the need of the Government for revenue, and I would endeavor to fix a duty which would yield some revenue to the Government.

Mr. FRELINGHUYSEN. Then the question of the protection of American industry would be a second consideration with the Senator from Florida?

Mr. FLETCHER. It would be a secondary consideration under any tariff legislation, because I do not believe in the right to tax all the people for the benefit of the few.

Mr. JONES of New Mexico. I hope the Senator from New Jersey will not leave the Chamber.

Mr. FRELINGHUYSEN. I am perfectly willing to wait if the Senator is not going to take long, but I hope I shall have an opportunity to leave soon.

Mr. JONES of New Mexico. The Senator from New Jersey has dwelt upon the labor cost in the production of strontium nitrate, and he wants a 40 per cent duty on the entire item. If the Senator from New Jersey had considered the information which was furnished to the committee by the Tariff Commission, I do not believe he would have referred to that labor cost at all. I would just like to have the Senator from New Jersey listen a moment and see if he can figure out whether he wants 40 per cent duty on the price of the finished product for the benefit of the labor involved. Let me read about the manufacture of strontium salts.

If the mineral strontianite is available, the manufacture of strontium salts is comparatively simple. The strontianite is simply dissolved in nitric acid to produce strontium nitrate.

I would like to know of the Senator from New Jersey what percentage of labor he thinks is involved in that simple process of dissolving the strontianite in nitric acid? That is the entire process in the manufacture of strontium salts. That is all there is to it, just simply dissolving the mineral in the nitric acid.

The mineral itself is imported into this country free of any duty. It is impossible to produce that ore in the United States, because it does not exist here in sufficient quantities to make it available.

It is quite true that prior to the war there was no production of strontium salts in the United States on a commercial scale. But let us see how much of an industry it is, and whether it needs this great 40 per cent protection. I will just give a little of the history of this industry and show the basis for protection which the committee has now suggested.

There are some strontium nitrate plants located in California, but they are only temporary, built for temporary purposes, with no idea of developing a permanent industry. The reason for that is that the ore must be imported into the United States, and the Tariff Commission says that the eastern manufacturers of strontium salts are so located that they can import the raw material free of duty, while the finished product, strontium nitrate, lacking specific mention in the act of 1913, has been declared dutiable at 15 per cent ad valorem as a chemical compound or salts.

They can not compete with the eastern manufacturer. The eastern concern can import the ore free of duty. We now have a duty of 15 per cent on the salts. So it would appear that necessarily there is only one concern in the East which is manufacturing this product at the present time, and, so far as information is concerned, there is absolutely no evidence that it can not manufacture it as cheaply as any concern on earth. As I have said, as stated by the Tariff Commission, the process is simply the dissolving of the ore in nitric acid.

Mr. SMOOT. The Senator is wrong in that.

Mr. JONES of New Mexico. I am reading from the Tariff Commission report.

Mr. FRELINGHUYSEN. I know the Senator does not want to mislead anyone; and I know he wants to get at the truth of this matter. I stated that I was informed that in the production of strontium salts the chief element was labor. That is borne out by the information I have received since I made that statement. In the Tariff Survey we find the following:

Sources of strontium minerals: Celestite is the mineral largely used in this country for the production of strontium salts. Prior to 1916 practically no strontium ores were mined in the United States, our requirements of strontium salts being imported chiefly from Germany. In 1916 there were produced in the United States 250 short tons of strontium ore, but not all of it was marketed. In 1917 about 4,035 short tons of strontium ore, valued at $87,700, were mined in this country. About 90 per cent of this output was celestite (strontium sulphate), the remainder being strontianite (strontium carbonate). The larger part of the output was from California. In 1918 the output decreased to 400 short tons, valued at $20,000. Workable deposits of ore occur also in Arizona, Washington, Texas, Utah, Ohio, and Michigan.

Manufacture of strontium salts: If the mineral strontianite is available, the manufacture of strontium salts is comparatively simple. The strontianite is simply dissolved in nitric acid to produce strontium nitrate. It can be reduced directly to strontium oxide, which, on treatment with water, forms strontium hydroxide.

The process of making strontium salts from celestite (strontium sulphate) is more complicated, as this mineral is not soluble in dilute acids. The celestite is finely pulverized with the proper quantity of coal and the mixture is then roasted in a furnace.

Of course, it does not go through automatically. You do not put it in a hopper and have it come out salts, but you have to have celestite, you have to roast it with coal, and then to get the strontium sulphide you treat it with Chile saltpeter, you evaporate it, and you crystallize it; so you have four processes. Does the Senator mean to say that that can be accomplished without labor? I am informed, and I should like to be corrected if my information is incorrect, that labor is an important factor in the development of this product, and therefore we are protecting labor, as I stated before. The Senator probably will be interested in knowing that I have in my office at the present time, which I am informed shows, speaking of the chemical schedule, that to-day chemists in Germany are working for 4 cents a day. The Senator probably knows the salaries paid chemists in this country. That difference between the returns to labor in Germany and in this country exists as to all classes of labor, and in placing the tariff upon this product, with these four processes, largely including labor, as far as we were able to ascertain, we have taken care of the difference between the cost of the manufactured article here and the price at which the product can be imported into this country, in order that we might retain the industry here.

The Senator attacks that. I firmly believe that that rate is too low, but I do know that if the amendment offered by the Senator from Ohio [Mr. WILLIS] prevails, it will mean the absolute destruction of that industry in this country, or that portion of the chemical industry which we have heretofore enjoyed.

Mr. WILLIS. Mr. President——

Mr. JONES of New Mexico. I would just like to reply to the Senator from New Jersey a moment, and I hope the Senator will not leave the Chamber. I want to make a statement right in this connection now. If the Senator from New Jersey will just listen to me a moment, I think he will discover that the experts have furnished him an excuse, and not a reason, and I will tell him why I say that.

The truth of it is that they have now gotten to another process entirely. The making of strontium nitrate from the celestite ore is practically a defunct enterprise. It is so simple to make it from the other ore, the strontianite——

Mr. SMOOT. They can not get that ore.

Mr. JONES of New Mexico. They can not get the other ore in this country. I want to say about that, that strontianite is the mineral which is largely used in this country, especially in California, for the production of strontium nitrate.

Mr. FRELINGHUYSEN. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from New Jersey?

Mr. JONES of New Mexico. I yield.

Mr. FRELINGHUYSEN. Is the Senator reading from the Tariff Survey?

Mr. JONES of New Mexico. I am.

Mr. FRELINGHUYSEN. Will he not read the first two sentences on page 22?

Mr. JONES of New Mexico. Yes; I expect to read that.

Mr. FRELINGHUYSEN. That would seem to indicate that the Senator had been misinformed when he spoke of a new process. It speaks there of celestite. It says that strontium "is the more widely distributed and the one more commonly used in the preparation of strontium salts or chemicals." It would seem as though the celestite process was the principal process used.

Mr. JONES of New Mexico. But I call the attention of the Senator to the fact that the labor cost can not be very much more in using the one than in the other, because of the manufacture of salts from the strontianite mineral. I was just reading how simple a process it was to get the strontianite. It is evident that this process is simple, but if we take the manufacture of the nitrate from the celestite ore, the Senator has mentioned some processes, but he has guessed absolutely at the labor cost. He does not know anything about it. It is a mere guess. He has made no attempt to ascertain the cost.

Mr. FRELINGHUYSEN. I know nothing about the cost of labor in the manufacture of this product, and neither does the Senator, but I do know that whatever labor is employed in Germany is paid about 10 or 20 per cent of what is paid here. I also am informed, in the same manner in which the Senator is informed—because he is not a chemist, and neither am I—that the larger element entering into this production is labor. That seems to be the question between the Senator and myself. I lay down the fact that to a large extent the production of this salt is labor, and I want to protect American labor and American industry. The Senator challenges that, attacks that, and wants to lower the rate. We might go on with this argument for a long time. I claim that the labor cost is the principal element, and that I am trying to protect the labor here rather than the labor abroad.

Mr. JONES of New Mexico. I would just like to give a little picture of this industry, and I am almost induced to read everything upon the subject.

Mr. FRELINGHUYSEN. If the Senator will kindly do that, it will give me an opportunity to get lunch.

Mr. JONES of New Mexico. I hope the Senator will not leave the Chamber. I wish to remind the Senator that he and the Senator from Ohio [Mr. WILLIS] and the Senator from Utah [Mr. SMOOT] are the only Republican Senators in the Chamber at this time. That is usually the case during the consideration of this bill. Ordinarily the Senator from Utah [Mr. SMOOT] and the Senator from North Dakota [Mr. MCCUMBER] are the only ones here, and the others merely drop in when they have something to say. They do not desire to listen to anybody else.

Mr. SMOOT. And sometimes the Senator from New Mexico is the only Senator on the other side of the Chamber.

Mr. FRELINGHUYSEN. Mr. President, I know the Senator from New Mexico and I know of his great courtesy. I am perfectly willing to listen to him, but I think he has said upon this subject all that can be said. I have been discussing this question with him for three-quarters of an hour. I have some friends waiting for me, with whom I have an appointment, but I am perfectly willing to remain longer if he desires. However, I do not think anything would be accomplished.

Mr. JONES of New Mexico. I call attention to the fact, in view of the remarks of the Senator from Utah, that there are now present seven Democrats and only three Republicans.

Mr. MOSES. And more Democrats are coming out of the cloakrooms in response to the Senator's call.

Mr. FRELINGHUYSEN. I would suggest to the Senator from New Mexico that he call for a quorum.

Mr. WILLIS. Mr. President, I think the Senator from New Mexico ought not to make that sort of a statement, that there are ordinarily only one or two Republican Senators present. Some of us have been here pretty constantly. I personally have listened to the Senator with great delight hour after hour. I think it is hardly fair for the Senator to make such a statement.

Mr. JONES of New Mexico. I withdraw what I said, so far as the Senator from Ohio is concerned. He is protesting against it. I notice that the Senator from New Jersey [Mr. FRELINGHUYSEN] is leaving the Chamber. Now he is gone. I suppose he does not care to be convinced that the committee has placed this duty too high. The members of the committee are merely guessing at it. From all the Senator has said, I would like to have anybody state how they can determine that the rate ought to be 40 per cent and not 50 per cent. The Finance Committee comes in this morning and offers to change the rate from 50 per cent to 40 per cent. From all that has been said, how on earth can they draw such a close distinction as that? They do not know a thing about it.

The ore must be imported from abroad. It comes from England. Some of it comes from Germany, I suppose. At any rate, it exists in Germany, but I suppose we get our supplies in this country from England. It comes over to the New Jersey coast or somewhere on the eastern coast and there it is converted into this salt, sodium nitrate. It is a very simple process, whether it comes from strontiumite or from the celestite ore.

I will now make the observation, Mr. President, that there is only one Republican Senator present, the Senator from North Dakota [Mr. MCCUMBER]. The Senator from Utah [Mr. SMOOT] has disappeared, the Senator from Ohio [Mr. WILLIS] has disappeared, and the Senator from New Jersey [Mr. FRELINGHUYSEN] has disappeared. I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. GOODING in the chair). The Senator from New Mexico suggests the absence of a quorum. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Gooding	McLean	Shields
Brandegee	Hale	McNary	Shortridge
Broussard	Harris	Moses	Simmons
Bursum	Heflin	Nelson	Smoot
Calder	Johnson	New	Spencer
Capper	Jones, N. Mex.	Newberry	Stanley
Caraway	Jones, Wash.	Nicholson	Sutherland
Colt	Kellogg	Norris	Swanson
Culberson	Kendrick	Oddie	Townsend
Curtis	Keyes	Overman	Underwood
Dial	Ladd	Page	Wadsworth
Ernst	Lenroot	Pepper	Walsh, Mass.
Fletcher	Lodge	Pomerene	Warren
France	McCormick	Ransdell	Watson, Ga.
Frelinghuysen	McCumber	Rawson	Willis
Glass	McKinley	Sheppard	

The PRESIDING OFFICER (Mr. ODDIE in the chair). Sixty-three Senators having answered to their names, a quorum is present.

Mr. WILLIS. Mr. President, I ask that the pending amendment be again reported.

The PRESIDING OFFICER. The pending amendment will be reported.

The READING CLERK. On page 30, line 8, in the committee amendment as modified the junior Senator from Ohio [Mr. WILLIS] moves to amend by striking out "40" and inserting "20."

Mr. WILLIS. On that I ask for the yeas and nays.

Mr. JONES of New Mexico. Mr. President, I do not care to prolong the discussion at all, but I may state, for the information of the Senators who are now present and who will be called upon to vote upon this provision, that it has developed that there is no information as to the cost of production of the commodity either in the United States or elsewhere. The only information on which the committee now makes its recommendation is the mere fact that the New York selling price of the imported article is 8 cents a pound and the price in the same place of the American article is 12 cents a pound. Therefore, they recommended and proposed in the bill submitted in the Senate that the duty should be 50 per cent ad valorem. This morning they come in and ask that it be reduced from 50 per cent to 40 per cent. We are not told why, except that through some sort of intuition or in some subconscious way they have developed the thought that there should be a reduction from 50 per cent to 40 per cent. There are no facts given as to why that should be done. The Senator from Ohio has now made a motion to reduce that from 40 per cent to 20 per cent.

This commodity was not produced in the United States prior to the war. The only available supply of ore for these salts in commercial quantities is in Germany and the United Kingdom. So far as we are advised, the process of manufacture is simple, but there is only one concern in the United States which produces the commodity in commercial quantities. We are advised by the Tariff Commission that the California plants were merely temporary structures, built up for war purposes; and judging from the price which was obtained for the commodity during the war they doubtless amortized the entire cost of their plants by the prices which they charged for the commodity during the war.

Prior to the war the selling price of this commodity, strontium nitrate, was 5 cents per pound; the uniform sales price of it in New York, after paying the transportation charges and adding the profit and everything else, was 7½ cents a pound. During the war the price of the commodity went up in the United States to around 50 cents per pound, and it remained there until recently. It was kept up to the war price. In regard to the prices I will read the following:

The prices of strontium nitrate, the principal strontium salt used in the United States, was constant at about 7½ cents per pound prior to the war. With the outbreak of the war the price increased to a maximum of 48 cents in about July, 1916, or more than six times the pre-war price. The price from July, 1917, to January, 1920, was constant at 25 cents per pound, when the price increased slightly to 30 cents per pound, or about four times the pre-war price.

That was in January, 1920. They were still increasing the prices up to four times the pre-war prices. The invoice value of imports of strontium nitrate in 1914 was 5.2 cents per pound. Here is what can be said in regard to the competitive conditions:

Prior to the war the requirements of the United States in strontium salts were supplied by imports chiefly from Germany. The imports of strontium ore were small and sporadic and were used for the manufacture of laboratory chemicals.

The stocks of strontium salts in the hands of the principal consumer at the outbreak of the war were sufficient to meet requirements until 1916. The shutting off of imports naturally resulted in manufacture in this country. In 1917 there were two firms located in California at the source of the raw materials and at least two firms on the Atlantic coast. It is reported that the plants in California were of a temporary structure and would likely be closed down as soon as normal conditions of competition were restored. The only possibility that these plants will be able to keep operating under normal conditions is for them to induce the western beet-sugar refiners to use the more efficient strontium process of recovering sugar from the molasses residue instead of the cheaper lime process now in general use. This seems problematical, as it would involve change of equipment and is more expensive. The sugar companies do not seem to consider a change justifiable under present conditions.

The eastern manufacturers of strontium salts are so located that they can import their raw material free of duty, while the finished product (strontium nitrate), lacking specific mention in the act of 1913, has been declared dutiable at 15 per cent ad valorem as a chemical compound or salt.

That is all there is to this industry, so far as our information goes. There is no evidence to show other than that this one concern—it has been named here, else I should not repeat the name—the Du Pont Co., is the only concern in the eastern part of the United States now producing nitrate of strontium.

The uniform import price prior to the war was 5.2 cents a pound, and the sales price was 7½ cents a pound; but during the war it was increased to around 50 cents per pound, and the American selling price now has been recently reduced to 12 cents a pound. The imported article is on the market at the same old price of 7½ cents per pound; and because solely of that difference in price in the American market we are asked to put a duty upon the importation of this commodity of 40 per cent. There is not a word of testimony here to the effect that it cost one dime more to produce the commodity in the United States than it costs elsewhere, but to preserve the price, which has not gone back to normal, we are asked to impose this duty; and the concerns which raised the price during the war to six times what it was prior to the war are now asking us to reintrench them in their profiteering upon the American people. There never was a more outrageous proposition than that which they are now insisting upon.

The Senator from Ohio has pointed out the difficulties in this situation. The article ought to be on the free list. It is bearing 15 per cent duty now, and the Senator from Ohio moves to reduce the proposed rate from 40 per cent to 20 per cent. Unless the motion of the Senator from Ohio shall prevail, we must brand the object of the Senate as being simply to keep up the extortionate prices for the benefit, practically, of one concern that has a monopoly of the product in this country, as stated by the Senator from Ohio. I sincerely trust that the motion made by the Senator from Ohio will prevail.

Mr. McCUMBER. Mr. President, a number of Senators desire to have the pending matter go over, but before I consent to that I wish to make a statement in order that it may go into the RECORD to meet all of the criticisms which have been urged. I shall deal only with exact figures.

Under the Reynolds report the foreign selling price of pure strontium nitrate was 15 cents; the landing cost was 1.5 cents; the American price was 52.5 cents. Taking the usual method of levying a duty and allowing 33⅓ per cent for profit and overhead on the cost would make 13.1 cents. Then you would have the foreign price of 15 cents, plus the landing cost of 1.5 cents, and plus the profit and overhead of 13.1 cents, which would make 29.6 cents. That will give the importer a very good profit and allow him to sell at 29.6 cents. The American price being 52½ cents, and subtracting what it may be sold for with a good profit by the importer, we find a difference of 22.9 cents between the American selling price and the foreign selling price, with all of this profit. To equalize the two would require, according to that estimate, 150 per cent based upon the foreign valuation. I simply desire to say that we have not attempted to equalize it; we did not allow 150 per cent, but we did allow 40 per cent.

Taking the very latest figures we have, the present quotation on strontium nitrate shows an import selling price of 7½ cents per pound, while the domestic selling price is 12 cents per pound. The difference between the two—and I am speaking of 7½ cents per pound as the landing price here—would be 4½ cents. It would require 60 per cent to balance those prices. We did not give 60 per cent duty, but we did give 40 per cent.

On strontium carbonate the difference would be about the same. So that upon the various commodities in this paragraph the duties which would be required would range from 60 per cent to 150 per cent.

The real objection, as I understand—and there is a great deal of validity in that objection—is that practically only one firm supplies the market or nearly all of the market, and they supply it in such a manner as to compel certain business firms that need their product to labor at a great disadvantage as compared to others. If that be true, I am not certain that there might not be a justification for even a lower duty than 40 per cent, and I am willing to grant the request of several Senators that the matter may go over in order that we may investigate that feature of the subject.

The VICE PRESIDENT. Without objection, the amendment will be passed over.

Mr. SIMMONS. Mr. President, I think my colleagues will agree with me in the statement that heretofore I have indulged only occasionally in reading to the Senate anything from the press. If I have had anything to say to the Senate, I have preferred to say it in my own way rather than to quote from the discussions of others with reference to the subject matter. A few days ago, however, on account of the very extraordinary conditions that had arisen here, I felt it my duty to deviate from my ordinary rule and to read extensively from certain great newspapers of the country. I did that because I discovered that nothing we could say on this side of the Chamber in exposition of the defects of this measure was even heard, or, if heard, treated with any consideration by the other side of the Chamber, especially by the committee in charge of the bill. I discovered that ordinarily when we were discussing this bill the seats on the other side of the Chamber were vacant, and that the few Senators remaining representing the committee were indisposed to answer any arguments that we might make or in any way to defend the measure. They relied upon the fact that they had the votes to pass it, and practically said to us, "You can talk as much as you please." That was not confined to what I might characterize as the Old Guard section of the other side; but even our friends of the agricultural bloc, who, I would suppose, were deeply interested in the rates carried in this bill, as they injuriously affect the farmers of this country, uniformly abdicated their seats in the Chamber and paid no attention to the assaults that were being made upon the bill. It occurred to me, as all of our arguments, all of our arrays of facts, however forceful, however overwhelming, were disregarded and treated as mere partisan utterances that required no explanation, that possibly the other side of the Chamber did not realize the sentiment with respect to this bill which was everywhere prevalent in the country and which was reflected by some of the leading newspapers of the country, especially some of the great organs of the Republican Party; and in view of the fact that they would not heed us, I hoped that if I could show them that the very arguments which we were making against this bill, the very defects which we were pointing out, the very iniquities to which we were pointing, were recognized by leading Republican, independent, and trade papers of the country, possibly that might at least cause them to halt and reflect and consider whether

they were not going a little too fast and too far. So I read one or two editorials from great Republican papers, the New York Journal of Commerce and the Chicago Tribune, both shining lights in their respective sections of the country, and both of large and general circulation in the United States.

The Senator from North Dakota at the time of the reading of those editorials treated them rather lightly. He could see in them nothing except the pernicious influence of the importers and the corrupting influence of the great department stores. He contented himself with that answer.

Of course, I did not assume at the time that the Senator from North Dakota thought when he said that that he had answered the argument of these great Republican papers. I thought that suddenly taken by surprise to find these great organs of his party so strongly aligned against him, and presenting such forceful and unanswerable arguments, he must do the best he could, and for the time being he could conceive of no answer at all except that they were improperly influenced by department-store advertisements and by the propaganda of the importers.

Mr. President, that answer of the Senator from North Dakota was not accepted in this Chamber, of course, by his own side or by this side; neither was it accepted by the country. In fact, it has been very generally criticized, and in some instances ridiculed, and the Senator has been told by organs of his own party that his answer was insufficient, and admonished either to change the bill or to make more effective answer. I am going to-day to do some more reading from newspapers, and I will state later the reason why I do this.

First, let me read to the Senator from North Dakota and to the Senate a statement which I find in the Washington Post. I think it got into the Post by mistake. It is an editorial taken from the Indianapolis News. The Indianapolis News has not been known, I think, in recent years as quite an orthodox Republican paper. It has been known as a Progressive Republican paper. It represents that element in the Republican Party which Albert J. Beveridge, of the State of Indiana, where it is published, has so recently led to triumphant victory at the polls. I shall hereafter have something to say about the Progressive sentiment of the country with respect to this bill; but let me read what this great Progressive Republican paper has to say. It might be very well to consider it in connection with what that great Progressive Republican in this body, the Senator from Nebraska [Mr. NORRIS], said on yesterday, and it might be well to consider it in connection with what was said by that other great Progressive in this body, the Senator from Wisconsin [Mr. LENROOT], the other day about one of the rates in this bill. I think that we shall see before we get through that the revolt on this bill comes not only from the Old Guard element in the Republican Party, but it comes from the Progressive element, and that the leaven is working, and working very satisfactorily, in the interest of the welfare of the people.

The Indianapolis News says:

It is an interesting fact that Senator MCCUMBER is thus far the only Republican Senator who seems to be particularly excited over the pending tariff bill. There is an occasional protest by our own Senator WATSON over what he supposes to be a filibuster, but it is a protest that does not seem to have much vigor behind it. He may be thinking of his most truthful statement that any tariff bill enacted under conditions practically the same as those which now exist would become obsolete in six months. Republican Senators, taking them as a whole, are singularly unvocal on the subject.

They are beginning, Mr. President, to be very weary of this bill. They are beginning to feel very much afraid of this bill; and we shall probably soon find a sentiment over there in favor of dropping it altogether unless the committee proceeds, as it has done in one or two recent instances, partially to correct its errors.

Let me proceed with the reading:

That opposition to the bill and the demand for postponement of tariff legislation are swiftly gathering strength must be clear to all. The bill has been subjected to fierce and very effective assaults, and, what is quite as important, the arguments against it have not been met. Senator MCCUMBER, when confronted the other day by editorials from Republican newspapers criticizing the bill, had something to say about "department store" influence, but the editorials were unanswered. Here is an interesting successor to the old "British gold" argument, and the department store has taken the place of the Cobden Club.

When the bill is criticized as conferring on the President a very great and extraordinary, if not unconstitutional, power, namely, to fix tariff rates, and as protecting, not production but profits derived therefrom, the only answer is that those who make these arguments—which, if true, should be fatal to the measure—are filibustering. It is not remarkable that Republican Senators should be uninterested. It is highly probable that many of them wish the bill had never been introduced or that, having been introduced it could now be dropped.

Again, Mr. President, let me read from a Republican paper, a paper that is very frequently independent, not hide-bound but liberal in its Republicanism, but always an advocate of what it regards as proper and legitimate protection. It is the New York Herald:

M'CUMBER'S CRITICIZED TARIFF.

Senator MCCUMBER, chairman of the Finance Committee in charge of the Senate tariff measure, protests with more heat than logic against Republican newspapers that can not condone and frankly condemn the impossible import duties proposed in the Fordney bill and in the McCumber amendments. He seems to think Republican newspapers should be for his Republican tariff measure whether it is a good bill or a bad bill. But it would be a poor newspaper, Republican or Democrat, that could think any bill put forth by its party must be a good bill, and any bill put forth by the opposition party must be a bad bill.

If Senator MCCUMBER seeks Republican approval of his tariff, seeks it throughout the country, whether from newspapers or from individuals, the way for him to get it is to make a better tariff measure. His measure is not a sound economic product and it will not be a good thing for the country with its excessive duties and the certainty that such duties will increase the public's cost of living.

The American people numbered in the ranks of MCCUMBER'S party will be no more favorable to the Fordney-McCumber schedules than are the newspapers that owe a higher duty to themselves and to the public than to be hidebound partisans on every question regardless of its merits. The Republican and independent newspapers that are telling FORDNEY and MCCUMBER the truth about their extravagant tariff duties are performing a service for their party that could be wrecked by some of the things the Fordneys in the House and the McCumbers in the Senate stubbornly insist upon doing in the face of business objection and public concern.

I am so well satisfied with the effect upon the course of this legislation of the Republican newspaper condemnation, which I have presented on two separate occasions, that, in addition to the first two great Republican papers from which I read, I read from half a dozen or more other papers a few days thereafter, to the same general effect, and the result of bringing the real facts with reference to this question to the knowledge of the other side of the Chamber, as reflected in the editorials of their own great newspapers, has been amazing. Up to that time they had listened to us in silence. They had stared at us, almost, when we attempted to criticize the measure. Every item that was reached and voted upon was passed by the almost solid vote of the other side of the Chamber, against the almost solid vote of this side of the Chamber, but after this new light was shed upon them they changed their tactics, and I am very glad to be able to say—and I congratulate my friends on the other side managing this bill—that they have been treating our objections with very much more consideration than before. They have been very courteous in answering our inquiries, and they have been always ready since then to give such arguments as they could present to our objections, feeble as they have been in most cases.

Not only that, Mr. President, but there has been a general awakening among the rank and file of the other side, and that has been reflected in the action of the committee. The members of the committee not only now explain and answer, but they have begun to amend their own amendments, and now nearly every morning when paragraphs are reached, and the iniquities and the excessiveness of the rates are exposed, we find the chairman of the committee or his lieutenant, the Senator from Utah, rising in the Senate and proposing to modify the rates heretofore proposed, and to reduce them, and we have just had a most striking illustration of the psychology of this changed situation upon the committee.

This morning we began early, and for nearly three hours we discussed a paragraph with no indication of any relenting on the part of the other side in the way of reducing the high tax they had prepared for the people, until suddenly a Senator on the other side, of progressive proclivities, who I assume has begun to feel about this bill as I have an idea many other progressives on the other side are beginning to feel—and before we go very far their ranks will be multiplied many times—the Senator from Ohio [Mr. WILLIS] rose in his place and proposed an amendment cutting the rate proposed by the committee in half, a rate they had contended for here for nearly three hours, without any suggestion during those three hours of any modification.

The Senator from Ohio made a speech in which he told the Senate that the majority of the Finance Committee of his own party had done this thing; that there was no justification for it; and that it was a gross outrage upon the American consumers of those products, and he offered an amendment to cut the duty one-half.

I do not know whether the committee is going to support that or not. I rather suspect that if they had not accepted it, and had taken a vote, there might have been some very startling changes, and I rather think the committee did not want those startling changes to develop just at this time. Therefore the committee came in and said, "If you will just let this go over, we will take it under consideration, and we might possibly reduce the rate." I see the leaven is working.

I call attention also to the action yesterday of the distinguished Senator from Wisconsin, who, by the way, is one of the ablest men in this body, one of the great leaders in the

West, and who, I believe, will be a leader in the next campaign, not as a hidebound, Old Guard Republican, but standing for the very same things that Beveridge and Pinchot stand for, and which brought them their magnificent victories recently.

The Senator from Wisconsin is one of the greatest debaters in this body, one of the most industrious students of this body, one of the great leaders of the Republican Party in this country, and he could not stand the duties proposed by the committee, so a few days ago he took the floor in criticism of one of these duties, and, by implication, uttered a warning to the committee which it has heeded, as is shown by the fact that morning after morning since then the committee have been coming in asking to cut down these rates, which in the beginning were so sacred that they could not be touched or questioned.

Yesterday another great Senator, a man in whose integrity and fairness and sound judgment every Member of this body has the utmost confidence, and for whom personally every Member of this body entertains the highest respect, took the floor on this question. He never has been a hidebound partisan. I do not know where he aligns himself now, but judging from his utterances in this Chamber for the past year I think he is in sympathy with the masses of the people of the United States, and will stand with that wing of his party known as the progressives when it is right, in his judgment, just as he will stand with the old guard when he thinks they are right, and will be against either, or both, of them when he thinks they are wrong.

The attitude he took yesterday means much that we can not just now see. We can only anticipate it. But I think I foresee in his attitude a movement which is growing day by day in this body, as it is growing day by day in the country. I am referring to the junior Senator from the great State of Nebraska [Mr. NORRIS]. He thought he saw the men with whom he has been aligned, and with whom he has been thinking in unison on the other side of the Chamber, generally characterized as the agricultural bloc, on the point of being led into a false position. He saw them, as he thought, I judge from his remarks, about to surrender the interests of the great agricultural classes of this country to the special interests through a trade, through a logrolling process, greatly to the discredit of the agricultural bloc and greatly to the discomfort of those toilers for whom the members of the agricultural bloc especially speak. I am not going to say that this is altogether a logrolling piece of business. I do not think the Senator from Nebraska said that, but the Senator from Nebraska did warn the friends of agriculture upon this floor that they were selling out the rights of the farmers in voting for these high duties upon the things which the farmer buys in return for a pitiable little concession made in the matter of certain isolated farm products which may possibly receive slight benefit from the imposition of protective duties.

I do not say there was any logrolling; I will not charge that. In my opening address I said there were things connected with the situation which indicated that something of that sort had taken place, and that a trade had been made upon the basis of a pretended concession to the agricultural interests by which those interests were to support the high, exorbitant rates upon the manufactured products of the country. It has seemed that way up until this recent outbreak on the part of the Senator from Michigan, the Senator from Nebraska, and the Senator from Ohio. None of the schedules which have been reached covers agricultural products, all of them relating to manufactured or mining products, upon which the very highest rates of duty have been imposed, higher rates, on an average, than on any other items in the bill, because all through this chemical schedule there is the sinister trail of the manufacturers of explosives and the manufacturers of dyestuffs, and this bill has been dominated more completely by the dyestuffs industry and the explosives manufacturing interests than by all the other industries put together, probably.

The chemical schedule is full of items which relate to by-products of the dyestuffs industry and the explosive-manufacturing industry, either a by-product itself or because it was some product which competed with a by-product of the dyestuffs monopoly.

The committee was committed to do for the Du Ponts and the other manufacturers everything they wanted. They had given them an embargo upon their dyestuffs, and probably could not put an embargo on the little things in the chemical schedule, and therefore decided to give them the next best thing, fixing prohibitive duties; so I say the sinister trail of the dyestuffs industry runs all through this chemical schedule, and that is one reason why I wanted to see it thoroughly debated and discussed.

What I mean to say is that while these high rates of duty, in many instances absolutely prohibitive, were being discussed there were no representatives of the agricultural bloc in the Chamber. There is not a single representative of the agricultural bloc in the Chamber now except my good friend from Nebraska [Mr. NORRIS]. These members of the agricultural bloc do not stay here and hear the argument. Why? I would not say they did not stay because they had had an understanding of which they were ashamed and did not wish to be subjected to the unpleasantness of being present when they were criticized. I will not say that. I do not think that would be quite true. Nevertheless, I must admit they have absented themselves concertedly, and I have noted that. We have wanted to talk with them. We want to reason with them. I do. I represent agriculture. I am deeply interested in it and I do not want to see it slaughtered in the American Congress, so I want to talk with them; but I can not talk with them. I have not been able to get their attention. No Senator on this side has been able to get their attention. They are absent when we discuss the bill, but when we come to vote upon the items and schedules they are very near the Chamber. They come in then, and up to this time they have been voting without question for every one of these outrageous duties.

I want to believe, and I do believe, that the beginning of the end of that monstrous situation is about at hand. Before I get through I want to read some things into the record which I do not think they can refuse to note and consider, and which I hope will bring them to a realization of the error they are about to fall into; not the error only, but the pit that was dug for them.

Do not tell me that the old guard Republicans, representing the protected industries in the country, want these agricultural products protected. No, they never have allowed them to be really protected. They have prevented them from being protected. They do not want them to be protected; but early in the discussions in the committee the old guard discovered that they would not be able to pass a bill imposing these prohibitive rates upon manufactured products, these ultraprotection rates, these rates protecting excess profits and not production, unless they could conciliate the agricultural element and get their votes. The agricultural element did not want to vote for the high rates imposed, but they found that they could not get what they thought they wanted for agriculture unless they agreed to these high rates.

So we have here a bill, as a result of that transaction, of that trade, if it was a trade, of which neither party to the trade on the other side of the Chamber approves, containing fake protection to agriculture which, although fake, is still obnoxious to the old guard, and containing high protective and prohibitive duties on manufactured products which are, of course, really obnoxious to the farming element; but these antagonistic elements, as different as oil and water, have come together, and they have worked together up until the little break that we had a few days ago, and the additional break we have to-day.

In confirmation of the statement I have made that we have been at last able to reach the old guard membership of the committee—and that controls in the majority membership of the committee—let me make this statement. New England is the dominating element of that committee, and with the aid of one or two of the old guard from other sections they have been able absolutely to dominate the committee. The result is that we have a tariff bill made in the interest of one section of the country and against the interest of every other section of the country. We have a tariff dictated largely by the protected manufacturers of New England and the North.

Those gentlemen came down here. They did not know anything about what was the difference in the cost of production here and abroad. They knew very little about what was the selling price of the American product as compared with the foreign product in the domestic market. They did not care anything about it. They knew what they wanted. They wanted a tariff high enough to protect them in their present exorbitant profits against foreign competition, and then they wanted an opportunity on the part of the President to raise that tariff high enough still to protect them against foreign competition in case they saw fit to further raise their profits. They told the committee what they wanted, and they got what they wanted.

What happened? I was not permitted to be present, but I find in the Daily News-Record of New York a very interesting article. I do not know to what party that paper belongs, but I have been told that it is a Republican paper. I read an article by the Philadelphia bureau of the Daily News-Record appearing in that publication, dated Philadelphia, May 17, as follows:

PHILADELPHIA, May 17.—Rumors that the tariff bill, now before the Senate, is in jeopardy and may not be passed at the present session without material support from the outside are current here. It is said

that Senator MCCUMBER this week privately advised some prominent manufacturers that unless manufacturing interests actively support the measure its passage by its present supporters can reasonably be doubted.

In this connection it is pointed out that manufacturing interests generally made strong representations to the Senate Finance Committee when the bill was being rewritten, and, having obtained the schedules desired in many instances, rested on their oars, instead of continuing the support that friends of the bill in Washington feel it must receive if it is to become a law.

It is also hinted that the entire wool schedule may be subjected to strong attack from protectionist quarters on the ground that the rates are too high, and that this may materially aid Democrats who assail it for purely political reasons. Another point made is that many stanch Republican newspapers have voiced criticism of the schedules as they now stand, and as things are shaping themselves friends of the bill may find themselves in an isolated group unless their position is vigorously supported from the outside.

About to be deserted by some in their own ranks, not knowing whether they will be able to hold the agricultural element over there in support of the high rates, they begin to fear the fate of the bill, they begin to comprehend that possibly the solid phalanx with which they started has been punctured and broken, so they appeal, very naturally, according to this article, to the very interests which came here and camped upon the committee day in and day out, night in and night out, until they had prevailed upon or dragooned that committee into giving what they wanted.

The committee had the right to send out this call under the circumstances. They had the right to say to those people, "Come and help." But, Mr. President, it is a very peculiar thing to happen that the American Congress, having made this bill in its committee in favor of certain interests, will now call upon those interests to come here and, by lobbying methods or any other methods or influence they can exert, bring to bear enough influence upon this body to secure the passage of these unjust rates imposing taxes upon the American people. They will come, Mr. President. It will not be long, if they become convinced that the bill is in jeopardy, before the corridors of this building will swarm with profiteers and protective flies, just as the corridors in front of the Finance Committee swarmed with them while the bill was being framed.

Now, I desire to do some more reading. I read the other day from Republican papers, protectionist organs of the Republican Party, orthodox and hidebound in their protection theories. That is the kind of papers I read from the other day, but now I think we have to some extent reached the old guard crowd over on the other side of the Chamber and have brought about the new situation which exists and is so gratifying to the friends of justice and sound legislation. I am going to read to-day what the independent papers are saying and what the farm papers are saying and what the trade papers are saying.

I hope that this may find lodgment in the minds and hearts not only of the old guard but more particularly of the progressive element over on the other side of the Chamber, which it now appears is to supersede in power and control the Republican Party in the United States, the old guard having brought that party to a position before the American people which the people can no longer endure. I speak now to those who are to become the leaders of the Republican Party in the elections this coming fall, the party which is to be led by such men as Beveridge, Pinchot, Norris, Lenroot, and Capper.

But first let me read an editorial from a very good paper, one of the class I have described, sent to me by a merchant in my own town. What I shall read is an editorial from the New York Commercial of May 16, 1922. You may cast aside what the Democratic papers say about the bill if you wish, but in the name of high heaven why should you think that a paper of commerce, a paper devoted to the consideration and discussion of questions of trade and commerce, should misrepresent and unduly criticize the bill? I think the New York Commercial is Republican. I know from the article that it is a protectionist newspaper. The article makes that plain. I think it is also a Republican paper. There are not many Democrats in the North or in New York who are protectionists. The article says:

TARIFF DISSATISFACTION CRYSTALLIZING.

Something must be wrong with the Republican tariff policy as expressed in the Senate Finance Committee's bill now under debate, if it is unable to obtain the indorsement of Republican newspapers.

The New York Commercial has seen that the bill has not had the indorsement of Republican newspapers as well as we have seen it. Its great editor there, at, politically and commercially, the peak in the United States, with a sweep of vision that takes in the whole country, starts out with the statement that the bill is unable to obtain the indorsement of Republican newspapers. I take it, therefore, it must be accepted that that is the fact, and the tariff bill which can not obtain for it the indorsement of Republican newspapers must be a very bad bill; it must be fraught with the greatest consequences of disaster to the American people.

But let me proceed:

It is no good for Senator MCCUMBER to denounce the newspapers for not agreeing with him, for the people of the country can hardly subscribe to the theory that the newspapers are all wrong and only Senator MCCUMBER is right. It is too much like the remark of the proud mother as the parade went marching by, that "They are all out of step but Jimmy."

One of the greatest complaints against the tariff bill is that it places exorbitant duties upon articles of which we import few, if any. One might argue that this could do no harm.

We have heard that argument made here. If there are any imports, they say, the duty will not do any harm, and why do you object to it? The answer might be, Why did somebody ask for it?

One might argue—

Says this great newspaper—

that this could do no harm—

That is, these high protective duties when there are no imports or but few—

because if the goods were not imported there would be no duty to collect. That, however, is not the point of the argument.

Now, the point is—

It is the fact that manufacturers and distributors here would immediately advance the selling price on the basis of the higher duties, just as though the goods were imported freely.

This great commercial paper, which is published in the metropolis of the United States, expresses the unqualified opinion that, whether there are any imports or not, the manufacturers and the merchants and the distributors would raise the price to the extent of the duty. Of course, Mr. President, that could not be true where there existed such a condition as I shall describe a little later. I continue reading:

On items which are largely imported, either in whole or in part, the complaint is that duties are carried far beyond the point needed for protection or revenue; that they are in too many instances prohibitive. The effect of this is to increase the price to the consumer beyond any legitimate level.

There would seem, therefore, to be basis for the charge of an unnecessary increase in the cost to the consumer on so many items as to make an appreciable increase in the cost of living, an increase that would be wholly artificial. The Commercial does not view the tariff problem from the partisan standpoint. It attempts to measure it according to economic law. The test is whether or not the welfare of the whole American people will be advanced or retarded. While sufficient protection—

And the newspaper from which I am quoting believes in proper protection, from the traditional and platform Republican viewpoint—

against ruinous foreign competition for all industries should be furnished, excessive protection is unnecessary protection and can only result in excessive profits for those directly interested. Those excessive profits come from the high costs to the American people, which means that the people are being taxed for the benefit of particular interests, just as though the tax were specifically levied by direct impost.

The tariff is also faulty in that it erects a Chinese wall around the United States, entirely forgetful of the principle that if we do not buy we can not sell. These defects are all so glaring that no one who makes a careful study of the problem is able to commend the bill.

That is what I have been saying all the time. If we could just get Senators to study this bill for themselves, whether they are low-tariff men, as Senators are on this side of the Chamber, or moderate-tariff men, or protectionists—if they would just study the bill and see what it will do I should have no apprehension at all. This article continues:

The debate now going on is largely perfunctory. It is made chiefly to the Presiding Officer and the recording clerks. There are seldom more than half a dozen Senators present except when there is a roll call, when the Sergeant at Arms hustles out and rounds up enough Senators to make a quorum, who then vote on strictly partisan lines, regardless of the debate.

If the tariff debate is prolonged all summer, as seems likely, it may be that the people will become so thoroughly dissatisfied that they will not only change the political complexion of the House but will demand a change in the method of tariff making.

Mr. NORRIS. Mr. President, may I interrupt the Senator from North Carolina?

Mr. SIMMONS. Certainly.

Mr. NORRIS. The Senator from North Carolina has just made a statement that interested me very greatly. I have wondered for a good while if in the Senate here we could not get enough Senators from both sides of the Chamber to form a sort of a nucleus around which there might be organized, without regard to this bill, a group of men in the legislative body of our country who would make an attempt to frame a tariff bill along the lines that the Senator from North Carolina has just said he favored?

I have always felt as to the manner in which tariff bills are framed—and the suggestion applies to both parties equally, for the same method has been pursued as to all tariff bills with which I have ever come in contact—that it naturally invites partisanship, and I firmly believe that any legislation, no matter what it may be, if it is built up on partisan grounds and is made a partisan measure, can not be so good as though it were built on a different principle which eliminated partisanship. I should

like to join with the Senator from North Carolina, or with any other number of Senators, to try to build up the kind of legislative nucleus which I have indicated.

Mr. SIMMONS. Mr. President, I heartily approve of the suggestion of the able and conscientious Senator from Nebraska. I have long dreamed of the possibility of doing what he has suggested, and I had hoped when we established the Tariff Commission that we should find it possible to evolve out of that agency a better method of framing tariff laws.

Mr. WADSWORTH. Will the Senator from North Carolina yield to me?

Mr. SIMMONS. I shall yield in just a moment, if the Senator from New York will pardon me.

I still hope that what I have indicated may come to pass. I desire to say for myself that if this bill—and I think I have studied it carefully—were based upon what I consider a fair, honest, just application of the principle of protection, as it has been defined by the Republican Party, while I should disapprove of the bill and vote against it on account of the protective principle, I should not myself have been disposed to have taken up much time in its consideration, because I would have recognized, in that case, the right of the Republican Party to pass a bill along those lines.

Mr. WADSWORTH. Mr. President, now will the Senator yield?

Mr. SIMMONS. Yes.

Mr. WADSWORTH. Would the Senator be willing to join a group in the writing of a protective tariff measure and do it in a nonpartisan spirit?

Mr. SIMMONS. No; I would not. I do not suppose that any body which we might create would be created to write a protective bill any more than a low-tariff bill. Their function would be to write a fair tariff bill, without any regard to any particular theory of tariff legislation.

Mr. WADSWORTH. I understood the Senator from Nebraska to express the hope that some day a group of Senators might be formed who would write a tariff bill in a nonpartisan manner.

Mr. SIMMONS. Yes; but he did not say a protective tariff bill or a free-trade tariff bill or a low-tariff bill; he said a tariff bill.

Mr. WADSWORTH. Does the Senator think we can ever get the tariff out of politics?

Mr. SIMMONS. I do not see why we can not.

Mr. WADSWORTH. If it is done in your way; yes.

Mr. SIMMONS. No; I do not insist that it shall be done in my way. In that matter, as in everything else in the form of legislation, I would consider the interests of the people of the country, and I would forego my opinions to a reasonable extent by way of compromise, as I have done so many times since I have been a Member of the Senate.

Mr. NORRIS. Mr. President, I do not want unnecessarily to interfere with the line of argument the Senator from North Carolina is following by leading him in a somewhat different direction, but everybody knows that whenever there has been a tariff bill framed, regardless of the party in power, the procedure followed in the House and the procedure followed in the Senate has been something like this: The committee representing the party in control frame the bill, without any consideration of the minority members of the committee, and when they have framed it to suit their ideas the minority members of the committee are called in, not to help them deliberate, not to help in any other way, but simply to be notified of the medicine which they have to take. Then the Republicans are expected to follow the Republican side and the Democrats the Democratic side. The result has been that, as a rule—there have been some exceptions, of course—tariff bills have been framed in accordance with the opinions and evidence of men who had a direct interest one way or the other in the legislation to be enacted.

Every man who has had anything to do with courts and witnesses and juries knows that kind of evidence is always poor evidence, and if no evidence is heard on the other side—in this case the people's side—the result is very often worthless. Why should we not frame a tariff bill along nonpartisan lines? Why is not that possible? Why do we say that the tariff has always got to be a matter of politics because it always has been a matter of politics? If we had proceeded on that theory as to everything else, if we were to follow along a certain line merely because our forefathers followed along that line, we would now be barbarians. There never was an advance made in civilization but that it became necessary to get rid of something that was old and worn out. In this enlightened age to me it seems to be perfect folly to say that we have got to have a tariff bill made on partisan lines when we know that even this aisle does not divide Senators along those lines. There are Senators on the other side who believe in protection; there are Senators on the other side of the aisle who believe in higher tariff rates than I do on this side of the aisle; but if we are going to make a political scrap out of it they are supposed to line up one way and those on this side are supposed to line up the other way, and while we are fighting over party advantage special interests wipe the slate clean and steal everything in sight.

Mr. SIMMONS. Mr. President, I thank the Senator very much for his contribution. I agree with him, as I have said before.

Now, Mr. President, I wish to read from some independent newspapers. Some of the Republican newspapers from which I have read have been charged with being the mouthpieces of the department stores. I do not know what charge will be made against the independent newspapers.

The Brooklyn Eagle—I have understood that it is classed as an independent paper—speaks as follows:

> Nothing better could have been expected from Democratic newspapers, but it is beyond a joke when Republican organs assail the Republican control of Congress on the sacred issue of protection. It is a disagreeable and even a portentous reminder of the Republican revolt which greeted the Payne-Aldrich tariff bill during the administration of Mr. Taft. * * * It may be necessary to revise existing rates, although revision is at least questionable when a considerable volume of Republican opinion is against meddling with business in its present unsettled condition. But when revision includes taxes on food and taxes on raw material which enters into the production of necessities that all must use it requires no gift of prophecy to predict a quick rise in the cost of living all over the land. With this prospect in view is it any wonder that Republican newspapers fear for the future of a party responsible for placing new burdens upon the shoulders of the people? * * * If the Republican leaders of Congress can not see what is visible to Republican newspapers of distinction all over this country they are in a sorry plight.

That sentence, Mr. President, contains in it volumes which the other side of the Chamber ought to digest.

> If the Republican leaders of Congress—

I repeat, quoting the editorial from this great paper—

> can not see what is visible to Republican newspapers of distinction all over this country—

Not where there are great department stores and scores of great importers, but all over this great country of ours—

> they are in a sorry plight. Those newspapers protest against the tariff bill, not because they wish to make trouble for the Republican Party—

They are Republican papers that this editorial is speaking of—

> but because they know that persistence in folly by the party itself will inevitably lead to disaster at the polls.

Not only are these great Republican papers against it because they think it is against the highest public interest, but they are against this bill for partisan reasons, because they think they see in it the germs of disaster to the Republican Party in the country.

I read from the New York Evening Post, another great independent paper, published at the center of commerce and information in this great country:

> There are just two objections to the McCumber-Fordney measure; it is based upon no scientific principle, and its individual schedules won't bear analysis. We hesitate to quote the Chicago Tribune.

That is the paper I quoted the other day, a great Republican paper. Its quotation so irritated the chairman of the committee that he made a sharp reply.

> We hesitate—

Says this independent Republican paper—

> to quote the Chicago Tribune, after Senator McCumber's terrible arraignment of it as a mouthpiece of the department stores, but in an editorial in which the tripling of the present duty upon aluminum is analyzed, the Chicago newspaper remarks—

I had not examined that. The editor says they have tripled the duty upon aluminum. My God, Mr. President! If there is a trust in this country—and they have a branch in my State; I do not want to say anything more against them than I am compelled to say—but if there is a recognized trust in this country, it is the Aluminum Trust. I say right here, by way of interjection in passing, that when I find a trust in this country which has risen to a position where it dominates prices and stifles competition in this country, in violation of the law, I will never consent, as a Member of the American Congress, to make that conspiracy against the law of the land effective by relieving it against foreign competition, which is the only remaining hope of the people for relief from the monopoly thus created.

Let me repeat:

> But in an editorial—

Speaking now of the editorial in the Chicago Tribune—

> in which the tripling of the present duty upon aluminum—

There were no importations of that, practically, before the war; there was a good deal during the war and a little after the war; the German trust was unloading some of it over here on the American trust; but before the war these two trusts divided the world and did not interfere with each other.

But in an editorial in which the tripling of the present duty upon aluminum is analyzed, the Chicago newspaper remarks—

The Tribune, it means—

Every hour's study of the bill, even by a layman—

Not by an expert on the tariff, not by a man whose experience in tariff legislation has placed him on the great committee or at the head of the great committee in charge of the financial affairs of the Government—

Every hour's study of the bill, even by a layman, reveals some point of such remarkable possibilities for evil and injustice as to cast doubt upon the value of the bill as a whole. Senator MCCUMBER seems to think that opponents of the bill have been answered when their motives have been impugned. But would there be any harm in taking into account the considerable number of voters who are so benighted as to believe that reason ought to play a part even in the framing of a tariff law?

Again, Mr. President, quoting from the New York Evening Post (independent):

The paradox of Congress forcing protection upon a manufacturer who protests that he doesn't need it or want it—

And we have had instances of this sort. In the case of these vegetable oils we have had manufacturers protesting against the duties imposed on their raw material forced on them; and there are many other instances—

The paradox of Congress forcing protection upon a manufacturer who protests that he doesn't need it or want it deserves a place in the museum of political curiosities. What is the psychology of such an attitude? Apparently there is a tariff type of mind which instinctively revolts at the sight of an untagged article from abroad. A product which does not pay toll at the customhouse gives such a person an uneasy feeling, as if the world were going to pieces.

Why, Mr. President, I heard one Senator say what in substance meant that he was in favor of putting upon any article produced in this country hereafter an adequate and "sufficient" protective duty to keep out the foreign article. Everything must be tagged with a duty. Every article that comes in must come in with a high tariff tax saddled on its back. If it does not come in, the producer in this country raises the price; if it does come in, the American consumer also pays the tax on the imported article.

Deep in their hearts—

Says this great paper—

Deep in their hearts members of the Fordney school of economics must be ashamed of having a free list at all—somehow it looks like an admission that the tariff system is not 100 per cent perfect. Tariff makers of this kind approach their task in the spirit of the fanatic.

Now, let me read from another paper, a nonpartisan paper. It is The New Republic. This paper is said to be very radical upon certain lines, and I think it is, but it is not a low-tariff paper. It is not a hidebound partisan paper upon the subject of the tariff. It is a free lance. It speaks its mind, as the great Senator from Nebraska [Mr. NORRIS] has the habit of doing, free of fetters and trammels. This great nonpartisan paper says:

The tariff makers in the Senate have interpreted a vague protectionist emotion as a mandate for letting every special interest in the country have just as high protection as it wanted.

The war has left our industrial rivals battered and anæmic. Is it strange that our industrial leaders should find a favorable occasion to go out after the commercial hegemony of the world? We have the greater part of the world's financial resources. We have an unlimited supply of what is the cheapest labor in the world, when efficiency is taken into account. If our manufacturers can pursue the policy of selling at a loss in every foreign market where our rivals appear to be making progress, why can we not eventually rule the world industrially? Our manufacturers can afford to sell at a loss abroad, provided they are enabled to charge monopoly prices at home.

Oh, yes; if you will just protect them against foreign competition, let no man's legs be long enough to scale the wall of protection, turn over to these trusts and monopolies that dominate many of the industries of the country the domestic market and permit them, with the consent of the Congress of the United States, supposed to represent the people of the United States and the welfare of the country, to charge in the domestic market whatever they please, then, enjoying the high prices of monopoly, they can afford to undersell the foreigner, or even to sell at a loss in all the other markets of the world.

This paper adds:

And that is what the present plans of the Republicans would enable them to do.

As for ordinary Americans, the employees in commerce and industry, the farmers, and the small shopkeepers—what will they get out of the policy of commercial imperialism? They will get the bills. They will also get a contingent claim upon the fruits of the national hostilities that will arise when "Made in America" has come to stand as a symbol for monopoly and sharp practice.

Now I want to read from another trade paper, the Shoe and Leather Reporter:

The tariff bill, as framed in the House and mutilated by the Senate Finance Committee, should be laid on the table and forgotten. It is about the worst piece of revenue legislation in the history of the Government.

I heard one Senator, claiming to represent the agricultural bloc—the man who went before the committee and secured these high rates upon certain farm products—say that this was the best tariff bill ever passed in this country.

I thought it was very strange that the junior Senator from Idaho [Mr. GOODING] was selected to represent the bloc, because I regard him as the highest protectionist I ever heard utter a protection sentiment in this country. He goes further in behalf of excessive protection than any man I have heard talk in this Chamber or outside of it. He declares that practically everything which comes into this country from abroad shall come in carrying a high tax, if not with a prohibitive tax, and that that shall apply not only to existing industries but industries which may be in the womb of the future, which may be unborn, which may not even have been conceived in the womb of time and possibility. I continue reading from this article:

It is about the worst piece of revenue legislation in the history of the Government. It is full of blunders, contradictions, and inequalities, and for every clause acceptable to an industry something follows of an objectionable character.

It should be plain as noonday sun—

To a man who always looks through a glass darkly the noonday sun is never plain, and I am afraid there are many hidebound protectionists in this body of that stripe—

It should be plain as noonday sun that it is not possible for Congress to frame an adequate bill at this time. Industrial and commercial conditions in all the countries of the world are in a state of flux.

We have not the figures showing the difference in the cost of labor here and abroad. We are not able to ascertain the fundamentals upon which a just and fair tariff, even upon the theory of the Republican Party, can be framed, and yet, without a guiding light, these gentlemen go and pile up taxes—25, 30, 40, 100, 200, 300 per cent—upon articles which the people of this country are forced to buy and consume. This article continues:

Whatever appears to be a good set of tariff clauses to-day might be completely out of alignment and inadequate to-morrow.

I am taking too much of the time of the Senate. I have here extracts from three leading farm papers, one of them the Southern Farmer, published in Houston, Tex.; one the Business Farmer, published in Mount Clemens, Mich.; and the other the American Agriculturist, published in New York. I want to put these in the RECORD without reading.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

The Southern Farmer, Houston, Tex., calls the Senate tariff bill "a betrayal of agriculture" and says: "The promise for protection for farm products is impossible to bring about, because we are an export nation for the main farm crops. This tariff will bring the farming regions of the West and South under still greater bondage to the industrial sections of the East and North. The emergency tariff showed the fallacy of any tariff helping prices for farm products to any extent worth considering. The bill is one written by special interests for such interests, with little regard to the plain people of the country, and it takes no prophet to foretell what its enactment will cost the Republican Party responsibility for it."

The Business Farmer, Mount Clemens, Mich.: "Nearly all of the agricultural items are in terms of specific duties. Reduced to an ad valorem basis at current valuations and compared with the ad valorem rates on commodities of which the farmer is a large purchaser, we find that the agricultural schedules are actually among the lowest on the list. Of what benefit to the farmer is a 25 per cent duty on a world grain like wheat, of which we produce a large surplus, when he must turn right around and pay a 40 to 80 per cent duty on the majority of things he buys? * * * The duty on sugar is an affront to every American consumer. But three and a half million Michigan people are asked to add several million dollars to their sugar bill for the direct benefit of a few hundred sugar-mill stockholders and a very small indirect benefit of a handful of beet growers."

American Agriculturist, New York: "They—our legislators—must bear in mind that products basic to the proper production, such as raw fertilizer salts, must be duty free, so that production is encouraged as cheaply as possible."

Here is an editorial clipped from The New Republic, from which I read a little while ago, relating to some of the mathematics of the Senator from Kansas [Mr. CAPPER] about the tariff. It reads:

According to Senator CAPPER'S arithmetic we are losing $3,000,000 by every day's delay in enacting the tariff law. We lose one million dollars in revenue and our industry loses two millions in money return. That is at first sight a horrifying sum of losses in these hard times. But let us wait a moment before crying out. When money is lost somebody usually finds it. What becomes of these three million? It remains in the pockets of the consumers, who do not need to pay it, in the shape of higher prices, to the Government and to the beneficiaries of protection. Senator CAPPER'S arithmetic, then, seems to

leave us just where we were before. We shall have to look at the tariff question from some other angle if we desire a glimpse of the realities.

What is the prospect of a swift recovery from depression? There can be no recovery until agriculture again enjoys satisfactory prices, and agriculture will not enjoy such prices until our European customers can find means of paying for American foodstuffs and raw materials. Whence will they find the means? They have no gold. Their credit is grievously impaired. Their only practicable resource lies in their exports; exports to America, or to other countries that are sending exports to America and thus have bills with which purchases in America can be made.

This is the simple economics of the question. We can not fully recover from depression without a stimulus to our agricultural exports. There are no resources with which to pay for such exports except imports. Yet Senator CAPPER and his colleagues of the agricultural bloc are demanding the erection of formidable obstacles against the import trade.

I will read now from the New York Herald, getting back to a Republican paper, although I understand that the New York Herald claims it is rather more independent than partisan. Anyhow, it is one of the greatest and ablest papers in this country. It is one of the most independent papers in its opinions and in the positions which it takes and advocates.

Mr. SMOOT. They are bitter against the bonus.

Mr. SIMMONS. They are bitter against this bill. The fact that a man who is against the bonus is also against this bill does not prove that your bill is good. That seems to be your logic, and seemed to be your logic the other day, that because I was against certain taxation plans to raise money for the bonus there was no force in my opposition to this bill. Because a newspaper is opposed to the bonus, you can see no merit in its opposition to the tariff bill. That is argument and reasoning and logic worthy of the architect of this bill. It is the character of argument with which this bill has been in large part defended.

The New York Herald article reads:

It is the conclusion of a mathematical expert, according to Senator MCCUMBER, that at the rate of progress so far made with the amendments the tariff bill will be passed on September 29, 1946.

Well, the American public may think that a quarter of a century from now will be soon enough to pass the new tariff measure if it can not in the meantime be ridded of its economically objectionable and politically dangerous provisions.

The people demand that their taxes shall come down, their cost of living shall come down, and the barriers against selling their goods abroad shall come down. If the only kind of tariff measure they can get from the present Congress is one that will jack up their cost of living still higher when it already is too high, and make it all the harder to export their surplus products when it already is hard enough to export them, then the American people do not want any statesman to rush himself out of breath over the passage of this tariff.

You are in a great deal more of a hurry about passing this bill than the people are. You are in a great deal bigger hurry about the passage of this bill than the unbiased leaders of thought of the Republican Party are. You thought in the beginning that by your threats of long sessions and night sessions, by your silence under attack, by your charges of a filibuster this bill might be voted upon before the rank and file of the Republicans in this Chamber, especially the Progressive and agricultural bloc, and before the people of the country, led by the newspapers of the country, had an opportunity to find out what was in it and to express their condemnation in advance of your hasty action. Against that disaster this side of the Chamber protected the country in its fixed determination, which it has pursued and will continue to pursue through the day and through the night, if we sit from the early eve to the early morning hours. This side of the Chamber has rescued the country from that danger and that threatened disaster, in my judgment, by its determination that the provisions of this bill shall have ample discussion to enable not only the representatives of the people who are to vote upon it to understand it but to enable the people of this country, irrespective of party, to understand it, and have an opportunity to express their opinion understandingly. The New York Herald article further says:

They will be content to wait till the cows come home for a Congress that has sense enough to know costs must be reduced, not inflated, and that has ability enough to frame the kind of tariff that is necessary to the welfare of the country.

The same paper continues:

If Senator MCCUMBER seeks Republican approval of his tariff, seeks it throughout the country, whether from newspapers or from individuals, the way for him to get it is to make a better tariff measure. His measure is not a sound economic product, and it will not be a good thing for the country with its excessive duties and with the certainty that such duties will increase the public's cost of living.

I probably read that before, Mr. President, and I desist.

I have read these editorial comments from these great lights of the Republican Party, nearly every one of which constitutes a bright particular star in the Republican and protectionist firmament, in order that the other side may have before it the views, the criticisms, the condemnation, and the denunciation of these papers generally throughout the country, not only Democratic papers, but Republican papers and independent papers alike.

Mr. McLEAN. Mr. President——

Mr. SIMMONS. If the Senator will pardon me, I am very nearly through, and I am so tired that I do not wish to prolong this discussion. I am not physically able to do it.

The balance I wish to say I shall be compelled, in self-protection, largely to read, without the heat of discussion, which has led me into exerting myself beyond my strength.

I want now to address myself especially to the agriculture bloc in this Chamber. I do wish more of them were here. I see but five of them in the Chamber. I do not know whether or not all of them will listen to me while I read.

Mr. SMOOT. There are six on the other side.

Mr. SIMMONS. I am not talking about my friend from Utah. I am talking about the agricultural bloc now.

I desire to read what I regard as probably the highest Republican authority in this country as to the effect of the bill upon the agricultural interests. He discusses it in a way that makes clear what he thinks of the measure and what the measure does. The speech to which I refer was made a few days ago in the city of Washington, being an address to that great body of business men who have been assembled here in convention as the representatives of the commerce of the United States, the organization known as the United States Chamber of Commerce. Secretary Hoover first addressed the convention, and I am glad to say that the speech which I am going to read is given equal treatment by the Evening Star, which I regard as a very fair paper, although I do not agree with it politically. It is a very able newspaper.

The address I refer to was delivered by Mr. James R. Howard, president of the American Farm Bureau Federation of Chicago, Ill. Who is Mr. Howard? He is, as I am advised, a Republican in politics, but an honest, fair-minded man, and recognized as one of the highest authorities upon questions pertaining to agriculture in the United States. He is probably the most prominent man representing that great interest in the United States to-day. That is attested by the fact that this great organization selected him to address it upon the subject of agriculture, and his speech followed the opening address of Secretary of Commerce Hoover. Here is what the article said:

Dependence of American agriculture on the European market was strongly stressed by James R. Howard, president of the American Farm Bureau Federation of Chicago, Ill., who said that the farmer has a greater direct interest in European conditions at this time than has the merchant or the manufacturer or the banker. They all have other trade fields to which they can turn, he pointed out, but the farmer has none other.

Now follows a quotation from Mr. Howard's speech:

Europe is the sole customer for our agricultural surpluses, the disposition of which is vital to every American industry. While she is the farmer's customer, she is the manufacturer's competitor.

The point I wish Senators might get into their minds is that she, Europe, is the farmers' customer and practically their only customer, but she is the manufacturers' competitor.

South America, India, Africa, Australia, which are open to the industrial trade of the United States, are the competitors of the American farmer in the European markets.

You ask to put up a bar of protection here against the agricultural products of Africa, India, Australia, and South America. This great agricultural authority tells us that our agricultural exports to Europe have competition there. Last year they amounted to nearly $2,500,000,000. The four products, tobacco, cotton, pork, and wheat, amounted to $1,500,000,000. The total agricultural products exported and sold in Europe, which is practically our only market, amounted to $2,500,000,000, and now this great agricultural authority tells us that when our $2,500,000,000 worth of American agricultural products reach the European market they are sold there in competition with the products of South America, India, Australia, and Africa.

What do we gain by keeping out the small imports from those countries? In the last year all of them together did not amount to more than four or five hundred million dollars. We keep out the small imports from Canada and Cuba, but what do we gain by keeping those few products out of the American market when it is absolutely certain that $2,500,000,000 worth of our agricultural products are going to Europe and there meet the agricultural products of the other countries to which I have referred in direct competition?

What folly! What absolute insanity is that proposition for the American farmer with these heavy exports against the other countries which are his competitors when he gets over to Europe. Mr. Howard points all that out. Suppose you drive them out of this market. Suppose you do not let them bring in the few things which they send now. They will carry them to Europe. Every part of this world produces its agricultural

products in sufficient quantity except Europe. Europe is the agricultural market of the world. If you drive out these agricultural products which are now coming from those countries to our market, necessarily they will go to the European markets, and you merely increase our competition there.

Mr. POMERENE. Mr. President, will the Senator yield?

Mr. SIMMONS. I can not yield. I just declined to yield to the Senator on the other side of the Chamber, and I could not in courtesy yield to the Senator from Ohio.

Mr. POMERENE. Very well.

Mr. SIMMONS. Our manufacturers are competitors with the manufacturers of Europe. They are competitors with the people who send imports over here which pay for our exports of agricultural products. It is desired now by the Republicans to raise the wall so high on those manufactured products which we have to take in exchange for our agricultural products—or else we can not sell them at all—that those manufactured products can not come in. We have $2,500,000,000 worth of agricultural products competing with the world, and you propose to exclude from our market the only coin in which Europe can pay us for those agricultural products. Of course, you leave the farmers absolutely helpless or worse than that. When the farmer sells his products over there he must take in exchange their manufactured goods which compete with our manufactures over here. He must take them in exchange. There is no other way for him to get paid, and yet, after forcing him to sell in this competing market of the world in competition with the products of all the world, you say that the things which he accepts in exchange, for which he trades his agricultural products, shall not come here, although they are his and he has bought them and paid for them with his own goods, that they shall not come into this country except with a load of tax upon them. He can not trade, as the Senator from Ohio [Mr. POMERENE] suggests sotto voce, even for house paints. It is too absurd, too absurd.

But let me proceed. Mr. Howard said further:

> Europe now being a debtor she will not be so much interested in furnishing a market for United States products, but rather will be more concerned in finding an advantageous market for the products of that Continent.

What does that mean, Mr. President? That means that Europe, if she finds that our tariff is too high on her manufactured goods with which she wants to pay for our agricultural products and raw materials will simply stop buying those products from us and buy them from Australia, Canada, India, and South America, where there are no such barriers imposed upon her.

> Naturally Europe will seek the cheapest possible markets in which to buy food products. This means that the American farmer, under high-wage conditions and with a soil in many sections of the country demanding artificial fertilization, must meet competition of the virgin soils of South America and Australia and crops grown by coolie labor. This is made more serious because we have virtually closed our doors to European immigration and those countries are relieving their congestion by sending their surplus populations to agricultural competing nations. Thus the Argentine, Australia, and western Canada can be depended upon for an increased agricultural production because of their influx of labor from Europe. This also means that the American farmer will have a keener competition in the world's market.
>
> Not only must this competition be met, but sooner or later Russia's experiment in sovietism will end and her reconstruction begin. That reconstruction will be agricultural. It is authentatively stated that the various negotiations for loans to the Russians by the Allies have been contingent upon the rehabilitation of her agriculture ahead of her other industries in order that England might have cheaper cereals at home and enjoy the industrial market abroad.
>
> AIDS TO AMERICAN AGRICULTURE.
>
> There are three things which, if accomplished in Europe, would assist greatly American agriculture, viz: That balancing of European budgets, the final settling of German reparations and the stabilization of exchange.

Then he adds:

> Three steps are essential in securing this stabilization of exchange.
>
> First, the drafts must be redeemable in some commodity of fairly stable value, preferably gold.
>
> Second—

And this I wish particularly to call to the attention of Senators—

> Second, the imports and exports of the various countries must reasonably balance each other; for only in this way can drafts continue to be redeemable in gold.
>
> Third, each country must be at work producing goods for sale and to use in making purchases of other countries; for only in this way can exports and imports hope to reasonably balance each other. These three points tie into each other, but the most important of the three is the last, namely, production.
>
> ECONOMIC BALANCE NEEDED.
>
> The greatest fundamental need is to have exports and imports of goods and services between nations more nearly in balance. This in turn can be accomplished only by resumption of business activities in countries now disorganized in order that they may have more goods to sell and with which to make purchases of our products.

Mr. President, I shall not read further from this article, but I will ask that the remainder of it, which I have not read, which is contained in this newspaper be incorporated in my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

> Production is not only the antithesis of bankruptcy, it is the cure for it. It is the only means by which we progress in material affairs or advance in our standards of living. Half our own domestic trouble lies in lack of production. If the merchant, the miner, the manufacturer, the railroad man (and I am not singling out either capital or labor) had produced as fully during the past two years as the farmer, we would not have become economically unbalanced.
>
> As a Nation we need to learn that idleness is more fatal physically, socially, and morally than is overwork. I can conceive of no better solvent for the present world distress than work—and Europe can only be rehabilitated through the medium of well directed productive energy. It is a part of our obligation to furnish her the opportunity through production effort to solve her own economic difficulties.

Mr. SIMMONS. Mr. President, in this connection I wish to read something from Mr. Lasker. Mr. Lasker also has been talking to the bankers. The article which I shall now read is taken from the Baltimore Sun:

> The eloquence of Chairman Lasker of the Shipping Board cast a spell over the Chamber of Commerce of the United States recently. He pictured the future of American shipping, going to all corners of the world, laden with cargoes incoming and outgoing. He was specific, indeed, in detailing these cargoes, particularly the cargoes coming to American shores from abroad—possibly too specific for the peace of mind of some of his administration associates. This is what he said:
>
> "We must obtain manganese"—

That is the commodity on which it is proposed to place a duty—

> "for our steel mills from Russia and South America; our automobile tire industry must obtain crude rubber from Brazil; our tin-plate manufacturers must import their tin from the Malay Straits and from Bolivia; our silk factories must get their raw product from China and Japan; our manufacturers of twines, canvas, linens, and laces must get their flax from Russia and Belgium. We must also import large quantities of coconut oil"—

One of the very commodities which this bill wishes to keep out, Mr. President—

> And other vegetable oils—

Those are anathema to the pending tariff bill—

> from the Dutch East Indies, sugar from Cuba, and rice from the Far East.

Those are the commodities Mr. Lasker desires the ships to transport, and those are among the chief commodities which the framers of this bill do not want to come here, but if its proponents can keep them from coming here they will deal a death blow to agriculture and to the industrial interests of the country. Such is the logic of Mr. Lasker's contention.

This great newspaper, The Sun, continues:

> Mr. Lasker's imaginative rhetoric was written in blissful ignorance of what Congress is doing. Does he not know that the Senate is trying to write a high duty on manganese? That North Dakota is demanding, and probably will get, an almost prohibitive tariff on flax? As for coconut and vegetable oils, about which not much is popularly known but which are extremely important, are not the dairy and the farming interests demanding a rate of duty which may eliminate these imports from the Dutch East Indies? As for Cuban sugar, REED SMOOT and his votaries are doing their best to keep down imports and raise the domestic price to a point as high as the traffic will bear.
>
> The list might be continued indefinitely. As Senator HARRISON remarks, the free list in the McCumber bill is a fearsome and wonderful thing.

I will not read the remainder of the article, but I will ask that it be incorporated in my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

> It reads almost like burlesque. It is not freakish, however, to a Congress that proposes simultaneously to pass a tariff measure which is the highest ever projected in this country and a bill to subsidize and stimulate American shipping for the carrying of a foreign commerce, which the tariff will make virtually impossible. Mr. Lasker in time may be able to see the point. Probably he would now if he were not so exclusively engaged in consulting the oracle about shipping. It is possible, also, that the dominating powers in the administration may see the point and advocate a change in policy. It is bad enough to put through a tariff bill that is economic folly. It is infinitely worse to put it in juxtaposition to a ship subsidy bill which it is bound to nullify in every hope held out for it.

Mr. SIMMONS. Mr. President, I wish to put in the RECORD an article written to the News and Observer, a paper published in my State, by Mr. Bion H. Butler. For 10 years Mr. Bion H. Butler has been regarded as the foremost writer upon economics and financial questions in the State of North Carolina. He has spent his life studying these great questions, and he writes constantly for the newspapers and some of the magazines with respect to them, and his writings are always worthy of reading, because he is fair, he is analytical, he is logical, he is truthful, and he has not the bias of partisan politics. I think he is a northern man, who came to my State many years ago and settled in that great northern colony around Pinehurst and Southern Pines in my State. He has won the respect and the admiration and the esteem of all North Carolina, a large

part of the South, for his character, his judgment, and his ability as a student of the subjects about which he writes.

His article is a very illuminating one. I wish I had time to read it, but I will put it in the RECORD, because I think it will appeal to our Republican friends representing the agricultural bloc. The Butler article discusses the agricultural situation and shows how utterly helpless agriculture will be if this bill shall pass and how absolutely certain it is that this bill will kill the only market in the world for our great agricultural surpluses. On the other hand Mr. Butler shows, just as Mr. Howard has shown, that if we escape competition with the agricultural countries of the world in our own market to a limited extent we will meet that same competition under adverse circumstances and to a very much larger extent in the sale of our two and a half billion dollars of agricultural exports.

The PRESIDING OFFICER. Without objection, the article referred to by the Senator from North Carolina will be printed in the RECORD.

The article referred to is as follows:

HIGH TARIFF NOT FOR THE FARMER—LIMITS FOREIGN MARKET FOR THE PRODUCTS WHICH HE RAISES.

(By Bion H. Butler.)

With the discussion of tariff, and the bunk that is handed out to the farmer about the benefits of that species of plunder called protection it is interesting to look over the March Bulletin from the Department of Agriculture which devotes some time to statistics of imports and exports.

To start with let it be known that agricultural exports for 1921, the year for which the statistics are presented, amount to over 50 per cent of the exports of the Nation. The farm is the one big factor of the country's world trade, yet the farm is the goat in every case where big business tries to present a case. Wheat products exported last year totaled in value $551,000,000, cotton came next with $534,000,000, pork products $246,000,000, and leaf tobacco with $205,000,000. These four farm crops were exported last year to the extent of more than a billion and a half dollars. This is more than a third of the total value of all exports of every kind. Cotton and leaf tobacco constitute over a sixth of the entire exports of this country.

LOOK AT THE FACTS.

Now the tariff apostles profess that they are going to protect the farmer by levying a tariff on the things he makes so the cheap labor of the Old World will not compete with him. It is amusing to look at some of the competition of the foreign producer. Last year this country imported 51,000,000 pounds of tobacco But it exported 10 pounds for every pound imported. If we are to be protected at home against the imports of foreign tobacco what are we to do in the markets of the Old World, where we sell ten times as much as the foreign producers sell in our market? America is not a tobacco-buying market. It is a tobacco-selling market. We buy a little of these types that go into fancy cigars and cigarettes, but the great movement of tobacco is from this country, and a tariff of a million dollars a pound would not make our home market any better for the tobacco grower because he supplies his home market and has half a billion pounds on his hands after he has supplied his home market, and he must market that abroad. It is that half billion pounds that goes abroad that makes the price of his tobacco, for unless that surplus sells at a price that will move it out of this country it would stay here to smash the market to absolutely nothing. Yet the high priests of tariff tell the farmers they will put a tariff on tobacco that will give the tobacco farmer his share of the tariff plunder.

When it comes to cotton, the situation is identical. We must find abroad a market for half of our cotton crop. If we do not, we have such a surplus that the price of cotton is wiped out. Suppose we put a tariff on foreign cotton to prevent it from coming into the United States? Where would that widen the market for the American cotton farmer? But if we really want to protect the American producer why not go at it right and forbid the importation of foreign cotton, foreign tobacco, foreign wheat, or anything else, and thus give the American market the complete field? But what good would that do? The farmer would still have on his hands just what he has now—a surplus of his crop that he must find a market for in the Old World, and all the tariffs and all the embargoes and all the artificial obstacles made can not change that situation. Unless the farmer has an outlet for his surplus he dies, and when the farm is wrecked the rest of the country will be walking closely behind.

EXPORTS FAR MORE THAN IMPORTS.

In the five years from 1910 to 1914 the average of farm exports of 21 leading products, as announced by the bulletin referred to, fell a little under $500,000,000 a year. Last year the imports of the same products ran a little above $500,000,000. In the same periods the exports were something less than $1,000,000 a year for the earlier years and almost $2,000,000 for last year. The farm exports have been doubling, but the farm imports have increased but moderately. The three big items of imports of agricultural products are, first of all, sugar, of which we import more than we make, the amount last year reaching almost 6,000,000,000 pounds. The next big item are hides and skins, amounting to 348,000,000 pounds, and almost as many pounds of wool. We imported much more wool than we raised, and nearly half as many hides and skins. Aside from these items our agricultural imports were about negligible. We had to import these items because this country does not make them in sufficient amount, as the imports show.

And on this exhibit the farmer is to have a tariff to protect him. Incidentally he will have to pay a tariff on all the things that come back from abroad in payment for the things he sells, and that is done to make these things high so we will not buy foreign goods, which is absolutely necessary if the farmer is to sell abroad.

What the North Carolinian gets out of a protective tariff is exactly what the lamb gets at the banquet when he goes to dinner with the wolf.

Mr. SIMMONS. Mr. President, I want to refer briefly to an article which appeared in the New York Herald a few days ago. I am not going to read the article, but am merely going to summarize a few of the things of which it treats. The article is written by a man whom I regard as one of the greatest reportorial writers in America to-day; indeed, Mr. President, he is entitled to rank with the greatest newspaper reporters of the world. I refer to Mr. Louis Seibold, who is now Washington correspondent of the New York Herald. The article appeared in the issue of May 17. I regret to say that I have mislaid the article since I made the memorandum I have before me, and therefore I can only give the memorandum, but I will have search made for the article, and if I can find it I will ask permission that it be put in the RECORD.

The PRESIDING OFFICER. Without objection, permission is granted.

Mr. SIMMONS. The article contains a most illuminating discussion of the present situation in the Senate. The writer discusses every angle of that situation and the tariff situation.

He declares in substance that the Fordney-McCumber bill has developed insurgency in the Senate. He declares that no scientific plan is observable in the framing of the bill. He declares that the attitude of the press of the country is such that the friends of the bill in the Senate should heed their admonitions; that the resentment against the bill among the Republicans is growing, and refers to the countrywide protests which he says the authors of the bill have ignored, and suggests that strong sentiment is developing for the withdrawal of the bill. I commend to a careful reading the words of this great newspaper correspondent published by the New York Herald, a great Republican newspaper.

Mr. President, I find here only a part of the Seibold article, but I shall offer the part of it I have located. It is as follows:

FORDNEY-MCCUMBER TARIFF DEVELOPING SENATE INSURGENCY—RESENTMENT GROWS AGAINST BILL TRACED TO AMBITIOUS FRAMERS—PERIL OF PARTY BREAK—REPUBLICAN SENATORS, UNINFLUENCED BY FARM BLOC, DEMAND DELAY—FEAR ELECTION EFFECT—WANT MEASURE CONSTRUCTED ON SOUND LINES BY COMMITTEE OF EXPERTS.

(By Louis Seibold. Special dispatch to the New York Herald.)

NEW YORK HERALD BUREAU,
Washington, D. C., May 16, 1922.

The attitude of many Republican Senators toward the Fordney-McCumber tariff bill, now being dissected in the upper House, brings into mind two famous criticisms of the last tariff measure put through Congress by their party.

When the Payne-Aldrich tariff measure was originally passed in 1909 the late J. P. Dolliver, a Senator from Iowa and one of the pioneers in the successful insurgent movement in the Republican Party, made this observation:

"This year has witnessed the perpetration of the two greatest fakes of the century—the discovery of the North Pole by Doctor Cook and the Payne-Aldrich tariff bill."

Four years later, when the same measure was being perfected, Albert Jeremiah Beveridge, then a Senator from Indiana (and now again a candidate), characterized it as the work of the "Taft-Aldrich-Lodge-Root combine and rank with injustices."

Mr. Beverdige's criticism was recalled by some Democratic Senators to-day in discussing the inadequacies of the pending bill pointed out by their Republican associates who are not affiliated with the agricultural bloc.

DESCRIBED AS MONSTROSITY.

Republican Senators who do not acknowledge the right of the "dirt farmer" element in the national legislature to dictate tariff legislation describe the Fordney-McCumber measure as a "monstrosity." Most of their Democratic colleagues who concur in this estimate of the bill express the hope that the Republican majority will pass it, as there will be a revulsion of popular opinion against it quite as decisive as that which followed enactment of the Payne-Aldrich tariff bill and eventually split the Republican Party wide open.

Republican Senators who concede certain reasonable privileges to the agricultural interests frequently have characterized the Fordney-McCumber measure as "amateurish, ill considered, and unnecessary" in the present coudition of business both at home and abroad. They say the same thing about the bonus bill, which originated in identic quarters, and, like the tariff measure, was framed with the idea that the American farmer is demanding a bill of which eventually he will become the victim.

There appears to be a genuine demand among many Republicans that the tariff be treated as a business and not a political proposition and that it shall provide a reasonable amount of protection to all the elements of the population instead of only one. Speeches by Republican as well as Democratic Senators have reflected a profound conviction that both parties should cooperate to authorize the Tariff Commission to work out a system better adapted to the economic needs of the country than is provided by the pending measure.

SCIENTIFIC POLICY NOT OBSERVED.

This policy was not observed by the Fordney and McCumber committees, although a provision was incorporated giving to the President authority to elevate or deflate rates on recommendation of the Tariff Commission. This provision is recognized as a sop to the advocates of a genuine tariff system, and according to both Republican and Democratic critics, will prove unworkable, as well as exposing the decisions of the commission to political influences.

In their zeal to please certain agricultural interests of the country the Fordney and McCumber committees are declared by both Republican and Democratic Members of the two Houses to have ignored every other consideration. The charge was made in the Ways and Means and Senate Finance Committees that the chief influences which dictated the construction of the pending tariff bill were of a purely personal character.

Schedules were framed, it is declared, for the sole purpose of winning members of the two committees to support the ambition of Messrs. Fordney and McCumber to report the measure to their respective Houses. That is the generally accepted version of the manner in which the bill was passed by the House and sent to the Senate.

Mr. President, there was much more that I wanted to say about this matter, but, having consumed twice the time that I expected to consume, I shall not trespass further upon the patience of the Senate at this time.

Mr. McCUMBER. Mr. President, about every day or two during the discussion of the pending bill, so long as Senators on the other side desire to kill time and have no argument to make upon the bill itself concerning the real facts that have governed the making of rates in any schedule, we shall, of course, be compelled to listen to hours and hours and hours of reading of editorials from newspapers which represent the importing interests of the country. I know of no way to avoid that situation. When the Senator from North Carolina began his long discussion this afternoon I thought that I would take a few minutes to answer some of the statements suggested by these newspapers; but, Mr. President, they have given no arguments.

I do not desire to enter into a daily contest with the great metropolitan newspapers of the United States which get their advertising from importers and who are necessarily influenced from the source of their supply; but I again invite them to give us some real facts to show that the duty upon any item in this bill is too high; that any duty goes beyond proper and reasonable protection. I do not care what article may be selected—they may take hosiery; they may take gloves; they may take knitted fabrics; they may take anything else. I should like them to specify the article, to ascertain the cost of production at home, and what would be a reasonable profit to the manufacturer of the article, and then to ascertain what it costs to bring the foreign article into the United States, and make a comparison of the cost of production in this country and the cost of the foreign article which competes with it landed at New York, or at any other place in the United States; and then let the American people determine what is a reasonable protection.

If they say that the cost of production is too high, I invite them to show what element in that cost ought to be reduced. I invite them to come out squarely and say that labor's wages are too high, if they think they are too high. I ask them to come out and say that the cost of the material is excessive, if it be true. I ask them to come out and show as definitely and as clearly as possible the profit that is being made by the American manufacturer, and show that it is an excessive profit. It is only by that method that we can determine what is a proper rate of duty.

I agree with one thing that these papers have said. They have declared, and often declared, that this is not just the right time to make a tariff bill. I made the equivalent of that statement in opening the discussion upon this subject, that it is the most difficult time in the history of the United States to formulate tariff legislation; but I coupled that assertion with the assertion, equally positive, that of all times in the history of the United States this is the time when we most need a protective tariff.

Abuse from the press of the country is not argument. The Committee on Finance will welcome the presentation to it of any evidential fact to show that it has made a single error upon a single item, and it will correct that error if it finds that it has made one.

Mr. President, there is another reason why this is not the best time in the world to pass a tariff law. Possibly it might have been better to delay this bill in one respect, because, had we delayed it long enough, the virus of a Democratic tariff would have taken effect upon the American people to such an extent that they would be immune to the poison that is being circulated by these representatives of the importing interests.

Mr. President, I realize that often in this debate there will be only a few Senators present. Senators on both sides understand why this is so. No matter what honeyed words may be used, no matter how often the declaration may be made that there is no attempt to delay action upon this bill, every man in the Senate knows that there is that desire. Every man in the Senate knows that when you discuss a little item hour after hour, day after day, repeating the same argument over and over and over again, you are not acting in good faith. The country knows it. Senators know that it is a time-killing process, and naturally they go out into the cloakrooms or into the Marble Room, telephone for their stenographers, and proceed to dictate answers to their letters; and that will continue just as long as you continue this time-killing process.

Mr. President, in all the years that I have been in the Senate there have been on this side of the Chamber those who have held diverging views as to what constitutes a proper protective tariff, and there always will be; and the same thing happens upon the other side of the Chamber. The only difference between the two sides is this: We have stood manfully by what we considered a protective policy; but every time we find a Senator on this side of the Chamber who disagrees with the majority on what constitutes a protective policy, we see Members upon the other side of the Chamber come crawling and fawning and flattering and with the last rose of summer kneeling at the feet of some Senator whom they think they can bring over to their view of the case. Mr. President, I have seen that flattering attitude year after year, but with all of the flattery and with all of the fawning I have never yet seen one of them make a success. You may flirt, and maybe have some Members now and then that will flirt with you, but you do not bring them over. They go back to their constituents, and they run as Republicans and not as Democrats. Whenever you have succeeded—only once or twice that I have known of—in bringing a Republican first to being what is called a Progressive, and then a sort of a Socialist, and then a Democrat, he has generally been repudiated both by the Democrats and by the Republicans, and he ends up ordinarily as an anarchist.

Now, Mr. President, I think it is time that we get at our bill again. That is the reason why I am not going to answer these editorials. Some day I am going to take the time to make a short reply to them; but after we have spent the entire day, and have accomplished nothing, it seems to me it is time to get back to a vote.

Mr. GOODING. Mr. President, the editorials that have been read in the newspapers this afternoon, and those that we heard on former occasions, are but very little different from the editorials that appeared when the emergency tariff bill was under consideration. It is quite evident to my mind that the New York Journal of Commerce and a few others of the great daily papers in the large cities are not going to permit, if they can help it, a protective tariff bill to be passed that gives protection to the American farmer.

That is the only reason, in my judgment—one of the reasons, at least—why these great daily papers, that have advocated the principle of protection in the past, are now opposing it—because protection has been properly distributed all over the country; because the farmer for the first time in the history of the country has been given proper protection in any tariff bill, and we find them all arrayed against the farmer. The condition is no different now than it was when the emergency tariff bill was passed; and I want to read just a short paragraph from my remarks of May 10, 1921, when the emergency tariff bill was before the Senate, showing that I had the same view of the conditions at that time:

> Mr. President, I am not unmindful that there is a new force behind the Democratic Party to-day that is fighting against protection for the farmer and the live-stock grower. I refer to the international bankers of the country, who have had on a propaganda ever since the emergency tariff bill was introduced opposing the measure and emphasizing the importance of our foreign trade, and it must be admitted, Mr. President, that the international bankers of the country are a mighty force to-day, for they represent billions, not millions, and they have been able to fill the newspapers of the whole country with their opposition to the emergency tariff bill, and at the same time have accentuated the importance of our foreign trade. It is easy to understand why the leaders of the Democratic Party are fighting so bitterly against protection to the agricultural and live-stock growers at this time, for they are receiving much encouragement from the international bankers of the country, who they know will be a mighty factor in the coming campaign in the interests of free trade on farm and range products.

That is practically all there is in this fight to-day. The international bankers who control these great papers in our large cities to a great extent were fighting the emergency tariff bill, and are fighting this bill to-day, because the American farmer is to be given proper protection for the first time in the history of this great Government of ours.

Mr. President, I said at that time that I should be very much alarmed over the future of the great principle of protection if there were not a shifting of sentiment toward protection. I called the attention of the Senate at that time to an organization known as the Southern Tariff Association, who were becoming a mighty factor in the South in educating the people down there in the interest of protection; and I want to say that they are a mighty factor to-day in all the Southern States, and they are accomplishing great things. I want to send to the desk and have read three articles that I find in the Manufacturers' Record—one an editorial from the Manufacturers' Record itself, another an editorial quoted from the Atlanta Constitution, and one from the Fort Worth, Tex., Star-Telegram. I ask that the three articles be read in my time.

The PRESIDING OFFICER (Mr. MOSES in the chair). Is there objection? The Chair hears none, and the Secretary will read as requested.

The reading clerk read as follows:

PROTECTIVE TARIFF SENTIMENT AS EXPRESSED BY SOUTHERN FREE-TRADE PAPERS.

[From the Manufacturers Record, May 18, 1922.]

Believing absolutely in the value of a protective tariff for the country at large, the Manufacturers Record has for 40 years been advocating protection for protection's sake. At the same time, it has always recognized that the South was being stabbed in the house of its own friends by its fight against a protective tariff even when a protective tariff was absolutely certain for other sections.

The Democratic politicians have been perfectly willing in times past to fight against protection for the South's raw materials, even when they knew this was putting a club in the hands of the northern and western manufacturers to beat down the South with free raw materials produced by the South. The East and West always very properly demanded a protective tariff on the finished product. They have been unwise, however, in that, while demanding a protective tariff for their own products, they have often sought free trade on their raw materials and the South has thus been made to suffer whether Democrats or Republicans were in power.

Recently the Manufacturers Record called upon the politicians of the South to recognize the fact that a protective tariff bill will be passed by Congress and that if they continued the policy of fighting all protection it would simply mean that the South would again be slaughtered while the rest of the country would have the benefit of protection. We are glad to see that two of the leading papers of the South, following that line of thought, are urging upon the Democrats in Congress that as a tariff bill is going to be passed they do their utmost to see that the South gets its share of a protective tariff.

On this point the views expressed by the Atlanta Constitution and the Fort Worth (Tex.) Star and Telegram are indicative of an awakening of sentiment on the part of southern newspapers that this section shall no longer be sacrificed merely for a free-trade fetish of the past. We commend to the politicians and to the people of the South the following articles from these two leading papers:

TARIFF AND THE SOUTH.

[Atlanta Constitution.]

In view of the obvious certainty that a high tariff bill will be passed by the Republican Congress and put into operation either before or soon after the 1922 elections, despite all that the Democrats might be able to do to prevent it, let us hope that the application of its "protection" will be general to the industries of the whole country, and that it will not be, in effect, a sectional measure.

As the Fort Worth Star-Telegram truthfully said in a recent editorial, which we reproduce elsewhere upon this page, "the big fact that faces us, and which can not be dodged, is that the present Congress is going to pass a protective tariff bill"; and the Texas newspaper takes the very logical position that if, in their zeal to promote the theory of free trade, the Democratic minority oppose the measure to the extent of excluding strictly southern products and southern industries from its protective influence the South will suffer materially and no possible good result will have been attained.

"Democratic Representatives in Congress," says the Star-Telegram, "who come back home and tell their constituents that they 'kept the faith of the fathers' and voted against that bill will give little consolation to the producers of the South if the bill is a one-sided and sectional measure, giving the East a big advantage and placing the South at a decided disadvantage."

From the standpoint of the Democratic South and southern welfare, this is expressive of an altogether reasonable and common-sense attitude toward the pending tariff bill.

Our Texas contemporary goes on to say that while the Democratic Members of the House and Senate may be, and doubtless are, "powerless to prevent" the enactment of the tariff bill, "they are not powerless to obtain protection for the products of Texas and the South" on a parity with the measure of protection to be thrown around the products of the North, East, and West, and that "if the bill is a one-sided affair the Democratic Members who 'keep their records straight' will be directly responsible for it."

The point of the whole matter, from the standpoint of southern prosperity and common sense, is that while the Democratic South is traditionally opposed to the principle of so-called "protection," there is nothing to be gained by stubborn opposition to a tariff bill, the enactment of which, in one form or another, is a forgone conclusion and a certainty.

On the other hand, much may be gained in the way of an equitable distribution of the promised "protection" by yielding to the inevitable and making the best of it.

That is to say, so long as enactment of an undemocratic high protective tariff bill apparently is inevitable the industries of the South should be placed on an even footing with those of the rest of the country in the enjoyment of the protection for which it provides.

If the bill is going to pass anyhow, why should the South be discriminated against and deprived of whatever special benefits the industries of the country may derive from it?

Why should southern industries be made to suffer discrimination simply because southern Congressmen and Senators are desirous of keeping their records straight?

Winfield Scott Hancock, Democratic nominee for the Presidency in 1880, said in one of the campaign speeches that the tariff was a "local issue," or words to that effect.

That statement was ridiculed from coast to coast; but General Hancock was right—the tariff is "local," according to the particular products and industries of a given locality.

And in the same way and to a proportionately greater extent it may be made sectional.

It is to be hoped, therefore, that our Representatives in Congress will not let their opposition to the protective-tariff principle drive them to such an extreme as to alienate the South from the provisions of the bill that is to be enacted by the Republican majority despite Democratic opposition to it in principle.

THE REAL TARIFF QUESTION.

[From the Fort Worth (Tex.), Star-Telegram.]

The question which is being raised by the Southern Tariff Conference is an economic question and not in any sense a political or partisan one. It is not even a question of protection or free trade. It does not foreshadow a shift in Texas to the Republican column, it does not even mean a growth of "protection sentiment" in Texas or in the South. It is simply the very practical question of whether the products of other sections of the country are to receive the benefits of a protective tariff and the products of Texas and the South be placed at a decided disadvantage by being denied such protection.

The big fact that faces us, and which can not be dodged, is that the present Congress is going to pass a protective tariff bill. Democratic Representatives in Congress who come back home and tell their constituents that they "kept the faith of the fathers" and voted against that bill will give little consolation to the producers of the South and of Texas if the bill is a one-sided and sectional measure, giving the East a big advantage and placing Texas and the South at a decided disadvantage. The bill is going to be passed. The Democratic Members who are going to vote against it will admit that right now. They will say that they are "powerless to prevent it." But they are not powerless to obtain protection for the products of Texas and the South. If the bill is a one-sided affair the Democratic Members who "keep their records straight" will be directly responsible for it.

No academic discussion of the question of protection or free trade fits this situation. No partisan denunciation of the measure as a Republican measure fits it. If the partisan interests of the Democratic Party require that Democrats shall have nothing to do with the measure, which we do not admit by any means, then the question which is before the Democrats in Congress is simply whether they are willing to sacrifice the interests of the producers of the South on the altar of fancied party advantage. That kind of party advantage, even if it could be gained, would benefit nobody but officeholders and politicians, for it is related alone to political campaign and the holding of office and not at all to the economic interests of the South.

The politicians are in control of the party machinery and apparently the Representatives in Congress are obeying the party without reference to the interest of their constituents. However, the right of petition has not been abolished, and it is to that the Southern Tariff Conference has decided to appeal. It has made little headway with the politicians. It is now turning to the people. If you believe that everything should be done to prevent the new tariff law from being a sectional and one-sided affair, if you believe that everything should be done to protect Texas and the South from the consequences of such a measure, then tell it to your Congressman. The bill is going to be passed. It is going to be passed and enforced by your Government, which is none the less your Government because it is controlled by Republicans. The question is, What kind of a bill do you want it to be? It is up to you.

Mr. GOODING. Mr. President, before this bill is passed petitions bearing more than 1,000,000 signatures will be presented in the Senate from southern States asking for proper protection to southern industries.

Again, I want to say that in my judgment when this tariff question is finally settled it will be settled by the South and West in favor of protection to agricultural interests and to the manufacturing interests, all the way around. The selfish interests of the East are never going to give proper protection to agriculture until they are forced to, and I shall welcome the day when the South and the West will join hands and come here to give the people a fair and an honest tariff measure, which will afford protection for every industry.

Mr. HEFLIN and Mr. LADD rose.

Mr. GOODING. I yield to the Senator from North Dakota.

The PRESIDING OFFICER. Does the Senator yield the floor?

Mr. GOODING. I yield to the Senator from North Dakota.

The PRESIDING OFFICER. If the Senator is yielding the floor, it will be the Chair's duty to recognize somebody.

Mr. GOODING. I yield the floor.

The PRESIDING OFFICER. Then the Chair recognizes the Senator from Alabama.

Mr. GOODING. I merely wanted to say this, in connection with my remarks, that the Senator from North Dakota has a letter from the South which he wishes to place in the RECORD, and if the Senator from Alabama will be kind enough to yield for that for a moment I am sure he will not be delayed.

Mr. HEFLIN. If it is not a very long letter——

Mr. GOODING. It is not a long letter.

Mr. HEFLIN. The Senator just wants it printed in the RECORD?

Mr. LADD. I am going to read just one paragraph, and ask to have the letter printed in the RECORD.

Mr. HEFLIN. Very well.

Mr. LADD. It has been stated here several times on the floor that the tariff furnishes no protection for the farmer. I have received a letter from the United Peanut Associations of America, which shows what the protective tariff has done for them. I read from the letter:

The emergency bill saved the industry; it raised the price to the farmer for Spanish peanuts (variety grown in the far South) from $28 per ton to $70; the price of peanut oil from 4½ cents to 10 cents per pound. At prices to-day the farmers of the South will raise peanuts, as they are on a fair competitive basis.

I ask that this letter be printed in the RECORD, together with the card attached to it.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE UNITED PEANUT ASSOCIATIONS OF AMERICA,
Suffolk, Va., May 16, 1922.

Hon. EDWIN F. LADD,
United States Senator, Washington, D. C.

DEAR SENATOR: It is a strange coincidence that the South must go to representatives from the North in quest of just and equitable legislation to protect and preserve their industries, but such is a fact; and with a brief statement, the peanut interests of the South wish to ask

your support of Senator GOODING's amendment to the Senate Finance Committee's report on the permanent tariff bill, in which a rate of 3 cents per pound is asked on peanuts in the shell and 4 cents on shelled peanuts; same rates as were incorporated in the bill as it came from the House of Representatives; also to ask your support of amendments Senator GOODING asks on vegetable oils—cottonseed, peanut oil, soya-bean oils, etc.

I am inclosing you a card which contains brief statement of capital invested in the peanut industry and, approximately, number of people engaged in the industry. This will give you a fair idea of the industry, and also please consider that the peanut industry is yet in its infancy. With proper protection this industry can and will increase to many times to-day's value.

Another feature for you to consider is that peanuts make up a cash crop, and is the only cash crop that can be produced in the far southern sections where the boll-weevil pest has made it impossible to raise cotton. You take away the protection afforded by the emergency bill and these farmers will be thrown into the pauper class and their communities made bankrupt.

The emergency bill saved the industry; it raised the price to the farmer for Spanish peanuts (variety grown in the far South) from $28 per ton to $70; the price of peanut oil from 4½ cents to 10 cents per pound. At prices to-day the farmers of the South will raise peanuts, as they are on a fair competitive basis.

Imports of peanuts and vegetable oils come from China and other Asiatic countries. Senator, our farmers can not live in huts. We must surround them with some comforts of civilization, and you know they can not support this great Government of ours and compete successfully in a free market with a competitor who lives in a hut and is content with a cupful of rice a day as food. The tremendous markets we have builded belong by rights first to our own people.

Be not confused by the opposition of southern Senators. The producers of peanuts—the farmers—want protection. The southern Senators from the peanut-producing States are putting party politics and their personal political doctrines ahead of the true and just interests of the peanut farmers of the South.

I will venture this assertion: That if the Republican majority in Congress will give the South a permanent tariff protection which will continue the blessings of the emergency tariff bill that this will put the southern voter to thinking, and when these people begin to think, something is certain to happen.

Help the industries of the South to enter into the same measure of prosperity as other sections, as we have the unfortunate condition of having representatives in the Senate who do not properly represent public sentiment on this question. Hence our only course to save our industries is by aid of representatives from other sections who have the broadness of vision to see beyond their own borders and are willing to help all of America alike. This is the thought that is behind us in writing you.

Yours very sincerely,

M. M. OSBORN,
Secretary United Peanut Associations of America.

Commercial statistics.

Value of farm lands devoted to the culture of peanuts, taking the United States Government estimates of 1920 acreage, valuing the land at $70 per acre as an average	$88,362,000
Value of special farm implements required for culture and harvesting peanuts, approximately	7,700,000
Value of equipment of peanut mills, shelling, cleaning, and crushing machinery, real estate, buildings, storage warehouses, etc	11,500,000
Capital invested in manufacturing establishments for manufacture of peanut pickers and other special farm implements	750,000
Total	108,312,000

People engaged in peanut industry.

Number of people employed in the mills, shelling, cleaning, and crushing establishments	10,500
Number of farmers (heads of families) estimated to be engaged in the production of peanuts in the United States	121,000
Total	131,500
Number of acres (estimated) in the South that is adaptable to the culture of peanuts and can thus be utilized if a market is available for the product	9,340,000

Mr. HEFLIN. Mr. President, I have listened to the speech of the chairman of the Finance Committee [Mr. MCCUMBER], and also to the speech of the junior Senator from Idaho [Mr. GOODING].

The farmer must not be deceived as to what is in this bill. It is easy for Senators to talk about what they would like to do and what they hope to do, but when we proceed with the consideration of this bill and act upon a provision, we then get the judgment of a majority of this body, and we know then exactly what was intended to be done by what was actually done.

I saw the Republican side of this Chamber vote to increase the tax upon arsenic, used for spraying and for other purposes by the farmers of the United States. Every farmer who uses it hereafter must pay more for it by reason of the tax that you put upon him in favor of those who sell arsenic. Is that protection for the American farmer?

There is a provision in this bill which taxes plant food, fertilizer, potash. You are going to increase the price of that to the farmer by levying a tax upon the stuff he must buy to produce the wherewith to feed his own family and the world. Is that protecting the American farmer?

Every farmer in the country, without a single exception, uses salt, and he uses it in abundance, for various purposes. I saw you last night by a large vote place a tax of 40 cents a sack upon salt. Then you stand up here and tell us that you are undertaking to protect the farmers of the United States. Would you have the farmer look pleasant while you tell him that you are preparing a sweet and soothing something for him, when in fact the dose that you have fixed for him is a concoction containing so much poison that he can not even taste the grain of sugar put in for the purpose of fooling him?

I am in favor of raising some of our revenue for the Government upon imports, and I favor a rate sufficient to render aid to an industry in this country which has to compete in our markets with a foreign industry. But I do not intend to sit silent and permit you to deceive the farmer and increase the tax on everything that he has to buy many times over, while you give him a little soothing sirup to keep him quiet while the tariff barons accomplish their dangerous deadly work.

Here is a bill with 4,000 items it in. The Senator from Nebraska [Mr. NORRIS] suggested to-day that both sides should from a nonpartisan standpoint write an honest tariff bill and put only the things in the bill that really deserve to be in it.

If that should be done, why, instead of having 4,000 items in the bill there would probably be less than 250. The bill that you have presented was intended to increase the profits and the fortunes of certain people at the expense and to the injury of the American people. Those who are influential and powerful politically and financially wrote into this bill just what they wanted. This bill can not be defended and common honesty demands that we condemn and denounce it.

You have a very dangerous provision in this bill, the one that the Senator from Georgia [Mr. WATSON] touched on in able and eloquent fashion day before yesterday. You have a provision in the bill that transfers from the legislative body to the President, to one man, the taxing power. You have written into this bill that by the stroke of his pen the President can increase the taxes 50 per cent. Who ever heard of such a monstrous thing in a free Government? It has been just a little while since our boys brought back that flag from where they had won victories on a battle field 3,000 miles from home, fighting for liberty and constitutional government. But they come back and find you in power, bartering away the constitutional rights of the Government and turning over the taxing power to the tariff barons—not satisfied with employing the taxing power to put profits in their pockets, but transferring that power when Congress is not in session to the President and providing that he may do it if they demand it when the Congress is not in session. Then you stand up and say that we ought to get out of the way, that we ought to sit silently here and permit you to roll this monstrous thing through this body. Can a man do that and be a patriot? Can he live up to the oath he took in the Senate when he came here and permit you to put something over on the people that he knows is monstrous, that he knows is oppressive, that he knows is wrong?

Mr. WATSON of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Georgia?

Mr. HEFLIN. I am glad to yield to my friend from Georgia.

Mr. WATSON of Georgia. I remind the Senator from Alabama that the estimate is that the bill will bring in a revenue of $300,000,000 a year to the Government. The most conservative estimate of what a tariff bill is worth to those whose business is protected from foreign competition by it is 5 to 1. Therefore this bill if enacted into law will be an annual bonus of $1,500,000,000 to the war profiteers, given to them in this Chamber, where the President came to take part in the discussion and to make a speech against the soldiers' bonus bill, which was killed in this Chamber by the very men who are giving this manufacturers' bonus of $1,500,000,000 a year.

Mr. HEFLIN. I thank the Senator from Georgia for his suggestion.

Mr. President, I believe that it will bring more than that into the pockets of the tariff barons of the United States. I believe that it will put $3,000,000,000 in the pockets of the tariff barons. Who will pay that money? Why, the masses of the American people will pay it. The consumer always pays the tax. Are you going to put this burden on a people already overburdened? Is the farmer to be deceived again?

Mr. POMERENE. Mr. President——

Mr. HEFLIN. I have finished, and I am glad to yield the floor to my good friend from Ohio.

Mr. POMERENE. Apropos of what the Senator has been saying with reference to the foreign markets for the farmers' products, perhaps a little information which I gathered a few days ago may be of interest.

At the present time there is a controversy between the Hollanders and the United States with respect to the shipment of

coal into the United States. The United States authorities are insisting upon certain regulations which are by no means pleasing to the Dutch of Holland. It has already succeeded in stirring up considerable irritation. One of those Hollanders who is here, a man in high authority, said with respect to those regulations: "The United States Government ought to remember that Holland is not required to buy her wheat or her meat in the United States, and if we are treated as the indications are the Government intends to treat us, we will buy our wheat in Argentina, and we will buy our meat in Argentina or Australia."

That is the situation. Now, let me apply the facts. Last year the wheat crop in Ohio was somewhat short. It amounted to 29,000,000 bushels, just about enough to feed our own people.

This year the Department of Agriculture reports that the crop will be 12,000,000 bushels in excess of what it was last year. That means about that much surplus of wheat for which we must find a market elsewhere. Our market is in Europe, the market that the farmer wants, the market of which the farm bloc here is trying to deprive the farmer under this legislation.

How are the farmers of Ohio going to be affected by a bill the purpose of which is to deprive our manufacturers and, whether it is the purpose or not, which will deprive our farmers of their market in just the way that I have indicated? It must be borne in mind that Europe already owes this country and our nationals about $18,000,000,000. Europe can not pay us in gold because she does not have it. Europe can not pay us in her depreciated currency because we will not take it. There must be some proper scheme of trade which is going to be reasonable and just to all parties concerned. If we are not going to do anything to encourage those markets, I submit that in the interest of the farmer we ought not to be attempting to deprive him of the market which he already possesses.

Mr. WALSH of Massachusetts. Mr. President, may we have the pending amendment stated?

The PRESIDING OFFICER. The pending amendment will be stated.

The READING CLERK. On page 30, line 14, in paragraph 84, thorium nitrate, thorium oxide, etc., the committee proposes to strike out "25" and insert "45," so as to read "45 per cent ad valorem."

Mr. SMOOT. In paragraph 84, page 30, line 14, I move to strike out the numerals "45" and to insert the numerals "40."

Mr. NORRIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. MCCORMICK in the chair). The Senator from Nebraska will state his inquiry.

Mr. NORRIS. I understood that the pending question was on the amendment proposed by the Senator from Ohio [Mr. WILLIS].

The PRESIDING OFFICER. That amendment has been passed over. The question is on the amendment offered by the Senator from Utah [Mr. SMOOT] to the committee amendment.

Mr. HITCHCOCK. Mr. President, it is cheerful to see that there is some recantation on the part of one member, at least, of the Committee on Finance, and I presume on the part of the committee itself. The present tariff rate upon this commodity is 15 per cent ad valorem, and I should like to hear some statement from the Senator from Utah, who now proposes to fix a duty of 40 per cent upon it, as to why the duty should be increased from 15 to 40 per cent.

While I am on my feet, I wish to refer to a statement made by the Senator from North Dakota a few moments ago. He said if it could be shown here upon the floor that any particular duty was excessive the committee would be glad to recognize the mistake and correct it. It is a most extraordinary theory upon which the Committee on Finance presents this case to the Senate. They attack a tariff which has been in force since 1913, and then they shift the burden of proof to this side of the Chamber.

It strikes me if an attempt is made to treble a rate which has been in existence for that length of time or to raise it in any particular the burden of proof ought to be upon the Committee on Finance to show that the change is necessary. But here in one case after another a proposed increase is presented to the Senate and not a word is said in justification of such increase. In this case the Senator from Utah by amendment proposes to increase the present rate on this article, which goes largely into the manufacture of gas mantles, from 15 per cent to 40 per cent, and I should like to hear from him some justification for the proposed increase.

Mr. SMOOT. Mr. President, if the Senator from Nebraska will look at the report of the Tariff Commission he will find that the imports were a little over 25 per cent of the production in the United States, and from the Reynolds report he will find as to thorium nitrate—speaking now of the commercial thorium nitrate—that the foreign value in the United States currency is $2.23; that the selling price of the foreign article in the United States is $2.72 and the selling price of the domestic article reported comparable is $3.50.

Mr. President, the rate of duty in the act of 1909 on this article was 40 per cent and the rate of the duty in the existing law is 25 per cent. If the Reynolds report is correct, 40 per cent will not be sufficient to cover the difference in price between the foreign and domestic product; but I think that there will be a change not only in the foreign valuation but in the American valuation as well.

In 1909, with a 40 per cent rate, with conditions entirely settled, there were importations of this article which were fairly competitive with the commodity made in the United States. I think the ingredients which enter into this commodity being dutiable that 40 per cent is not an undue rate of protection under the conditions as they to-day exist.

I have a late report from the Commerce Department as to the wages paid in this very industry. I do not know that it would make any difference if I should call the matter to the attention of the Senator, but I wish to assure him that this particular item of thorium nitrate, being made from thorium itself, and the process being a rather difficult one and involving considerable labor, the proposed duty is not excessive.

I thought, in the first instance, that 40 per cent was ample, but the committee thought otherwise, and, under the Reynolds report, when the bill was reported to the Senate the rate was fixed at 45 per cent. Since then, however, in view of existing conditions, the committee thought that the rate of 40 per cent which was originally proposed was the correct rate. Therefore I have made the motion to fix the rate at 40 per cent.

Mr. HITCHCOCK. Mr. President, the Senator from Utah referred to the selling price of the article in the United States as an element in making up the duty.

Mr. SMOOT. I referred both to the American selling price and to the foreign selling price of the article in the United States and likewise gave the invoice price. Taking the invoice price of $2.23, we would have to have a duty of about 60 per cent.

Mr. HITCHCOCK. What is the selling price in the United States?

Mr. SMOOT. It is $3.50.

Mr. HITCHCOCK. What proof is there that that is a fair price?

Mr. SMOOT. The fact that the article has to compete with the foreign article here on a basis of $2.23.

Mr. HITCHCOCK. But what reason has the Senator to believe that $3.50 is a fair price for the product?

Mr. SMOOT. The pre-war price was a little over $3.

Mr. HITCHCOCK. Not according to my figures.

Mr. SMOOT. That was the price according to the report of the Tariff Commission.

Mr. HITCHCOCK. The imports in 1914 were 147,885 pounds and the price then of thorium nitrate was $2.30 a pound.

Mr. SMOOT. I will go down the list, beginning with 1914. In 1914 the price was $3.25; in 1915 it was $4.25; in 1916 it was $5.85; in 1917 it was $8; in 1918 it was $8; in 1919 it was $3.75.

Mr. HITCHCOCK. The Senator from Utah is now reading the American selling price?

Mr. SMOOT. No; I am not reading the American selling price; that is the estimated imported price of thorium in the United States. If the Senator will take the Reynolds report, he will find in the remarks following thorium these words:

Last domestic sale, October, 1920. Manufacture discontinued on account of foreign competition.

That was in 1920, and that was the last domestic sale made here.

Mr. HITCHCOCK. In the United States?

Mr. SMOOT. In the United States. If the Senator will turn to the tariff hearings, he will find stated there the following:

The present market price of thorium nitrate made in the United States is $3.75 per pound, which equals $8.25 per kilo, and which price represents a profit to the American manufacturers of about 20 per cent on the selling price. This American price of $3.75 per pound represents a decrease in selling price over the last five years of over 53 per cent and represents an increase over the importer's selling price of 1914, which was then $3.30 per pound, or less than 14 per cent.

Mr. HITCHCOCK. What is the consumption in the United States?

Mr. SMOOT. In 1913 it was approximately 149,000 pounds; in 1914, 156,000 pounds; in 1915, 210,000 pounds—I am giving the round figures.

Mr. HITCHCOCK. So that the consumption is approximately 200,000 pounds?

Mr. SMOOT. About that.

Mr. HITCHCOCK. And yet the imports from abroad are given in the report as being 35,406 pounds for 1920.

Mr. SMOOT. And for the first nine months of 1921 they were at the rate of 57,000 pounds.

Mr. HITCHCOCK. For the first nine months of 1921 the imports were 44,000 pounds.

Mr. SMOOT. That is for nine months, and that would be at the rate of 57,000 pounds a year, or over 25 per cent of the domestic production.

Mr. HITCHCOCK. In other words, the latest report shows that we are making 75 per cent of the product consumed in this country.

Mr. SMOOT. Not the latest.

Mr. HITCHCOCK. The latest I have been able to get hold of for 1921.

Mr. SMOOT. But the imports are increasing and will continue to increase if the Reynolds report is to be relied upon.

Mr. HITCHCOCK. But they do not approximate what they were before the war. They are less than one-third of what they were before the war.

Mr. SMOOT. I will tell the Senator what they were in pre-war years. In 1911 the imports were 118,201 pounds.

Mr. HITCHCOCK. And now we have only 44,000 pounds.

Mr. SMOOT. Certainly, because they have not gotten fairly started yet; but the imports will be much greater, I will say to the Senator.

Mr. HITCHCOCK. Then, as in the case of other schedules, this schedule has been based upon what it is thought it is likely to happen and not what has happened and not what the statistics show?

Mr. SMOOT. No; that is an unfair statement.

Mr. HITCHCOCK. I asked the Senator what the consumption was, and he said something over 200,000 pounds. I asked him what the imports are, and he says they approximate 40,000 pounds.

Mr. SMOOT. They were 57,000 pounds in 1921.

Mr. HITCHCOCK. That is only 25 per cent of the domestic consumption.

Mr. SMOOT. Yes; but the imports are increasing and will continue to increase.

Mr. HITCHCOCK. Does the Senator mean that we are to shut out competition when it reaches 25 per cent of the domestic production?

Mr. SMOOT. No; I do not mean that. But I say that the figures show an increase in importations, and that the imports are gradually increasing there can be no doubt, as the Senator may see.

Mr. HITCHCOCK. Does not the Senator realize the need of doing business with Germany?

Mr. SMOOT. I do.

Mr. HITCHCOCK. Is it not absolutely necessary, if we are to export our products to Germany, that we must buy something from Germany?

Mr. SMOOT. I have no fear about that.

Mr. HITCHCOCK. But when Germany is not sending us anything how can she buy from us?

Mr. SMOOT. Under conditions existing in Germany to-day and in view of the cost of producing goods there and the wage scale prevailing there, I have no fear that there will not be plenty of goods bought from Germany.

Mr. HITCHCOCK. This tariff bill should be framed upon statistics; it should be based upon facts and not surmises or prophecies or predictions or guesses as to the future.

Mr. SMOOT. It has been framed upon the facts.

Mr. HITCHCOCK. I ask the Senator this question: Does he think that we ought to make a tariff schedule to exclude articles from Germany?

Mr. SMOOT. I have answered that question once, and I will answer it again and say "No."

Mr. HITCHCOCK. Then, what percentage of our consumption would the Senator admit in competition with our local production?

Mr. SMOOT. That would depend entirely upon the product.

Mr. HITCHCOCK. Does the Senator think 25 per cent is too much?

Mr. SMOOT. I think that wherever importations are 25 per cent of the domestic consumption in the United States, then we are getting very near the danger line, because, if they can take that much of the business away from the American producer, we know that there is extreme competition.

Mr. HITCHCOCK. Would the Senator be willing to admit 20 per cent of American consumption so as to have competition?

Mr. SMOOT. I say again that would depend upon the condition of the industry not only in Germany but in this country. As to some commodities, I would admit 75 per cent or 80 per cent of the domestic consumption, but there are others as to which I should think 25 per cent would be approaching the danger line.

The Senator knows that in some lines Germany can and does control the trade of the world, and will do so, no matter what rates we put in this bill. The same statement applies to some of the products of Japan, to some of the products of England, and also to some of the products of France, and other countries. Whatever rate might be put in this bill, such products will come into the United States because the people of the United States are going to buy them. The Senator knows that we would not keep out all the perfumes of France, even if we imposed on them a duty of 60 per cent or 75 per cent. They would be purchased here by the women who want French perfumery, and I would not care how much of that commodity came in.

Mr. HITCHCOCK. Can the Senator give the consumption in this country of gas-mantle scrap?

Mr. SMOOT. I do not know whether I have it here or not. Has the Senator got it there? I find that I have not. In the case of scrap I know that there is very little imported.

Mr. HITCHCOCK. The imports were 60,000 pounds in 1914.

Mr. SMOOT. Oh, if the Senator wants the imports——

Mr. HITCHCOCK. Do they approximate that?

Mr. SMOOT. No; not that much, I think.

Mr. HITCHCOCK. I understand that this schedule imposes the same tariff on gas-mantle scrap that it does on the thorium nitrate?

Mr. SMOOT. Why, certainly; because 95 per cent of the scrap is thorium nitrate.

Mr. HITCHCOCK. And yet the importations of gas-mantle scrap in 1920 were 144 pounds only.

Mr. SMOOT. The Senator knows that there is nothing in that. Whatever scrap comes in here is the waste from the gas mantles, and 90 per cent of that waste is thorium nitrate; and what difference does it make, Mr. President, if they can get the thorium nitrate in? The scrap is gathered up just the same as the waste of wool and the waste of cloth.

Mr. HITCHCOCK. Why is a tariff put on it if it does not make any difference? Why is it subjected to a 40 per cent tariff if it does not make any difference? Why do you put it in this bill and impose a tariff on it?

Mr. SMOOT. I say, if the tariff on thorium is a certain rate, and scrap mantle is virtually thorium, there should be the same rate. I do not see that there is anything wrong in that. Gas-mantle scrap, which is dutiable at 10 per cent ad valorem in the old bill, is converted into thorium nitrate, and this is the only commercial use of it. That is all there is to it. It is thorium nitrate just the same.

Mr. HITCHCOCK. I am asking the Senator why a duty of 40 per cent is imposed on it when less than 200 pounds comes into the country? It certainly is not a dangerous competition.

Mr. SMOOT. Simply because in the manufacture in a foreign country the scrap is used in exactly the same way that it is used here, and no one wants particularly to ship scrap in here when he can ship in the thorium at the same rate. Why should he?

Mr. HITCHCOCK. Mr. President, this item seems to me very much like ink, very much like wood alcohol, very much like a large number of other items in this bill which present a condition in which the American market is supplied to a very limited extent by foreign competition. The Senator from North Dakota indicated that the purpose of this bill was to impose a tariff to represent the difference in cost. It seems to me that the purpose of this bill is to shut out competition, because when we show a case such as ink, for instance, in which the United States manufactures all of its ink except some 20,000 pounds a year, when it not only manufactures all the ink that the American people consume but manufactures enough to export millions of dollars' worth of ink a year, nevertheless the Finance Committee insists on reporting to the Senate a duty double what it is at the present time.

Mr. SMOOT. Is the Senator speaking now of gas-mantle scrap?

Mr. HITCHCOCK. I am speaking now of ink. I have gone back to that. This is another item of the same sort.

Mr. SMOOT. There is quite a difference between ink and thorium. Ink is exported, and thorium is not.

Mr. HITCHCOCK. But the Senator stood here and insisted on demanding that the present tariff on ink be raised from 15 per cent to 25 per cent, and finally abandoned that and accepted a 20 per cent duty.

Mr. SMOOT. Oh, no; a 20 per cent duty is what we reported.

Mr. HITCHCOCK. No; you reported a 30 per cent duty. You doubled the existing tariff in your report to the Senate, and when I demonstrated that we made all of our own ink, and that we exported millions of dollars' worth of ink to other countries, then you moved to accept the Houes schedule of 20 per cent. I say that the condition is the same in this schedule, only not to so great an extent.

Mr. SMOOT. That was decided before ever the Senator spoke.

Mr. HITCHCOCK. We are not importing more than 25 per cent of our consumption in thorium nitrate. We are making most of our thorium nitrate, and yet you insist on increasing the duty on thorium nitrate, notwithstanding the fact that Germany never has been able to send to us thorium nitrate to the amount of more than 25 per cent of our consumption.

Mr. SMOOT. Not able to do so? The Senator is not correct in that statement.

Mr. HITCHCOCK. The Senator please will not interrupt me until I finish. I charge, under those circumstances, that your bill is not for the purpose of enabling American manufacturers to compete with foreign manufacturers upon a reasonable basis. That used to be the old Republican theory. Your bill is for the purpose of giving to the American manufacturer a monopoly in this market. Your bill is for the purpose of shutting out imports from such countries as Germany. Your bill is for the purpose of erecting a wall so high that the manufacturers in this country can increase the price of the things that they sell to the American people. That must be the case, otherwise you would be satisfied with the present tariff on thorium nitrate, under which the American manufacturer makes three-quarters of all the thorium nitrate that the American people consume, and the imports of thorium nitrate at the present time are less than they were before the war. They are almost negligible, and if the American manufacturer amounts to anything at all he ought to be able to hold his market as it is now, at 75 per cent of the American consumption.

It must be understood by the American people that you are making a tariff, not for the purpose of enabling the American manufacturer to compete with manufacturers abroad, but in one schedule after another you are raising the tax so high as to shut out competition and give a monopoly to the American manufacturer. I asked the Senator from Utah whether he would not be satisfied with competition amounting to only 25 per cent of the American consumption, and instead of saying definitely "Yes" or "No" he said that in some cases he would and in some cases he would not.

Mr. SMOOT. The Senator wanted me to tell the truth, did he not?

Mr. HITCHCOCK. Certainly.

Mr. SMOOT. Then, that is the only way in which I could answer the question.

Mr. HITCHCOCK. But I should like to know why 25 per cent is not a reasonable supply to come in from abroad and regulate the American price for the protection of the consumer. You have forgotten all about the consumer. He ought to have protection. When you levy taxes on him in order, under the Republican theory, to build up home industries you ought at least to have in mind the protection of the consumer by still permitting enough competition to come in from abroad to prevent exorbitant prices being charged.

That was the old theory of the protective-tariff idea, and that was what made it so alluring to the American people. They were told time and again by Republicans on the stump that all they wanted to do was to make the tariff high enough to enable the American manufacturer to compete against the so-called pauper labor from abroad; and now you are not satisfied with making the tariff high enough to enable the American manufacturer to compete. You want the tariff so high as to exclude competition. You want the tariff so high as to give a monopoly in this country, and that is the vice of this whole bill. It is in schedule after another—not only in thorium nitrate, but it was in ink to a still more aggravated degree, because it was demonstrated here by the figures I read into the RECORD that at the present time, with a 15 per cent tariff, the American manufacturer actually supplies almost the whole market, with only the faintest fraction of competition from abroad. So it was with wood alcohol in even a greater degree. You insisted on taking wood alcohol off the free list, although I demonstrated here that the United States had the greatest wood-alcohol production in the world; that we actually manufactured half of all the wood alcohol made in the world, and we have been able to do that with wood alcohol on the free list; and yet you insisted on putting a tax on wood alcohol, not for the purpose of raising revenue but to make it impossible for competition to come in here under any circumstances.

What is going to be the result? Going back again to wood alcohol, you have given an invitation, you have given an opportunity to the manufacturers of wood alcohol to unite to raise their prices to the American consumer. You have not increased your revenue at all. You have simply increased the probability that the price of wood alcohol will be advanced to the American consumer, and what is true of wood alcohol and ink is true of this schedule.

Mr. SMOOT. Mr. President, it is a strange fact that the raw material for the manufacture of thorium nitrate is controlled by England. She controls all of the raw material, which comes from India and a little from Brazil, and even in Brazil she controls it; and yet, before the war thorium nitrate entered into England free of duty. What has England found that she had to do to protect her industry in the manufacture of thorium? Why, she has taken it from the free list and imposed a duty of 33⅓ per cent upon it, and yet she controls all of the raw product of the world. We have to get ours there, too, with the exception of what we get down here in North Carolina.

Remember that under the Underwood bill there was a duty of 25 per cent put upon monazite sand. Why? Because it was produced in North Carolina. That bill imposed a duty of 25 per cent on the raw product, the sand, dug by men, as the Senator from North Carolina said here the other day, referring to another product; and yet they put a rate of 25 per cent duty on the monazite sand of North Carolina, and gave a duty of only 25 per cent upon thorium nitrate. I ask the Senator from New Mexico [Mr. JONES] if that is fair or right?

But England, free-trade England, as she is called, which had it on the free list before the war, since the war closed, in order to protect her industries, has placed a duty of 33⅓ per cent upon thorium nitrate. All that we are asking here is a 40 per cent ad valorem duty, and the importations prove that there is competition, and there is not any question but that there is.

Again, Mr. President, gas mantles are made from thorium nitrate, and 1 pound of thorium nitrate makes about 325 gas mantles. In 1909 we heard this Chamber ring and ring with the statement of the monopoly of the gas-mantle manufacturers of the United States. All they have to do is buy 1 pound of nitrate of thorium and make 325 gas mantles, and we are so solicitous of the manufacture of the gas mantles, that great monopoly which was so howled about in this Chamber in 1909, that we want to give them cheaper thorium nitrate. Let us be consistent.

Mr. President, I do not care to say anything more about it. The rate is a fair protective rate and no more, and the committee asks that 40 per cent be substituted for 45 per cent.

Mr. WALSH of Massachusetts. May the Secretary report the amendment?

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The READING CLERK. On page 30, line 14, the committee amendment proposes to strike out "25" and insert in lieu thereof "45." The Senator from Utah [Mr. SMOOT] has proposed to amend the committee amendment by striking out "45" and inserting in lieu thereof "40," so as to read:

Thorium nitrate, thorium oxide, and other salts of thorium not specially provided for, cerium nitrate, cerium fluoride, and other salts of cerium not specially provided for, and gas-mantle scrap consisting in chief value of metallic oxides, 40 per cent ad valorem.

Mr. WALSH of Massachusetts. I ask for the yeas and nays.

The yeas and nays were ordered.

The reading clerk proceeded to call the roll and Mr. ASHURST voted "yea."

SEVERAL SENATORS. Let the question be stated.

Mr. ASHURST. May the question be stated again, Mr. President?

The PRESIDING OFFICER. The Secretary will again state the amendment to the amendment.

The amendment to the amendment was again read.

Mr. ASHURST. In other words, we are voting on the amendment proposed by the Senator from Utah [Mr. SMOOT].

Mr. WALSH of Massachusetts. It raises the House rate 15 per cent and reduces the Senate committee rate 5 per cent.

Mr. FRELINGHUYSEN. Mr. President, the roll call had been begun.

The PRESIDING OFFICER. It had, and a response was made.

Mr. FLETCHER. A parliamentary inquiry.

Mr. BALL. What is the question?

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from Utah to the committee amendment. The Senator from Utah proposes to strike out "45" and to insert "40."

Mr. ASHURST. Let the question be stated again, so that the parliamentarians over here watching the bill will know what the question is.

The PRESIDING OFFICER. The Secretary will state the amendment.

The READING CLERK. On page 30, line 14, paragraph 84, under thorium nitrate, the committee proposed to strike out "25" and to insert "45." The senior Senator from Utah [Mr. SMOOT] proposes to strike out "45" and insert "40," so as to read "40 per cent ad valorem."

Mr. FLETCHER. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state his inquiry.

Mr. FLETCHER. I understand that the proposal of the Senator from Utah is really a committee proposal; that the committee proposes this change, so that it is a committee amendment.

Mr. SMOOT. That is correct.

The PRESIDING OFFICER (Mr. MOSES in the chair). The committee has a right to modify its amendment.

Mr. FLETCHER. That being so, it is a committee amendment, and the question is, Shall the committee amendment providing 40 per cent be agreed to?

Mr. SMOOT. No; the question is to strike out "45" and to insert "40."

Mr. ASHURST. An affirmative vote will be a vote to reduce the tariff. That is plain enough.

Mr. FRELINGHUYSEN. I make the point of order that the roll call has been begun and debate is not in order.

The PRESIDING OFFICER. That point of order is sustained, and the Secretary will proceed with the roll call.

The reading clerk resumed the call of the roll.

Mr. LODGE (when his name was called). I transfer my pair with the senior Senator from Alabama [Mr. UNDERWOOD] to the Senator from Maryland [Mr. WELLER], and vote "yea."

Mr. McCUMBER (when his name was called). I transfer my general pair with the junior Senator from Utah [Mr. KING] to the senior Senator from Pennsylvania [Mr. CROW], and vote "yea." I ask that this announcement of my pair and its transfer may stand for the balance of the day.

Mr. NEW (when his name was called). I transfer my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Oregon [Mr. STANFIELD], and vote "yea." I ask that this announcement of my pair and its transfer may stand for the day.

Mr. WATSON of Indiana (when his name was called). I have a pair with the senior Senator from Mississippi [Mr. WILLIAMS], which I transfer to the senior Senator from Maryland [Mr. FRANCE], and vote "yea."

The roll call was concluded.

Mr. GLASS. I transfer my general pair with the senior Senator from Vermont [Mr. DILLINGHAM] to the Senator from Rhode Island [Mr. GERRY], and vote "yea."

Mr. FRELINGHUYSEN. I transfer my general pair with the Senator from Montana [Mr. WALSH] to the Senator from Washington [Mr. POINDEXTER], and vote "yea."

Mr. JONES of New Mexico. Making the same announcement as to the transfer of my pair as on the previous vote, I vote "yea."

The result was announced—yeas 59, nays 0, as follows:

YEAS—59.

Ashurst	Gooding	McKinley	Sheppard
Ball	Hale	McLean	Shortridge
Borah	Harreld	McNary	Simmons
Brandegee	Harris	Moses	Smoot
Broussard	Johnson	New	Spencer
Bursum	Jones, N. Mex.	Newberry	Stanley
Calder	Jones, Wash.	Norris	Sutherland
Capper	Kellogg	Oddie	Swanson
Caraway	Kendrick	Overman	Townsend
Curtis	Keyes	Pepper	Wadsworth
Dial	Ladd	Phipps	Walsh, Mass.
Ernst	Lenroot	Pomerene	Warren
Fletcher	Lodge	Ransdell	Watson, Ind.
Frelinghuysen	McCormick	Rawson	Willis
Glass	McCumber	Robinson	

NOT VOTING—37.

Cameron	France	Nicholson	Sterling
Colt	Gerry	Norbeck	Trammell
Crow	Harrison	Owen	Underwood
Culberson	Heflin	Page	Walsh, Mont.
Cummins	Hitchcock	Pittman	Watson, Ga.
Dillingham	King	Poindexter	Weller
du Pont	La Follette	Reed	Williams
Edge	McKellar	Shields	
Elkins	Myers	Smith	
Fernald	Nelson	Stanfield	

So Mr. SMOOT's amendment to the committee amendment was agreed to.

The PRESIDING OFFICER. The question now recurs upon the amendment of the committee as amended.

Mr. SIMMONS. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. GLASS (when his name was called). Making the same announcement as before as to the transfer of my pair, I vote "nay."

Mr. LODGE (when his name was called). Making the same announcement as before as to my pair and its transfer, I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

Mr. FRELINGHUYSEN. I transfer my general pair with the senior Senator from Montana [Mr. WALSH] to the junior Senator from Washington [Mr. POINDEXTER] and vote "yea."

Mr. McCUMBER. Making the same announcement as on the previous vote, I vote "yea."

Mr. NEW. Making the same announcement as on the previous roll call, I vote "yea."

Mr. JONES of New Mexico. I make the same announcement as to the transfer of my pair, and vote "nay."

Mr. CARAWAY (after having voted in the negative). I have a pair with the junior Senator from Illinois [Mr. MCKINLEY]. In his absence I transfer that pair to the senior Senator from Texas [Mr. CULBERSON] and allow my vote to stand.

The result was announced—yeas 39, nays 18, not voting 39, as follows:

YEAS—39.

Ball	Hale	McCumber	Shortridge
Brandegee	Harreld	McLean	Smoot
Broussard	Johnson	McNary	Spencer
Bursum	Jones, Wash.	Moses	Sutherland
Calder	Kellogg	New	Townsend
Capper	Keyes	Newberry	Wadsworth
Curtis	Ladd	Oddie	Warren
Ernst	Lenroot	Pepper	Watson, Ind.
Frelinghuysen	Lodge	Phipps	Willis
Gooding	McCormick	Rawson	

NAYS—18.

Ashurst	Glass	Pomerene	Stanley
Borah	Harris	Ransdell	Swanson
Caraway	Jones, N. Mex.	Robinson	Walsh, Mass.
Dial	Norris	Sheppard	
Fletcher	Overman	Simmons	

NOT VOTING—39.

Cameron	France	Myers	Smith
Colt	Gerry	Nelson	Stanfield
Crow	Harrison	Nicholson	Sterling
Culberson	Heflin	Norbeck	Trammell
Cummins	Hitchcock	Owen	Underwood
Dillingham	Kendrick	Page	Walsh, Mont.
du Pont	King	Pittman	Watson, Ga.
Edge	La Follette	Poindexter	Weller
Elkins	McKellar	Reed	Williams
Fernald	McKinley	Shields	

So the committee amendment as amended was agreed to.

The PRESIDING OFFICER. The Secretary will report the next amendment.

The READING CLERK. On page 30, line 17, the committee proposes to strike out "20" and insert "25," so as to read:

PAR. 85. Tin bichloride, tin tetrachloride, and all other chemical compounds, mixtures, and salts, of which tin constitutes the element of chief value, 25 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I have examined all the data regarding this item which I have been able to find, and it does seem to me that there is no excuse to be given for the rate of duty which the committee proposes.

I am very glad to observe the Senator from Kansas [Mr. CURTIS] in the Chamber. I think it is about the first time to-day.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Kansas?

Mr. JONES of New Mexico. I yield.

Mr. CURTIS. I was sitting in the rear of the Chamber to-day when the Senator named the Senators who were present, and he did not look back to see me. I was there talking to one

of the employees. I was here all the time during the Senator's speech. I have been here all the time to-day except for two hours, when I was at a meeting of a subcommittee in the Finance Committee room.

Mr. JONES of New Mexico. If I have done the Senator an injustice I apologize for it, but I submit that if he was in the corner talking to somebody about something else he might as well have been in the cloakroom.

Mr. CURTIS. I heard every word the Senator from New Mexico said.

Mr. McCORMICK. If the Senator from Kansas was in the Chamber, he could not very well escape hearing everything the Senator from New Mexico said.

Mr. JONES of New Mexico. I do not believe anyone ever fails to hear what the Senator from Illinois has to say when he gets on one of his rampages here.

Mr. President, as I was trying to say, I have examined all of the information which I have been able to find on this subject. I have looked through all of the usual documents on which we have depended during this debate. If any reason can be offered as to why this duty should be imposed, I think we ought to have it.

I wish to state that there have been no importations of this commodity of any consequence whatever for years. In the year 1914 there were imported 337 pounds. It is a commodity produced entirely in this country so far as home consumption is concerned. Perhaps Senators do not understand what it is. It is chloride of tin, bichloride and tetrachloride of tin. It is produced from scrap tin, which can be obtained in this country. More particularly the use to which the tetrachloride is put is for weighting silk. So far as commerce is concerned, there is no commerce in this commodity at all, or anything that could be recognized as such. Under existing law it is dutiable under a basket clause at 10 per cent. The House bill imposed a duty of 20 per cent, increasing the existing duty 100 per cent. The Finance Committee of the Senate, feeling evidently that it was necessary for them to do something, have raised the rate of duty to 25 per cent. This product is made out of scrap tin and, as far as obtainable, from old tin cans, by dipping it in a solution of chlorine which makes a tin chloride. It is used for that purpose.

This increase must come just from the habit of increasing the taxes. It is true it does not affect everybody, only those who use weighted silk. That is the principal use for it, but it does go into the silk trade of the country, and a great many people struggle very hard to get a little silk, especially the ladies of the family.

I would like to know why this increase is proposed. It is just possible that it is done because pig tin has now been put on the dutiable list instead of on the free list where it is under the existing law. Of pig tin we import about 100,000,000 pounds a year. None of it is produced in the United States. They found a little up in Alaska—about 100 tons. Tin itself comes from Bolivia, as a rule, into the United States. It is admitted free now.

The bill proposes to put a duty of 2 cents a pound on the 100 tons annually imported. I do not see how that affects this item, but it may be offered as an excuse for increasing this duty. This material made out of scrap tin—there is no question of any competition that I can find at all. I may say that the 337 pounds which did come into this country in 1914 were valued at less than 4 cents a pound, while the present price of the commodity now is over 28 cents a pound, seven times the price of the small amount that was imported in 1914.

I would like to have somebody undertake to justify the rate.

Mr. SMOOT. Mr. President, I will say, in the first place, that the committee has reported to place tin in pigs and blocks on the free list. The Senator said it was 3 cents a pound.

Mr. JONES of New Mexico. I was looking at the rate recommended by the House, and I find that in the House bill it is 2 cents a pound.

Mr. SMOOT. Yes; but the Finance Committee put it on the free list. I will make a statement as to the rates when the Senator from New Mexico shall have concluded.

Mr. JONES of New Mexico. I see that the Senate Committee on Finance has stricken out the provision for 2 cents a pound upon tin. Therefore, I should like some Senator to explain why the committee increased the duty on bichloride of tin.

Mr. SMOOT. Mr. President, just a word. The pre-war price of bichloride of tin was from 10 to 11 cents a pound; the present price is below the pre-war price; it has come down to 9 cents a pound. The pre-war price of tetrachloride of tin was 26 cents a pound, while it is now 28 cents a pound, or about the pre-war price. On all of the chemical compounds and mixtures and of salts of different materials in this bill we have tried to preserve a uniform rate of 25 per cent ad valorem.

The House has a 20 per cent rate on the American valuation and the rate proposed by the committee is 25 per cent on the foreign valuation. So far as the use of this article is concerned, it is used as the Senator has stated for the weighting of silk, or, in other words, it is an adulterant. This material is put into silk in order to make the silk weigh; and I do not think anyone is going to suffer from the imposition of this duty.

Mr. NORRIS. Mr. President, will the Senator from Utah yield to me?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Nebraska?

Mr. SMOOT. I yield.

Mr. NORRIS. It seems to me, from what I can learn in relation to it, that this is an article on which we might very well levy a tariff because it is, in fact, a luxury. The question, however, arises in my mind, fithere are no imports, then what is the use of imposing a duty on it? We shall get no revenue by doing so, and I can not see any good from doing it. I confess that if revenue could be derived, this would be a very proper place to levy a revenue duty; but if there are no imports, and we shall get no revenue, it does not seem to me worth while fooling with it.

Mr. SMOOT. So long as the article is going to be used, and so long as we may get it from any other part of the world, I think we ought to have it made in this country. That is my opinion. The Reynolds report shows that the foreign value in the United States is 34 cents a pound.

Mr. NORRIS. What about the imports?

Mr. SMOOT. I will give those later. The selling price of the foreign article of tetrachloride of tin in the United States was 90 cents a pound. See what profit there is in that. If it may be made in this country and is going to be used in this country, let us make it in this country instead of importing it from a foreign country.

Mr. FLETCHER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Florida?

Mr. SMOOT. I yield.

Mr. FLETCHER. Does the Senator from Utah say there are no importations at all of this article? The statistics in reference to the subject are not available.

Mr. SMOOT. It is in the basket clause in the present law. For 1914 the importations were given, but because of the fact that the article is in the basket clause under the existing law we can not segregate the various salts and mixtures which fall in that clause. We have the statistics for the entire importations in the basket clause, but we can not ascertain as to the importations of a particular item.

Mr. FLETCHER. The statistics seem to be combined with those concerning gold, platinum, and silver and rhodium salts in the importation figures. There are apparently three concerns manufacturing it in this country, and even now, under the present law, imposing a duty of 10 per cent ad valorem, there do not seem to be any importations coming in. How can it be expected that any will come in under a 25 per cent duty?

Mr. SMOOT. I do not know whether or not any are coming in.

Mr. FLETCHER. I can not see that there is any justification for increasing the duty from 15 per cent under such circumstances.

Mr. JONES of New Mexico. Mr. President, just a word. All the information that there is upon the subject, after a description of the article and its uses, I find under the head of production in the tariff report:

> The preparation of tin chlorides has developed almost exclusively into the detinning of scrap tin by means of chlorine gas. The process originated in the plant of the Goldschmidt chemical works at Essen, Germany. The process, however, was soon established by the Goldschmidts in this country. In about 1913 another company began operations, and at the present time (1918) there are three companies producing tin chlorides in the United States by the chlorine detinning process. The growth of the industry is dependent on the growth of the silk industry, which is the largest consumer.
>
> In 1914 census reports give the production of all-tin salts as 8,291,200 pounds, valued at $2,028,500. In 1919 (preliminary figure) the output of tin chlorides was 8,999,200 pounds, valued at $2,986,500, and of oxide of tin 1,352,600 pounds, valued at $900,240.
>
> Imports: Statistics are combined with those of gold, platinum, silver, and rhodium salts.
>
> Exports: Statistics not available.

That is all the information that the Tariff Commission gives in its summary, but I have here from a member of the force of the Tariff Commission the statement that the present price of these tin crystals is 27½ to 28 cents per pound, and of tin oxide from 37 to 38 cents a pound, and that the imports of tin chloride

in 1914 were 337 pounds. I figure from the book containing the statistics that the value of that importation was $93, or a little less than 4 cents a pound.

Mr. SMOOT. That would be a little less than 30 cents a pound.

Mr. JONES of New Mexico. The Senator is right. That is just about the present price of the commodity in this country. I do not, therefore, see any possible reason for increasing the duty on the commodity.

The present rate is 10 per cent; the House bill made it 20 per cent, and the Senate committee proposes to make it 25 per cent. There is no earthly information on which to figure any such tariff rate. There are no imports coming in, and none can come in. The material is made out of scrap tin, and any other country which wants to make it has got to get the scrap tin from somewhere else. There is something in the tariff surveys to the effect that Japan is threatening to develop the industry, buy her scrap tin in the markets of the world, and make the chloride and weight the silk over in Japan. There is some suggestion of that kind, but there is no suggestion that Japan is going to make the tin chloride and ship it to this country in competition with the American product. There is not a suggestion of competition from any country on earth.

Mr. President, I move to strike out the figure "25" and insert "10."

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from New Mexico [Mr. JONES] to the committee amendment.

Mr. JONES of New Mexico. Upon that I ask for the yeas and nays.

The yeas and nays were ordered, and the principal legislative clerk proceeded to call the roll.

Mr. ERNST (when his name was called). I transfer my general pair with the senior Senator from Kentucky [Mr. STANLEY] to the senior Senator from Minnesota [Mr. NELSON] and vote "nay."

Mr. FRELINGHUYSEN (when his name was called). Making the same announcement as heretofore in regard to my pair and its transfer, I vote "nay."

Mr. LODGE (when his name was called). Making the same announcement as heretofore with reference to my pair and its transfer, I vote "nay."

Mr. McCUMBER (when his name was called). Making the same announcement with regard to my pair and its transfer, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as to my pair and its transfer as on the previous vote, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call having been concluded, the result was announced—yeas 14, nays 39, as follows:

YEAS—14.

Ashurst	Harris	Ransdell	Simmons
Caraway	Jones, N. Mex.	Robinson	Walsh, Mass.
Dial	Overman	Sheppard	
Fletcher	Pomerene	Shields	

NAYS—39.

Ball	Hale	McKinley	Rawson
Brandegee	Johnson	McLean	Shortridge
Broussard	Jones Wash.	McNary	Smoot
Bursum	Kellogg	Moses	Sutherland
Calder	Kendrick	New	Townsend
Capper	Ladd	Newberry	Wadsworth
Curtis	Lenroot	Norris	Warren
Ernst	Lodge	Oddie	Watson, Ind.
Frelinghuysen	McCormick	Pepper	Willis
Gooding	McCumber	Phipps	

NOT VOTING—43

Borah	France	Myers	Stanfield
Cameron	Gerry	Nelson	Stanley
Colt	Glass	Nicholson	Sterling
Crow	Harreld	Norbeck	Swanson
Culberson	Harrison	Owen	Trammell
Cummins	Heflin	Page	Underwood
Dillingham	Hitchcock	Pittman	Walsh, Mont.
du Pont	Keyes	Poindexter	Watson, Ga.
Edge	King	Reed	Weller
Elkins	La Follette	Smith	Williams
Fernald	McKellar	Spencer	

So the amendment of Mr. JONES of New Mexico to the amendment of the committee was rejected.

The PRESIDING OFFICER. The question recurs upon the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The PRINCIPAL LEGISLATIVE CLERK. On line 20, after the word "titanium" and the comma, the committee proposes to insert the words "5 cents per pound and," so as to read:

Titanium potassium oxalate, and all compounds and mixtures containing titanium, 5 cents per pound and 25 per cent ad valorem.

Mr. FLETCHER. Mr. President, I trust that amendment will not be agreed to. Under the ruling I believe it will not be in order to offer an amendment to the ad valorem item; otherwise I should move to reduce that; but the question would come upon the adoption of this amendment, and it does not seem to me that that amendment is at all justified.

The story of this paragraph is about like this:

Under the act of 1909 the duty was 25 per cent ad valorem. Under the act of 1913 the duty was 15 per cent ad valorem. The House bill carries a provision for 25 per cent ad valorem, and now the Senate committee proposes to add to the 25 per cent ad valorem 5 cents per pound. That would mean an addition of about 8 per cent more, making this duty 33 per cent ad valorem instead of 10 per cent ad valorem.

The statistics show that as to the amount of production there are no figures available, but that the imports for the fiscal year 1914 were only 3,328 pounds, at about 60 cents per pound. In other words, at that time the imports of titanium trichloride amounted to only about $2,200 worth—about 3,328 pounds, worth about 60 cents a pound. That was the total importation in 1914, when the duty was 15 per cent ad valorem. It is now proposed to make it 33 per cent ad valorem.

Importations of titanium sulphate in 1914 were 1,213 pounds, worth about 20 cents per pound. In other words, about $224 worth of the product came in in 1914 under a duty of 15 per cent ad valorem. The proposal now is to raise that duty to 33 per cent ad valorem.

What is the use of it? What is the occasion for it? The importations amount practically to nothing. They amounted to nothing under the act of 1913, and yet the House proposes to increase that duty 66⅔ per cent, and the Senate committee proposes to add 8 per cent more on top of that.

I can not see any revenue to be derived from it or any basis for any protection. It just seems to be a duty levied without any rhyme or reason, increased from 15 per cent to 25 per cent in the House bill, which is an increase of 66⅔ per cent of the duty, and then the Senate committee proposes to add 5 cents a pound on top of that, which would be at least 8 per cent ad valorem more.

The exports are not recorded. There are no available figures further than those that I have stated, and it does seem to me that there is no ground whatever for proposing this great increase in the duties on these commodities.

Mr. McCUMBER. Mr. President, the House imposed a duty of 35 per cent ad valorem upon the American valuation. An examination of the Reynolds report showed that that would be insufficient, but that with a duty of 5 cents per pound and an ad valorem duty of 25 per cent on the foreign valuation we would equalize the foreign selling price with the American selling price. On a further consideration of that matter this morning the committee came to the conclusion that with the last data they had on the subject they could strike out the provision of 5 cents per pound which they had previously recommended and then raise the 25 to 30 per cent ad valorem, which would give the duty just an ad valorem basis and make it 30 per cent, so that is what I was about to present. The Senator from Pennsylvania [Mr. PEPPER], however, is very much interested in this subject and possibly desires to discuss it to-day, or possibly may request that it go over.

Mr. PEPPER. Mr. President, if it is agreeable to the chairman of the committee, I should very much prefer not to discuss it at the moment, but to have it go over until I have had an opportunity to review the relation between the figures now proposed and those originally reported by the committee.

Mr. FLETCHER. Of course, I did not know what was in the mind of the committee. I was basing my observations on what appeared in the bill. I think the proposal of the committee will be an improvement, because I think that would mean 30 per cent ad valorem instead of about 33 per cent ad valorem; and I am perfectly willing to have the matter go over to suit the convenience of the Senator from Pennsylvania.

The PRESIDING OFFICER. Without objection, the amendment will be passed over. The Secretary will state the next amendment of the committee.

The READING CLERK. Schedule 2: Earths, earthenware, and glassware.

Mr. McCUMBER. Mr. President, we have passed over quite a number of the paragraphs in the first schedule; and if the

Senator from Missouri [Mr. SPENCER] is here, I should like to take up paragraph 74.

Mr. ROBINSON. What is the paragraph?

Mr. McCUMBER. Paragraph 74, zinc salts. The Senator from Missouri desires to be present when that is discussed. If he is not present, however, I will suggest that paragraph 7, on page 4, has been passed over.

Mr. WALSH of Massachusetts. Mr. President, I make the point of no quorum. The Senator from New Mexico [Mr. JONES], who knows about this schedule, is absent, and desires to be here when it is taken up.

The PRESIDING OFFICER. The Senator from Massachusetts suggests the absence of a quorum. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Harrison	McNary	Shortridge
Ball	Johnson	Moses	Simmons
Brandegee	Jones, N. Mex.	New	Smoot
Bursum	Jones, Wash.	Newberry	Sutherland
Calder	Kellogg	Norris	Townsend
Capper	Kendrick	Oddie	Wadsworth
Caraway	Keyes	Overman	Walsh, Mass.
Curtis	Ladd	Pepper	Warren
Dial	Lenroot	Phipps	Watson, Ind.
Fletcher	Lodge	Pomerene	Williams
Glass	McCormick	Rawson	Willis
Gooding	McCumber	Robinson	
Hale	McKinley	Sheppard	
Harris	McLean	Shields	

The PRESIDING OFFICER. Fifty-three Senators have answered to their names. There is a quorum present. The question is upon agreeing to the amendment proposed by the committee in paragraph 7, page 4.

Mr. SIMMONS. That paragraph includes ammonium sulphate, and my understanding is that it was put over until we take up potash.

The PRESIDING OFFICER. The Chair will say to the Senator from North Carolina that the chairman of the committee just now suggested that we return to the consideration of that paragraph.

Mr. SIMMONS. I just talked with the chairman of the committee, and I think I have stated the understanding correctly.

Mr. McCUMBER. It can be passed over again, if the Senator desires.

The PRESIDING OFFICER. Has the chairman of the committee any suggestion to offer?

Mr. McCUMBER. I want to see if we can take up paragraph 8, antimony salts.

The PRESIDING OFFICER. The Secretary will state the amendment.

The READING CLERK. In paragraph 8, page 4, the committee proposes to strike out, after the word "oxide," the words "2 cents per pound" and to insert "1½ cents per pound and 25 per cent ad valorem."

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The READING CLERK. The next amendment passed over is, on page 4, line 22, strike out the words "tartar-emetic" with the hyphen and to insert the words "tartar emetic."

The amendment was agreed to.

The READING CLERK. The next amendment passed over is, on page 4, line 23, after the "tartrate" and the comma, to strike out "5" and insert "6," so as to read "6 cents per pound."

Mr. SIMMONS. What is that matter?

The PRESIDING OFFICER. Potassium-antimony tartrate, 6 cents per pound.

Mr. SIMMONS. Why was that passed over? Does the Senator from North Dakota know why it was passed over?

The PRESIDING OFFICER. The Chair is informed that the Senator from New Jersey [Mr. FRELINGHUYSEN] requested to have it passed over.

Mr. McCUMBER. I do not remember who made the request, but it was passed over at the request of some Senator because of its relation to liquated antimony, in paragraph 376. I do not think it was asked that we wait until we reached that paragraph. I do not recall now, other than that, why it was passed over.

Mr. SIMMONS. I wish to suggest to the Senator that where a Senator requests that a matter be passed over, and it is called up while he is away, probably the Senator ought to have some notice of it.

Mr. McCUMBER. It is rather difficult to handle a bill when, after a Senator asks that half a schedule go over from time to time, he is away when we get back to it.

Mr. SIMMONS. I shall make no objection to have the amendment considered.

Mr. McCUMBER. I understand the Senator does not make any objection, but I am not certain that the Senator who asked that it go over would not make objection, and I think under the circumstances we had better go on with the next schedule.

The PRESIDING OFFICER. Without objection, the balance of paragraph 8 will be passed over.

Mr. McCUMBER. Pass over all of that schedule and go to the next schedule.

The PRESIDING OFFICER. The Secretary will report the next amendment.

The READING CLERK. Schedule 2, on page 31, earths, earthenware, and glassware.

The first amendment of the committee in this schedule is on page 31, line 4, after the word "manner" and the comma, to strike out the words "and brick other than fire brick, 10" and to insert "15", so as to read:

Fire brick, weighing not more than 10 pounds each, not glazed, enameled, ornamented, or decorated in any manner, 15 per cent ad valorem.

Mr. ROBINSON rose.

Mr. McCUMBER. I was just going to ask that this amendment be passed over on account of the fact that the Senator from Idaho [Mr. GOODING] presented the matter again this morning, and the committee had it under consideration this morning until 11 o'clock, when it had to adjourn before considering it even a second time. So I will ask that this paragraph may go over.

Mr. ROBINSON. I have no objection.

The PRESIDING OFFICER. Without objection paragraph 201 will be passed over, and the Secretary will state the next amendment.

The next amendment of the committee was in paragraph 202, on page 31, line 21, after the word "grooved," to strike out the word "and" and insert the word "or";

The amendment was agreed to.

The next amendment of the committee was on page 31, line 23, after the word "tiles" and the comma, to insert the words "red or brown, and measuring seven-eighths of an inch or over in thickness."

The amendment was agreed to.

Mr. JONES of New Mexico. I should like to inquire of the chairman of the committee as to the program. Are we going ahead with the next schedule, covering earthenware?

Mr. McCUMBER. I could not find the Senators present at whose request some of the paragraphs in the preceding schedule were passed over, and I did not want to bring them up in their absence. Therefore I asked that we go on to the next schedule.

Mr. JONES of New Mexico. I suppose we can go ahead to some extent upon this new schedule, but, as far as I am concerned, I have been paying more attention to the paragraphs which we have passed over than to the paragraphs in the next schedule. We can go ahead for awhile, but now we have passed over the first paragraph of the earth and earthenware schedule. I presume, of course, the best thing to do is to go ahead with it and go back to the paragraphs passed over at the convenience of the various Senators, but I agree with the chairman of the committee that the sooner we dispose of these paragraphs in the chemical schedule and get rid of them the better. I can only regret that Senators who want to take up these passed-over paragraphs are not here. By the way, I observe that the Senator from New York [Mr. CALDER] is now here, and perhaps the first paragraph in the earth and earthenware schedule could be taken up.

Mr. McCUMBER. I just stated a moment ago that the Senator from Idaho had desired a further hearing upon that matter, and we had begun to have a hearing on it when we were called into the Chamber this morning, and for that reason I asked that it be passed over.

The next amendment of the committee was, on page 32, line 3, to strike out "35 nor more than 50" and to insert "45 nor more than 60," so as to read:

Tiles wholly or in part of cement, valued at not more than 40 cents per square foot, 8 cents per square foot, but not less than 45 nor more than 60 per cent ad valorem.

The amendment was agreed to.

The next amendment of the committee was, on page 32, line 5, to strike out "38" and insert "50."

Mr. SHEPPARD. I desire to offer an amendment to substitute "5 cents per square foot" for the figure appearing in the bill.

The PRESIDING OFFICER. Does the Senator desire to have "50 per cent ad valorem" stricken out and to insert "5 cents per square foot"?

Mr. SHEPPARD. There is an amendment just prior to that one.

The PRESIDING OFFICER. On page 32, line 3, there was an amendment agreed to, striking out "35 nor more than 50" and inserting "45 nor more than 60."

Mr. SHEPPARD. I intend to offer my amendment there.

The PRESIDING OFFICER. Without objection, the vote whereby the amendment on line 3 was agreed to will be regarded as reconsidered, and the Senator from Texas is recognized for the purpose of offering an amendment to the amendment of the committee.

Mr. SHEPPARD. My motion is to strike out the words "8 cents per square foot, but not less than 45 nor more than 60 per cent ad valorem," and insert in lieu thereof "5 cents per square foot."

The PRESIDING OFFICER. The Secretary will state the amendment.

The READING CLERK. In paragraph 202, page 32, line 2, the Senator from Texas proposes to strike out the words "8 cents per square foot, but not less than 45 nor more than 60 per cent ad valorem," and to insert the words "5 cents per square foot."

Mr. SHEPPARD. I also desire to amend by striking out the remainder, as reported by the committee, and inserting the language of the bill as it passed the House.

The PRESIDING OFFICER. May the Chair suggest to the Senator that we dispose of the amendment he has already offered first?

Mr. SHEPPARD. Very well. I desire to address myself to that amendment.

TILES AND TILING.

The tariff act of 1909, the Payne-Aldrich Act, placed a duty of 4 cents per square foot on plain unglazed tiles, of one color, exceeding 2 square inches in size; on glazed, encaustic, ceramic mosaic, vitrified, semivitrified, flint, spar, embossed, enameled, ornamented, hand-painted, gold decorated, and all other earthenware tiles and tiling, by whatever name known, except pill tiles and so-called quarries, or quarry tiles, valued at not exceeding 40 cents per square foot, a duty of 8 cents per square foot, and where valued at a figure exceeding 40 cents per square foot a duty of 10 cents per square foot and 25 per cent ad valorem; on so-called quarries, or quarry tiles, 45 per cent ad valorem; on mantels, friezes, and articles of every description, composed wholly or in chief value of tiles or tiling, 60 per cent ad valorem.

The tariff act of 1913, the Underwood-Simmons Act, reduced the duty on plain unglazed tiles, of one color, exceeding 2 square inches in size, from 4 cents per square foot to 1½ cents per square foot; on glazed, encaustic, ceramic mosaic, vitrified, semivitrified, flint, spar, embossed, enameled, ornamented, hand-painted, decorated, gold decorated, grooved, and corrugated, and all other earthenware tiles and tiling, except pill tiles and so-called quarries, or quarry tiles, but including tiles wholly or in part of cement, reduced the duty from 8 cents per square foot to 5 cents per square foot; on so-called quarries, or quarry tiles, it reduced the duty from 45 per cent ad valorem to 20 per cent ad valorem; on mantels, friezes, and articles of every description or parts thereof, composed wholly or in chief value of earthenware tiles or tiling, except pill tiles, it reduced the duty from 60 per cent ad valorem to 30 per cent ad valorem.

The tariff bill of 1922, the Fordney-McCumber Act, as passed by the House, placed a duty of 8 cents per square foot, but not less than 35 nor more than 50 per cent ad valorem on tiles—unglazed, glazed, encaustic, ceramic, mosaic, vitrified, semivitrified, flint, spar, embossed, enameled, ornamented, hand painted, gold decorated, grooved, and corrugated, and all other earthenware tiles and tiling by whatever name known, except pill tiles, and so-called quarries or quarry tiles, but including tiles wholly or in part of cement, valued at not more than 40 cents per square foot, and where valued at more than 40 cents per square foot, 38 per cent ad valorem. On so-called quarries or quarry tiles, red or brown in color, it levied a duty of 3 cents per square foot, but not less than 20 per cent ad valorem. On mantels, friezes, and articles of every description, or parts thereof, composed wholly or in chief value of earthenware tiles or tiling, except pill tiles, 38 per cent ad valorem.

The tariff bill of 1922, the Fordney-McCumber Act, as reported to the Senate and now before us, imposes a duty of 8 cents per square foot, but not less than 45 nor more than 60 per cent ad valorem, on tiles—unglazed, glazed, encaustic, ceramic, mosaic, vitrified, semivitrified, flint, spar, embossed, enameled, ornamented, hand painted, gold decorated, grooved or corrugated, and all other earthenware tiles and tiling by whatever name known, except pill tiles and so-called quarries or quarry tiles, red or brown, and measuring seven-eighths of an inch or over in thickness, but including tiles wholly or in part of cement, valued at not more than 40 cents per square foot, and when valued at more than 40 cents per square foot, 50 per cent ad valorem. On so-called quarries or quarry tiles, red or brown, and measuring seven-eighths of an inch or over in thickness, it places a rate of 5 cents per square foot, but not less than 30 per cent ad valorem. On mantels, friezes, and articles of every description, or parts thereof, composed wholly or in chief value of earthenware tiles or tiling, except pill tiles, 50 per cent ad valorem.

Tiles are made of clay and are used for flooring, roofing, and in finishing walls. They contribute in marked degree to the comfort, beauty, utility, and sanitation of the home. They are used in making pipes or conduits for the drainage of land.

It will be seen that the lowest range of duties in the measure I have mentioned is found in the Democratic act of 1913, the Underwood-Simmons Act. And yet it was under that act that the production of tiling in the United States grew from a value of $5,705,583 in 1914 to $10,930,000 in 1920, with exports in the latter year of over $1,000,000 in value; imports having in that same year a value of less than $85,000. Under the Democratic act of 1913 the tiling industry reached a point where it supplied the domestic market and exported a substantial surplus. Imports are so small as to be not even remotely suggestive of competition.

It would strain the human intellect to the breaking point, therefore, to find a reason for the enormous increase in the rates on this important building material in the bill under consideration, rates which rise from less than 2 cents on the commoner forms to 8 cents per square foot, a sweep upward of 400 per cent on the cheaper varieties. Truly our Republican friends are the champion aerialists of tariff legislation. Evidently they mistake the Senate for an aerodrome, the various tariff schedules for airships to be used in contests for the dizziest altitudes, the flight leaders being Pilot MCCUMBER and Pilot SMOOT.

Mr. President, it is questionable whether the enormous increases proposed by the Senate bill will not imperil the small amount of revenue derived from these articles under the present law. Inasmuch, however, as revenue is the supreme need of the hour, and inasmuch as the position of this industry makes it independent of protection, I move to substitute the existing rates for those in the bill reported by the Senate Committee on Finance.

Mr. President, I ask for the yeas and nays on the amendment which I have proposed.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HARRISON (when his name was called). Transferring my pair with the junior Senator from West Virginia [Mr. ELKINS] to the senior Senator from Texas [Mr. CULBERSON], I vote "yea."

Mr. LODGE (when his name was called). Making the same announcement as to the transfer of my pair, I vote "nay."

Mr. SUTHERLAND (when his name was called). I have a general pair with the senior Senator from Arkansas [Mr. ROBINSON]. I transfer that pair to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

The roll call was concluded.

Mr. WATSON of Indiana. Making the same announcement as on the last roll call, I vote "nay."

Mr. BALL. Has the senior Senator from Florida [Mr. FLETCHER] voted?

The PRESIDING OFFICER (Mr. BROUSSARD in the chair). That Senator has not voted.

Mr. BALL. I transfer my pair with the Senator from Florida [Mr. FLETCHER] to the junior Senator from Oklahoma [Mr. HARRELD] and vote "nay."

Mr. CARAWAY. Has the junior Senator from Illinois [Mr. MCKINLEY] voted?

The PRESIDING OFFICER. He has not voted.

Mr. CARAWAY. I have a pair with the junior Senator from Illinois [Mr. MCKINLEY]. I transfer that pair to the Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. JONES of Washington (after having voted in the negative). The senior Senator from Virginia [Mr. SWANSON] is necessarily absent. I have a pair with him for that day. I find, however, that I can transfer that pair to the senior Senator from Iowa [Mr. CUMMINS], which I do, and allow my vote to stand.

Mr. JONES of New Mexico. Making the same announcement as to my pair and transfer, I vote "yea."

Mr. COLT. I have a general pair with the junior Senator from Florida [Mr. TRAMMELL]. I transfer that pair to the Senator from Washington [Mr. POINDEXTER] and vote "nay."

The roll call resulted—yeas 11, nays 35, as follows:

YEAS—11.

Ashurst	Harris	Overman	Shields
Caraway	Harrison	Pomerene	Simmons
Dial	Jones, N. Mex.	Sheppard	

NAYS—35.

Ball	Hale	McCormick	Shortridge
Brandegee	Johnson	McLean	Smoot
Broussard	Jones, Wash.	McNary	Sutherland
Bursum	Kellogg	Moses	Townsend
Calder	Kendrick	Newberry	Wadsworth
Capper	Keyes	Nicholson	Warren
Colt	Ladd	Oddie	Watson, Ind.
Curtis	Lenroot	Pepper	Willis
Gooding	Lodge	Rawson	

NOT VOTING—50.

Borah	Frelinghuysen	New	Stanfield
Cameron	Gerry	Norbeck	Stanley
Crow	Glass	Norris	Sterling
Culberson	Harreld	Owen	Swanson
Cummins	Heflin	Page	Trammell
Dillingham	Hitchcock	Phipps	Underwood
du Pont	King	Pittman	Walsh, Mass.
Edge	La Follette	Poindexter	Walsh, Mont.
Elkins	McCumber	Ransdell	Watson, Ga.
Ernst	McKellar	Reed	Weller
Fernald	McKinley	Robinson	Williams
Fletcher	Myers	Smith	
France	Nelson	Spencer	

The PRESIDING OFFICER. On the amendment offered by the Senator from Texas to the amendment of the committee, the yeas are 11 and the nays are 35. A quorum not being present, the Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Hale	McLean	Smoot
Ball	Harris	McNary	Sutherland
Broussard	Johnson	Newberry	Townsend
Bursum	Jones, Wash.	Nicholson	Wadsworth
Calder	Kellogg	Oddie	Warren
Capper	Keyes	Overman	Watson, Ind.
Caraway	Ladd	Pepper	Williams
Colt	Lenroot	Phipps	Willis
Curtis	McCormick	Rawson	
Ernst	McCumber	Sheppard	
Gooding	McKinley	Shortridge	

The PRESIDING OFFICER. Forty-one Senators have answered to their names. There is not a quorum present. The Secretary will call the names of the absent Senators.

The reading clerk called the names of the absent Senators and Mr. GLASS, Mr. HARRISON, Mr. LODGE, and Mr. MOSES answered to their names when called.

Mr. BRANDEGEE and Mr. KENDRICK entered the Chamber and answered to their names.

The PRESIDING OFFICER. Forty-seven Senators have answered to their names. There is not a quorum present.

Mr. McCUMBER. I move that the Sergeant at Arms be directed to request the presence of absent Senators.

The PRESIDING OFFICER. The question is on the motion of the Senator from North Dakota.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will carry out the instructions of the Senate.

Mr. DIAL and Mr. POMERENE entered the Chamber and answered to their names.

The PRESIDING OFFICER. Forty-nine Senators have answered to their names. A quorum of the Senate is present. The Secretary will call the roll on the amendment proposed by the Senator from Texas [Mr. SHEPPARD] to the amendment proposed by the committee.

The reading clerk proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as before with regard to the transfer of my pair, I vote "nay."

Mr. JONES of Washington (when his name was called). Making the same announcement as before, I vote "nay."

Mr. LODGE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as before, I vote "nay."

Mr. SUTHERLAND (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. ERNST. Making the same announcement as before, I vote "nay."

Mr. GLASS. Making the same announcement as heretofore, I vote "yea."

Mr. JONES of New Mexico. Making the same announcement as on the previous roll call as to the transfer of my pair, I vote "yea."

Mr. BALL. I transfer my pair with the Senator from Florida [Mr. FLETCHER] to the Senator from Missouri [Mr. SPENCER] and will vote. I vote "nay."

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON]; and

The Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH].

The result was announced—yeas 11, nays 40, as follows:

YEAS—11.

Ashurst	Glass	Overman	Shields
Caraway	Harris	Pomerene	Simmons
Dial	Jones, N. Mex.	Sheppard	

NAYS—40.

Ball	Hale	McCumber	Phipps
Brandegee	Johnson	McKinley	Rawson
Broussard	Jones, Wash.	McLean	Shortridge
Bursum	Kellogg	McNary	Smoot
Calder	Kendrick	Moses	Sutherland
Capper	Keyes	New	Townsend
Colt	Ladd	Newberry	Wadsworth
Curtis	Lenroot	Nicholson	Warren
Ernst	Lodge	Oddie	Watson, Ind.
Gooding	McCormick	Pepper	Willis

NOT VOTING—45.

Borah	Frelinghuysen	Norris	Sterling
Cameron	Gerry	Owen	Swanson
Crow	Harreld	Page	Trammell
Culberson	Harrison	Pittman	Underwood
Cummins	Heflin	Poindexter	Walsh, Mass.
Dillingham	Hitchcock	Ransdell	Walsh, Mont.
du Pont	King	Reed	Watson, Ga.
Edge	La Follette	Robinson	Weller
Elkins	McKellar	Smith	Williams
Fernald	Myers	Spencer	
Fletcher	Nelson	Stanfield	
France	Norbeck	Stanley	

So Mr. SHEPPARD's amendment to the amendment of the committee was rejected.

Mr. SHEPPARD. I now move to strike out the remainder of the paragraph as reported by the committee, and to insert the language which I send to the desk, the remainder of the paragraph after the words "ad valorem," on line 4.

Mr. SMOOT. Mr. President, is that motion in order?

The PRESIDING OFFICER. The last amendment proposed by the Senator from Texas does not affect the previous amendment, and the amendment of the committee is now before the Senate.

Mr. SMOOT. The Senator can offer that amendment after the committee amendments are agreed to.

The PRESIDING OFFICER. The question is on the amendment proposed by the committee on page 32, line 3.

The amendment was agreed to.

The ASSISTANT SECRETARY. The Senator from Texas now proposes, after the words "ad valorem" and after the semicolon on line 4, to strike out the remainder of the paragraph, all down to and including line 12, and to insert in lieu thereof the following words:

So-called quarries or quarry tiles, 20 per cent ad valorem; mantles, friezes, and articles of every description or parts thereof, composed wholly or in chief value of earthenware tiles or tiling, except pill tiles, 30 per cent ad valorem.

Mr. SHEPPARD. That is the existing law; and on that amendment I ask for the yeas and nays.

Mr. SMOOT. Technically, of course, the Senator can not offer that amendment at this time.

Mr. SHEPPARD. Why not?

Mr. SMOOT. Because of the fact that there are a number of items stricken out that are in the bill, and there is no amendment on the part of the committee to those items, and the committee amendments are to be considered first, but after the committee amendments are disposed of the Senator can offer his amendment.

Mr. SHEPPARD. Would that be held to be an amendment in the third degree?

Mr. SMOOT. I do not mean now; I mean after the committee amendments in the whole bill are agreed to.

Mr. ASHURST. Mr. President——.

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Arizona?

Mr. SMOOT. I do.

Mr. ASHURST. I do not want to discuss the amendment, but I simply want to find out the parliamentary status. A unani-

mous-consent agreement, then, has been entered into to consider committee amendments first, has it?

Mr. SMOOT. Yes.

Mr. ASHURST. And it would not be in order to attempt to amend the text?

Mr. SMOOT. Not until the committee amendments are agreed to.

Mr. ASHURST. But, of course, even under that agreement the Senator is at liberty to move to amend the committee amendments.

Mr. SMOOT. Oh, certainly; but that is not what the Senator is doing. The Senator is striking out, for instance, "mantles, friezes, and articles of every description, or parts thereof." There is no amendment to that.

Mr. ASHURST. Oh, I see; he is striking out the text.

Mr. SMOOT. He is striking out the text and substituting the existing law.

Mr. ASHURST. But he could move an amendment in order on line 5 and line 9.

Mr. SMOOT. Oh, certainly.

Mr. ASHURST. And all of lines 10, 11, and 12.

Mr. SMOOT. As to the rates, that is true.

Mr. SHEPPARD. As the Senator says, technically, of course, the amendment can not be offered in the shape in which I have offered it; but in order to present the issue I ask unanimous consent to offer it in that way. If that is not granted, I will simply move to amend the committee amendment by substiuting "20" instead of "50."

Mr. SMOOT. I think the best way to do is to proceed under the unanimous-consent agreement, as we have on all of the other paragraphs that have been disposed of, and of course when the committee amendments are disposed of this amendment can be offered. I think it would be better to follow that course in this instance, too.

Mr. SHEPPARD. Then I ask to have the next committee amendment stated.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The next amendment of the committee was, in paragraph 202, relative to tiles, on page 32, line 5, to strike out "38" and insert in lieu thereof "50," so as to read:

Valued at more than 40 cents per square foot, 50 per cent ad valorem.

Mr. SHEPPARD. I move to amend by substituting "20" for "50," and on that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. POMERENE. Before the vote is taken I desire to say that I was out at my dinner while a part of this paragraph was passed over, or perhaps was being considered, and I want to ask one of the Senators in charge of the bill a question with regard to the earlier part of the paragraph. On page 31, line 23, after the words "so-called quarries or quarry tiles," are the words "red or brown, and measuring seven-eighths of an inch or over in thickness." Why is this amendment limited to the two colors, red and brown?

Mr. SMOOT. The reason for that is that if we do not make it red or brown specifically, then artificial colors could be put in and simply take a higher rate because of the artificial color. The red and the brown are the natural colors of the clay, and that is all we want to go by.

Mr. POMERENE. They are the natural colors of certain clays. They are not the natural colors of all clays.

Mr. SMOOT. That is true.

Mr. POMERENE. I was not expecting the matter to come up at this particular time, but some months ago some people came to talk to me about this subject, and my impression is that that was one of the objections to the amendment. It picks out the tiles of certain concerns which manufacture the red or brown tile, when there may be other varying colors. The color of the tile when it is finally burned depends in large part on the chemical elements which are in the clay, and why they should make special favorites of those who manufacture either red tiles or brown tiles when there might be intermediate colors I have not been been able to comprehend.

Mr. SMOOT. If the Senator will wait just a moment I will call his attention to a decision which was made upon this very point.

Mr. POMERENE. If this matter has not already been passed upon, I should like to have it go over until I can have an opportunity to examine my file.

Mr. SMOOT. If the Senator makes the request, of course I will not object, but will consent to let it go over for the present, until the Senator can get his file.

Mr. POMERENE. I will not be able to do that to-night.

Mr. SMOOT. We can take it up the first thing in the morning.

Mr. POMERENE. I will try to have that done.

Mr. SMOOT. I ask unanimous consent that the vote by which the amendment on page 31, line 23, was agreed to may be reconsidered.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. SMOOT. I ask that that amendment be passed over.

The PRESIDING OFFICER. It will be passed over. The question is on agreeing to the amendment offered by the Senator from Texas [Mr. SHEPPARD], on page 32, line 8, to the amendment of the committee. The yeas and nays have been ordered and the roll will be called.

The Assistant Secretary proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as on the last vote, I vote "nay."

Mr. FRELINGHUYSEN (when his name was called). I transfer my pair with the senior Senator from Montana [Mr. WALSH] to the junior Senator from Missouri [Mr. SPENCER] and vote "nay."

Mr. HARRISON (when his name was called). Making the same announcement as before as to my pair and its transfer, I vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as on the previous vote, I vote "yea."

Mr. JONES of Washington (when his name was called). Making the same announcement with reference to my pair and its transfer, I vote "nay."

Mr. LODGE (when his name was called). Making the same announcement as before in regard to my pair and its transfer, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as to my pair that I made on the previous vote, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as on the last roll call, I vote "nay."

The roll call was concluded.

Mr. BALL (after having voted in the negative). I understand my pair, the senior Senator from Florida [Mr. FLETCHER], has not voted.

The PRESIDING OFFICER. That Senator has not voted.

Mr. BALL. I transfer my pair to the junior Senator from Oklahoma [Mr. HARRELD] and allow my vote to stand.

Mr. ERNST. Making the same announcement as before, I vote "nay."

The result was announced—yeas 12, nays 40, as follows:

YEAS—12.

Ashurst	Harris	Overman	Sheppard
Caraway	Harrison	Pomerene	Shields
Dial	Jones, N. Mex.	Robinson	Simmons

NAYS—40.

Ball	Gooding	McCumber	Phipps
Brandegee	Hale	McKinley	Rawson
Broussard	Johnson	McLean	Shortridge
Bursum	Jones, Wash.	McNary	Smoot
Calder	Kellogg	Moses	Sutherland
Capper	Kendrick	New	Townsend
Colt	Keyes	Newberry	Wadsworth
Curtis	Ladd	Nicholson	Warren
Ernst	Lenroot	Oddie	Watson, Ind.
Frelinghuysen	Lodge	Pepper	Willis

NOT VOTING—44.

Borah	France	Nelson	Stanfield
Cameron	Gerry	Norbeck	Stanley
Crow	Glass	Norris	Sterling
Culberson	Harreld	Owen	Swanson
Cummins	Heflin	Page	Trammell
Dillingham	Hitchcock	Pittman	Underwood
du Pont	King	Poindexter	Walsh, Mass.
Edge	La Follette	Ransdell	Walsh, Mont.
Elkins	McCormick	Reed	Watson, Ga.
Fernald	McKellar	Smith	Weller
Fletcher	Myers	Spencer	Williams.

So Mr. SHEPPARD'S amendment to the committee amendment was rejected.

The PRESIDING OFFICER. The question recurs on the amendment proposed by the committee.

The amendment was agreed to.

The next amendment of the committee was, on page 32, line 8, to strike out "38" and insert "50," so as to read:

Except pill tiles, 50 per cent ad valorem.

The amendment was agreed to.

The next amendment of the committee was, on page 32, line 9, to strike out the words "brown in color, 3 cents per square foot, but not less than 20," and insert "brown, and measuring seven-

eighths of an inch or over in thickness, 5 cents per square foot, but not less than 30," so as to read:

So-called quarries or quarry tiles, red or brown, and measuring seven-eighths of an inch or over in thickness, 5 cents per square foot, but not less than 30 per cent ad valorem.

Mr. POMERENE. This raises, perhaps, the same question which was involved before. I ask that the amendment may go over.

Mr. SMOOT. I have no objection to its going over.

The PRESIDING OFFICER. Without objection, this amendment will be passed over, and the Secretary will state the next amendment.

The next amendment of the committee was, in paragraph 203, page 32, line 14, to strike out the numeral "100" and to insert "one hundred" in italics.

The amendment was agreed to.

The next amendment of the committee was, on page 32, line 17, to strike out "17" and insert "20," so as to read:

Other cement, not specially provided for, 20 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I want to make a statement at this stage of the procedure. We were notified on yesterday that the bill would be taken up in a certain order, and I was furnished with a copy of that order. No one expected we would go ahead and reach the earthenware schedule to-day. The Senator from Arkansas [Mr. ROBINSON] was prepared to take up paragraph 201 and the Senator from Texas [Mr. SHEPPARD] paragraph 202 of the earthenware schedule, but no one expected that that schedule would be reached to-day. We thought we would go ahead with the items which have been passed over in the first schedule.

Mr. SMOOT. Mr. President——

Mr. JONES of New Mexico. I yield to the Senator from Utah.

Mr. SMOOT. I want to say to the Senator from New Mexico that the junior Senator from Utah [Mr. KING] had to go to Chicago. He desired that the item should go over until his return. He made a special request to that effect. We can return to zinc oxide if the Senator is ready to proceed with that.

Mr. JONES of New Mexico. I am ready to proceed with that item.

Mr. SMOOT. I have no objection to returning to zinc oxide and proceeding with the consideration of that item. I will say to the Senator that the other matters were passed over because of the request made by the junior Senator from Utah, who stated that he had to leave the city, that he had an engagement in Chicago, and would not be back until Monday morning.

Mr. JONES of New Mexico. I did not know that the request applied to all the passed-over items. I thought it applied only to the dye embargo provisions and the duties on dyes and the related items.

Mr. SMOOT. The junior Senator from Utah especially mentioned that subject, but I understood him to say when he left that he desired the items which had been passed over to go over until Monday because he could not be in attendance before that time. If the Senator from New Mexico will take the responsibility and answer to the junior Senator from Utah for the promise that was made to him, he can call up any item that he desires.

Mr. JONES of New Mexico. I suppose there is no objection to taking up the first paragraph of the second schedule then?

Mr. ROBINSON. The first paragraph of that schedule was passed over because of the absence from the Chamber of the Senator from Idaho [Mr. GOODING].

Mr. SMOOT. That is correct.

Mr. ROBINSON. That Senator is now present and if he is ready and desires to do so, I know of no reason why the Senate should not proceed with that item.

Mr. CURTIS. I think the Senator from Arkansas must have misunderstood the chairman of the committee. The intention was to have a further hearing before the Committee on Finance in the morning.

Mr. ROBINSON. The chairman of the committee did say that the junior Senator from Idaho had presented to the committee some matter touching the brick paragraph and had not concluded it. He did not say when it was expected the matter would be concluded, but I think perhaps it is true that the Senator from North Dakota did not expect to proceed with the paragraph to-night. However, I am merely announcing that I am ready to proceed with it, and if Senators on the other side are ready there is no reason why we should not go ahead with it.

Mr. GOODING. Mr. President, I asked the chairman of the committee to give me a hearing on the brick paragraph to-morrow morning, which he promised to do, and I would like to have the item go over for that reason.

The PRESIDING OFFICER. The understanding of the Chair was that paragraph 201, fire brick, has been passed over.

Mr. ROBINSON. It was passed over, but no definite time for its consideration was fixed.

The PRESIDING OFFICER. That is true.

Mr. ROBINSON. If anyone insists that it shall go over, I do not insist upon proceeding with it now. I merely announced that we are ready to go on with it if the others are, but the Senator from Idaho has stated that he wants to take up the matter again before the committee in the morning, so I presume that will carry it over.

The PRESIDING OFFICER. The previous arrangement then remains unchanged and the item will be passed over.

Mr. SMOOT. I am perfectly willing to take up paragraph 8, antimony, which was passed over, if the Senator desires to do so, but I wish to be frank with the Senator from New Mexico and say that I understood the junior Senator from Utah to ask that those items which had been passed over should not be taken up in his absence. I may be mistaken and the Senator from New Mexico may be correct, but the junior Senator from Utah specifically mentioned paragraphs 25 and 26 and wanted those two paragraphs to go over entirely until we take up the embargo. I understood that he wanted those items which have been passed over to go over until his return, but I may be mistaken.

Mr. SIMMONS. Mr. President, as I understood the junior Senator from Utah, he wanted the embargo question to go over, but I did not understand him as asking that all these items should go over and await his return.

Mr. SMOOT. Then I ask that we take up paragraph 7, ammonium carbonate and bicarbonate.

The PRESIDING OFFICER. Let us come to some understanding about paragraph 203, cement. Is the Chair to understand that by agreement the amendment on line 13, page 32, is passed over?

Mr. SMOOT. No one has asked that that be passed over.

The PRESIDING OFFICER. The Chair understood the Senator from New Mexico [Mr. JONES] to ask that it be passed over.

Mr. JONES of New Mexico. That involves the question of Portland cement.

Mr. SMOOT. No; not at all. Portland cement has nothing to do with that amendment.

Mr. JONES of New Mexico. Does not the amendment in line 17, page 32, cover Portland cement?

Mr. SMOOT. That is "other cements, not specially provided for." On Portland cement a rate of only 5 cents per 100 pounds is proposed by the committee.

Mr. UNDERWOOD. But they are all in the same paragraph.

The PRESIDING OFFICER. The pending question is on the amendment in line 17, page 32.

Mr. SMOOT. And that does not touch Portland cement at all.

Mr. JONES of New Mexico. The whole matter ought to be discussed together before we decide upon that part of it.

Mr. SIMMONS. That is, other cements than Portland cement?

Mr. SMOOT. Yes.

Mr. SIMMONS. When that amendment is voted upon, there will be a motion offered, I suppose, to adopt the paragraph, will there not?

Mr. SMOOT. Certainly; that is, the amendment is all there is in the paragraph which has not been agreed to.

The PRESIDING OFFICER. May the Chair interject that it is not the practice in the Senate to move to adopt a paragraph but merely to agree to the amendment in a paragraph.

Mr. SIMMONS. So I supposed, the motion being simply to agree to the amendment.

Mr. SMOOT. That is all.

The PRESIDING OFFICER. That, the Chair will state for the information of the Senator from North Carolina, is the pending question.

Mr. SIMMONS. I understand what the pending question is.

The PRESIDING OFFICER. Is it agreed that that amendment shall be passed over?

Mr. SMOOT. No; it is not.

Mr. SIMMONS. I will state the only reason why I ask that it be passed over. I am willing to go on with it myself right now, and ready to discuss it if the Senator from Utah wants to discuss it, but I wish to say that the Senator from Nebraska [Mr. HITCHCOCK] has been investigating the matter and desires to discuss it. He is unfortunately unable to be here to-night.

Mr. SMOOT. All the cement which falls under the amendment in that paragraph is some special kind of cement, generally with a trade-mark. It does not touch Portland cement

at all. It involves cements in little cans, with trade-marks, or some special kind of cement.

Mr. SIMMONS. What are the cements used for which are included in the amendment?

Mr. SMOOT. Does the Senator mean those "not specially provided for"?

Mr. SIMMONS. How are they designated and what are they used for? I know Portland cement and Roman cement are used in house building and road construction.

Mr. SMOOT. These cements are used more as pipe cements than anything else. They are higher priced, and they are generally put up in little packages, although some are not. It has no more reference to Portland cement than cement has to lime.

Mr. SIMMONS. I suppose that is true. It is not Portland cement and it is not Roman cement. I do not know exactly what it is. I do not know the use of it. I do not know the kinds. For some reason I take it the Senator from Nebraska [Mr. HITCHCOCK] has some objection to this amendment.

Mr. SMOOT. He might have some objection to the rate of 5 cents a pound on Portland cement, but that is not up for discussion at this time.

Mr. SIMMONS. And the Senator probably knew that it was not up for discussion, because the committee only changed the numerals "100" to the words "one hundred." There could be no objection to that. I assume the other item is the only matter the Senator from Nebraska intends to discuss. However, if the Senator from Utah desires to take it up in his absence I have nothing to say.

Mr. SMOOT. This is all that I would suggest——

Mr. SIMMONS. I notice that the Senator from Utah has been very liberal in putting over matters for Senators on the other side of the Chamber who do not happen to be here to-night or whose convenience will be advanced or promoted by putting the items over.

Mr. SMOOT. Mr. President, that is not a fair statement.

Mr. SIMMONS. I withdraw it if the Senator thinks it is unfair.

Mr. SMOOT. I requested a moment ago, and the Senator must have heard me, that all of this paragraph should go over on the request of a Democratic Senator, and I am perfectly willing that it shall go over.

Mr. SIMMONS. I withdraw the statement if the Senator says it is unjust. I did not hear him when he made that request. If the Senator from Utah is going to get angry, of course I will have to withdraw it.

Mr. SMOOT. I am going to say this much further to the Senator, that if we act upon this amendment to-night, which I hope we will, because it does not amount to anything—I am referring to the amendment we have up now—and if the Senator from Nebraska when he returns wants to open up the item for discussion I shall ask unanimous consent that the vote by which the amendment was agreed to shall be reconsidered, and the Senator then can make any kind of statement upon it he sees fit, just as if it had never been acted upon.

The PRESIDING OFFICER. The Chair understands the Senator from Utah to object to the unanimous-consent request to pass over this amendment at the present time. The question is upon agreeing to the amendment proposed by the committee.

Mr. SIMMONS. Mr. President, I do not propose to discuss this item to-night myself, but I offer an amendment to reduce the amount specified in the committee amendment from 20 per cent to 10 per cent.

The PRESIDING OFFICER. The amendment proposed by the Senator from North Carolina to the amendment of the committee will be stated.

The ASSISTANT SECRETARY. On page 32, line 17, in lieu of the numerals "20" proposed to be inserted by the committee, the Senator from North Carolina proposes to insert "10," so as to read:

Other cement, not specially provided for, 10 per cent ad valorem.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from North Carolina to the committee amendment.

Mr. SIMMONS. I ask for the yeas and nays on the amendment.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. BALL (when his name was called). Making the same announcement as on the previous vote with reference to my pair and its transfer, I vote "nay."

Mr. FRELINGHUYSEN (when his name was called). Making the same announcement as before, I vote "nay."

Mr. HARRISON (when his name was called). Making the same announcement as on the previous vote, I vote "yea."

Mr. JONES of Washington (when his name was called). Making the same announcement as before, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as on the previous vote, I vote "nay."

The roll call was concluded.

Mr. WATSON of Indiana. Making the same announcement as heretofore, I vote "nay."

Mr. COLT. Making the same announcement as heretofore, I vote "nay."

Mr. CURTIS. I am requested to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Vermont [Mr. DILLINGHAM] with the junior Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

The result was announced—yeas 12, nays 42, as follows:

YEAS—12.

Caraway	Harrison	Pomerene	Shields
Dial	Jones, N. Mex.	Robinson	Simmons
Harris	Overman	Sheppard	Underwood

NAYS—42.

Ball	Hale	McKinley	Rawson
Brandegee	Johnson	McLean	Shortridge
Broussard	Jones, Wash.	McNary	Smoot
Bursum	Kellogg	Moses	Sutherland
Calder	Kendrick	New	Townsend
Capper	Keyes	Newberry	Wadsworth
Colt	Ladd	Nicholson	Warren
Curtis	Lenroot	Norbeck	Watson, Ind.
Ernst	Lodge	Oddie	Willis
Frelinghuysen	McCormick	Pepper	
Gooding	McCumber	Phipps	

NOT VOTING—42.

Ashurst	Fletcher	Nelson	Stanley
Borah	France	Norris	Sterling
Cameron	Gerry	Owen	Swanson
Crow	Glass	Page	Trammell
Culberson	Harreld	Pittman	Walsh, Mass.
Cummins	Heflin	Poindexter	Walsh, Mont.
Dillingham	Hitchcock	Ransdell	Watson, Ga.
du Pont	King	Reed	Weller
Edge	La Follette	Smith	Williams
Elkins	McKellar	Spencer	
Fernald	Myers	Stanfield	

So the amendment of Mr. SIMMONS to the committee amendment was rejected.

The PRESIDING OFFICER. The question recurs on the amendment proposed by the Committee on Finance.

Mr. UNDERWOOD. Mr. President, I propose to detain the Senate but for a moment in reference to the pending paragraph. I stated the other day that when the present law was written an earnest effort was made by those who drafted the bill to provide so far as possible untaxed material for the building of the homes of America; and I pointed to the fact that in writing that bill shingles and lumber had been put on the free list; that the tax on paints had been very greatly lessened; and that on almost everything else that went into the homes or into the schoolhouses the tax had been entirely removed or greatly reduced.

I realize that those who believe in a protective-tariff system see no reason why there should be discrimination in favor of the citizens when tariff taxation is levied or in the purposes for which it is levied. That is the distinct line of demarcation between those who believe in the character of law that is now on the statute books and those who frame a protective-tariff measure.

Of course there is only one amendment now pending to this paragraph, as the Senate committee agree with the House of Representatives in reference to Portland, Roman, and other hydraulic cements. The only amendment which the Senate committee have proposed to the paragraph as it came from the other House is to increase the tax on cements other than Roman, Portland, and other hydraulic cements. I must say that the item on which the committee have increased the tax imposed in the bill as it came from the other House is of minor importance; but that is not true as to the item in which they agreed with the House bill and left a 5-cent tax on every 100 pounds of building cement which is introduced into the United States.

Under the agreement as to the consideration of this bill the amendments proposed by the Committee on Finance must be considered before there is any opportunity to offer amendments as to the remainder of the schedule. So, Mr. President, we are prevented from making any motion in reference to this important item except as to a minor subdivision; but, Mr. President, the proposed duty on Roman cement and Portland cement shows how far the majority members of the committee may go

in trying to protect special interests in this country when such protection is absolutely unnecessary.

Everybody knows that the great equation incident to the distribution of cement is transportation; that the cost of making cements is a minor consideration compared to the cost of transportation.

I recall that at one time when I was a Member of the House of Representatives the question of building the great Roosevelt Dam near Phoenix, Ariz., arose. The project had been agreed upon and the appropriation was made, or the money had been allocated for that purpose; but when the engineers of the Government started to build that dam they found that all the cement manufacturers in the United States had entered into a combination and fixed the price of cement, for they knew that an immense amount of cement was going to be used in the construction of that dam. They put up the price on the American people and on the Government and on the homesteaders in the Salt River Valley, who ultimately had to pay for the dam. The railroads also at the same time put up their cost of transportation. The result of the concerted move on the part of the manufacturers of cement and the railroads was that the Government engineers went to the site of the location of the dam and there easily found a cement rock; and, instead of paying the exorbitant price that this combination proposed to impose on the Government, the burden of which ultimately would have been imposed on the farmers and homesteaders of the Salt River Valley for the cost of the dam, the Government built its own cement factory to make cement merely for the purpose of building the dam, and scrapped the factory when the dam was built, thereby saving one-half the cost of the amount which otherwise they would have paid for the cement. There is hardly a State in the Union that has not cement rock. The cost of preparing the rock for the manufacture of cement is not great, but the real question is one of transportation.

Mr. President, there may be a few points at the borderline of our country where the foreign manufacturer of cement may cross and compete with the American manufacturer just across the line, but it is only within a very narrow margin; yet, in order to protect those few individuals, those few places right along the borderline—for the foreign cement on account of its weight and the freight rate can not enter the country to any distance—the Committee on Finance now proposes to take cement off the free list, where it is now untaxed, and put a tax of 5 cents per 100 pounds or $1.10 a ton on every ton that comes through the customhouse. Of course, there will be very little come through the customhouse; but this proposed legislation will build up a wall to allow the cement manufacturers within the country to level tribute to that extent on the American people. The proposed tax is not necessary. Keeping cement on the free list would not destroy an American industry. The imposition of the tax is not going to protect labor; it is nothing in the world but an effort of the Finance Committee to try to collect money from the pockets of the mass of the people and to take that money and put it into the coffers of the few special producers of cement.

There is to-day no more important article to the home life and business life and hygiene of America than cement. Millions of tons of it go into the roads over which the children are transported to school in automobiles.

Mr. SIMMONS rose.

Mr. UNDERWOOD. I will yield to the Senator from North Carolina in just a moment.

The works in every drainage district are made with cement; cement is the foundation of almost every house; the lining of wells to protect them from infection is now made of cement, and not of brick. Now I yield to the Senator from North Carolina.

Mr. SIMMONS. I have just gotten some data here that I wish to furnish the Senator in connection with the argument he has just made.

In 1920 I find that there was produced in this country 100,000,000 barrels of cement, the unit value of which—that is, the barrel—was $2.02. When the war began it was selling for about 85 or 86 cents. The imports in 1920 were only about half a million barrels. In 1921 the imports were only 120,000 barrels. The exports in 1920 were 2,985,807 barrels. The percentage of imports to domestic production is just about one-half of 1 per cent.

Mr. UNDERWOOD. I did not have an opportunity to see the figures before I started to make my discussion, but I know that what the Senator has just said is true, because I examined it years ago—that the imports coming into this country amount to one-half of 1 per cent and the exports about equal the imports.

Mr. SIMMONS. No; the exports for 1921 were 1,181,024 barrels. The imports were only 121,000 barrels; so the Senator will see that it is eight or ten times as much.

Mr. UNDERWOOD. Oh, yes—121,000 barrels. Then, the imports do not equal one-half of 1 per cent—not nearly—and the exports are as much as 1 per cent of the American production; so that the exports going out of this country exceed the imports coming in several times over, and yet all of them are infinitesimal in proportion to the American production.

Mr. SIMMONS. Nearly ten times over.

Mr. UNDERWOOD. A hundred times. The American production is more than a hundred times greater than the imports.

Mr. SIMMONS. Oh, yes; several hundred times greater.

Mr. UNDERWOOD. So that if you are going to have any tariff at all to produce revenue for the Government, you can not disturb that situation without damming out all of it. The result is that except possibly at some little corner of the United States not a barrel of Portland cement will come into this country, and yet you are going to erect an impregnable wall, behind which special interests may flourish to levy their tribute on the foundations of the home, the cellars of the people, the great roads of the country, and every other useful enterprise that needs cement.

Mr. President, I suppose it is utter folly to talk to the gentlemen who have charge of this bill with the idea that they will change their language one iota; but if there is any tax in this bill that is not justified from a revenue standpoint, because it will produce only an infinitesimal amount of revenue, or from a protective standpoint, unless somebody along the borderline has to be wet nursed in order that honest competition can not come in in connection with him, it is this paragraph of the bill. There is no justification whatever for it.

Mr. McCUMBER. Mr. President, I want first to correct one statement made by the Senator. He says that the committee has increased the duty. The House bill called for a duty of 17 per cent ad valorem.

Mr. UNDERWOOD. The Senator will please put me correctly before he starts to correct me. I said that you had increased the duty over the present law. This article is on the free list under the existing law.

Mr. McCUMBER. Then I misunderstood the Senator.

Mr. UNDERWOOD. That is what I said.

Mr. McCUMBER. I desire to state, however, that compared with the House bill we have reduced it, so that it is not even half of what the House bill would be at 17 per cent upon the American valuation.

I desire to say further, Mr. President, that this affects only the production along the Canadian line. It probably will not affect the price at all at other points in the United States. Canada has a duty of 11 cents a hundred; and if the American along the Canadian line desires to ship cement into Canada he must pay 11 cents for every hundred pounds, while under the present law the Canadian would ship into the United States freely. Of course, neither of them will ship very far on account of the freight rates; but it does affect, and affect disadvantageously, the American producer along the Canadian line.

The duty is a very small one, and I think it should be sustained.

Mr. POMERENE. Mr. President, I desire to ask the Senator from North Dakota a question. What duty is charged by the Canadian Government?

Mr. McCUMBER. Eleven cents per hundred pounds.

Mr. POMERENE. That is against the importation of our cement?

Mr. McCUMBER. Portland cement; yes.

Mr. POMERENE. I notice that in the Summary of Tariff Information which is presented here this significant statement is made:

> The bulk of the increase—

That is, since the armistice—

> is Canadian cement from plants located near the border. The Canadian industry is expanding and will be of increasing importance in the domestic market.

But this is added:

> Most Canadian plants operate at a disadvantage, however, since fuel must, in most cases, be imported from the United States.

That is the situation with regard to cement. I simply want to add this further statement:

Cement is produced all through our section of the country, and I do not know of what particular benefit this tariff would be to them. Of course, like everything else, if they can get a tariff I assume that they want it.

Mr. SMOOT. Mr. President, just for the RECORD, I want to state the reason for the Government building a cement plant

at the Roosevelt Dam. The Senator from Alabama, I think, was a Member of the House then, and I was a Member of the Senate. It was figured that the freight rate on the cement from the nearest factory that could furnish the cement to that dam would amount to more than the building of the whole plant.

Mr. UNDERWOOD. I will say to the Senator that what I said I said advisedly, because I was on the committee that acted on the question, and I know that we had hearings, and it was shown there that the cement operators had gone into a combination and put the price up on the Government, and so had the railroads.

Mr. SMOOT. I am not disputing that, because I do not know anything about the combination of the cement industry; but I know that it was shown that the railroad freights alone on the cement from the closest cement factory to the Roosevelt Dam would have amounted to more than the building of a cement plant, and of course it was a very splendid thing for the Government to do.

Mr. UNDERWOOD. Certainly; and that being the case, showing that this question is governed by freight rates, your committee, where there is no necessity to put this in here to protect an American industry throughout the country unless you want to play favorites right on the border, put it in here so that they may have this to hide behind.

Mr. SMOOT. The Senator is right as far as 90 per cent of the cement manufacturers in the United States are concerned, and perhaps more than that. It is only a question here of the people along the border in Canada. That is all that will ever be affected.

Mr. UNDERWOOD. Yes; just a few favorites here.

Mr. SMOOT. I do not think they are favorites. I think it is a condition that exists; and, of course, they can have a cement factory in one place from which we can ship cement into Canada because of the freight rate. The Senator is right on the question of cement; it is a freight question. Some of that cement is manufactured in some of our cities and shipped into Canada, with a duty of 11 per cent. Why? Not because Canada can not furnish it, but because of the fact that the freight rate is more than the 11 per cent itself to the point at which they want to use the cement.

Mr. ROBINSON. Mr. President, referring to the statement made by the Senator from Alabama [Mr. UNDERWOOD] as to the condition of the cement business at the time of the construction of the Roosevelt Dam, much evidence exists to establish the conclusion that that condition has not materially changed. The cement business is controlled by an organization of the industry which constitutes a monopoly.

The Senator from New York [Mr. CALDER] this morning put into the RECORD a portion of the report of a legislative investigating committee in that State touching housing conditions, commonly known as the Lockwood committee. That committee in its intermediate report discusses at some length, on page 86, what it designates as the cement combination.

The Lockwood committee declares that throughout the eastern district of the United States, and in fact throughout the entire country, the business is controlled by what is known as the Cement Manufacturers' Protective Association. The eastern branch of the business, it is stated, is in the hands of 19 manufacturers who are associated under the title of the Cement Manufacturers' Protective Association, the largest producers being the Atlas Cement Co., the Lehigh Portland Cement Co., and the Alpha Portland Cement Co. It is stated in the report to which I have referred that the aggregate business of the group just mentioned exceeded 50,000,000 barrels per year at the time of the investigation. The eastern organization was connected by the most intimate affiliation and exchange of detailed information with two other organizations in different sections of the country. The report set forth that at fixed times these groups, representing the various sections of the United States, exchanged all the information or data which they possessed concerning every transaction in the business, the result of which was to bring about uniformity of trade conditions and uniformity of prices throughout the United States; and that combination is designated by the committee as one of the most flagrant and dangerous monopolies in the building industry.

The committee report proceeds to detail the manner in which this combination was effected and carried out. It states:

> A complex reporting system for the purpose of controlling prices maintained by the eastern association required each member to make a daily report to the association of all business done by that member. These reports were exchanged daily between all the members of the organization, each being obliged to report on a form card every contract closed. These cards were mimeographed and immediately sent to every other member of the organization. Besides this daily disclosure and exchange of the business of each other to each and all of the others, the association issued bulky quarterly printed books or bulletins specifying every contract made by each member for specific job work with all the details of the contract. Each of the three associations covering various sections of the country had the same system and exchanged such information:
>
> A comparison of the voluminous quarterly-yearly reports shows absolute uniformity of price in any given period. There were wide fluctuations in the price of cement between 1915 and 1919, but it fluctuated constantly upward, and when there were price changes they were uniform and instantaneous with mathematical precision.

The testimony of the vice president of one of the companies in the combination known as the Cement Manufacturers' Protective Association, namely, the vice president of the Alpha Portland Cement Co., touching upon the point of uniformity of prices, made this statement quoted in the Lockwood report at page 87:

> I don't know of any variation between the price of my closest competitor and myself to the extent of 1 cent a barrel at any time in two years.

That declaration of fact is conclusive evidence that the condition described by the Senator from Alabama as existing some time ago was true as to conditions at the time this committee made its investigation and submitted its report. It shows conclusively that the cement business is controlled absolutely, both as to trade conditions and prices.

The Lockwood committee report proceeds:

> The uniform advances in the market price of cement by this combination and the dates of changes in price are shown by reference to the manufacturers' prices in New York City up to November 1, 1920, which were as follows.

Now, listen to these figures relating to prices of cement, and the uniform and very great advances beginning with January 1, 1920, when the price per barrel was $2.65. The price per barrel on the respective dates is stated as follows:

March 29	$2.75
April 7	2.95
April 23	3.35
June 18	3.65
July 13	3.90
October 4	4.09

Mr. DIAL. Mr. President——

The PRESIDING OFFICER (Mr. FRELINGHUYSEN in the chair). Does the Senator from Arkansas yield to the Senator from South Carolina?

Mr. ROBINSON. I yield.

Mr. DIAL. Does the Senator mean that that is the average price, or did it all go up at the same time?

Mr. ROBINSON. I mean that according to this record they all advanced at the same time. To quote the language of the president of the Alpha Portland Cement Co.:

> I do not know of any variation between the price of my closest competitor and myself to the extent of 1 cent a barrel at any time in two years.

Mr. DIAL. It sounds very much like a conspiracy, does it not?

Mr. ROBINSON. Beyond any doubt, if that evidence is to be accepted as reliable, it is a trust within the meaning of the Sherman antitrust law and ought to be proceeded against under that statute.

Mr. DIAL, Mr. HITCHCOCK, and Mr. CALDER rose.

The PRESIDING OFFICER. Does the Senator from Arkansas yield; and if so, to whom?

Mr. ROBINSON. I yield first to the Senator from South Carolina, who rose first.

Mr. DIAL. Notwithstanding all that, the United States Government is one of the largest consumers of cement, indirectly, through the States in building bridges and constructing highways.

Mr. ROBINSON. Yes; it is.

Mr. DIAL. Our taxes go very largely for those activities.

Mr. ROBINSON. To pursue the suggestion which the Senator from South Carolina has just made, public works which require the use of Portland cement are in process of construction throughout the United States on behalf of States, counties, and other governmental subdivisions.

Mr. DIAL. And the National Government contributes and helps pay for it.

Mr. ROBINSON. I yield now to the Senator from Nebraska.

Mr. HITCHCOCK. Mr. President, evidently the Attorney General's office takes the same view as that taken by the Senator from Arkansas, that there is a Cement Trust. I notice by the New York papers that that trust has been on trial for the last five weeks, and the case is now nearing its conclusion. The hearings were closed yesterday, and the arguments are proceeding to-day and to-morrow. In view of the fact that the legal department of the Government, acting upon the statistics which the Senator from Arkansas has read, has proceeded to prosecute this Cement Trust as a criminal conspiracy, I would like to know of some member of the Finance Committee why the committee is recommending to the Senate the establishment of

this high tariff on the product—the legal branch of the Government prosecuting the conspiracy for robbing the American people, and the legislative branch deliberately proposing to raise a tariff wall around the country so as to give it a better opportunity.

Mr. CALDER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from New York?

Mr. ROBINSON. I yield.

Mr. CALDER. If the Senator will pardon me, I was going to call his attention to the fact just mentioned by the Senator from Nebraska that those men were indicted by a Republican district attorney in New York, and are now being tried. In further answer to the statement just made by the Senator from Nebraska, I want to call his attention to the fact that these increases in prices, beginning, as the Senator from Arkansas has indicated, early in 1920, step by step, step by step, until they increased 100 per cent in one year, all occurred in the period when cement was admitted free of duty. It occurred to me that the fact that cement was free did not have the effect of bringing down the price.

Mr. ROBINSON. In reply to that statement I will say to the Senator from New York that ought to suggest to his mind that if these conditions exist his party should not put a premium upon the conduct of this trust by raising a tariff wall so as to prevent the possibility of importations of material quantities of cement into the United States in competition with the products of the trust.

Mr. CARAWAY. Mr. President, would it not suggest itself also that if this trust is able to control prices and raise them when the product is free, it needs no protection?

Mr. ROBINSON. Absolutely. I have not concluded my discussion of the facts which I am producing in an attempt to show that this association is a trust. I intend to submit some conclusions.

Mr. CARAWAY. May I say just one more word?

Mr. ROBINSON. I yield with pleasure.

Mr. CARAWAY. I know this is true, at least in our section, that not only do they agree upon prices but the territory is parceled out, and you can not buy in one section where low prices may be quoted if you do not belong to that territory; and the road commissioners in Arkansas have been unable to purchase from people in some other section than their own.

Mr. ROBINSON. Not only is the statement just made by my colleague true, but if a purchaser of Portland cement or other cement for use in the construction of the highways has a controversy with the company from whom he purchases, he can not purchase one pound of Portland cement from any other company until he adjusts that controversy to the satisfaction of the other party to it.

Mr. HARRIS. Mr. President, I want to remind the Senator from Arkansas that this is not the first time they acted as a trust. In the Roosevelt administration, I believe it was, either the Bureau of Corporations or the Department of Justice investigated them and found that they were acting as a trust.

Mr. ROBINSON. To proceed with some further evidences on which this committee based its conclusion that the business is trust controlled, I want to bring to the attention of the Senate two regulations which were adopted by those controlling the organization, for the purpose of enabling the trust to know at all times what stocks were on hand and what uses were contemplated for the same:

(1) Dealers were allowed an advance supply equal only 15 days.
(2) Where a contractor required cement for a particular job he was required to execute an agreement that the cement delivered would be used only for the purpose specified in the contract and on that particular job. If any cement remained after the job was completed, he was under obligation to return it, so that by no possibility could a stock be surreptitiously accumulated.

So we have the evidence that the dealers in cement and their organizations require the mutual exchange of all information respecting contracts and prices; that when one dealer raises the price all other dealers simultaneously do the same thing, and that the net result of the combination during the year 1920 was to almost double the price of this expensive material.

Mr. POMERENE. Mr. President, is this a part of the perfectly balanced tariff law about which we have heard so much this afternoon?

Mr. ROBINSON. Mr. President, I wonder what sort of a conscience an individual must have to justify the imposition of a tariff for protective purposes on the products of this gigantic trust? I wonder by what mental process a protective tariff can be justified in honest conviction, whether one be a Democrat or a Republican, when the circumstances surrounding the industry exist which are disclosed in connection with cement.

The committee, further proceeding, reported:

In order to further enforce compliance with these provisions by the purchase, the association maintained a vigilance system with a staff of inspectors throughout the territory to check up the supply on hand at the various dealers and the uses to which their stock had been put.

When public sentiment became aroused and the manner in which this industry was controlled and conducted was discussed, particularly in the city of New York the dealers announced that they had suddenly abandoned their former practices which had proved so obnoxious to the public. But the Lockwood committee went into that question and reached the conclusion that in spite of the protestations of reform the combination continued to operate in other forms, notwithstanding the fact that in the meantime its members have been indicted.

The tax on Portland and Roman cement in this paragraph is 5 cents per hundred pounds, or $1 per ton. How do you justify the imposition of any tax for the protection of this trust-controlled product? Throughout the United States this combination is levying tribute from every road district, from every home builder, from every bridge builder, charging excessive and extortionate prices. The outrageous extortion in the State of New York almost produced a revolution there. Thousands of people homeless, the construction of buildings suspended, business throughout the country suffering interruption consequent to that condition, and yet the Senate is asked to levy tribute upon the American people for the benefit of men and combinations of men who violate and defy the laws of the United States and of the States of the Union.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Ohio?

Mr. ROBINSON. I yield.

Mr. POMERENE. It perhaps may add a little to the illumination of the subject if I were to give to the Senate some information which came to me to-day.

In the State of Ohio there have been built up to date about 5,100 miles of paved highway throughout the State. That means the equivalent of one road from New York through Ohio to San Francisco and back nearly to Columbus, Ohio. A large part of these roads are made of brick with a concrete base. Many others are made of cement. During the past year or two very bitter complaints have been made because of the very high prices that must be paid by the State or the county, as the case may be, for road-building material, a large part of which is the cement which the Senator from Arkansas is discussing.

I suspect our friends who talk about this bill being for the benefit of the farmer will be able to demonstrate how it is going to benefit the farmer to have this increased price in the road-building material of the country, a large part of which is paid by assessment upon their farms or by taxes collected either by the State or the county or the Nation.

Mr. ROBINSON. Mr. President, the condition described by the Senator from Ohio in that State is similar to those in the State of Arkansas. For 10 years the road question was agitated there, until public sentiment became so overwhelming in favor of the construction of improved highways that the people, in the form of improvement districts, provided for the construction of more than 4,000 miles of roads within the limits of the State, the greater portion of them being hard surface and the principal part also contemplating the use of large quantities of cement. That condition is quite general in nearly all the States.

About the time the war began the States in the South and Southwest moved forward as if in one enterprise for the construction of hard-surface roads. The people had come to know that rapid and permanent progress without them was impracticable, if not impossible. For every mile of road that has been built and for all highways that are now under construction throughout the United States excessive prices have been paid and are being charged now for cement. This will continue, in all probability, whatever may be the provision in this bill, but it is astonishing beyond my comprehension that the Senate of the United States should be requested, should be urged, to put a protective tariff upon a trust-controlled product, and thus fasten more securely upon the public its iniquitous power. Where is the justification for it in law, in common sense, or in morals?

Mr. DIAL. Mr. President, I wish to ask the Senator a question, if he will yield to me.

Mr. ROBINSON. I yield gladly to the Senator from South Carolina.

Mr. DIAL. The Senator will recall that Congress appropriated about $17,000,000 with which to build new hospitals to take

care of sick and wounded ex-soldiers, and a large part of the expense involved in that construction will, of course, be cement. Does not the Senator think the tariff will help keep up the prices in the United States at the expense of the wounded and disabled ex-soldiers, because the construction of the buildings which are provided for in the act, as the Senator will recall, must be fireproof?

Mr. ROBINSON. Yes; the Senator is correct. Not only is cement used in the construction of highways and private homes but in many public buildings, including hospitals constructed under the order of Congress for the benefit of sick and wounded ex-service men. This trust has levied a tribute of millions of dollars against the Government of the United States. We are imbecile enough—I will not say mean enough—to consider putting a premium upon the outlawry of the agencies which, while plundering the citizens and home builders of the land, dishonor the flag and the Government it symbolizes.

Mr. CALDER. Mr. President, the Senator from Alabama [Mr. UNDERWOOD], it seems to me, in his statement this evening touched the point better than anyone else. As I recall it, he said that the transportation question was the most important one affecting the price of this commodity. I believe that is so. The greater the distance necessary to carry the article the more it costs the consumer; the price goes up accordingly, of course.

I have taken the trouble to look up the price of cement quoted in the Tariff Information Survey, volume 2. I observe that beginning in 1900, when the tariff was 7 cents per hundred pounds, 2 cents per hundred pounds more than the amount proposed in the pending bill, the average factory price per barrel was $1.09, and the same in 1901, when the tariff rate was 8 cents.

The price hovered along about $1 per barrel until the Payne-Aldrich law was enacted, that much-defamed measure which fixed the duty at 8 cents per hundred pounds. Then the price of cement in this country, the average price at the mill, went down to 85 cents a barrel in 1908; in 1909 it was 81 cents; in 1910, 89 cents per barrel; in 1911, 84 cents per barrel; in 1912, 81 cents per barrel; and in 1913, $1 per barrel. Then it began to rise under the Underwood law, a law under which cement was admitted free of duty. It continued to rise until in 1919——

Mr. ROBINSON. Mr. President, will the Senator yield for a question?

Mr. CALDER. Certainly.

Mr. ROBINSON. I presume the purpose of the Senator's argument is to show that the intention of the proposed duty is to lower the price of cement.

Mr. CALDER. The rates then began to rise, and we find that in 1919 the mill price was $1.69; and in 1920, as the distinguished Senator from Arkansas has pointed out, the price ran up to $4 a barrel, and still there was no tariff on cement.

Now, of course, these exorbitant prices were caused by a combination of the cement manufacturers. In New York State a Republican legislature authorized the appointment of an investigating committee, of which Senator Lockwood is chairman, a State senator coming from my old congressional district. It is true that we have a gentleman for counsel of the committee from the Senator's own party, doing a splendid job.

What happened? As the result of the information unearthed by this committee we have been able to obtain information, to submit it to the Federal authorities, by them to have it submitted to a grand jury, and now we are trying in New York the men responsible for the high prices. It is true the Committee on Finance has reported the bill imposing a duty of 5 cents per hundred pounds on this article.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from New York yield to the Senator from Ohio?

Mr. CALDER. I yield.

Mr. POMERENE. Do I understand that while the good people of New York are trying to put in jail the men to whom the Senator from that State refers, we are trying to reward them by imposing an increased tariff duty on cement?

Mr. CALDER. No; Mr. President, but through the activities of a Republican administration here in Washington and through the officials of the Department of Justice in New York, we are trying to destroy the Cement Trust.

However, Mr. President, the Committee on Finance propose a rate in this bill of 5 cents per hundred pounds on cement. The Senator from Ohio knows that a duty of 5 cents a hundred pounds on cement will not affect its price in the slightest degree. There are some manufacturers along the Canadian border, notably in Michigan and Wisconsin—not in my own State, for my State has not asked for this duty, nor have I advocated it—where there are large cement industries on this side of the border and others on the Canadian side. These American companies, I am informed, are out of the combination who have asked for this duty of 5 cents per hundred pounds in order to even up the cost of manufacture between this country and Canada. That is the whole story. Any man who has studied the question, anyone who knows anything about the problem of the manufacture and transportation of cement, knows that the proposed duty will not affect the price in the slightest degree in the building of homes.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER. Does the Senator from New York yield to the Senator from Massachusetts?

Mr. CALDER. I do.

Mr. WALSH of Massachusetts. I ask the question of the Senator from New York, because he is a contractor and is very much interested in the housing problem. I understood the statement which was put into the RECORD this morning, which was filed by Mr. Untermyer, counsel for the Lockwood committee, to be to the effect that, in his opinion, building materials are now selling for 50 per cent in advance of the cost of production, allowing a reasonable profit to the manufacturers of such building materials. Is it the opinion of the Senator from New York that that is a truthful statement as to the situation in New York?

Mr. CALDER. I do not know what the costs of manufacturing building material are to-day, but I should not be surprised if in New York common brick are selling for double what they cost to produce. I am not so well informed as to other building material.

Mr. WALSH of Massachusetts. The statement of Mr. Untermyer was that building materials are selling for 50 per cent in advance of the cost of production, allowing a reasonable profit to the producer. Does the Senator from New York agree with that statement?

Mr. CALDER. I said a moment ago that I agree to it in the matter of brick. I doubt very much, however, if the statement is accurate in regard to cement. I think that the cement manufacturers who are selling that product in our market are obtaining a pretty good profit, but I doubt if they are getting 50 per cent profit, I will say to the Senator from Massachusetts.

Mr. McCUMBER. Mr. President, it never occurred to me that because this combination on cement was formed by some of the producers of Portland cement during the time of the Democratic free trade tariff that the Democratic Party or their policy were at all responsible for that combination. Though it was brought about during the time that cement was coming in free, I want to acquit them of any complicity whatever in attempting to bring about the combination.

Neither do I think the Democrats are justified in assuming, because we are asking for a rate of 5 cents per hundred pounds in order to protect a class of producers of cement along the Canadian border, none of whom have entered into any combination whatsoever, so far as the testimony shows, and who for the most part are selling directly to the consumer, that we are endeavoring to further the interests of a combination.

The evidence is undisputed that this little tariff rate of 5 cents per hundred pounds on cement will only affect the producers of cement who are along the Canadian border, mostly in Michigan and west of that State, and who are in direct competition with the Canadian producers. The testimony received by us was to the effect that it costs somewhat more in the United States to produce cement than it costs in Canada. Then, too, the producers of American cement are cut off from the Canadian trade by reason of a tariff of 11 cents per hundred pounds which is imposed on that article by the Canadian Government, while the people of Canada are exporting their product into the United States free of duty.

The proposed duty will not affect the cement combination one way or the other. It will, however, affect a little strip of territory lying mostly west of the Alleghanies which is in direct competition with the Canadian producers of cement.

Mr. UNDERWOOD. Mr. President, the defense of this bill is remarkable to me. I thank the Senator from North Dakota for acquitting the Democratic Party of an attempt to aid the Cement Trust in any way, but it is very apparent that when the Democratic Party took the tariff off cement they did not intend to be guilty of going into partnership with the trust, and so they acquitted themselves when they accomplished that act. However, the combination and understanding to put up the price of cement did not originate after cement was placed on the free list; it existed before that time. Perhaps it was not so hard and fast a combination as it is to-day, but I pointed

out awhile ago the operation of the combination at least 15 years ago, if not more—at any rate, long before the present tariff law was placed on the statute books.

The Senator from New York justified this proposed tax because of the rising and falling of the prices. Of course, we all know that at times when there is great building activity, when there is demand for cement to build roads all over the country, and there is a greater demand generally for the product, the combination can put up its prices; but in duller times, when there is not so much cement needed, when there is not so much construction going on in the country, the price comes down closer to the point of the cost of production. The very figures the Senator from New York has read in reference to the difference in the cost of production at various times show what an enormous profit the cement industry working in combination can reap from the American people.

I have said that I realize that the conditions of this trade were governed by freight rates, and that is true; but there is a border line. The Senator from North Dakota in his eloquent remarks said the duty is only 5 cents a hundred pounds, but 5 cents a hundred pounds is $1.10 a ton.

The cement manufacturers do not expect to make their profits out of the tax; they only want to exclude from foreign competition that territory in which the foreign cement may enter by paying the freight rates, thus giving the people of that section of the country the benefit of lower prices. Of course cement is a commodity which is carried at a comparatively low freight rate. I do not recall the railroad transportation rates, but probably $1.10 a ton will cover the freight rate for from 150 to 200 miles from the border into the interior. I am not familiar with the freight rates, as I have said, but I know $1.10 would carry it to a certain extent into the interior and perhaps 150 or 200 miles. That is probably as far as the competition could go. The chairman of the committee so admitted a moment ago when he said, "There can be no competition except along the border, and we are simply establishing a freight rate, not in order to build up an industry, not to protect labor, but to prevent competition on the border." The border, however, is not only on the Canadian line; the border is also at New York. I have heard of instances as far south as the Carolinas where the cement combination attempted to force high prices for cement, but, by reason of the fact that the local communities could bring in a few shiploads of cement, they forced down the price to a more reasonable figure.

Mr. SIMMONS. Mr. President, I wish to say to the Senator that I am advised that in my State, where we are doing an immense amount of road building, the State having voted $50,000,000 for that purpose and many of the counties on the coast having voted from $1,000,000 to $2,000,000, the price of cement charged by the American producer was so unreasonable that they sought to overcome that by purchasing abroad; that they did make a purchase abroad, and in one contract saved a half a million dollars. If we impose this tax on cement, of course, such relief against the exorbitant prices of the Cement Trust will be gone.

Mr. UNDERWOOD. Certainly. The Senator from North Carolina has pointed out one instance where the people of his State in building roads saved a half million dollars because they could bring cement across the border. The same situation applies to New York, where the people are crying out against the throttle hold of the trust, and yet the Senator from New York defends the proposal of the committee and says that he wants to wait until the Supreme Court of the United States decides whether the members of the combination are guilty and shall go to the penitentiary, but in the meantime he wants to lock the door against any foreign competition and let the cement manufacturers continue to exploit the people of New York. The people of the Senator's State have found them guilty, and he has acknowledged that the verdict is a righteous one.

Mr. President, this is simply an instance of the way this bill is written, and it is admitted on the floor here. There is no evidence tending to show that the duty is needed because the product of a foreign country is produced cheaper than the commodity is produced on American soil. There is nothing said here showing that the tax is to be laid in order to protect American labor; there is nothing here to show that if it were not imposed the industry would fail. No; not at all; but we are told that some of the manufacturers of this product, for their own selfish interest, come before the Finance Committee and ask for a tax that will exclude foreign competition, and it is granted to them without question. That is how this bill has been written. The door was open to those who wanted to exploit the American people. They are invited before the committee and asked what prices they desire to levy on the necessities of the American people, and they are granted without question.

Mr. HITCHCOCK. Mr. President, let us see, first of all, what it is that the United States Tariff Commission report on the subject of cement; and having this report of the commission before us, I am unable to see how any committee could consider for a moment the levying of any tariff.

The United States Tariff Commission has this to say:

> Domestic plants produce almost 50 per cent of the world production of hydraulic cement. The United States was the pioneer in the development of concrete construction, and as a result domestic consumption of the material per capita is the highest in the world.

Mr. President, you have not here the case of an infant industry. You have here just about such a case as when we discussed wood alcohol. Of all the production of hydraulic cement in the world, the United States produces one-half; and yet, in the face of that fact, we are asked here to erect a Chinese wall around the country to prevent any importation whatever of cement from abroad.

If this were a statement made in a partisan spirit, made in the heat of an argument, it might be discredited somewhat; but here is the calm, unbiased, nonpartisan declaration of the Tariff Commission that of all the hydraulic cement produced in the world the United States produces one-half. That statement was written when cement was on the free list.

Now, let me read another paragraph from the report of the Tariff Commission:

> The United States is independent of other countries for its cement supply. Domestic manufacturers have the advantage of cheaper fuel, and by the use of large-scale mechanical units and labor-saving devices they have gone far toward eliminating the European advantage due to lower-priced labor.

Yet we are asked to take cement off the free list and subject it to a tariff of something like 20 or possibly 25 per cent.

Mr. SMOOT. Oh, no.

Mr. HITCHCOCK. Will the Senator say what per cent it is?

Mr. SMOOT. If it were $3 a barrel, that would be 200 pounds, and 1 per cent would be 2 cents. That would be 2½ per cent.

Mr. CALDER. If the Senator will permit me, I believe a barrel weighs about 380 pounds, and with a duty of 5 cents a hundred pounds this would mean about 9½ per cent.

Mr. SMOOT. Yes; but, I say, even if it were 5 cents for 380 pounds, it is not 1 per cent. The Senator talks about its being 25 per cent.

Mr. HITCHCOCK. Then I will withdraw that statement. The committee has brought in so many 25 and 30 per cent tariff schedules here that I perhaps made an overhasty computation and figured that that was it; but it does not matter what per cent it is. It is on the free list now.

Mr. SMOOT. If the Senator had made that statement, I would have agreed with him, and I would not have interrupted him.

Mr. HITCHCOCK. I am glad the Senator has corrected me.

Mr. SMOOT. I thought the Senator would be.

Mr. HITCHCOCK. It is a crime to take an article off the free list and subject it to any tariff whatever which must inevitably raise the price to the American consumer when America has shown, by her own experience in the course of many years, that she can make cement in competition with the whole world, and for many years we have actually made one-half of all the cement produced by all the nations of the world.

Mr. President, some attention has been drawn here to the uses to which cement is put. Heretofore the Senator from North Dakota or the Senator from Utah, when we have mentioned one of these tariffs, has risen in his place and has called attention to the small quantity of the article consumed, and he has assured us that on account of the small quantity of the article consumed we need not be disturbed over the tariff imposed, because it would not necessarily affect very many people. But what have we in the matter of cement? We are in an age in which cement is used more than it ever has been used before in the construction of our public buildings, in the construction of our bridges, in the construction of our great office buildings, in the construction of our hotels, in the construction even of private homes, and, above all, in the construction of the good roads of the country that the National Government and the State governments have gone into partnership in building. We are appropriating something like $100,000,000 a year to aid the States of the United States in constructing good roads, and a very large proportion of this expense will necessarily be incurred by the purchase of cement, and yet we are deliberately going to work here, by a tariff on cement, to shut out all possi-

bility of competition, for the obvious purpose of raising the price of cement to the American consumer.

The Senator from New York [Mr. CALDER] has been active in expressing the great need for promoting the housing industry of the United States, and yet he comes forward here as the supporter of a plan to increase the cost of every building in the United States. He stands now advocating something which will tend to make rents higher everywhere in the United States.

Mr. CALDER. Mr. President, the Senator knows that that is not so. The Senator knows that a rate of 19 cents a barrel on cement, which is 9½ per cent, will not affect the price of cement in the crowded centers of the country at all. He knows, as the Senator from Alabama pointed out, that while it might affect the price of cement 150 miles from the border, it will not affect it beyond that, just as the Senator knows that free trade on cement had nothing whatever to do with fixing the price at $4.65 a barrel during 1920.

Mr. HITCHCOCK. The Senator flatters me. I do not know as much as the Senator asserts I do; but I do know that within 150 miles of the border of the Atlantic Ocean a great many people live, and in the Senator's own State there are millions of people living in houses complaining of exorbitant rents; there are thousands of office renters in New York City complaining of the outrageous rents they are compelled to pay; and the Senator knows that in the city of New York at the present time the cost of building is so exorbitant that even the loan companies hesitate to make loans upon the buildings, feeling that the cost is outrageous.

Mr. CALDER. And if the Senator will permit me, the Senator from New York also knows that the exorbitant price of cement to-day is at a time when cement is on the free list.

Mr. HITCHCOCK. I am going to deal with that suggestion made by the Senator. I credit the Senator with ignorance as to the reason, for I do not believe that he intended to misrepresent the matter to the Senate. I credit the Senator with ignorance as to the real reason why cement has been high. He has forgotten, apparently, that we have had a war, and that that war put a stop to our imports, and that the fact of cement being on the free list during that time produced comparatively little competition from abroad.

Mr. CALDER. Did it stop the imports from Canada?

Mr. HITCHCOCK. I will read the Senator the figures on imports. I have said that I have credited him with ignorance, because I could not believe that he knew the figures and deliberately stood up here to argue to the Senate that because cement was on the free list we were nevertheless having competition from abroad to regulate prices.

Now let us look at what the figures are.

The importation of cement in 1910 was $587,000 worth.

The importation in 1911 was $315,000 worth.

The importation in 1912 was $168,000 worth.

The importation in 1913 was $124,000 worth.

In 1914 the value of the imported cement was $163,000.

The importation in 1915 was $132,000 worth.

Then, the war being in full blast, the value of the imports fell to $9,000 worth in 1916.

It fell to $2,000 worth in 1917.

It fell to $6,000 worth in the fiscal year 1918.

It fell to $1,100 worth in the calendar year 1918.

The Senator can see that there were practically no importations of cement during that period to regulate the price, and whether cement was on the free list or subject to a duty did not cut much figure.

Mr. CALDER. The amount of cement used in the country fell off then because there were no building operations of any importance during the war.

Mr. HITCHCOCK. The Senator is mistaken again. There were a great many military operations that required a great deal of cement.

Mr. CALDER. But not to be compared to what they were in 1919 or 1920.

Mr. HITCHCOCK. I tell the Senator that there were a great many building operations. There were a number right here, promoted by the Government, in Washington. The Government actually put money into the construction of cement buildings, and encouraged manufacturing institutions to enlarge their plants with cement construction during the war.

Mr. ROBINSON. Mr. President, will the Senator yield?

Mr. HITCHCOCK. I yield.

Mr. ROBINSON. So great was the demand for cement during the war that many road programs throughout the South had to be abandoned because the producers of cement could not supply the material necessary in the construction of the roads.

If the Senator will yield to me for just a moment further, there was some discussion a while ago about the ad valorem equivalent of this 5 cents a hundred pounds on Portland and Roman cement. The Senator from Nebraska made the statement that it was approximately 25 per cent, and the Senator from Utah retorted sarcastically and indignantly that it was less than 2½ per cent. Of course the ad valorem equivalent depends upon the price of Portland cement. If you take the price of Portland cement in 1914, before we entered the war, your figures were not very far wrong; it would be approximately 20 per cent. If you take the price of Portland cement at its peak, in 1920, when it was $5 a barrel instead of 90 cents a barrel, it would be 4 per cent; but the ad valorem equivalent of necessity depends upon the price of the commodity, and varies as the price fluctuates. But in 1914, I repeat, before the United States entered the war, the price of Portland cement was 90 cents a barrel, and the ad valorem equivalent of 5 cents per hundredweight at that price would be 20 per cent.

Mr. HITCHCOCK. I am not through with the Senator from New York yet. He rose here and undertook to convey to the Senate the impression that the price of cement had been advanced while cement was on the free list, and therefore he made the implied argument that being on the free list increased the price of cement. He argued here that the Cement Trust was formed during that period, while cement was on the free list; and when I showed him the figures demonstrating that during that period imports were practically negligible on account of the war, he advanced another fallacy. What was it? Why, he advanced the fallacy that we were not using much cement during that period. Now, I want to convince the Senator what we were doing during that period. I have the figures here, and I am astonished that as a builder he was not aware of the fact.

I will take the war period. I ask the Senator from New York to listen to this. In 1914 the production of cement in the United States was 88,000,000 barrels. Not using much cement? We produced in this country 88,000,000 barrels. During 1915 we produced 85,000,000 barrels. During 1916 we produced 91,000,000 barrels.

Mr. CALDER. Mr. President——

Mr. HITCHCOCK. Not now. During 1917 we produced 92,000,000 barrels. During 1918 we produced 71,000,000 barrels. During 1919 we produced 88,000,000 barrels. Yet the Senator says we were not using much cement during that period.

The Senator has been convicted of being absolutely wrong, both as to the import matter and as to the consumption matter.

Mr. CALDER. Mr. President, the Senator stops at 1919, when he pointed out that we imported $51,000 worth of cement. He did not go to 1920, when the figures would have shown that we imported $1,230,000 worth of cement.

Mr. HITCHCOCK. I only stopped because the Tariff Commission report did not show any later figures, I will say to the Senator. If there are any later figures, I shall be very glad to hear them.

Mr. CALDER. I do not charge the Senator's party with being reponsible for the high price of cement——

Mr. HITCHCOCK. That was the clear implication from what the Senator said.

Mr. CALDER. Because there was free trade in cement, but I do charge that during the time the Senator's party was in control of the country the trusts, which reached great proportions, such as the Cement Trust reached, were the strongest and most powerful and made the greatest profit and violated the law the most. Nor do I charge that they were responsible for that altogether, because I recall that during the year 1920, when the high prices obtained to which the Senator from Arkansas referred—and this is fair in this discussion, for we are all desirous of getting information—because of a regulation adopted by the Interstate Commerce Commission, the cars usually required for the hauling of cement were taken from the cement manufacturers and were given to the hauling of coal. The Senator will recall that we had a coal strike at that time.

Mr. HITCHCOCK. The Senator can make his argument in his own time, but not in mine. I am here to make the argument, and I repeat it—and I would like to have the Senator take his own time to meet this charge—that he sought to give the impression to the Senate and to the country that although cement was on the free list, and, being upon the free list, came in here in destructive quantities, nevertheless, the price was rising and a trust was being formed; and when I called his attention to the fact that war practically put a stop to the importations during that period—and he had to admit the figures as I read them from the report—he said, "Oh, there was not much cement being used." Now, I have shown him that there was just as much cement being used in the United

States during that period as during any other, only it was not being used in the same way.

Mr. CALDER. But the fact remains that during the operation of the last Republican tariff law, when the duty on cement was 7 and 8 cents per hundred pounds, the price was low; in fact, one-half what it is to-day, when we are manufacturing it in large quantities and when it is coming in free of duty.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER (Mr. MOSES in the chair). Does the Senator from Nebraska yield to the Senator from Idaho?

Mr. HITCHCOCK. I yield.

Mr. GOODING. I want to say to the Senator that I think he must agree that the tariff question affects but a small portion of the cement which is used in this country. Owing to freight rates and the cheapness of cement, it can not reach from any given point to any great distance. I am quite sure that none of the intermountain country, nor any other territory, unless it is very close to the border of Canada, can be affected by this tariff. Canada has a rate of 11 cents against our 5 cents. So it seems to me it would be unfair to the cement plants which can reach the Canadian market not to give them some protection as against 11 cents in Canada. I think we must agree that a 5-cent duty on cement from Canada can not affect the whole supply of cement in this country. Will the Senator argue that it can affect it?

Mr. HITCHCOCK. The Senator gives his case away. The reason why Canada puts on a higher tariff than we do is because of the increased cost of fuel, which makes it more expensive to produce in Canada than in the United States.

Mr. GOODING. Not 6 cents more.

Mr. HITCHCOCK. The Tariff Commission state in their report that it costs more to manufacture in Canada than in the United States on account of the cost of fuel. The Senator is met, furthermore, by the stern fact that during all these years and at the present time the United States is producing one-half of all the cement in the world, and is exporting——

Mr. GOODING. That has nothing to do with it at all.

Mr. HITCHCOCK. And is exporting great quantities of cement to other countries.

Mr. GOODING. If the Senator will yield, I think that he will agree with me that the scale of labor is a little lower in Canada than it is in America; that labor is a little bit cheaper there; that the Canadians produce a little bit cheaper all along the line. I merely want to see this question discussed in a spirit of fairness and intelligence, and the fact accepted by men of intelligence; that is all.

Mr. HITCHCOCK. When a Republican comes to the point where he is willing openly to impose a tariff upon a trust-controlled article like cement, used in such enormous quantities for public and private purposes—to build highways, for which the people pay taxes; to build hospitals, which must be built largely of cement; to build public buildings, which must be built largely of cement—when a Republican can bring himself to the point where he is willing to vote a tariff for a trust which his own courts are prosecuting for violating the law by raising the prices to the American people, there is no hope for such a Republican.

Mr. McCUMBER. Mr. President, will the Senator yield to a Republican to ask unanimous consent that when we close our session for this calendar day we shall recess until to-morrow at 11 o'clock?

The PRESIDING OFFICER. Is there objection?

Mr. HARRIS. Mr. President, I ask the Senator from North Dakota if he is not willing to begin the sessions at 9 or 10 o'clock in the morning and stop at 6 or 7 at night? To-night we wasted about 40 minutes in getting a quorum, and we are wasting time coming here at night. We have had long speeches about subjects other than the tariff, and we had the same last night. I think we would do more work if we began earlier.

The Senator said this morning, as an excuse for not meeting earlier, that the committee has meetings in the morning. It seems to me it would be better for the committee to meet at night. There are only four or five Republican members of the committee to meet, and it would be better to do that than to inconvenience the Senate and keep us here at night.

I am willing to stay here all night, if necessary, but I am not willing to stay here and waste time, as we are doing to-night, and as we have been wasting time. We have had to wait several times to get a quorum, and I hope the Senator will let us meet earlier. I believe by pursuing that course he will get through with the bill much sooner than if we have night sessions. I wonder if he will not be willing to agree to that.

Mr. McCUMBER. I do not think so. But let us meet to-morrow at 11 o'clock, and then let us see if we can not close the session at 6 to-morrow instead of having an evening session. I feel positive that we shall do a little work to-morrow, perhaps.

Mr. UNDERWOOD. Is it the Senator's proposal to meet at 11 tomorrow, or at 10?

Mr. McCUMBER. At 11 to-morrow.

Mr. UNDERWOOD. Of course, as I have said a number of times, the Senator from North Dakota is in charge of the bill, and there is no disposition on this side of the Chamber to interfere with his fixing the hours he wants the Senate to sit; but I believe that as much headway will be made if we sit during daylight hours, and eliminate midnight hours. Of course, however, that is entirely within the control of the Senator. We do not desire to throw any logs in his way in fixing the time of running the sessions.

Mr. McCUMBER. I really hoped it would result as the Senator has stated, but I have found that we really do not get down to business until late in the day. It is not until between 5 and 6 o'clock in the evening, generally, that we get really to voting upon any of the items. For that reason I felt that we had to do most of our voting after about 5 o'clock.

Mr. UNDERWOOD. The Senator said to-day that although it was stated that there was no filibuster on this bill, he was satisfied there was. Of course, the Senator is entitled to his own opinion, but he is mistaken about a filibuster. If we were really filibustering on this bill, we would still be on the first paragraph of the chemical schedule. This is the easiest bill to filibuster, if we wanted to filibuster it, that I have ever seen come into the Congress, because of the number of amendments. But this side of the Chamber is not trying to prevent the passage of the bill by dilatory tactics.

You control the majority, so you have a right to express your views to the country. We merely have the right to express our opposition, and with a bill of this magnitude, in which a great deal is involved, it is our right and privilege to present our viewpoint to the country, and we know we can not do it in a few days of debate. Undoubtedly there is going to be considerable debate on the bill, as there always has been on a bill of this kind. The average time a tariff bill stays in the Senate is two or three months, and we are going to debate this one thoroughly. It is not a question of voting on the amendments. We can vote on a hundred amendments in half an hour when we get ready, but we are going to let the American people know what is in this bill first, and when that is done, then if you have a majority of votes to pass the bill, you can do so. But whether we meet at 11 and stay in session until 11 at night, or whether we meet at 11 and stay in session until 6, I do not think it will make much difference as to the ultimate date when the bill is voted on.

Mr. HITCHCOCK. Before agreeing to unanimous consent, I would like to ask the Senator whether he intends to press this particular amendment to a vote to-night?

Mr. McCUMBER. I do not want to hold the Senate any longer than 10 o'clock.

Mr. HITCHCOCK. I will say to the Senator that I would like to have the amendment go over until to-morrow. I was caught by surprise in having it come up this evening, and there are some matters I want to look into.

Mr. SMOOT. This matter has been passed on once already, but I gave notice that if the Senator from Nebraska wanted a reconsideration of the vote by which the amendment was agreed to, I would ask unanimous consent for a reconsideration of the vote, giving the Senator an opportunity either to speak or to offer an amendment.

Mr. UNDERWOOD. The proposition pending before the Senate has not been voted on. The Senator from North Carolina proposed an amendment and that was voted on. The issue now before the Senate is the committee amendment, and that has not been voted on.

Mr. SMOOT. I think the committee amendment has been agreed to.

Mr. UNDERWOOD. No; I took the floor when the committee amendment was proposed, and it has not been voted on.

Mr. SMOOT. That may be.

Mr. ROBINSON. A vote was had on the provision we have been discussing, placing a duty of 5 cents per hundredweight on Portland and Roman cement; but of course the Senator can move to reconsider it.

Mr. UNDERWOOD. I think the Senator is mistaken, because when the Chair announced the vote on the amendment offered by the Senator from North Carolina I took the floor, and I do not think there has been any vote taken since. I ask the Chair to inform us as to the parliamentary situation.

The PRESIDING OFFICER. The parliamentary situation is that there is an amendment pending, proposed by the committee, in paragraph 208, on page 32, line 17.

Mr. UNDERWOOD. That is the second amendment?

The PRESIDING OFFICER. It is the second amendment.

Mr. McCUMBER. In either event, I do not think it has much to do with the request that when we close our session to-day we shall meet at 11 o'clock to-morrow.

Mr. UNDERWOOD. There is no objection to that.

Mr. HITCHCOCK. I have no objection to it, if there is no intention of forcing a vote on this amendment to-night.

The PRESIDING OFFICER. The Senator from North Dakota asks unanimous consent that at the close of the session to-night the Senate shall take a recess until 11 o'clock to-morrow. Is there objection? The Chair hears none, and it is so ordered.

Mr. HITCHCOCK. I will say to the Senator that I am going to make a strong plea to the members of the Finance Committee to pass over this paragraph at least until we find out definitely whether this product is controlled by a trust. It may not be necessary to wait until the court reaches a decision in New York, but I can not conceive that self-respecting Republicans want deliberately to impose a tariff for the benefit of a criminal outlaw.

Mr. SMOOT. For the information of the Senator, I want to say that there is no amendment offered here as to Roman cement, and, of course, under the agreement we can not offer an amendment as to that until the committee amendments are disposed of. The only amendment there relates to special cement, cement not otherwise provided for; not hydraulic cement, not Roman cement, but cement that is carrying a trade-mark, put up in little packages and little bottles, used for pipe cement, having nothing to do with buildings whatever.

Mr. HITCHCOCK. Mr. President, I have heard before that these are very little things, and that we are making a great deal of fuss about some small matter. The country is entitled to know whether this enormous product, which has such varied uses of a public and private character, involving taxation, involving the housing problem, involving the rent question, is to be given a high protective tariff by this Congress and taken from the free list, particularly when the cement industry is practically controlled in the United States, when the United States makes one-half of all the product in the world, and when it is alleged in court that those who control a large part of the industry are engaged in a criminal conspiracy to rob the public.

Mr. SMOOT. What the Senator should do, as I expect he will, and I shall have no objection if he does, is to offer an amendment to put Roman cement and hydraulic cement upon the free list. However, there is no amendment in the bill touching that item at this time.

Mr. HITCHCOCK. I propose to go further than that. I want cement on the free list.

Mr. SMOOT. Then, of course, the Senate will have to disagree to the amendment of the committee.

Mr. HITCHCOCK. That is going to be the issue before the American people, whether the Congress of the United States is going to deliberately put on the tax schedule and take from the free list an article which is dominated by a trust.

Mr. SMOOT. The Senator is proposing to take something from the free list that has a patent name and for which they charge exactly what they please under the patent, and then say that it has an influence upon the erection of buildings and upon the construction of roads.

There are two items in the paragraph. One is controlled by patent or trade-mark in every instance. There is no reason why, under that condition, we should not get whatever revenue we can for such goods of that character as may come into the country in competition with the product. But there is no question as to hydraulic cement and, in part, on that item I agree with the Senator. But do not let us try to disguise the question that is before the Senate at this time. We have been discussing things to-day that are not before the Senate at all.

Mr. HITCHCOCK. That is nothing new.

Mr. SMOOT. I am perfectly well aware of that.

Mr. HITCHCOCK. But we are going to get it before the people. It is going to be before the Senate, and we have a right to get it before the people.

Mr. SMOOT. I have in my desk a list of the daily speeches that have been made and the length of time that has been taken by the different Senators on subjects which have nothing to do with the tariff. If that were put in the record it would surprise every Senator, I believe, but I do not think it would be a very good record to be pointed to in the future. If there were any one thing that would convince me that there is a filibuster on it would be that record.

EXECUTIVE SESSION.

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After eight minutes spent in executive session the doors were reopened.

WAPATO IRRIGATION PROJECT, WASHINGTON.

Mr. JONES of Washington. Mr. President, I ask unanimous consent for the present consideration of the bill (H. R. 9951) to amend section 22 of an act approved February 14, 1920, entitled "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes," for the fiscal year ending June 30, 1921.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, and it was read, as follows:

Be it enacted, etc., That the eighth paragraph of section 22 of "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes," for the fiscal year ending June 30, 1921, pertaining to the collection of charges from landowners on the Wapato project of the Yakima Indian Reservation, Wash. (41 Stat. L., 431), following the words "*And provided further,*" be amended to read as follows:

"That the Secretary of the Interior is hereby authorized and directed to collect on or before December 31 of each calendar year hereafter, including 1922, from landowners other than Indians under the said system the sum of $2.50 per acre for each acre of land to which water for irrigation purposes can be delivered from the said system, which sum shall be credited on a per acre basis in favor of the land in behalf of which it shall have been paid and be deducted from the total per acre charge assessable against said land when the amount of such total charge can be determined, and the total amount so collected, including any money collected from Indian allottees, shall be available for expenditure under the direction of the Secretary of the Interior for continuing the construction work on the said system.

"That nothing herein shall be construed to modify or release any charge that may have accrued prior to the year 1922 and as to any unpaid amounts due for the years 1920 and 1921, the Secretary of the Interior, in his discretion, is hereby authorized to grant an extension of time within which such payments may be made for such time and upon such terms, including interest charges, as he may determine and under such rules and regulations as he may prescribe: *Provided*, That no extension for the payment of any amount so due for the years 1920 and 1921 shall in any event be extended beyond January 1, 1925."

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ADDRESS BY SENATOR FRANK B. WILLIS.

Mr. McCORMICK. Mr. President, I request that there be printed in the RECORD in the regular type an address delivered by Senator WILLIS on the one hundredth anniversary of the birth of General Grant.

There being no objection, the address was ordered to be printed in the RECORD in eight-point type, as follows:

ADDRESS BY HON. FRANK B. WILLIS AT BETHEL, OHIO, 2 P. M., APRIL 28, 1922, UPON THE CELEBRATION OF THE ONE HUNDREDTH ANNIVERSARY OF THE BIRTH OF GEN. U. S. GRANT.

Senator WILLIS spoke as follows:

"It is a singular and interesting coincidence that Bethel was the home of the man who did more in his day to preserve the foundation of the Union than was done by any other man of his generation, and at the same time the home of the man who by his effort was to make possible the erection on that foundation of an enduring structure—an indissoluble union of indestructible States.

"Here the lives of Thomas Morris, the advocate and expounder, and Ulysses S. Grant, the soldier and builder, were inextricably interwoven, and here to-day a grateful people in solemn pride pay tribute to the memory of two of their former citizens. Yet these mighty men, the gift of Bethel and Clermont County to the Nation, are too great in character and achievement to be circumscribed in the narrow compass of village, county, or State. Thomas Morris and Ulysses S. Grant belong to the whole Nation, whose freedom they had such a prominent part in preserving.

"In yonder cemetery is a humble shaft bearing the inscription:

"Thomas Morris. Born January 3, 1776; died December 7, 1844. Aged 69 years. Unawed by power, and uninfluenced by flattery, he was throughout life the fearless advocate of human liberty.

"This inscription is an epitome of the life of Thomas Morris. His 20 years of service in the General Assembly of Ohio furnished constant exemplification of his unfailing, courageous devotion to free schools, free speech, free soil, and free men. His elevation to the United States Senate in 1833 gave larger scope and fuller play to his powers. Unawed by threats he battled on for the preservation of free government at a time when other great leaders were endeavoring to blow out the moral lights around them in a nation-wide effort to make slavery follow the flag.

"The great triumvirate—Clay, Webster, and Calhoun—were a unit in demanding that the constitutional right of petition should be overthrown to the end that the shackles of slavery should be forever riveted on the Republic. Calhoun and Clay,

Wright and Preston, Buchanan and Leigh, all leaders of the Senate, united in thunderous demand that not only the limbs of slaves but the minds and consciences of men should be shackled and tied and chained. Slavery was to be preserved and extended at any cost; its opponents, feeble in numbers and influence, were denied the right of even having their petitions heard by Congress.

"In this dark hour one voice rang out in the Senate clear as a silver bell. It summoned the discouraged friends of freedom to battle and sounded uncompromising challenge to any and all who for mere political advantage would enter into a 'covenant with death and an agreement with hell.' The speech of Senator Thomas Morris, of Ohio, delivered in the Senate on February 9, 1839, has never been excelled in that body in point of courage, logic, or far-reaching effect. It awakened a lethargic Nation from the stupor of slavery; it saved the foundation on which Grant and his soldiers fought and won.

"Ulysses Grant and Thomas Morris were brought together in another relationship even more intimate and interesting. Senator Morris was a great lawyer. There came to his law office an awkward country lad seeking an opportunity to study law. Judge Morris took this man into his office and his home. This confidence was not misplaced. The lad became lawyer, Congressman, general—the Hon. Thomas Hamer, long a resident of Bethel, who gave up his life in the Nation's service at Monterey in 1846.

"While Thomas Hamer was a Member of Congress, the father of Ulysses Grant applied to him for an appointment for his son as a cadet at West Point and through the good offices of Senator Morris this application was granted and General Hamer appointed Grant to West Point. A few days later the term of office of Thomas Morris as United States Senator expired and he went home, politically an outcast, repudiated by his own political associates because he had been the uncompromising foe of slavery. Yet he fought long enough to save the foundation of constitutional liberty and to provide the leader who was to build on that foundation.

"Grant began where Morris left off. The afterglow of greatness casts a strange light on life and character and tends to obscure perfectly human qualities and to ascribe to their possessor a meaning and significance as unwarranted as they are fantastic. Grant was a typical American boy, reared in a good Christian home; he knew how to work and did work on farm and in tannery, but it does not seem probable that he pleaded any harder with his father for opportunity to begin work early in the morning than most American boys would do under similar circumstances or that he had to be cautioned by his parents against overwork. The fact is that throughout his life Grant was inclined to be sluggish—he worked best under pressure—he was a ponderous machine that functioned in direct ratio to the size of the task to be done. The first 38 years of his life were not strikingly successful; his first 11 years in the Army would have been forgotten but for his later achievements. In 1860 he was a clerk in a tannery at Galena, Ill., at the munificent salary of $600 a year; eight years later he was elected President. A crisis had come big enough to call out all his latent powers.

"From Donelson to Mount McGregor the life of U. S. Grant is history—he was part of the Nation's life, and for a considerable period a very dominant part.

"Shiloh, Vicksburg, Chattanooga, Richmond, Appomattox were the steps by which he mounted the heights of military fame to take place alongside of Hannibal and Napoleon as one of the greatest captains in history. He was a common-sense commander—he relied more upon action than he did upon Jomini; his theory of warfare he summarized as follows: 'The art of war is simple enough. Find out where your enemy is. Get at him as soon as you can. Strike at him as hard as you can, and keep moving on.'

"Grant maintained from the hour he came to the notice of President Lincoln the unbroken confidence of that great leader. Had it not been for the stoic firmness of the President in sustaining Grant in the Vicksburg campaign the outcome would have been doubtful. The President said of him, 'I can't spare this man; he fights.' Again he said, 'I rather like this man Grant; I think we will try him a little longer.' To Carpenter, Lincoln said, 'The great thing about Grant is his perfect coolness and persistency of purpose. He is not easily excited and he has the grit of the bulldog; once let him get his teeth in, and nothing can shake him off.'

"The great captain was always confident of himself; though modest and quiet, he did not underestimate his own powers. When one of his generals in alarm reported, 'General Lee is on our flank,' General Grant coolly replied: 'Very well, then we are on General Lee's flank.' In the darkest days of 1864 Grant said, 'I feel as certain of capturing Richmond as I do of dying.'

"His terse expressions as a leader are illustrative of his character. His reply to General Buckner at Fort Donelson was: 'An immediate and unconditional surrender; I propose to move immediately on your works.' Again, after a great disaster in the advance on Richmond, 'I propose to fight it out on this line if it takes all summer.' But while he was oak and rock in battle, he was generous as a woman and tender as a child. After General Buckner surrendered at Fort Donelson, General Grant remembered the friendly help given him by Buckner when he had been left penniless in New York. In General Buckner's own words describing the surrender he says:

"General Grant left the officers of his own army and followed me with that modest manner peculiar to himself into the shadows and there tendered me his purse. In the modesty of his nature he was afraid the light would witness this act of generosity and sought to hide it from the world.

"The credit for the final success of the great campaigns in the East for the capture of Richmond must be adjudged by impartial history to belong to General Grant. That Mr. Lincoln sought to interfere as little as possible with the military affairs after General Grant took charge of the Army will be shown by the following letter:

"WASHINGTON, *April 30, 1864.*

"Lieutenant General GRANT. Not expecting to see you before the spring campaign opens, I wish to express in this way my entire satisfaction with what you have done up to this time, so far as I understand it. The particulars of your plan I neither know nor seek to know. You are vigilant and self-reliant, and (I put no) restraints or constraints upon you. While I am very anxious that any great disaster or capture of any of our men in great numbers shall be avoided, I know that these points are less likely to escape your attention than they would be mine. If there be anything wanting which is within my power to give, do not fail to let me know it. And now with a brave Army and a just cause, may God sustain you.

"Yours very truly, "A. LINCOLN.

"And then when the last shot had been fired and the last drop of blood shed, the great leader was magnanimous, kind, and generous. His treatment of General Lee and his army at Appomattox did more than any other one thing to make the South realize that, after all, we were all citizens of the common country, with a common hope and a single flag. Happily, now North and South are united, each proud of the heroism of the other and rejoicing in the achievements of the heroes in blue and gray—all Americans.

"Lincoln's prophecy has been realized—

"Though passion may have strained, it must not break our bonds of affection; the mystic cords of memory stretching from every battle field and patriot grave to every living heart and hearthstone all over this broad land will yet again swell the chorus of the Union when touched, as surely they will be, by the better angels of our nature.

"The conquering hero said, 'Let us have peace.' The memory of this patient, silent, courageous, typical American is one of the mightiest forces making for union and the maintenance of our institutions.

"General Grant never sought political preferment. He was elevated to the Presidency in response to the people's demands. As President he was as courageous as he had been as general. When, following the financial difficulties of 1873, his own party lost its sense of proportion and passed the inflation bill to authorize an increase in the greenbacks to four hundred million, he bravely vetoed the action of the Congress, believing it to be a departure from the true principles of sound finance.

"Grant stood by his friends even to his own hurt. Some of them sought to use their connection with the old hero for their own personal profit. General Grant was loath to believe that any human being could entertain a motive so foreign to his own thought. When criticized because he stood by a friend who was under fire, Grant said:

"The true test of friendship, after all, isn't to stand by a man when he is in the right—anyone can do that; the true test is to stand by him when he is in the wrong.

"As he stood by his friends, so he remembered his enemies in a thoroughly human way, and sometimes he castigated them mercilessly. It will be recalled that when it was brought to his attention that a certain prominent leader did not believe in the Bible, Grant said:

"Certainly not; he does not believe in it because he did not write it himself.

"The San Domingo scheme was criticized bitterly at the time it was announced. Yet subsequent events have shown that Grant was not far from right in this matter.

"While educated for war, he was devoted to peace; the treaty of Washington and the settlement of the Alabama claims was the first long step forward in the direction of arbitration and world peace.

"The Washington conference of 1921 was in no small degree an outgrowth of Grant's policy of peace and international good

will. American ships now sail unimpeded through the Panama Canal—Grant foresaw and planned it. His statesmanship was as farsighted as his generalship. Modestly, quietly, patiently he planned and executed. Great in war and official station, he was majestic in private life.

"Imposed upon by trusted friends, the meager savings of a lifetime were lost in an hour and the old hero had to begin over again to earn support for wife and family. Already fatal disease had laid its palsying hand upon him. Toiling at Mount McGregor to finish his memoirs he looked death in the face without a tremor. He stoically worked on that he might pay his creditors and provide for those dependent upon him. He won his last fight and when the spirit fled a sorrowing world cherished the memory of this mighty oak whose falling left a lonesome place against the sky.

"So lived and toiled and struggled and achieved this sturdy, upright, patient, modest, typical American, whose life is an inspiration and whose memory is a benediction to us all."

RECESS.

Mr. CURTIS. I move that the Senate take a recess, the recess being under the order previously made, until to-morrow at 11 o'clock a. m.

The motion was agreed to, and (at 10 o'clock and 10 minutes p. m.) the Senate took a recess until to-morrow, Saturday, May 20, 1922, at 11 o'clock a. m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate May 19 (legislative day of April 20), 1922.

POSTMASTERS.

CALIFORNIA.

George A. Herdeg, Riverside.
Jessica H. Wright, Sierra Madre.

COLORADO.

Grace M. Fawcett, Smuggler.

CONNECTICUT.

Edward A. Honan, Gaylordsville.

LOUISIANA.

Joseph H. Hebert, Addis.
Levi P. Carter, Bunkie.

NEW JERSEY.

Ralph G. Riggins, Bridgeton.

OKLAHOMA.

Agnes L. Dillon, Geary.
James M. Baggett, Tuskahoma.
William C. Colvin, Westville.

PENNSYLVANIA.

Nellie Smith, Abington.
Isaac H. Detweiler, Perkasie.
John E. Showalter, Terre Hill.
Charles W. Schlosser, Waterford.

TEXAS.

George H. Sparenberg, Austin.
R. Kyle Cross, Cumby.
Richard T. Polk, Killeen.
Benjamin F. Womack, Snyder.

UTAH.

Clyde A. Pons, Standardville.

WEST VIRGINIA.

Harry M. Slush, Whitesville.

HOUSE OF REPRESENTATIVES.

FRIDAY, *May 19, 1922.*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Our heavenly Father, in a changing world Thou art a God who changest not. May Thy anchorage be our stay. Encourage us in all our ways to acknowledge Thee. Help us to trust our Maker's love and our Savior's ransom. We breathe our confessions; with considerate pity forgive us. Do Thou always show us the acceptable excellence of life. Bless us with a growing appreciation of men, his rights and his relationship to our institutions. In Thy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

DESIGNATION OF SPEAKER PRO TEMPORE.

The SPEAKER. I expect to be absent to-morrow, and possibly on Monday, and I therefore designate Mr. WALSH as Speaker pro tempore until my return.

BRIDGE ACROSS HUDSON RIVER NEAR PEEKSKILL, N. Y.

Mr. HUSTED. Mr. Speaker, I ask consideration for the bill H. R. 11152, granting consent to the Bear Mountain Hudson River Bridge Co. to construct and maintain a bridge across the Hudson River near the village of Peekskill, State of New York.

The SPEAKER. The Chair would like to state that in recognizing gentlemen for unanimous consent as to these matters the Chair has adopted the rule that that privilege was taken away from the Chair and given to the House, and he only recognizes gentlemen in case of bridge bills, which constitute a kind of perfunctory legislation. The Chair thinks the House is always glad to facilitate business of that kind, and with that in mind he recognizes the gentleman from New York [Mr. HUSTED].

Mr. GARNER. Mr. Speaker, the statement of the Chair is with the idea that anyone having a bridge bill to be considered may go to the Speaker at any time and get permission from him to ask unanimous consent to consider the bill. Now, it occurs to me that the rule the Speaker has adopted is a good one and must apply in cases of that kind only in case of emergency.

The SPEAKER. The Chair is glad that the gentleman made the suggestion. The Chair has adopted that very rule, and it is only in case of emergency, and where they are awaiting the passage of the bill, that the Chair recognizes gentlemen for that purpose. The gentleman from New York is recognized.

The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 11152) to authorize the Bear Mountain Hudson River Bridge Co. to construct and maintain a bridge across the Hudson River near the village of Peekskill, State of New York.

The SPEAKER. Is there objection?

Mr. STAFFORD. Before the objection stage is passed, I would like to inquire of the author of the bill as to the reason why in this bill the time for beginning construction is extended three years instead of the customary 1-year period, and the time for completion is extended five years instead of the customary 3-year period?

Mr. HUSTED. Section 2 of the bill provides that the act shall be null and void if actual construction of the bridge therein authorized be not commenced within three years. As a matter of fact, they intend to commence construction immediately.

Mr. STAFFORD. Under the general bridge act it provides construction shall be begun within one year and completed within three years, and there are many instances where, when construction has not been begun within one year, that we pass revival acts, granting them further time. When I read this bill and report it seemed to me rather peculiar that in the bill itself you should provide for the beginning of construction within three years. I thought perhaps it might be a speculative scheme, by which it was desired to float bonds before real construction began.

Mr. HUSTED. No. I can assure the gentleman that is not the case. It is the intention to begin construction at once, and the financing has been fully completed, contingent only upon the passage of the bill.

Mr. STAFFORD. There are some bridge bills that we scrutinize rather carefully in their passage through the House. Those built across the Mississippi River are in that class. As I recall, there is but one bridge across the Hudson River, that at Poughkeepsie. Are there more?

Mr. HUSTED. There is but one bridge across the Hudson River between New York and Albany, a distance of 150 miles, and that is a railroad bridge only. The bridge provided for in this bill is for automobiles and foot passengers, something which is very much needed.

Mr. STAFFORD. How far above New York is this proposed bridge to be constructed?

Mr. HUSTED. About 50 miles above the city of New York. It will cross the Hudson River just north of the village of Peekskill, and will connect the east with the west bank near the big pavilion in the Interstate Park, about 3 miles below West Point.

Mr. STAFFORD. Is it to be a toll bridge?

Mr. HUSTED. It is to be a toll bridge, but there are provisions in the act whereby the interests of the State have been carefully safeguarded. There is a provision that the State can

take it over at once for cost plus 10 per cent, and then at the end of short periods the State can take it over at practically cost less depreciation, and at the end of 30 years it becomes absolutely the property of the State free of cost. The estimate of the life of the bridge is approximately 100 years.

Mr. STAFFORD. And the State has already provided legislation in regard to this construction?

Mr. HUSTED. It has.

Mr. STAFFORD. I have no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 11152) to authorize the Bear Mountain Hudson River Bridge Co. to construct and maintain a bridge across the Hudson River near the village of Peekskill, State of New York.

Be it enacted, etc., That the consent of Congress is hereby granted to Bear Mountain Hudson River Bridge Co., a corporation incorporated by act of the Legislature of the State of New York approved March 31, 1922, its successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Hudson River, at a point suitable to the interests of navigation, near the village of Peekskill, county of Westchester, State of New York, in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 22, 1906.

SEC. 2. That this act shall be null and void if actual construction of the bridge herein authorized be not commenced within three years and completed within seven years from the date of approval hereof.

SEC. 3. That the right to alter, amend, or repeal this act is hereby expressly reserved.

Also the following committee amendment was read:

Page 2, line 3, strike out the figures "22" and insert in lieu thereof the figures "23."

The SPEAKER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HUSTED, a motion to reconsider the vote by which the bill was passed was laid on the table.

CHANGE OF REFERENCE.

Mr. STEENERSON. Mr. Speaker, I move a change of reference be made on the bill (H. R. 6339) from the Committee on the Post Office and Post Roads to the Committee on Claims.

The SPEAKER. The Chair does not recognize the gentleman for that purpose. The Chair likes to be notified in advance before any such motion as that is made.

Mr. STEENERSON. A motion to change the reference of a bill? I supposed that was the order of business after the reading of the Journal right now.

The SPEAKER. The Chair thinks in courtesy the gentleman ought to notify the Chair and the members of the committee before making a motion.

Mr. STEENERSON. We do not want this bill in our committee, and I thought there would be no objection to it.

The SPEAKER. The Chair thinks the gentleman ought to notify the Chair in such a case.

Mr. STEENERSON. I certainly would have done so if I had been aware of any such rule.

The SPEAKER. There is no such rule, of course.

Mr. STEENERSON. It was requested to be done by the gentleman from Texas [Mr. HARDY].

Mr. GARNER. Mr. Speaker, will the gentleman yield for a question? I would like to know if he comes within the rule. He has not made a statement. If he is within the rule authorizing him to make his motion, well and good; but unless he comes within the rule, I shall object.

The SPEAKER. There is no right of debate.

Mr. STEENERSON. I have no statement to make except that the gentleman from Texas wished this to be done.

The SPEAKER. This is a private bill, and the gentleman can make a change of reference without any motion of the House.

Mr. GARNER. It is a private bill.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 2853. An act for the relief of persons suffering damage by reason of proceedings for the condemnation of land for Camp Benning, Ga.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate numbered 53, 54, 56, 58, 59, and 113 to the bill (H. R. 10329) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for other purposes.

The message also announced that the Senate had agreed to the amendments of the Senate numbered 44, 47, and 61 to the bill (H. R. 11065) making appropriations for the Departments of State and Justice and for the judiciary for the fiscal year ending June 30, 1923, and for other purposes.

The message also announced that the Vice President had appointed Mr. CAPPER and Mr. ROBINSON members of the Joint Select Committee on the part of the Senate, as provided for in the act of February 16, 1889, as amended by the act of March 2, 1895, entitled "An act to authorize and provide for the disposition of useless papers in the executive departments," for the disposition of useless papers in the Government Printing Office.

SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 2853. An act for the relief of persons suffering damage by reason of proceedings for the condemnation of land for Camp Benning, Ga.; to the Committee on Claims.

ENROLLED BILL PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. RICKETTS, from the Committee on Enrolled Bills, reported that on May 17 they had presented to the President of the United States for his approval the following bill:

H. R. 4069. An act authorizing the Secretary of the Interior to sell certain lands on the Wind River Reservation, Wyo.

RIVER AND HARBOR AUTHORIZATIONS.

Mr. DEMPSEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 10766.

The motion was agreed to.

The SPEAKER. The gentleman from Wisconsin [Mr. STAFFORD] will please take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, with Mr. STAFFORD in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 10766, the river and harbor appropriation bill. The gentleman from New York [Mr. DEMPSEY] has 22 minutes remaining.

Mr. WALSH. Mr. Chairman, the Clerk ought to report the title of the bill, should he not?

The CHAIRMAN. It is not necessary, although it has been the practice.

Mr. WALSH. I think it is necessary.

The CHAIRMAN. Where is the rule that requires it? I ask the gentleman from Massachusetts to cite the rule.

Mr. WALSH. The rule provides that measures shall be considered in the Committee of the Whole House on the state of the Union by their title—not by their number.

The CHAIRMAN. The gentleman from New York is recognized for 22 minutes.

Mr. GARNER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GARNER. I understand last evening that general debate was exhausted and that we should read the bill under the five-minute rule.

The CHAIRMAN. There were 22 minutes remaining.

Mr. GARNER. Then that was an erroneous statement by the gentleman from Masachusetts [Mr. WALSH] that I read in the RECORD this morning, that that was one reason why a point of order was made that there was no quorum present, because there was nothing else pending before the committee.

Mr. WALSH. Mr. Chairman, will the gentleman from New York yield for a parliamentary inquiry?

Mr. DEMPSEY. Yes.

Mr. WALSH. I did not quite get the remark of the gentleman from Texas. The RECORD discloses that "the gentleman from Massachusetts" said, "There seems to be nothing further to do." I had endeavored to get some time in which to ask the gentleman from Louisiana [Mr. DUPRÉ] a question, and I was advised that all of his time had expired.

Mr. GARNER. Well, when the gentleman from Massachusetts made the remark that there was nothing more to do I understood that the general debate had been exhausted and that we were ready to take up the bill under the five-minute rule.

Mr. WALSH. Not at all.

Mr. DEMPSEY. Mr. Chairman, the bill under consideration is an attempt to take a step forward in the solution of the problem——

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. WALSH. What is the bill under consideration?

Mr. DEMPSEY. The purpose of the bill is for the adoption of projects for the improvement of rivers and harbors.

Mr. WALSH. That is the first time at this session that that has been said about it. I am glad to have it in the RECORD. [Laughter.]

Mr. DEMPSEY. It is a bill seeking to take a forward step in the solution of the very serious traffic problem which confronts the United States. It is needless to say that in ordinary times, in normal times, the railroads of the country, aided by the waterways in their present state and condition, are unable to handle the traffic which the country has. This is peculiarly true following the harvest, and the question is whether we can contribute to the solution of the very difficult problem of providing adequate transportation facilities by improving our waterways.

A few days ago, when we had under consideration in the House the question of making appropriations for the improvement of rivers and harbors, a gentleman who has long been eminent in connection with the improvement of waterways stated that in his opinion it was hopeless to improve the inland waterways of the United States as a whole; that there were exceptions; but, taking it all in all, the condition was rather a hopeless one. Now the question is whether an examination of the record——

Mr. ANDREWS of Nebraska. Mr. Chairman, will the gentleman yield for a question there?

Mr. DEMPSEY. Yes.

Mr. ANDREWS of Nebraska. What relation does this bill sustain to the appropriation that was carried a short time ago in the Army appropriation bill in relation to rivers and harbors?

Mr. DEMPSEY. It has this relation: That bill appropriates money to improve rivers and harbors. Whether it will apply to these new projects or not depends on whether this bill becomes a law in advance of the appropriation bill, in which event those appropriations would apply to these new projects as well as to the old projects; or there might be inserted in the appropriation bill a provision making those appropriations applicable not only to the projects already adopted but also to those to be adopted, in which event the appropriations already made would apply to the projects in this bill.

Mr. ANDREWS of Nebraska. The other bill carried the appropriation, and now you are proposing to pass legislation to tell what shall be done with that money?

Mr. DEMPSEY. No. That bill in its terms applies only to projects already adopted by Congress.

Mr. ANDREWS of Nebraska. This bill carries money for additional projects?

Mr. DEMPSEY. No. This bill provides authorizations of new projects entirely.

Mr. ANDREWS of Nebraska. Then, it is the idea that the appropriation goes first and the legislative proposition comes afterwards?

Mr. DEMPSEY. Yes.

Mr. ROACH. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. I would prefer to make a continuous statement first, and then I shall be glad to answer questions, if I have time.

Mr. ROACH. I want to ask a question on this point.

Mr. DEMPSEY. My time is limited.

Mr. ROACH. Will the gentleman yield?

Mr. DEMPSEY. Yes; I am yielding. What is the question?

Mr. ROACH. That appropriation bill only provided for old projects. If we pass this bill, will there be a lessening of expenditure on the old projects, or will the money all go into the new projects?

Mr. DEMPSEY. No. The appropriation was of a lump sum, without specifying the places of expenditure. If that is made available for new projects, it will be in the discretion of the engineers as between the old and new projects.

Mr. ROACH. The appropriation was a lump sum and it was based on the minimum requirements?

Mr. DEMPSEY. I agree with the gentleman as to that.

Mr. ROACH. How can you spend money out of that appropriation for new projects without lessening the appropriation for the old projects?

Mr. DEMPSEY. You can not.

Mr. LONDON. Mr. Chairman, will the gentleman permit a question?

Mr. DEMPSEY. I am sorry I can not. I decline to yield further.

Now, as to the question of whether we can relieve the transportation situation by the improvement of the inland waterways of the country, it is well to examine the condition and see what the inland waterways are doing at the present time.

There have been large developments in the matter of the carrying of shipments by inland waterways within a very brief time. Take, for instance, the Sabine-Neches waterway, in which the country is as vitally interested as in any other waterway in the whole United States. A wonderful oil field has been developed in the State of Texas, one of the greatest oil fields in the world, and that inland waterway, about 76 miles long, is now carrying about 11,000,000 tons of traffic, and that upon a depth of 25 feet. We are now giving them a depth of 30 feet. They need that for the class of tank vessels which carry the oil, and undoubtedly that waterway will be used to capacity, and the amount of freight carried upon it will vastly increase. Now, 11,000,000 tons is a very large amount of traffic for any waterway to carry, and this I say is comparatively new traffic.

Take another illustration. Take the Monongahela River. That runs down to Pittsburgh. It carries at the present time 24,000,000 tons of traffic. By this bill we are giving the Monongahela River additional facilities. The traffic is now so dense that boats have to wait for long periods in order to pass through the locks, and the amount of traffic is so very great that navigation is dangerous. We are simply increasing the facilities so that the traffic, which is growing there by leaps and bounds, can be carried and can be carried safely.

Take as another illustration the Columbia River and Willamette River in Oregon. That waterway carries 4,000,000 tons of traffic, and the traffic there is steadily increasing. Take as a small example the Clatskanie River in Oregon. We have spent on that river only $24,000.

Mr. MONDELL. While the gentleman is discussing these specific projects, may I call his attention to a project for which a survey is to be ordered? May I make an inquiry with regard to it?

Mr. DEMPSEY. Certainly.

Mr. MONDELL. The Rio Grande River a short distance above El Paso has upon it the Elephant Butte irrigation dam. The entire flow of the river is controlled and carried through the canals of the national irrigation project, which is fed from the Elephant Butte Dam. The Rio Grande below that point, if it carries any water at all at any time, carries what water is not needed for irrigation. If there has ever been any attempt at navigation at that point, even before this reclamation project was started, I do not know of it. It is 1,200 miles, I think, above the mouth of the river. The Rio Grande at that point is dry except when the water is not needed for irrigation. I notice that you are proposing a survey of the Rio Grande at El Paso. Is that for irrigation purposes or for navigation?

Mr. DEMPSEY. Irrigation and reclamation projects are not within the province of our committee.

Mr. MONDELL. What is the idea?

Mr. DEMPSEY. We are not attempting to usurp the province of another committee.

Mr. MONDELL. What is the idea of the committee making a survey of a river that is dedicated to irrigation?

Mr. DEMPSEY. As to the survey to which the gentleman refers, the reason it is granted is very obvious. It is this: We appropriate annually about a quarter of a million dollars for surveys. That is the amount which has been appropriated for many years. Now gentlemen come in and ask for a survey. It is almost a matter of course to grant them a survey, and why? The engineers testify before our committee that the inclusion of a particular survey does not add materially, if at all, to the expense, that they have most of the data right there in their office, that they are able to prepare it as a matter of clerical work and not as a matter of work in the field, and that the appropriation will not be exceeded, nor will it deprive any genuine survey—if this one happens not to be—of the funds which are needed for the purpose of making it.

Mr. MONDELL. Then do I understand the gentleman to say that if I should come in before his committee and ask for a survey of the North Platte River in Wyoming, which carries much more water than the Rio Grande carries at El Paso, I would be able to secure in this bill an appropriation for a survey? It might help me locally.

Mr. DEMPSEY. The gentleman might procure a survey, and the result of it would be that instead of helping him locally I think he would find that the report would be adverse, and the people in his district would say that his energies might well

have been spent upon something other than the securing of a survey where he knew the result would be adverse.

Mr. MONDELL. If the gentleman would say that to the gentleman who asked for this Rio Grande survey, it would be more to the point.

This is not a question of rivers and harbors. The gentleman from New York has assured us that there was nothing in this bill except rivers and harbors.

Mr. DEMPSEY. Now, this project bill attempts to deal with the problems of the country and to help really to solve many of the transportation problems. For instance, we propose the improvement of Coos Bay in Oregon. What does that mean? The Coos Bay district in the State of Oregon contains billions of feet of lumber. A great part of that lumber belongs to the United States, and the United States is interested in having it marketed. The instant that we improve Coos Bay in Oregon we will bring that lumber to the eastern market.

That will result in two things: First, the lumber in the Coos Bay district will increase in value at least $1 a thousand, and that will add to the Government resources ten or fifteen times the cost of this project. That is important to the Government as a government, but it is still more important to the people of the United States as a people, because the lumber of the South which has been supplying us in the North for many years is being exhausted. The peak of production in the South was reached some years ago. The time is coming, and coming in the near future, when the South, with its splendid climate, with its rich agricultural land, and rapid development, is sure to need all the lumber that is growing in its own territory. The result will be that if the people of the East, in the thickly populated part of the country, are to have lumber at any moderate price they must secure it from the Pacific slope, and the only way it can be brought East at a moderate price is by water.

Now, let us come down to San Francisco. We find that San Francisco has one 40-foot entrance to its bay. San Francisco is the greatest port on the Pacific slope. It is a great center for the commerce between the United States, China, and Japan, and all the great east with its teeming millions. San Francisco has a 40-foot channel but it is along the coast. It is 6 or 7 miles longer than a straight channel into the bay. It is dangerous to navigation because it is near the rockbound coast, and in great storms vessels are apt to be cast on that coast. So it is of vast importance that a new channel should be dredged.

I started to say a word about the importance of deep waterways in Texas. There is nothing more important in the public mind than the enormous increase in the use of gasoline in the United States and the constantly mounting price. We hope that we can reduce the price if we reduce the cost of transportation to market. The only way we can reduce that cost is by deepening the channel and enabling the vessels of deeper draft, which are more economical to operate, to bring it to market. That is what we expect to do by the improvement of the Texas waterways.

Another thing we do in this bill is this: Certain projects have been completed, and yet the appropriations do not lapse at the end of the year, and so it becomes necessary, in order to release them, even after the project has been entirely finished, to have a clause releasing them and turning it into the general fund. That we do by this bill.

For the first time in the history of the country, or for many years, the Mississippi River is doing a large and constantly increasing business. When the project for the upper Mississippi was adopted we made no provision for the improvement by the Government of harbors along the river, and so you can navigate the river; but when you reach a city, when you reach the point where you are to receive or discharge a shipment, you have no harbor which you can enter or from which you can depart. The bill provides that the project for the improvement of the upper Mississippi shall include the harbors of that part of the river.

One of the worst problems, and the most serious problem with which we had to contend during the war in supplying the troops with munitions and food, and in supplying our allies with both these things, was the congestion in the port of New York.

People in the country seem to assume that that condition is going to continue; that the port of New York will be unable to avoid it; and that in the future we will have the same difficulty in handling the traffic that prevailed during the war. The fact is that the port of Greater New York has been formed, which includes not only the city of New York but adjacent territory, and that port of Greater New York will expend $500,000,000 as a local contribution to solve traffic conditions in the city of New York and make it so that we can not have a condition where freight cars are piled up outside the city for 50 miles, as they were during the war. In other words, they are going to provide abundant facilities for the handling of this traffic—docks and terminals sufficient in number and adequate in size—and facilities for sending traffic destined beyond the city around it, instead of through the congested centers. And this bill provides the channels to be used in connection with the docks and warehouses, so that the improvements may be complete and result, as they will, in the economical and rapid handling of all the freight which comes to that great city.

Mr. BEGG. Will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. BEGG. Does this contemplate adding this authorization to the $40,000,000 appropriation, or is this to come out of that?

Mr. DEMPSEY. I will show the gentleman. River and harbor improvements are made in the United States only on projects that have been adopted. Up to the present time certain projects have been adopted—say 100, and I suppose there are 200. They are in various states of completion. Take, for instance, the gentleman's Ohio River; that project was adopted 12 years ago to be completed in 10 years. About half of the locks and dams are completed, about one-quarter are being built, and one-quarter are not started. That is the situation on that project already adopted. We find, as time goes on, in this great country of ours that we need to do new things, that we can not rely simply on the projects we have already adopted.

Mr. BEGG. I understand that part of it, but the point is——

Mr. DEMPSEY. We are adopting now some new projects. As to the appropriation of money, under the appropriation bill passed by the House, the $42,815,000 which it carried would not apply to these projects now to be adopted. It could only apply in one of two events—in the event that this bill becomes a law before the appropriation bill becomes a law, or in the event that there be inserted in the appropriation bill two words, the words "and hereafter" after the word "heretofore." The appropriations now carried in that bill apply to projects heretofore adopted, and if there were added the words "and hereafter" after the word "heretofore," then the appropriation would apply also to this bill.

Mr. BEGG. Is it contemplated that after this bill is passed a new river and harbor appropriation bill, in addition to the $42,000,000, will be adopted?

Mr. DEMPSEY. No. I would say in addition to that to make it clear that the amount which it will be necessary to expend to complete the projects covered by this bill will be about $36,000,000, but that is not to be expended at once. It will be expended only from year to year, and the maximum amount which it is estimated might be expended the first year would be perhaps ten or eleven million.

Mr. BEGG. And that would come out of the $42,000,000?

Mr. DEMPSEY. Yes; in either of the contingencies I have suggested.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. DUPRÉ. In the case of the Monongahela River we were informed by the engineers that it would take about eight years to complete the enterprise, the whole cost of which will be some $6,000,000, but it would be asked only pro tanto each year.

Mr. DEMPSEY. I thank the gentleman for his suggestion. My recollection is that the engineers said, in addition to that, that the amount to be expended would be, roughly, a half million dollars the first year. This bill provides also authority for the construction of six new dredges. There has been progress made in the construction of dredges for harbor work in the United States, the same as there has been in locomotives or any other mechanical contrivance, so that the dredge of to-day does much better work and so much more work that the present dredge saves about $50,000 over the obsolete dredge which we have in operation in the United States. There can be no greater measure of economy, there can be nothing that will tend to make each dollar appropriated for rivers and harbors go further and secure a full dollar of return for each dollar expended than the authorization for these new dredges.

The CHAIRMAN. The time of the gentleman from New York has expired. All time has expired, and the Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That the following works of improvement are hereby adopted and authorized, to be prosecuted under the direction of the Secretary of War and supervision of the Chief of Engineers, in accordance with the plans recommended in the reports hereinafter designated:

Pawtucket River, R. I., in accordance with the report submitted in House Document No. 654, Sixty-sixth Congress, second session.

Mamaroneck Harbor, N. Y., in accordance with the report submitted in House Document No. 651, Sixty-sixth Congress, second session, and subject to the conditions set forth in said document.

Harbor of New Rochelle and Echo Bay, N. Y., in accordance with the report submitted in House Document No. 110, Sixty-seventh Congress, first session, and subject to the conditions set forth in said document.

New York and New Jersey Channels, in accordance with the report submitted in House Document No. 653, Sixty-sixth Congress, second session.

Mr. BURTON. Mr. Chairman, a parliamentary inquiry. Would an amendment proposed to this paragraph lie when the section is read or would it lie now?

The CHAIRMAN. The present occupant of the chair is not advised whether that question has been presented since the appropriating powers have been taken away from the Committee on Rivers and Harbors. The rule has been that on general appropriation bills and on revenue bills the bill is considered by paragraphs, but the river and harbor bill, even when it carried appropriations and not merely authorizations, was not a general appropriation bill, and yet the bill was always considered by paragraphs. The Chair thinks it would be better practice to have the bill considered by paragraphs, and all question would be removed if the gentleman having the bill in charge would ask unanimous consent to have it so considered.

Mr. DEMPSEY. Mr. Chairman, I ask unanimous consent that the bill be considered by paragraphs instead of by sections.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. DEMPSEY. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. DEMPSEY rose.

Mr. LONDON. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. LONDON. I notice that in sections 1 and 2 of the bill, in making various provisions for projects it is provided that projects be made in accordance with the reports submitted to the House at various times.

Mr. DEMPSEY. Yes.

Mr. LONDON. Some of these reports have been submitted as late as 10 years ago. Is it customary in legislation to refer to some document that is not before the House?

Mr. DEMPSEY. Oh, the documents are before the House in the sense that they have been sent to the committee and they are available to everyone. The gentleman will find that instead of that being a report of 10 years ago, the probability is that the project has been completed, and that that is simply a modification of a project on which there is a recent report.

Mr. Chairman, I started to say a word about the question of whether we could really help the solution of the traffic problem by improving our inland waterways. It has been suggested that that has been possible in Europe, that in Europe they have made a great success of their waterways, but that in this country it is impossible. As an illustration of what we can do in the United States, let me point to the greatest inland transportation, not alone in the United States but in the world; the greatest in extent, the greatest in success, the greatest in the rate of transportation. There is no transportation in the world that has been as cheap or is as cheap to-day as the transportation on the Great Lakes, and that transportation has been made possible by American genius and American enterprise, by devising the kind of ships best fitted for that transportation, by inventing labor-saving devices to unload and load, so that they load and unload in a miraculously quick time, a time which puts to shame the loading and unloading elsewhere in the world.

We carry on the Great Lakes 100,000,000 tons. That varies up to one hundred and twenty and one hundred and thirty million tons. About 96 per cent of that consists of iron ore and coal which is carried back to the Northwest. All of that traffic is between our own people so that there is left only a minimum, a small portion of traffic which goes abroad. Let me make a comparison of the cost of transportation on the Great Lakes and transportation on the ocean. The cost per ton-mile for transportation on the ocean by foreign nations, where they have cheap labor, where they have been in the transportation business from time immemorial, transportation by England, which has been the mistress of the seas for hundreds of years, is 3 mills per ton-mile.

And it costs on the Great Lakes, just one-third of that, 1 mill per ton-mile. That shows what you can do on your inland waterways when American genius and American enterprise starts out to solve the problem. It is equally well shown in the result in Texas on this comparatively new waterway, the Sabine-Neches. They have grown there to a traffic of over 11,000,000 tons, an enormous traffic when you consider it in comparison with waterways anywhere in the world, and that has grown up in a few years, because those who produce the oil have seen the necessity of transporting it in the cheapest way to the market.

Mr. BURTON. Will the gentleman yield for a question?

Mr. DEMPSEY. I will.

Mr. BURTON. Does not the gentleman from New York recognize the vital distinction between the waterways of the Great Lakes, 20 feet deep and more, and the so-called inland waterways, rivers having a depth of from 2 to 12 feet?

Mr. DEMPSEY. I recognize the distinction and I recognize there is a wide distinction; I realize, for instance, in a city you improve your road from curb to curb, and I realize where traffic is not so great in the country you will have it sometimes from 12 to 16 feet. You can not have 20 feet of depth everywhere, it is true, but what I do say is the waterways of the country, a large number of them, aside from the Great Lakes, and I will call attention to a considerable number now, can be used to relieve congestion in transportation and to secure a lower rate of transportation and thus reduce the cost of living. The Monongahela the gentleman recognizes as a useful waterway with its 24,000,000 tons of freight; and the Sabine-Neches, with the 11,000,000 tons it carries.

Mr. BURTON. But the Sabine-Neches is not an inland waterway.

Mr. DEMPSEY. Why not, it is an artificial waterway, and——

Mr. BURTON. It provides access to the sea by ocean-going boats.

Mr. DEMPSEY. No; they are tankers, that is all.

Mr. BURTON. They sail on the ocean and go all over the world, and the object of improving the Willamette and the Columbia is to give access to the port farthest inland, Portland. That is very different from the Monongahela.

Mr. DEMPSEY. Let us put the issue squarely. What I am contending here is this, that the improving of our inland waterways, according to our experience up to the present time, is of the greatest value to the Nation in relieving the congestion which occurs in normal times owing to the inability of the railroads, through lack of cars, trackage, and adequate terminals, and in securing cheaper rates, and that it is important to improve every inland waterway which is capable of carrying a tonnage large enough to really help relieve congestion and to make the transportation economical. Does not the gentleman agree to that?

Mr. BURTON. I would not agree to that broad statement.

Mr. DEMPSEY. Let me call attention to a few illustrations besides those I have referred to. Let us take a very small stream which is only 8 feet. Here is the Calcasieu River, La. Now, we have spent $655,000 upon it. It carried freight last year to the value of $8,000,000—636,000 tons. Was that river worth improving? Let us take another. Here is the Tensas River, La. It is only 4 feet, but——

Mr. BURTON. Do not leave out the Bayou-Teche.

Mr. DEMPSEY. We abandon projects in this bill which were adopted years ago and upon which vast sums of money have been expended in preceding times. We abandon those projects which have no water, and only improve those with water. Let us take the Tensas, upon which we have spent only $85,000. Last year it carried 102,000 tons of traffic, worth a million dollars in round figures. Let us take another. I spoke of the Clatskanie River, Oreg. We have spent less than $25,000 on it, and it carried last year 100,000 tons of freight, worth nearly two million dollars.

Take the Ohio. It is only improved part of the way down. The Ohio and Mississippi together and their various tributaries constitute an inland waterway of over 6,000 miles, but they are not in use, all of them, because we have not completed the improvements, and yet, in spite of that, the Ohio carried last year about 9,000,000 tons of traffic. It should have carried 13,000,000 or 14,000,000 tons, but the reason probably that it lost last year is that there has been no traffic on the ocean as compared to the ordinary years and less traffic by rail during this time. So we say we believe it is worth while to develop the waterways of our country. We believe we can develop them; we believe there is no reason why, if we can do what we have been doing on the Great Lakes, what we have been doing on the Monongahela, we believe there is no reason why we can not do what we have done on the Sabine-Nechez if we put the genius, the energy, and the resourcefulness of our people at work. We can use our waterways and develop them for all purposes. There is no reason why with the 66,000,000 primary horsepower in the United States we should be using only 6,000,000 horsepower. All of this vast unused energy should be developed and applied

to useful purposes and to the saving of coal at the same time that we improve the navigation of our waterways.

There is no reason why in the end we can not cease using our streams as places for sewage, a practice which will make the history of this age and the history of our people up to this time incomprehensible to our descendants, and have pure water for all the people of the United States. The time must come, and it is coming soon, when we must use these waterways, if we are to send the farmer's product or the manufacturer's product to the markets. It is useless to plant our fields, it is useless to have our factories running, unless you can send the products of both to the places where they can be sold. [Applause.] And you can send them more cheaply by water than you can in any other way. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. BURTON. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to proceed for 10 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. BURTON. Mr. Chairman and gentlemen of the committee, I still adhere to two views expressed in the discussion of the Army appropriation bill; first, that specific appropriations should be made by Congress for the various river and harbor projects instead of leaving the apportionment to the War Department.

Mr. DEMPSEY. Permit me to say that I entirely coincide with the gentleman's views, as I think they are the result of observation and experience. I think he is entirely correct.

Mr. BURTON. Second, I do not share the optimistic expectations expressed here in regard to the improvement of inland waterways. There are numerous inland streams which can be profitably utilized. In some remarks here on March 27, page 4632, I sought to set forth the classes of inland waterways which might profitably be improved. What I have especially objected to is the expensive development by locks and dams and the removal of serious obstacles in rivers paralleled by railroads, where there are other methods for transportation available much cheaper and much more convenient. I do not think the gentleman from New York [Mr. DEMPSEY] has thoroughly realized the difference between the ordinary inland waterway and the Great Lakes, where there are bodies of water, like Lake Superior, Lake Huron, Lake Michigan, and Lake Erie, with a depth quite as useful for navigation as in the ocean itself. What is needed for their utilization is the improvement of the connecting waters, such as the River St. Clair, the River St. Marys, and the Detroit River. Then, again, the other class of improvements which he names, the Willamette and the Columbia, extending to the sea and furnishing a channel for ocean-going vessels. The Sabine-Neches is in the same class. The Delaware River is in the same category. The Patapsco River, furnishing an outlet from the port of Baltimore, is of the same type. Those are different from shallow-draft streams, where you must use small boats. And in this age I think that latter method is distanced by others more convenient and useful.

Yet I recognize the congestion that prevails on the railroads, and I do not offer any objection here to giving this method by the inland waterways a trial. What I would suggest as regards the more expensive improvements is to do this, improve the barge canal, that has been undertaken by the State of New York; improve the Ohio River; improve the Mississippi River. The latter is at a very high stage of utilization for navigation from Cairo down. Let us ascertain whether they are going to succeed or not. If those three waterways do not prove successful, in view of the very fertile territories through which they pass, no others will.

But, Mr. Chairman, I did not rise especially to speak on this subject. There are certain fundamental principles which we must adopt in utilizing the waters of the country. I look to a great era of development in the United States in the coming years. We are just at the beginning of the utilization of our resources, just at the beginning of providing the conveniences and luxuries of life. During the time in which I was chairman of the Rivers and Harbors Committee there was a disposition for economy which prevented our making appropriations adequate for the purposes which we desired. The keynote of this problem is this: First, we must recognize that water is an asset just as well as the land. Next, in the utilization of that water, cooperation must be used. I use that single word—I mean cooperation between different uses of water and cooperation between the Federal Government and municipalities, States, and private individuals, on the other hand. We were constantly hounded, when I was a member of that committee, for appropriations for mere bank protection where there was no navigation. We excluded those just as far as possible.

Now, what is the solution? We must take into account the different uses and treatment of water. First, navigation; second, water supply for cities, water supply for irrigation comes in. We must take into account the purification of water. Along with those we must also regard drainage and flood protection, and last of all, I would name—and in a way it is the most important—the utilization of water for power. Different agencies, the Federal Government and communities, must all join, the Government paying its share for navigation; private individuals for their share for bank protection; municipalities providing the funds necessary to secure purification of water and water supply, and presumably private enterprise putting in the capital for the development of water power.

There are a number of streams in this country that could not be utilized profitably for navigation alone, nor could they be used profitably for water power alone, but if you join the two together they can be improved and improved with profit.

Now, I think this bill contains projects which are for the most part entirely commendable. I desire to say just a few words on the proposition for the use of the New York and New Jersey Channel. In 1900, with a Government engineer, I went through the Arthur Kill and the Kill Van Kull, and was impressed with the possibilities of that waterway near New York, as a place to provide for smelters, for the refining and storage of oil, and for a great variety of uses.

The project was adopted by the Committee on Rivers and Harbors. Just see what the result has been. There have been, I think, 30,000,000 tons carried through that waterway in a single year, with a value of a billion dollars. That certainly is an improvement this country can afford to undertake. I do not say that there may not be some odds and ends, some incidental portions of it, that should be taken up by private enterprise.

And, to digress here, generally speaking, amounts expended upon the harbors of the country, the channels adjacent to great cities, have conferred in their improvement a greater benefit than money expended upon the rivers of the country. That does not mean that we should omit to utilize the rivers, particularly such rivers as the Mississippi and the Ohio, but so far as the return is concerned in increased trade and development of traffic and general profit to the whole country, what could surpass the benefits obtained from the improvement of such a harbor as that of New York and the channels in the neighborhood, also the channels to the harbors of Philadelphia and Baltimore, and the improvement of the Southwest Pass for access to New Orleans, and, perhaps, overtopping them all, the improvement of the Great Lakes and its harbors?

Gentlemen of the committee, I want to lay before you this idea: There is something for us to consider in the coordination of different uses of water. If we are to have as good a country as we ought to have, if we are to have the abounding wealth that we desire, we must take up this problem in a large way. We must impose the expense where it properly belongs. Where the improvement is for private benefit, let it be paid by private parties; where it is for the benefit of a community alone, let it be paid by that community. And it is the same with respect to a State. Where you can place the improvement on the ground of universal and general benefit, then the whole country should pay for it from the Federal Treasury. But the dividing line between them all should be carefully drawn. [Applause.]

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. DEMPSEY. Mr. Chairman, I ask unanimous consent that the gentleman from Ohio may have one additional minute. I wish to ask him a question.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The CHAIRMAN. The gentleman from Ohio is recognized for one minute more.

Mr. DEMPSEY. I may say that I am quite in sympathy with what the gentleman from Ohio has so well said, and I believe if he will stay here—and I know he will—during the consideration of this bill he will find that every item of it is within the principle that he has laid down in the light of the experience he has had.

Mr. BURTON. I am glad to hear that. I had understood that there were improvements proposed for creeks or harbors scarcely worthy of attention, but I did not find them. The old "chestnuts" that were thrown off when I was active in this work do not seem to be here. Most of this work is for the enlargement of projects already undertaken.

Mr. DEMPSEY. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. DEMPSEY: On page 2, between line 9 and line 10, insert the following paragraph:

"Newark Bay and Hackensack and Passaic Rivers, N. J., in accordance with the report submitted in House Document No. 206, Sixty-seventh Congress, second session, and subject to the conditions set forth in said document."

Mr. DEMPSEY. Mr. Chairman, I would say in reference to this amendment that it applies to a part of the Greater New York development, and it is part of the improvement of that port which is of importance to the whole country. It aims to make Newark Bay available for the commerce which comes in on all the trunk-line railroads there, and to make it available there so that it can be transshipped from Newark Bay instead, where it is unnecessary to do it, of sending it over to Greater New York. It is also intended to give Newark Bay all the commerce that would naturally come through it as a great center, as it is, for manufacturing and commerce and all the things that go to make for commercial prosperity.

Mr. WARD of North Carolina rose.

Mr. LEHLBACH. Mr. Chairman, will the gentleman yield for a question?

Mr. DEMPSEY. Yes.

Mr. LEHLBACH. Is it not a fact that it was intended to incorporate this item in the bill proper, and the reason for its not being offered then as an amendment is the fact of its being referred to the district engineers for report?

Mr. DEMPSEY. Yes. All the gentleman said is true. The district engineer had not fully realized the necessity of this project, but in the opinion of the Chief of Engineers it was of such vital importance that he deemed a special report necessary, and it was sent back for a new report, so that it might be made a part of this bill. It is as important a project as there is in the bill.

Mr. WARD of North Carolina. The question I wanted to ask was substantially submitted by the gentleman from New Jersey [Mr. LEHLBACH].

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. APPLEBY. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from New Jersey moves to strike out the last word.

Mr. APPLEBY. Mr. Chairman and gentlemen, I want to say a very few words in favor of this particular section on page 2, line 7, calling for New York and New Jersey channels in accordance with the report submitted in House Document No. 653, Sixty-sixth Congress, second session.

We should all be interested in better waterways located within the United States where the public is going to be benefited. This particular project which I wish to speak for will provide for the deepening of the channel from Sandy Hook to Perth Amboy, and from Perth Amboy through the Arthur Kill and Kill Van Kull into upper New York Bay. As the gentleman from Ohio [Mr. BURTON] has said, there is probably a greater development of industrial plants along these waterways than in any other part of the United States. Many large manufacturing plants of various kinds have located there in the last few years. These channels at the present time are not of sufficient depth to carry the deep-draft ships which would like to enter. This project was recommended in 1881, and in 1905 by the War Department, which improvement calls for a 30-foot channel for incoming steamers from the Atlantic Ocean opposite Sandy Hook via Arthur Kill to upper New York Bay. It seems to me there is no more greatly needed item in this bill than this particular one. The possibilities for the further development of industry and increased number of plants are immeasurable. At the present time the oil coming into the Standard Oil establishment at Bayonne has to be reloaded into the ocean-going ships from the boats of lighter draft in order to reach the refining and storage plants. Anyone familiar with the volume of the business done by these oil companies, and the coal companies as well, together with the great number of plants located along the Arthur Kill, must know that this project is a necessity, and will save thousands of dollars annually through lowering the cost of transportation. In fact, it is the most important item in the entire bill, as a great project calling for such a harbor improvement as this must of necessity be. The country in general will be well satisfied if the House approves this project which I have so hastily mentioned. [Applause.]

Mr. HILL. Mr. Chairman, I rise in opposition to the pro forma amendment.

The CHAIRMAN. The gentleman from Maryland asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. HILL. Mr. Chairman and gentlemen, in reference to this bill, H. R. 10766, which is a bill "authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes," it is my understanding that for the work on the Baltimore Harbor no reference is necessary in this bill. I should like to ask, however, a statement from the chairman of the committee on this subject.

It is my understanding that under existing legislation there is authorized a 35-foot channel for the port of Baltimore, and that in the War Department appropriation bill, out of the $42,000,000 authorized by this Congress and appropriated for rivers and harbors, $350,000 was provided in the discretion of the engineers for the project in Baltimore. It is my understanding, therefore, that it is not necessary for Baltimore Harbor to be referred to in this bill; but, as I say, I should like to have that understanding confirmed by the chairman of the committee.

Mr. DEMPSEY. Baltimore Harbor has already adopted in its interest the project for 35 feet of water, and that project is under way and in process of completion. That is one of the very great harbors of the country. It is one of the harbors which is a demonstration of the fact that you can be located off the ocean and yet have a wonderful business. Everyone on the committee realizes the importance of Baltimore, and we believe that with the increased appropriation which was passed in the Army appropriation bill Baltimore will get all that it needs for the present year, all that can be profitably and economically expended in the improvement of the harbor.

Mr. HILL. I thank the chairman of the committee, and I wish to ask one more question: It is my understanding that the Representatives of the State of Maryland in this House should be entirely content with the situation as to the appropriation for Baltimore Harbor, and that there is nothing further to be done in reference to that situation at the present time?

Mr. DEMPSEY. There is nothing to be done except to be sure that you are present if there is any danger when the military appropriation bill comes back from the Senate. However, I understand that the Senate committee have adopted, I think unanimously, the appropriation as it was passed by the House, so I do not anticipate any difficulty in conference. But we should be prepared to meet it if it turns out that I am wrong. I think my information is correct.

Mr. HILL. It is my further understanding that the House has dealt generously with the Baltimore Harbor in this matter.

Mr. DEMPSEY. It is a lump-sum appropriation, but the disposition of the engineers is to regard Baltimore as being of very great importance in relation to the other harbors of the United States, and my understanding is that the Chief of Engineers believes that he will be able to allot to Baltimore Harbor all that can profitably and economically be expended there during the coming season.

Mr. HILL. I will say to the chairman of the committee that Baltimore City has recently authorized a bond issue of $50,000,000 and is making enormous improvements, and that therefore it is particularly gratifying to the people of Baltimore that this appropriation has been made.

Mr. GARNER. Will the gentleman yield?

Mr. HILL. I yield to the gentleman from Texas.

Mr. GARNER. I want to congratulate the gentleman from Baltimore upon getting a certificate of character to exhibit to his constituents from the chairman of the committee. I understand this project is all right, and that the record will give the gentleman from Baltimore full credit for everything being satisfactory, and that Baltimore will get out of the $43,000,000 all that can possibly be spent in Baltimore Harbor.

Mr. DEMPSEY. Why should not the gentleman have the credit to which he is entitled? He has done his part.

Mr. GARNER. I do not want it to go under the guise of his having to assist the Baltimore project. I merely want it to show that it is for the purpose of assisting the gentleman in his reelection.

Mr. DEMPSEY. He should be assisted when he has done good work, as he did in this instance, and we all want to assist him where he has done good work.

Mr. GARNER. I quite agree with the gentleman.

Mr. HILL. I want to thank the gentleman from Texas—I have not had the chance before—to thank him for the help he gave me by inference a little while ago on my bill for 2.75 per cent light wines and beer. [Laughter.]

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

Wilmington Harbor, Del., in accordance with the report submitted in House Document No. 114, Sixty-seventh Congress, first session, and subject to the conditions set forth in said document.

Mr. LAYTON. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Delaware asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. LAYTON. Mr. Chairman, it is not necessary for me to speak at any length upon this item for the harbor of Wilmington, Del. Yesterday I put a rather long dissertation in the RECORD upon this subject, including this paragraph itself. I will only repeat what I said yesterday that the committee, in including projects, were careful to include projects where the localities were showing a disposition largely to help themselves. The city of Wilmington is the one great city in my State, a city of 125,000 inhabitants and with probably as varied an industrialism as there is in any city in the United States, with a tremendous output, and valuable output, and as you all know with a tremendous wealth, which goes to swell largely the Federal Treasury. They have bonded themselves for $3,000,000 in order to develop a port. Up to this time the city of Wilmington has depended upon a little river called the Christiana. It is probably not more than 80 or 100 yards across. Wilmington has reached the point where she must have an outlet upon the Delaware River. The consequence is that she has asked that this paragraph be favorably considered by the House, in order to improve the mouth of that river, where she proposes to spend at least $3,000,000 for docks, terminals, warehouses, and so forth. Running into that development are three of the great railroads of this country—the Baltimore & Ohio, the Pennsylvania, and the Reading. I believe, and I think the House will believe, if they give it mature consideration—I know the engineers of the Government take this view of it—that even now there is a congestion upon the Delaware River that demands this improvement. I do not believe there is any place in the United States where there is a greater industrialism and a greater congestion of population, with a certainty of still greater future development in industrialism, in agriculture, and in horticulture, and of increasing population than there is from New Castle, Del., up beyond Philadelphia for many miles, at least as far as Bristol.

Mr. BURTON. I quite agree with the gentleman from Delaware that along the Delaware River is a place for great industrial growth. Has there been improvement along on the front of the Delaware River to accommodate the traffic of Wilmington as yet?

Mr. LAYTON. I do not exactly understand the gentleman's question.

Mr. BURTON. You are right near to the Delaware River and most of your traffic has been in the Christiana River.

Mr. LAYTON. Yes.

Mr. BURTON. I used to tell the people coming from there that you would ultimately have to improve the facilities on the main Delaware River. Have they begun to do so?

Mr. LAYTON. Oh, yes; undoubtedly; and there is already a $5,000,000 factory to be established, conditioned upon the making of this improvement.

Mr. BURTON. In olden times the sewage of Wilmington used to be discharged into the Christiana River, and the Government had to do the work of getting it out. Has that been attended to?

Mr. LAYTON. Does the gentleman mean the discharge from the factories—the sewage, and so forth?

Mr. BURTON. Yes.

Mr. LAYTON. The gentleman has asked me a question that I can not answer. I do not know.

Mr. BURTON. That was one objection that lay to this appropriation some 10 or 12 years ago.

Mr. LAYTON. Mr. Chairman, almost from Wilmington to the northern limits of Philadelphia there is one compact municipality as far as factories, dwelling houses, and warehouses and things of that kind are concerned. There is hardly a vacant space, so to speak. It is all connected up with trolley lines and cement roads, and the time will soon come when there will be no vacant space on the Delaware River within the limits I have specified. There is a great territory behind the port of Wilmington, and therefore in making this projected improvement it is going to relieve Philadelphia; it is going to relieve Chester also, and as soon as the Chesapeake Canal is constructed it will bring into cooperation the great port of Baltimore, bringing it into relation with the Delaware River and all its industrialism, which is almost inestimable. [Applause.]

The Clerk read as follows:

Locklies Creek, Va., in accordance with the report submitted in House Document No. 612, Sixty-third Congress, second session, and subject to the conditions set forth in said document.

Mr. CLOUSE. Mr. Chairman, I move to strike out the last word, and I ask unanimous consent to extend and revise my remarks in the RECORD.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. CLOUSE. Mr. Chairman and gentlemen of the committee, it is not my purpose to discuss at length the various projects which your Committee on Rivers and Harbors have incorporated in the pending bill, nor shall I attempt to discuss any particular project with a view to showing the relative merits of one as compared with another. Were I called upon to discuss or express my individual opinion on the several projects, I could but say that there is not one single item in the bill which deserves any greater consideration than the other, but that each and every one is not only meritorious but an absolute necessity in the handling of the commerce of the Nation.

Your committee has labored long and diligently in the investigation of all matters pertaining to the improvement and development of rivers and harbors, and in those deliberations we have endeavored at all times to arrive at our conclusions solely and alone from facts produced showing or tending to show the imperative necessity of the project, not only from the viewpoint of handling the commerce but with the view also of benefiting the greatest number of people possible by way of reduced charges of transportation.

Perhaps at no time in the history of the world, and certainly at no time in the history of this Nation, have we been confronted with the serious problems that threaten to destroy our progress and prosperity as we are to-day. Chief among the obstacles confronting us is that of transporting the produce of the soil, the products of the factory, the natural and necessary resources of the Nation, at rates that are reasonable to the farmer, the merchant, the laborer, the manufacturer, and the citizen. I think that all will agree that present-day conditions of transportation are not only inadequate, but that they are exorbitant and intolerable. They can not be defended, much less can they be long endured.

The hour of the Nation's return to normalcy and prosperity may be well measured by the course which we pursue in encouraging and coordinating the transportation facilities of the country. The troublesome conditions into which we have been thrown may be attributable to many causes, but chief among them, in my judgment, is due to the fact that the people of this country, the Congress of the United States, the Nation, has failed to grasp the wonderful possibilities and benefits that are to come to all our people as a result of the development and improvement of our internal rivers so that they may be utilized for the handling of the commerce of the country.

The Government of the United States entered upon a program of building a merchant marine. The construction of this merchant craft was started during the period of war, and while millions of dollars was ruthlessly wasted in the execution of that program, yet out of an expenditure of approximately three and a half billion dollars we have, after discarding all worthless craft, a huge fleet left, which can be utilized only in the carrying of our surplus products across the high seas and to the markets of the world. In this way only can we ever expect to realize a single farthing on this stupendous investment. Only by the improvement of our rivers and harbors will we be able to freight the surplus corn and wheat and cattle and hogs and horses and mules and coal and timber and the thousand and one things that go to make up our commerce to the ports of embarkation at rates that are reasonable and profitable to the producer.

The inadequacy of the railroads of this country to handle the commerce of the Nation has been conclusively demonstrated, and when we consider the fact that the commerce of the United States doubles every 10 years, then we are irresistibly driven to the conclusion that in order to meet future conditions of an ever-increasing population we must turn our attention to the development and use of rivers as the one and only means of meeting the situation with which we are now, and in the future will be all the more seriously, confronted. By this means and in no other way can we hope to reduce the cost of transportation, which is a tremendous burden on the farmer and producer as well as on the consuming public.

In advocating the development of these natural arteries of commerce it is not my intention to advocate the abandonment of our railway systems. They have in the past rendered great service in the development of our country, and in all which

they deserve the appreciation and fair consideration of a grateful people. They have not only aided in the development of our country and its resources in the past but they will constitute an indispensable influence in the continued growth and progress of the Nation. The principle which I have in mind, the policy which this Government must inevitably adopt, is to improve and encourage all sorts of transportation in order to obtain the benefits of the almost inexhaustible resources of the country and furnish to our people the most seasonable and economical transportation that it is possible to devise.

There are some governmental policies relating to the operation of railroads, however, which I do not approve, and which, in my judgment, should not be tolerated for another day. The policy to which I refer is that of the Interstate Commerce Commission allowing railroads to establish rates on lines which parallel our rivers so as to meet the rates established by water transportation, and to permit them to establish an entirely different rate on the very same character of freight when it is being hauled into inland territory. To illustrate, the railroads haul to-day from New Orleans to St. Louis, a distance of 718 miles, 100 pounds of second-class freight for $1.73, while they charge for hauling the same amount of the same kind of freight from New Orleans to Fort Smith, Ark., a distance of 494 miles, but where there is no water competition, $1.84½. The railroads to-day haul 100 pounds of freight from Portland, Me., to New Orleans, a distance of 1,685 miles, for the sum of $2.51, while they charge from Kansas City to New Orleans, for the same kind and amount of freight, the sum of $2.48½, although the haul is 806 miles shorter. Why this inequality? Simply because in one case there is water competition, in the other there is not.

I believe that the rates should be made according to the character and distance hauled, and not predicated upon the fact of whether there is or is not water competition. I believe that the railroads should have a fair return on their investment, but I do not believe that they should be permitted to drive commerce from our rivers by hauling freight at a loss in order to compete with water transportation, and then charge an excessive rate to the shipper who lives in the interior where there is no water transportation. No sane business man would tolerate such practices in his private business affairs, and why should we as representatives of the people, clothed with the power to tax the people and appropriate their money, be less mindful of the affairs of our constituents than we would be of our own affairs? I want to see the Government adopt business methods in the administration of the affairs of the Nation. I want to see Congress function with an eye single to the development of our vast resources along economical lines, but always functioning for the benefit of the greater number of American citizens. I want to see in the not far distant future steamships and steamboats plying the waters of every navigable river in America, carrying the products of the farm, the forest, the mines, the factory to all the markets of the earth, and with this I hope to see a Nation of the most prosperous, progressive, happy, and contented peoples of all the ages of the world.

I am glad to say that we as members of your Committee on Rivers and Harbors have at all times endeavored to follow a course which would give the greatest results with the least possible expense to the taxpayer. We have stood firmly by every scheme and every program that tended to reduce the expenses of administration of Government, but we are firmly convinced that it is not always economy to deny appropriations adequate to carry on the necessary work of the Government in a continuous, successive manner. Indeed, in the development of our rivers and harbors it has been shown that the greatest expense, if I may not say extravagance, has been due to a lack of sufficient appropriations to carry on the work of improvement continuously after it has once been commenced.

It requires a large amount of money to assemble the necessary machinery with which to carry on the work, and of course, if funds are not provided with which to prosecute the work after assembling the necessary machinery and materials, then the amount so expended is absolutely lost. It was for these reasons that this committee carried the fight for increased appropriations for rivers and harbors to the floor of this House, and successfully put through a bill increasing the amount of the appropriation for the next fiscal year $30,000,000 above that of last year and $27,000,000 more than the Director of the Budget had recommended. We confidently believe that the wisdom of our course will have been thoroughly demonstrated by the time the next appropriation for this purpose comes up for consideration. We hope to see the work commenced on all projects heretofore adopted and prosecuted to a speedy completion. We hope out of this amount to see some of the newer projects commenced. We hope by next year to see this House adopt the plan of allowing the Committee on Rivers and Harbors to designate the amount to be spent upon the several projects, the time and manner in which it shall be spent, and the place where the money shall be spent.

I hope to see the great Cumberland River in my own State and in the State of Kentucky completed for the benefit of the thousands of honest peoples living in that fertile region. We have a sufficient amount allocated this year to complete at least the adopted project below Nashville, and then if I continue as a member of this great committee of this House, I expect to see the work commenced between Carthage and Burnside, Ky., and carried on continuously until that stream is made navigable 365 days in each and every year.

I know there are some here who say the expense incident to completing the remaining locks can not be justified, but to those who entertain such views let me say that there is in and contiguous to the Cumberland Valley through which this river flows 3,000,000 acres of the most fertile soil to be found in America. With proper facilities for shipping and handling the products of this vast area of productive soil we can increase the quantity production at least as much as $5 per acre, and with this we find that in one year we have increased the value of crops raised in this particular section no less than $15,000,000, or a sufficient amount to pay all of the expense of its completion and have a net balance left of approximately $5,000.000.

Ah, but some one says, that operates to the benefit of only those living in that section. I deny it. When you have offered facilities which increases the productivity of any section of the country you have not only benefited that particular section of the country but you made it possible through cheaper means of transportation to reduce the cost of living to the consuming public of America.

Now, Mr. Chairman and gentlemen, I want briefly to discuss a few of the items embraced in the pending bill, and in doing so I desire to say that there is not a single project embraced in the bill that affects my district or my State. But as a member of the Committee on Rivers and Harbors, after weeks and months of diligent study and investigation, we have reported a bill here that I think is absolutely necessary to meet the requirements of the Nation at this time. I do not quite agree with the distinguished gentleman from Ohio [Mr. BURTON] in all that he said with respect to the improvement of internal rivers. I do agree, however, with him in that this Congress should have the power and should exercise the power of designating the particular projects that should be improved.

Mr. DEMPSEY. Will the gentleman yield?

Mr. CLOUSE. Yes.

Mr. DEMPSEY. In order that they might be designated with reasonable intelligence the gentleman would send them to a committee that knew something about the subject.

Mr. CLOUSE. I would certainly do that. I would not only vest the committee with the power to designate the projects to be improved but I would give the committee the power to make the appropriation to carry out that improvement. The great difficulty under the present system is that the Board of Engineers look to the tonnage and commerce that is being carried on a certain river, and from that they determine the necessity of its development or improvement. That is not the true criterion by which to be governed on river improvement, internal or otherwise. I am going to show you by an illustration. The Cumberland River project was adopted in 1886. Appropriations were made by Congress for the commencement of work. What did the Board of Engineers do? I speak of a river now that penetrates and passes through my district.

The Board of Engineers goes to the headwaters of the Cumberland River in Kentucky and constructs a lock and dam there at a cost of $359,875.05. What next do they do? Instead of continuing at the head of the river going toward the mouth, they drop down below Nashville, a distance of nearly 400 miles, and commence there the construction of dams. They built dams on the lower river at an expense of $3,720,832.54. They then shift the scene and commence work between Nashville and the upper Cumberland River, and there they have constructed seven dams at an expense of $2,500,000. The first lock was placed in operation November 26, 1904, almost 20 years ago, and the last lock to be completed was 12 years ago. Nothing has been done on the remaining locks, yet, uncompleted as they are, they constitute an impediment rather than a benefit to navigation. Is that a system that any intelligent business man would pursue? The Cumberland River before the construction of these locks and dams could be utilized for navigation at least six months out of the year. As it is to-day it is a worthless project until completed. This river, as I have said, penetrates one of the most fertile sections in America—rich not only in agricultural possibilities but rich in minerals and in timber. In bygone days

the manufacturers of timber in the city of Nashville and down on the Ohio floated their logs down that stream, which is now rendered impossible by the construction of the locks, because rafts can not pass over them at any tide in the river. The commerce on this river showed a greater tonnage in 1890 than it did in 1920. Why? Because of this impracticable method of constructing locks and dams at different points and not in succession, as they should be built.

Mr. BURTON. Will the gentleman yield?

Mr. CLOUSE. I will.

Mr. BURTON. I am interested in the gentleman's statement. Do I understand the gentleman to say that that improvement by locks and dams has proved to be an injudicious one?

Mr. CLOUSE. Indeed, it is until completed, because the locks and dams make the floating of logs an absolute impossibility, and you can not traverse the river by boat higher than Carthage, Tenn., nor can you get into the Ohio by reason of the uncompleted locks and dams on the lower section.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. BURTON. Mr. Chairman, I ask that the gentleman have two minutes more that I may ask him a question.

The CHAIRMAN. The gentleman from Ohio asks that the time of the gentleman from Tennessee be extended two minutes. Is there objection?

There was no objection.

Mr. BURTON. I am interested in asking this question, because I incurred a great deal of obloquy by opposing the building of those dams. How many more are needed to complete the project?

Mr. CLOUSE. According to the plan adopted by Congress eight more dams will be required before the project is completed.

Mr. BURTON. Does the gentleman say that if those were completed the improvement would be injudicious?

Mr. CLOUSE. No. I say that if those were completed it would furnish a commerce of not less than 2,000,000 tons annually, with a value of probably $20,000,000.

Mr. BURTON. So that the gentleman advocates the project?

Mr. CLOUSE. Indeed I do, but I do not advocate the system which the Board of Engineers has adopted in making the improvement. They should have begun at one end or the other of the river and carried on the work successfully and continuously, and not by piecemeal and in broken lots.

Mr. BURTON. The gentleman from Tennessee still advocates, I take it, the preliminary examination and the survey as a condition of the adoption of any improvement, does he not?

Mr. CLOUSE. Oh, yes. This project is already adopted. It is a continuing one. It is not necessary to embrace it in this bill. In fact, the engineers are still working upon it, but they are not working as they should work, because, as has been demonstrated here in the improvement of this as well as the Ohio River, which was adopted many years ago with an authorized appropriation of millions of dollars, now possibly two-thirds or three-fourths completed, yet those rivers are not serving the people in the way they could serve them if they were completed.

Mr. BOND. Just what the gentleman has been talking about is not embraced in the present bill?

Mr. CLOUSE. Oh, no. The Cumberland River project is an adopted one, and I sincerely hope that with the very valuable aid of my distinguished colleague, whose judgment and advice as a member of the committee is always sound, that the good people of this section of Tennessee and Kentucky may soon realize their fondest hopes, and that is that the Cumberland River may be speedily put into condition whereby it may be utilized every day of the year.

The Clerk read as follows:

Waterway connecting Core Sound and Beaufort Harbor, N. C., in accordance with the report submitted in House Document No. 88, Sixty-seventh Congress, first session.

Mr. WALSH. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. WALSH: Page 2, line 21, after the word "session" insert:

"Plymouth Harbor, Mass., in accordance with the report submitted in House Document No. 996, Sixty-sixth Congress, third session, and subject to the conditions set forth in said document."

Mr. WALSH. Mr. Chairman, this project contemplates an improvement of the harbor of Plymouth, Mass., upon conditions that the Commonwealth of Massachusetts or other local interests shall contribute $51,000, the entire cost of the project being $102,000. It means the dredging of an additional channel and turning basin to a new point in the harbor where the wharf is to be constructed. At the time the Committee on Rivers and Harbors were holding their hearings the manufacturing interests at Plymouth had under consideration the dredging of a channel to another point in the harbor, and at my request the committee, under the authority which they have, requested the Board of Engineers to make a survey of this new project. That survey has been completed, and the cost of that project is such that the parties interested feel that at the present time they could not make the contribution which they expected to make toward its completion.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield?

Mr. WALSH. I do.

Mr. DUPRÉ. Will the gentleman indicate the volume of the commerce on this proposed improvement? Incidentally I want to welcome the gentleman among the supporters of the bill.

Mr. WALSH. The commerce at Plymouth is quite considerable. The main plant of the Plymouth Cordage Co. is located at Plymouth. They bring large quantities of their raw material by water and ship some of their products by water, but not a very considerable quantity.

Mr. DUPRÉ. What does the gentleman mean by "considerable"? It is a rather elastic term. I am in favor of the amendment, but I would like to hear a little more about it.

Mr. WALSH. Some fifteen or twenty thousand tons, worth several hundred thousand dollars, to that one plant. We also have there located cotton mills and I think two woolen mills which, of course, have some of their raw material and some of their fuel brought in by water.

Mr. DUPRE. Is the project in the gentleman's district?

Mr. WALSH. It is.

Mr. DUPRÉ. I gravely suspected that to be the fact. Is it a local or a national issue?

Mr. WALSH. It is entirely a local condition, affecting national resources.

Mr. DUPRÉ. Affecting the gentleman from Massachusetts, who is a national resource? Is that the idea?

Mr. WALSH. Hardly that, although I have no objection to the gentleman accusing me of that, in view of my characterization yesterday, which I am happy to say has not affected the gentleman's good temper and genial disposition.

Mr. DUPRÉ. It certainly has made the gentleman from Massachusetts amiable this morning when he is asking something for himself. [Laughter.]

Mr. WALSH. I plead guilty to the usual failing of humble Members who are asking appropriations for their own particular section. I was explaining why this matter had not been brought to the attention of the committee. I think I had stated that a survey had been made by a board of engineers of this other proposed project, and the interests affected and particularly interested in this other project at another point in the harbor did not feel at this time they could make the contribution which would be proper in order to have the dredging and the channel constructed at that point. The parties in interest here are at this time ready to contribute 50 per cent of the cost.

Mr. DUPRÉ. The gentleman understands that he will have to wait until the next military appropriation bill for the money to carry out this project if it be authorized?

Mr. WALSH. I understand from the explanation made by the gentleman yesterday that that will be the case.

Mr. DUPRÉ. All of which the gentleman understood before he sought the explanation?

Mr. WALSH. Oh, no; I think the gentleman does me an injustice there.

Mr. DUPRÉ. Not knowingly.

Mr. WALSH. I really was asking the gentleman for information, because I was uncertain as to what the status of these projects would be, in view of the appropriation heretofore carried in the military appropriation bill.

Now, that is all I have to say in reference to this project, except that it was passed upon by the Board of Engineers. The conditions imposed are that local interests or the Commonwealth shall contribute $51,000 toward this improvement, which it is estimated will cost $102,000.

Mr. DEMPSEY. Mr. Chairman, it is my understanding that the committee informally considered this report by the engineers and were ready to adopt it, but that we did not adopt it, solely owing to the circumstances suggested by the gentleman from Massachusetts. He wanted a resurvey, with the idea of the adoption of another project to which local interests would largely contribute, and while I have no authority to accept the amendment as chairman of the committee, I do state my understanding is that the committee favored the project and the adoption of the recommendation of the engineers.

The question was taken, and the amendment was agreed to.

Mr. LYON. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 2, between lines 21 and 22——

The CHAIRMAN. After the amendment just adopted?

The Clerk read as follows:

Insert a new paragraph, as follows:

"Cape Fear River below Wilmington, N. C., in accordance with the report submitted in House Document No. 94, Sixty-seventh Congress, first session."

Mr. LYON. Mr. Chairman and gentlemen of the committee, as I stated on yesterday, the amendment as offered does not provide for any new project. It simply authorizes the present project to be changed so that the channel across the bar at the mouth of the Cape Fear River, Wilmington, N. C., can be straightened. This amendment has been approved by the War Department and the Board of Engineers for Rivers and Harbors. This is one of those projects that I think meets with the approval, or perhaps will meet with the approval, judging from his remarks, of the gentleman from Ohio [Mr. BURTON]. Now, I want to say this in regard to this amendment, that according to the engineers' report the cost of dredging this new channel would be very little, if any, more than to get the required depth in the present channel. It proposes to straighten the channel so as to get the same depth at perhaps a less cost, but with a saving in maintenance charge, according to the engineers, of about $60,000 a year. We have spent on this channel as presently located hundreds of thousands of dollars, and the channel to-day is in a worse condition than it was in 1916. They figure that the cost of building a new channel, dredging, and so forth, will be even less than it will cost to dredge the channel as at present located. The cost of maintenance will be considerably less, practically saving the Government some $60,000 or $65,000 each year. I will bring this thought to you: This change is bound to come some time. The engineers say the conditions are going from bad to worse, and it looks to me as if it would be economy to make the change at this time, so there will be no more money thrown away on the present channel. Every year's delay means the expenditure of perhaps $100,000 on the channel as it is now located. I want to say this, that the bill now pending in the Senate has this item in it. I think there is no question of the fact that it will become the law, but I prefer to see it become a law in the House of Representatives rather than wait until it goes through the Senate, and I hope it will have the support of gentlemen on both sides of the Chamber.

Mr. DEMPSEY. Mr. Chairman, the amendment proposed by the gentleman from North Carolina was considered by the committee. It is true that there was a favorable report by the Board of Engineers, and it is true that the Board of Engineers estimated that the annual maintenance would be reduced from $90,000 per annum to $30,000 per annum, and so a large saving will be made. It is true also that the present channel is tortuous and dangerous, but the commerce on the Cape Fear River is not large enough so that we think that it would justify the item at the present time, and we have tried to keep the expenditures down just as low as possible. We think the project should be adopted at the proper time, but we do not believe that it should be adopted now.

Mr. LYON. Does not the gentleman think, though, that in view of the fact we are continuing to expend $90,000 a year in attempting to maintain the present channel that we should not wait until they have spent two or three hundred thousand dollars more before making this change?

Mr. DEMPSEY. I stated very frankly the facts.

Mr. LYON. I appreciate that.

Mr. McDUFFIE. Does not the gentleman recognize the fact that by the adoption of this amendment it would mean the saving of money on the part of the Government in the end?

Mr. DEMPSEY. I stated the facts in regard to it. I said the engineers estimated that instead of costing $90,000 a year it will only cost $30,000 a year; there has been an expenditure of $420,000 and——

Mr. DUPRÉ. In six or seven years the saving would pay for this improvement if authorized at the present time. Is not that so?

Mr. DEMPSEY. Yes. After all——

Mr. LYON. Will the gentleman yield for a question?

Mr. DEMPSEY. This is one of the close questions, I will say frankly. We thought we ought to keep within as narrow proportions as possible in spending the money, and I am obliged to say that this is one of the close questions.

Mr. LYON. I want to make this statement: I wish to say about the additional cost of $420,000, that the estimated amount for the completion of the present project, which has not been completed, is $303,000, and that amount is not available. And the engineers state, I believe, that the difference in the cost of completing the present project as the channel is now located; and the cost, if the change be made, will be less than $200,000.

Mr. DEMPSEY. That is entirely correct.

Mr. LYON. And we could save $60,000 a year for the maintenance.

Mr. DEMPSEY. All those things are true.

The CHAIRMAN. The question is on the amendment of the gentleman from North Carolina [Mr. LYON].

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Sabine-Neches Waterway, Tex., in accordance with the reports submitted in House Document No. 975, Sixty-sixth Congress, third session, and the supplemental reports submitted by the Chief of Engineers under date of February 25, 1922, and subject to the conditions set forth in said reports: *Provided*, That no expense shall be incurred by the United States for acquiring any lands required for the purpose of this improvement: *Provided further*, That before entering upon the prosecution of the improvements herein authorized, local interests shall guarantee, in a manner satisfactory to the Secretary of War, that the United States will be held free from any claim for damages resulting from the execution of the work hereby authorized.

Mr. DEMPSEY. Mr. Chairman, I offer the amendment which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will read.

The Clerk read as follows:

Amendment offered by Mr. DEMPSEY: Page 3, lines 14, 15, and 16, after the word "and" in line 14, strike out the words "the supplemental reports submitted by the Chief of Engineers under date of February 25, 1922," and insert in lieu thereof the following: "Senate Document No. 152, Sixty-seventh Congress, second session."

Mr. DEMPSEY. Mr. Chairman, this is simply a formal amendment. The report was not in at the time this bill was prepared, but has come in, and we give it the proper designation.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. GARRETT of Texas. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. GARRETT of Texas: On page 3, after line 24, insert the following paragraph:

"Buffalo Bayou, Tex., in accordance with the report submitted in House Document No. 93, Sixty-seventh Congress, first session, and subject to the conditions set forth in said document."

Mr. GARRETT of Texas. Mr. Chairman, I feel confident if the gentlemen have examined House Document No. 93 and have looked into this project at all they will readily agree with me that this project should be included in this bill. This is what is known as the Upper Houston ship channel, which is a distance of about 6 miles from the turning basin to the foot of Main Street in the city of Houston. There is a considerable amount of traffic carried over this portion of the channel. I think in 1918 the report showed that there was over $26,000,000 of freight transported over this portion of the channel. It is now 5 feet deep and a little over, and this is to authorize a depth of 10 feet.

The people of Houston have spent a great deal of their own money on this project. They have built a public free wharf at the foot of Main Street that cost $50,000, and the traffic is growing day by day. The immense industries of the Houston Ship Channel are served by it, and the coast country craft that ply from the foot of Main Street serve people that the larger vessels do not serve. This project has been approved by the engineers, and it is one that ought to be in this bill. I would certainly feel very grateful to the chairman of the committee if he should agree with me that this should go in and, if not, that my good brethren here in the House will join me in putting it in this bill.

Mr. DEMPSEY. Mr. Chairman, I would like to have the proposed amendment read again, please.

The CHAIRMAN. Without objection, the amendment will be again reported.

The amendment was again read.

Mr. DEMPSEY. Mr. Chairman, all I can say in regard to this amendment is this, that this is a part of the Houston Ship Canal, which is one of the great waterways of the country, doing a very large business, but while there is a favorable report the committee did not deem that this was the proper time to adopt it or incur the expenditure. On that account the committee feels that the amendment should not be adopted.

Mr. GARRETT of Texas. The gentleman will concede that this is a very meritorious project?

Mr. DEMPSEY. The Houston Ship Canal, I am frank to say, is one of the great waterways of the country. Of course, it is impossible to adopt all these improvements at one time. I think the gentleman's amendment will prevail at some time, but we could not accept it now.

Mr. GARRETT of Texas. I hope the gentleman will accept it now, because to-day is the day of salvation, and to-morrow is uncertain.

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Texas [Mr. GARRETT].

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. GARRETT of Texas. Division, Mr. Chairman.

The committee divided; and there were—ayes 11, noes 23.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Red Lake and Red Lake River, Minn., in accordance with the report submitted in House Document No. 61, Sixty-sixth Congress, first session, and subject to the conditions set forth in said document.

Mr. DEMPSEY. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. DEMPSEY: On page 4, between lines 8 and 9, insert the following paragraph:

"Monongahela River, Pa., in accordance with the report submitted in House Document No. 288, Sixty-seventh Congress, second session."

Mr. DEMPSEY. Mr. Chairman, the Monongahela River has the largest traffic of any of these inland rivers of the whole country—over 24,000,000 tons. The traffic is not only tremendously great, but it is increasing very rapidly. At the present time not alone is the river, owing to the insufficiency of the improvements, unable to accommodate the traffic, but the traffic is positively dangerous. This condition is constantly increasing. Very great businesses are waiting upon the improvements to be made which are contemplated in this report. Enormous sums will be expended the instant the Congress has adopted it. I know of no provision in this bill and know of no provision which could be inserted in any bill, which is more meritorious or which should be adopted in preference to this particular amendment.

Mr. KELLY of Pennsylvania. Mr. Chairman, the improvement of the Monongahela River into a great commerce-carrying waterway was a dream of George Washington in the early days of the Republic.

On several occasions he traveled from the Point at Pittsburgh, where the Monongahela joins with the Allegheny to form the Ohio, to its sources in the West Virginia mountains.

In the diary which he kept on those journeys are many allusions to the strategic importance of the Monongahela and the possibility of making it part of a continuous waterway from the Gulf of Mexico to the Atlantic seaboard.

But, Mr. Chairman, even the far-seeing Washington did not vision the actual accomplishments of the present. The river he followed through the wilderness is to-day the greatest commerce-carrying waterway in the United States. In 1920 more than 24,000,000 tons were carried on its bosom, almost all the tonnage being coal for the great industries of the Pittsburgh district.

I have been at Lock No. 3 on this river and have seen the continuous procession of the boats, at a time when 100,000 tons of coal were being locked through in 24 hours, while the empty barges were passing upstream. Such a sight can be seen on no other river in the United States.

The Chief of Engineers, United States Army, has reported that the commerce on this river is increasing rapidly. With the increasing utilization of the river the correction of certain physical disadvantages of the present locks and dams has been urgent.

The Chief of Engineers sums up the case as follows:

The construction of an additional chamber at Locks Nos. 7 and 8 is necessary to accommodate the increased traffic and also to avoid any interruption to the movement of coal should an accident occur to any one of the chambers. Where a dam is provided with a lock consisting of one chamber only, any accident to this lock interrupts traffic on the river. As stated in the reports of the district engineer and the Board of Engineers for Rivers and Harbors, the movement of coal has grown to such amounts that any interruption is of far-reaching consequence. As an illustration it may be stated that there is one industrial plant on Pool 2 of the river which now uses about 35,000 tons of coal per day, all of which is brought to it by water. It is readily seen that any interruption to this steady movement of coal would be most disastrous. Another industrial plant uses 14,000 tons of coal per day. Both of these plants are taking steps to increase their facilities with a corresponding enlarged consumption of fuel. The increased movement of coal has also rendered necessary the extension of the guide walls of the lock, and in some cases the guard walls also. The term "guard wall" is applied to that wall in extension of the lock wall nearest to the dam. The guard wall is a great measure of safety to the fleet, as it protects it from danger of being carried over the dam in high water. Under present conditions with the present guard walls tows proceeding downstream are compelled to drive into the head of the lock at full speed in unfavorable conditions of wind and water, and this action has caused damage at several localities. The guard walls should, therefore, be extended both for the safety of navigation and the safety of the locks themselves. There is great danger if the guard walls are not extended, as stated in the report, of a serious accident involving not only loss of property but also loss of life. The term "guide wall" is that given to the extension of that wall of the lock nearest to the land and generally parallel to the bank. The extent of tow movement on the river is now so great that where formerly vessels could tie up during foggy weather or exceedingly high winds, they are now compelled to navigate as long as they possibly can. This means that tows are constantly arriving at the locks, and if the guide walls are not of sufficient length, much time is lost in moving the tow into the lock, whereas with the guide walls of sufficient length that they can accommodate the entire tow, the tow is able to move into the lock as soon as the gates are open. The extension of the guide walls is of first importance in securing the efficiency of the structures already existing, for cases are already not uncommon where a lock even with double chambers is kept in operation every minute of the 24 hours. * * * If the guide walls are not extended as recommended, the locks in the course of a very few years will be unable to handle the traffic desiring to pass through them. The tow in times of high water can not remain unmoored a short distance above the lock without danger of being carried over the dam. It is necessary, therefore, that the tow, if it has to wait, be tied up immediately above the lock, so as to move into it at slow speed, or so far above it as to gain sufficient headway to permit maneuvering on approach to the lock. The delay in the latter case will be readily recognized.

* * * Since the improvements proposed by the district engineer are designed to meet the needs for increased capacity and to provide the facilities for expediting and safeguarding the important business of this river, the board is of the opinion that the work is worthy of being undertaken by the United States, and it therefore concurs with the district and division engineers in recommending the modification of the existing project to the extent above indicated. The board believes that the transportation facilities afforded by this improvement give such benefits to the general public through the reduction in cost of manufactured products that no local cooperation should be required.

After due consideration of the reports and also of the far-reaching economic results, I concur in general with the views of the district engineer, the division engineer, and the Board of Engineers for Rivers and Harbors, and therefore report that the further improvement of Monongahela River, Pa., is deemed advisable to the extent proposed and described above, at an estimated cost of $6,640,439. I concur with the district engineer and the board also in the opinion that no local cooperation should be required in this case. The initial appropriation should be $2,000,000 and the balance as required to complete the work in four years, with the exception of the second chamber at Lock No. 8, whose construction may probably be deferred until the movement of coal from the pool above it requires its use.

LANSING H. BEACH, *Major General.*

Mr. Chairman, in 1886 an eminent English authority on the manufacture of iron stated that the iron trade in the northern part of the United States could never become one of a largely exporting character because of the distance at which iron ore and fuel lie apart and the expense of sending the product to the seaboard.

This handicap has been overcome by American enterprise. The iron ore comes from the Lake Superior fields to the lake ports and thence to Pittsburgh. The coal can be brought to the center of manufacture by means of the Monongahela River.

Upstream improvements are now essential, as the coal in the lower reaches is practically exhausted. Railroad transportation will not meet the need, because of the physical characteristics of the land. Nor can the steel companies provide the space necessary for incoming cars, for switching, and for empty cars.

It is stated that within 5 miles from the river, in Pools 7 and 8, there are hundreds of millions of tons of coal in the Sewickley vein alone. This can be handled to the Pittsburgh district by water at a saving of 50 cents a ton. There are companies which use from 17,000 to 35,000 tons of coal every day, so that the saving involved would greatly lessen the cost of producing iron and steel.

The United States has spent to date on the Monongahela River $8,041,855. This further amount of $6,640,439 will make a total of little more than half that spent on the locks at Sault Ste. Marie, which are much less vital to American industry.

In the Monongahela Valley, exclusive of the city of Pittsburgh, are 34 cities, boroughs, and towns, with a population of 250,000. The business activities of the valley are largely confined to two great industries—bituminous coal and the manufacture of steel products. The presence of the vast beds of coal in the valley is largely responsible for the great steel industry.

Mr. Chairman, this is no local improvement, but one nation-wide in scope. It means cheaper production of the products which are basic in our civilization. It should inure to the benefit of every consumer in America, wherever located.

I was glad to introduce as a bill the measure which is now incorporated in the amendment offered by the chairman of the committee. It should be adopted without a vote in opposition, for it means benefit to every American. [Applause.]

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Jamaica Bay, N. Y., and the entrance thereto, in accordance with the progressive project adopted by the river and harbor act approved June 25, 1910, with a view to securing a depth of 30 feet at mean low water as far as Mill Basin, subject to the conditions set forth in House Document No. 1488, Sixtieth Congress, second session.

Mr. BOND. Mr. Chairman, I present a committee amendment.

The CHAIRMAN. The gentleman from New York offers a committee amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BOND: Page 6, strike out the paragraph in lines 14 to 20, inclusive, and insert in lieu thereof the following:

"Jamaica Bay, N. Y.: Any funds heretofore or hereafter appropriated for this improvement may be applied to providing the channels specified in House Document No. 1488, Sixtieth Congress, second session, with a depth of 30 feet at mean low water whenever and to such extent as the city of New York shall construct or provide for the construction of terminals with facilities suitable to channels of that depth: *Provided*, That the city of New York may be reimbursed for dredging and disposing of the material dredged from the main interior channel at actual cost: *Provided further*, That such reimbursement which may include overdepth allowance not exceeding 1 foot shall be made on a cubic yard unit cost and shall not exceed a rate of 10 cents per cubic yard for dredging and disposing of the dredged material, including any cost of inspection borne by the United States."

Mr. BOND. Mr. Chairman, I ask unanimous consent to revise and extend my remarks in the RECORD.

The CHAIRMAN (Mr. WALSH). The gentleman from New York asks unanimous consent to revise and extend his remarks in the RECORD. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from New York is recognized for five minutes.

Mr. BOND. Mr. Chairman and gentlemen, this is a provision which was drafted by the Army engineers, and which has the unanimous consent of the Committee on Rivers and Harbors, to carry into effect a contract which was entered into a number of years ago between three parties, the United States Government, the State of New York, and the city of New York. Under this contract the State was to deed to the city of New York 16,000 acres of land. This has long since been done. The United States was to dredge the entrance channel to be protected by one or two riprap jetties to be provided when necessary. The limit of the expenditures of the United States Government in any event was fixed by the terms of the agreement at $7,450,000. The city on its part was to make these channels of service by dredging basins, erecting bulkheads, and by making suitable connections with the upland. While the original project as adopted provided for a 30-foot channel, it also provided that 18 feet was first to be provided and then, as commerce required, increased to 30 feet. The purpose of this amendment, which has the full approval of the Army engineers, and the phraseology of which was drafted by General Taylor, of the Board of Army Engineers, is designed to carry out the original project of a 30-foot channel in Jamaica Bay.

A great work is being done at Jamaica Bay. It has the facilities, if properly developed, so that it may become one of the great loading ports of the world.

This is an amendment which will make it possible to apply the money appropriated and to be appropriated to the improvement creating the 30-foot channel.

This is another example of the present method adopted by Congress of only making appropriations for river and harbor improvement where there is local cooperation. In this particular instance it is estimated that the expenditure of the city of New York for this improvement will be twenty times that of the United States Government. This is a part—a most important part—of the port of New York. While you all realize in a measure the importance of the port of New York, it might be well to place before you a few concrete facts. It is estimated that about one-half of all the foreign commerce of the country goes through the port of New York. A port district was created by a joint act of the Legislatures of New York and New Jersey and ratified by the Congress of the United States. This port district of New York alone, as thus created, contains 105 organized municipalities. It embraces a population of 8,000,000 people and is served by 12 trunk-line railroads, which bring in and take out over 75,000,000 tons of freight per annum. An immense number of foreign and domestic steamships, not less than 8,000 in number, annually bring to or take from the port over 45,000,000 tons of freight per annum. There is an almost incalculable amount of local water-borne traffic within the port. There is the most prodigious manufacturing output in the world within a similar area, with a variety of products and commodities to be handled unprecedented anywhere else. There are over 4,000,000 tons of foodstuffs alone annually required by the people of the port district.

The magnitude of the Jamaica Bay portion of the port of New York may be visualized when it is stated that it contains an area of 18½ square miles and is sufficient to include the harbors of Liverpool, Rotterdam, Antwerp, and Hamburg, and still have some to spare.

In carrying out its part of this three-party agreement, during the last year the city of New York entered into a contract for the bulkheading of 2,240 feet, extending south on Flatbush Avenue extended, to Rockaway Inlet, at a contract price of $525,000. This work is now more than two-thirds completed. April 8, 1921, the city of New York authorized the issuance of corporate stock of $750,000 for dredging and bulkheading construction. While the city of New York already owns most of the property adjacent to this development, it has adopted a plan and has taken actual steps to acquire additional land at a cost estimated at $5,000,000. The city of New York is awake. It realizes that it must furnish better harbor facilities than it has done in the past, and this is part and parcel of the general scheme to accomplish this. Plans have been already drawn by the city of New York, and the money has been provided for the building of additional docks at Jamaica Bay. These docks are of most modern construction, with most modern compliances and of a size never before constructed, one being 757 feet wide by 1,000 feet long, and the others being 757 feet wide and 2,000 feet long. This modification—if it is even that—has the approval of the Army Engineers and of the entire Rivers and Harbors Committee, which has not only had hearings on the subject but it has examined Jamaica Bay and has seen the work now being done by the city of New York in actual construction.

This improvement is more than local, it is a part of the development of the transportation system of the country. There is hardly any subject of more importance before the public to-day than that of transportation. No country can become truly great without a real system of transportation. Water transportation is, and always has been, the cheapest form of transportation. As the country grows in population and prosperity it will become increasingly more necessary to increase water transportation facilities. It has been estimated that nearly one-half the cost of most necessaries of life is for transportation and distribution.

The entire bill under discussion appropriates in round numbers on new projects and modification of old ones $37,000,000. Only the most urgent of projects have been included in the bill. In addition to this sum there was appropriated in the Army appropriation bill passed by the House for old projects and their maintenance the sum of approximately $42,000,000. Considering the tremendous commerce of the country carried on our waterways this is an exceedingly small sum, and it is predicted by those who have given the subject most thought that in the near future appropriations for such improvements will be greatly in excess of the amount being provided this year. Many other projects were presented to the committee and discarded, not because they were without merit, because many of them were of exceeding merit, but because it was felt that the financial condition of the country is at present such as not to warrant greater expenditures at this time. No doubt many of these will be considered at a later date and adopted. I am sure the commerce of the country will warrant this action.

In the old days there used to be considerable criticism of rivers and harbors appropriations, and there is no doubt that in many instances money was appropriated for projects which did not have real merit. Under the present method, however, of framing these bills such a result can never occur again. There is not a project in this bill which has not had the careful consideration and scrutiny of the Army engineers, who have specialized in this character of work, and each and every project contained in the bill has been approved and recommended by the Army engineers. Also it is the settled policy of the committee not to recommend any project in which the locality does not have sufficient faith to cooperate to the extent of contributing its own funds to the enterprise. In most of these projects at least one-half of the expense is borne by the localities, and in many of them the localities bear the expense to a much larger proportion. This effectually does away with the old tendency to ask for Government improvement of projects without merit, for no locality is willing to match money with the Government unless it conscientiously believes that the improvement when made will be worth the money invested.

The members of your committee have given this bill most careful and painstaking attention, and its members feel sure that it is a conservative measure, well worthy of your most favorable consideration.

Mr. LAYTON. Mr. Chairman, will the gentleman yield?

Mr. BOND. Yes.

Mr. LAYTON. I understand that this amendment does not call for any larger appropriation?

Mr. BOND. That is correct.

Mr. LAYTON. But owing to the congestion in the port of New York the city of New York has bought land on the north shore and proposes there to erect docks and terminals in order to relieve that congestion?

Mr. BOND. Yes; that is true. The city of New York let a contract last year of $535,000 for this work. Two-thirds of that work has been done. They also issued bonds for $750,000 for this improvement. Piers, the largest ever built, have been planned for, and the money has been provided.

Mr. McDUFFIE. Mr. Chairman, will the gentleman yield?

Mr. BOND. Yes.

Mr. McDUFFIE. This addition to the terminal facilities is very much needed by the commerce of the city?

Mr. BOND. It is tremendously needed. Nearly one-half of the commerce of the United States goes through the port of New York. It is very congested, and has been complained of a great deal, and this is a part of the development, so as to relieve that congestion. [Applause.]

The question is on agreeing to the amendment offered by the gentleman from New York.

The amendment was agreed to.

The Clerk read as follows:

Waterway from the Mississippi River to the Sabine River, La. and Tex.: The section from Calcasieu River to Sabine River, in accordance with the report submitted by the Chief of Engineers under date of August 13, 1921, and printed in Senate Commerce Committee document.

Mr. DEMPSEY. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. DEMPSEY: Page 6, line 24, and page 7, lines 1 and 2, strike out the words "by the Chief of Engineers under date of August 13, 1921, and printed in Senate Commerce Committee document" and insert in lieu thereof the following: "in Senate Document No. 149, Sixty-seventh Congress, second session."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Trinity River, Tex., from Liberty to Dallas, in accordance with the report submitted in House Document No. 989, Sixty-sixth Congress, third session.

Mr. BRIGGS. Mr. Chairman, I move to strike out the last word. This provision leaves the river open from the mouth up to Liberty, but provides for the abandonment of the stream from Liberty on up to Dallas?

Mr. DEMPSEY. Yes.

Mr. BRIGGS. Mr. Chairman and gentlemen of the committee, the Rivers and Harbors Committee has followed the recommendations of the Army engineers in declining to continue any further improvement of the Trinity River between Dallas and Liberty, and in so doing has, in my opinion, been too greatly influenced by the expenditures heretofore made in the construction of locks and dams in the upper part of the river, within 50 miles of Dallas, without the development of a sufficient amount of commerce to justify the investment.

I do not intend to offer any extenuation or excuse for the investment of nearly $2,000,000 in locks and dams in the upper part of the river under the plans pursued in the past. That was something with which I had nothing to do. Starting the improvement of the river at the head of the stream was, in my opinion, a grievous mistake, and one that has occasioned not only a considerable loss to the Government but has also resulted in the greatest injury to the further development of navigation upon the river and to those who would have made substantial use of the lower half of the waterway if its improvement had been commenced at the mouth of the river and carried on up the stream as conditions required.

In the development of the Mississippi River the plan apparently deemed the proper and only logical one was to commence the improvement at the mouth of the stream and then carry it on up as the demands of commerce justified. And a similar course, it would appear, has been pursued with respect to other streams. Had the improvement of the Mississippi been started at the head of the stream instead of at its mouth, as was the plan pursued with respect to the Trinity, the great port of New Orleans would never have been developed and there probably would have been no navigation of consequence upon that great waterway.

But in the case of the Trinity, Congress saw fit to start the improvement at the head of the stream and work downward to the mouth, and now appears disposed to condemn the river because the lock and dam construction in the upper part of the stream has not provided the commerce anticipated in that section of the river. Had the development of the stream proceeded from its mouth northward, it would have permitted commerce to have utilized the stream to the fullest, and, as the development proceeded, would have afforded not only a waterway for the surrounding country but an outlet to the sea for the vast resources of timber and other building material, as well as the agricultural products of the territory along the waterway.

I therefore insist that the previous action of Congress in starting the improvement of the Trinity at the wrong end can not justify the conclusion that the improvement of the lower half of the stream would not develop enough commerce to make further investment advisable at this time.

It is true that after much investigation and a number of hearings it was made apparent that the improvement of the river, by open channel work, from the mouth of the stream as far up as Liberty ought to be continued and that this recommendation has been adopted by the committee, and it is further true that, as such improvement proceeds and commerce develops, additional development of the river northward will probably be made; yet this does not, in my opinion, justify the present abandonment of the remainder of the lower half of the stream, although it may not be regarded by the committee as being advisable to continue further lock and dam construction.

The conclusion of the Army Engineers and of the Rivers and Harbors Committee that enough commerce could not be expected to develop to justify further improvement of the section of the stream between Long Lake or Hurricane Shoals and Liberty, either by virtue of a plan for additional locks and dams or open channel work, is not, in my opinion, borne out by the testimony adduced upon the several hearings held by the engineers at my request within the past three years.

At a hearing recently before the Rivers and Harbors Committee upon this project I took occasion to review some of the testimony which came from those residing in various counties along the river, who have been for years and are now intimately acquainted with the stream, the adjacent territory, and the resources. and available commerce of that section. It is so important that I feel it proper to again refer to the same with reference to the present transportation conditions which have particularly emphasized during and since the World War the great need of a more adequate development of the waterways.

Everywhere there is felt the discomfort and, no doubt, the distress, in many cases, flowing from the scarcity of houses and apartments for rent and the alarmingly high and necessary prices that must be paid to keep a shelter over one's head. Building operations—either industrial, business, or for home use—are not keeping pace with the demand; and one of the chief reasons why is the reluctance of those able to build to pay the high costs of construction, especially of building material. Entering into this cost will be found the cost of transportation as one of the greatest factors, whether the material moved is steel from the mills or gravel from the pit or stone from the quarry.

Can anyone, therefore, fairly argue that the failure of individuals and communities to get reductions in costs of transportation to haul building material both for building and highways is not delaying the solution of both the housing and transportation problem? Certainly it needs no argument to demonstrate that for many years to come the railroads will not be able to carry the tremendous amount of growing traffic that will have to be moved.

But it is not alone a case of entire want of such facilities in many most important cases, but even where such transportation can be obtained it is at such greatly increased costs that cheap materials can no longer be hauled and remain cheap. Perhaps no group of men better appreciate or are more familiar with that situation than the Army engineers. The great Government projects of which they are in charge have reflected these enormous increases not only in the actual costs but must, so far as freights are concerned, still be anticipated in their estimates in some appreciable degree.

But even the Government does not have brought home to it and does not encounter the difficulties to the same extent or in quite the same discouraging degree as those engaged in work other than that for the Government. The Government, because it is the Government and its projects are the projects of all, commands the advantage of priorities in shipment, and can get materials hauled where others can not, even though transportation charges are abnormally high.

Perhaps as alarming a development as can be cited is that there nowhere appears to be any prospect of a substantial decline in railroad freight rates.

This condition of lack of transportation, as well as high costs, threatens to result in still greater confusion and demoralization unless the waterways of this country can be utilized.

I am well aware of the efforts of the past to develop inland waterway transportation and the discouraging results that have followed from the standpoint of the actual use of the improved streams. It has not been contended, and, of course, can not be, that the waterways have not brought about enormous reductions to the people in freight rates. But in doing so the commerce on the streams has for the most part been destroyed, for the charges the railroads made were so low—admittedly in some cases by the railroad heads to be at cost and perhaps at an actual loss—on the haul that water rates were practically met, and shippers, where it was possible to do so, would use the railroad in preference to the stream. The railroads never allowed water competition to divert from them any traffic, even if it required, as stated, rail rates to be made so low that there was no profit in the haul. Moreover, they would not issue through or joint rates and declined to issue through bills where hauls were to be partly by rail and partly by water, thereby keeping through traffic not originating on a river or other stream from using an inland waterway. This is not forming an indictment of the railroads; it is reciting only actual experience and gives the reasons why commerce has not developed on our streams when railroads were sufficiently near to serve the needs of communities and shippers.

But these lessons have not been taken by the people as reasons for abandoning their streams and turning over their entire transportation needs to the railroads for solution. Instead the public has sought for and found, I believe, the means of correcting and checking an artificial—not natural—condition which has prevented the use of natural highways, streams, when all facilities for transportation are needed and, as previously asserted, more desperately than ever to-day.

Conditions, too, have changed greatly in the last three years. The railroads have only recently notoriously broken down. They were in that condition before the Government took them over. The strain to which they were subjected by the vast war movement did not benefit them, and gave no opportunity to bring them up to the fullest measure of efficiency to which they might be raised. It was only with the greatest effort and exhaustion of every available resource that they could be coaxed and forced into carrying the tonnage that simply had to be carried to win the war.

Even then the country released them from every haul considered by the Government unnecessary, or rather subordinated to the exigencies of the time. They hauled little bulk freight—whether steel, ore, stone, gravel, lumber, or what not—that was not immediately destined for war material or as a direct aid in supplying the facilities required to carry on the war.

This is not said in criticism—for the tonnage the railroads carried in freight and passengers was enormous—but to emphasize how industry, ordinary commerce, and public and private improvements, in a general way, were interrupted, halted, and delayed for several years; everybody and every industry have held off buying as far as they could since the war, waiting for costs to come down; but the purchase of machinery, equipment, supplies, or raw materials would not longer be postponed, probably, if transportation charges were sufficiently reduced.

It would be a bad enough situation if the railroads only had to meet the problem of moving the tonnage that the people of the country have been waiting to have moved since the war began, and also the normal current demand for transportation.

Only comparatively recently the public had the experience of inadequate roadbeds, equipment, and terminals to even take care of that situation, and there was further presented an even more aggravated situation during the previous immense movement in the foreign trade, coal shortages in sections of our own country, with the greatest crops, which had to be moved, that perhaps this country has ever produced.

The coal situation and the crop movement were more than temporary situations, and were contributing factors which added to the congestion produced by the more constant causes and demonstrated the demoralization in railroad transportation from which there is no relief except through the waterways.

But perhaps even such desperate conditions might not suffice to persuade the railroads to forego their practice in the past of throttling water competition by putting into effect—and either maintaining or raising later—rates which operate to drive water traffic and steamboats from the rivers; so Congress in the recent transportation act of 1920 (pars. 1 and 2 of sec. 406) provided that the Interstate Commerce Commission shall not grant any authority to railroads exempting them from the operation of the so-called long and short haul provision "on account of merely potential water competition, not actually in existence," and further provided:

> Wherever a carrier by railroad shall, in competition with a water route or routes, reduce the rates on the carriage of any species of freight to or from competitive points, it shall not be permitted to increase such rates unless, after hearing by the commission, it shall be found that such proposed increase rests upon changed conditions other than the elimination of water competition.

It has been charged that the purpose of this statutory inhibition against raising rates after reduction to meet a potential or actual water competition has been practically defeated and its value destroyed, by the ability of the railroads to recoup their losses or increase their earnings under the discretionary power heretofore vested in the Interstate Commerce Commission to waive the operation of the "long and short haul" clause, and allow the railroads to charge less for long than short hauls. By the amendment referred to of the interstate commerce act the Interstate Commerce Commission is now prohibited from authorizing any such waiver on account of merely potential water competition not actually in existence, and thereby vitality will be given to the other provision which prohibits increase of rates after being once reduced, except under certain conditions.

While it is often argued that railroads were accustomed frequently to raise their reduced rates made to destroy water competition, after such destruction had been completed, this was by no means general; and it is common knowledge that such low rates were kept in effect to deter the establishment of any new river or waterway service. Therefore the clause prohibiting increase after reductions was seldom, if ever, called into operation, as the railroads could recoup their losses or increase their earning through the indefinite suspension of the "long and short haul" clause, and therefore were indifferent. But now, once railroad rates are reduced to destroy water competition, they must stay reduced until changed conditions obtain other than the elimination of water competition. And railroads will not be permitted to recoup losses or increase earnings in another way.

But these are not all the regulatory measures recently adopted to meet and correct the condition which previously has enabled the railroads to destroy the traffic on the waterways and deprive the country of their service.

Congress, in the new transportation act of 1920, has further conferred the great power upon the Interstate Commerce Commission of fixing not only maximum but minimum railroad rates. This will enable the Interstate Commerce Commission to protect the waterway transportation from the assaults of the railroads by preventing them from reducing their rates to a point that will destroy the competition, although unprofitable otherwise.

Moreover, provision is made for through rates, and a maximum charge where one of the carriers is a water line. This is one of the powers that the commission seemed inclined to think it previously had, but concerning which apparently the railroads took a contrary view. It now moves out of the sphere of controversy and becomes one of the further aids that waterway advocates have urged as necessary to a successful solution of waterway commerce.

At the risk of perhaps being regarded as tedious, I have dwelt at some length upon recent fundamental and vital changes in economic and transportation conditions. I have also called attention to new statutory powers and inhibitions that are regarded as means for bringing about reforms which will enable waterways to develop lines and commerce and succeed when improved consistently with present and prospective needs.

But I have not yet directed attention to a recent declaration of policy by Congress that is equally important and deserves the closest consideration by all.

Section 500 of the transportation act of 1920 expressly declares—

> It is hereby declared to be the policy of Congress to promote, encourage, and develop water transportation service and facilities in connection with commerce of the United States, and to foster and preserve in full vigor both rail and water transportation.

Of course, no one knows better than Congress the history of the decline of inland waterway transportation in this country, with the reasons and causes for such decline. Nor is anyone better informed upon the deplorable lack of commerce and shipping on improved or partly improved waterways, capable of handling a very large tonnage in the aggregate. And yet with the picture before it of the rather disastrous past experience of the waterways in competition with the railroads, Congress

has determined and declared in unmistakable language that the waterways of this country shall not be abandoned, but instead shall be promoted, encouraged, and developed, with necessary service and facilities, and that both rail and water transportation shall be fostered and preserved in full vigor. Could language be stronger in enunciation of a present and future policy or more convincing that Congress had made up its mind definitely that the waterways are absolutely necessary and must be preserved and fostered because they are needed? Feeling also, because many, owing to unfair competition, may not be used as they ought to be used and many may not be paying now reasonable returns on the Government investment, that is no reason for abandoning them. It is rather viewed as only a more urgent reason for removing their artificial handicaps and putting them to service. The railroads under Government operation lost a billion dollars in two years and a half, and under private control continue to lose at the rate of a hundred million a month—which the Government paid for a while—in spite of rate increases, which the public continues to pay in high freight and passenger rates. But this is not regarded as any reason for abandoning the railroads, in the face of an unprecedented need and demand for transportation. And yet these losses aggregate more, probably, than the total cost, extending over more than a hundred years, of improving and developing not only all the inland waterways of the United States but the coast waters, ports, and harbors as well, with all the cost of maintenance thrown in. According to the Report of the Chief of Engineers for 1921, the total amount of all appropriations made by Congress was $1,072,611,103.44.

Attention has been pointedly called, though in a rather general way, to the new and changed conditions because of the arguments so often voiced that since the building of the railroads river traffic has gone never to return. I think it has been demonstrated that there is very little, if any, basis left for such a conclusion if improvements of the waterways are continued under the present declared policy of Congress, in the light of such new conditions and with the statutory safeguards which it has so recently provided—quite aside from other most important considerations as applicable to the Trinity.

It is therefore erroneous to argue that because the Trinity River lost the largest part of its boat traffic after the coming of the railroads that it can never be restored.

The Trinity River, in fact, enjoys additional considerations in favor of its improvements not enjoyed by a great many other improved waterways, and in this connection I desire to call attention to the evidence developed on the last hearing before you of the enormous quantities of hardwood timber in the bottom lands and the vast deposits of stone and lignite along the banks of the river, as well as to the sand and gravel in its bed.

Not only in the testimony of the witnesses who have appeared at the various hearings has this condition been made to appear but it is confirmed by the original survey report of Colonel Barden and the supplemental or reexamination report of Colonel Cosby.

Mr. D. A. Nunn, of Crockett, one of the most prominent citizens in that community and who is exceptionally well posted on the situation, testified that between Hurricane Shoals (sec. 20) and White Rock Shoals (sec. 25) there are over 1,000,000,000 feet of merchantable hardwood timber. He further states the great body of the same is right adjacent to the river.

Practically all witnesses agree that upon this land there can conservatively be cut 5,000 feet of merchantable timber to the acre, worth at least $5 a thousand. Some of the witnesses gave actual estimates running up to 10,000 feet to the acre, but for purposes of average it may be assumed that there are only 5,000 feet to the acre.

The supplemental or reexamination report also shows that while there are 250,000 acres of land in the valley within 1 mile of the river between Long Lake (mile 316) and the mouth of the stream, yet the total area of land nearer to the river than to a railroad from Long Lake to the mouth is approximately 1,084,100 acres, the great bulk of which, as all witnesses testified and the reports reflect, is heavily timbered. There are from five to ten billion feet of timber on these acreages, valued at from $25,000,000 to $50,000,000.

In fact, the reports show that of the 675,000 acres of bottom lands in the reach from Dallas to the mouth only about 10 per cent was cultivated, and of the territory within 1 mile of the river only about 14 per cent. It is assumed that these figures are averages, as in some localities, like that of Trinity County, it is reflected by the testimony of Mr. Renfrow, of Trinity, that over 20 per cent is in cultivation, and, according to Messrs. Wooters and Ellis, of Houston County, out of 89,000 acres over 40 per cent was cultivated. Of course, it is frankly admitted that the cultivation along some parts of the river is very much greater than it is along other parts.

But it is apparent from only brief computation that several billion feet of hardwood, merchantable timber is to be found in the bottom lands along the lower Trinity, conservatively valued at $25,000,000 at the least estimate. Surely this great asset of the country is worth saving and ought not to be destroyed.

It moreover offers commerce both in rough and milled lumber right on the banks of the stream.

But these vast resources of timber are not all that is available for tonnage on the stream. The great deposits of lignite, which are shown to exist along the banks of the river, and the great stone quarries there and adjacent thereto, with a practically inexhaustible supply of gravel out of the bed of the stream, will, aside from farm products, supply river traffic with a tremendous amount of commerce.

In this connection attention is further called to the fact that while it may be true that roadways will be needed to the river to enable much of the lands in the bottoms to reach steamboat landings, yet it will be possible to construct such roadways at a tremendously less cost if the river can be utilized to haul the material entering into their construction than if those same materials have to be hauled by railroad and then again hauled from there by teams and wagons or trucks. In fact, one witness, Mr. H. H. Haines, then general manager of the Galveston Commercial Association and now with the Houston Chamber of Commerce, and a traffic man of long experience, stated at the hearing at Galveston in March, 1920, that if the river could be utilized to haul the road materials for construction of roads from the river through the bottom lands, that the cost of such construction would not exceed, probably, $5,000 a mile, as against $12,000 a mile if the haul had to be made by railroad.

Judge G. C. Clegg, of Trinity, Tex., testified his precinct had voted a $200,000 bond issue for construction of a roadway to the river, but that the railroad freight rates on road material are so high it was impossible for them to go ahead with the work.

Mr. Woolsey, of Trinity County, another witness at the Galveston hearing, stated that if the river could be utilized it would mean a saving on hauling of gravel or shell of $50,000 or $70,000—referring apparently to the road bond issue testified to by Judge Clegg—and that the money for road improvement in Trinity County is lying idle now in bank on account of present prohibitive freight rates on gravel. It might be added that, irrespective of the high freight rates, it is almost impossible to even get cars to haul it.

The witnesses at the Galveston hearing particularly stressed, as I also desire to do, the fact of the great saving there will be in road construction along the river if the river is improved so that the road materials can be carried on the stream to their destination and the roadways built from the river at or along to points beyond, instead of having to carry such materials on the railroads and build from the railroads.

It seems to me, as it seems to the people of my district, that the tremendous importance and value of this difference and distinction was not sufficiently appreciated in the conclusions reached in the supplemental report with reference to the improvement of the Trinity above Liberty. There seems to be no great difference of opinion concerning the fact that some roadway must be built, though there may not be accord and agreement as to the nature and extent of the same.

But there is the gravest difference in the conclusions which have been drawn, particularly in the reexamination report, that it will be as easy to build from the river farms and bottoms to the railroad as it would be from those lands to the river. To appreciate the error of this conclusion we have only to consider the fact that 250,000 acres of the finest river bottom land is according to the supplemental or reexamination report within 1 mile of the river from Long Lake to its mouth. It is also recited in the report that the acreage in the valley nearer the river than to the railroad from Long Lake to the mouth is 1,087,100 acres, and it may be added with a growth of from five to ten billion feet of timber. It is further the testimony of substantially all the witnesses that the railroad is for the most part many miles from the river, except a short line between Livingston, in Polk County, and Weldon, in the southern part of Houston County, which is 28 miles long and runs at an average of 7 miles from the river.

Mr. D. A. Nunn, of Crockett, at the Galveston hearing, testified that the river is from 14 to 25 miles to possibly 35 miles from the railroad up in his section; that is in the section between White Rock and Hurricane Shoals. He further testified he had no lines of railroads paralleling the river, excepting at something like 14 to 30 miles. He further testified that farmers

now have to haul their cotton and drive their hogs 20 to 25 miles into Crockett, where they met the railroad.

Mr. W. L. Smithers testified that between Riverside and Long Lake it was from 15 to 20 miles in most places on the river to the nearest railroad line.

Mr. M. A. Milliff also testified that under existing conditions and from the large farms along the section of the river between Trinity and Hurricane Shoals and above, products are now being transported 15 to 35 miles by wagon. It seems unnecessary to refer to the testimony of any other witnesses, as reference to the stenographic reports of the hearings will reflect that particularly all witnesses testified to the same effect.

It will also be recalled that the original and supplemental reports, as well as the testimony, reflect that the width of the valley is only from 3 to 7 miles except at a few places. It is therefore readily apparent that the distances necessary to construct roads to the river would be far less than the distance necessary to construct roads to railroads.

In calling particular attention to the great advantage that the Trinity River enjoys in its great latent commercial resources over many other inland waterways, I do not desire to underestimate or have you to lose sight of the remarkable fertility of the bottom lands and their great productive power. Practically all the witnesses at the hearings held before you last September, and the one at Galveston, agree in stating that these lands in seasonable years will produce from three-quarters of a bale to a bale per acre, and from 40 to 60 bushels of corn, in addition to being especially adapted to the raising of the finest sugar cane. It was further testified that 20 hogs per acre can be raised each year. In this connection the board will further recall that Mr. Smithers and Mr. Nunn, I think, and others, testified that the farmers, however, to get their hogs to market had to drive them from 20 to 25 miles in the heat of summer, causing them to suffer great loss in weight and some to die on the way, and that if water transportation were available on the river hogs could be transported without any loss at all times of the year.

Mr. H. J. Arledge, of Crockett, states that he has to haul his products from his farm to Crockett, 25 miles away, at a cost of 70 cents per hundred pounds.

Messrs. Daniel and Arrington, of Crockett, state that their cost on a 25-mile haul of their products from their stream is from 65 to 70 cents a hundred pounds, while Mr. W. L. Smithers, of Walker County, testified that such estimate was entirely too low and at least $1 to $1.50 would be nearer a correct estimate of such cost.

This testimony is not conjectural, but is based upon the actual experience of men who own and operate farms along the river and actually transport their products the distances named in order to get to a market or the railroad.

To further illustrate, not only the tremendously high cost to which the river-bottom farmers are subjected in order to get their crops to market, but the additional impossibility in many cases of moving them at all, as will be remembered by the board to have been disclosed by the testimony at the last hearing before you. It will be recalled that in the testimony on that occasion it appeared that it took four mules to haul out from the river farms 5 bales from 15 to 35 miles to market, and that the strain on the teams is so great that they can only make two trips a week.

Testimony then further developed that due to such difficulty many of the products grown on the river farms, such as sugar cane, corn, and other grain, had either to be thrown away or fed to the hogs.

It will be further borne in mind that on the hearings the further startling fact was disclosed that it was costing from $25 to $30 an acre to clear the bottom land of timber so that it might be farmed, and that such timber when cut had to be burned up and destroyed because there was absolutely no way of getting it out to market in spite of its great value.

It is further to be borne in mind that efforts have been made in the past to save this timber by trying to raft it down the stream, but the logs have proven too heavy to float in most cases and in others the driftwood and snags cause the rafts to be lost and the effort to save the logs to be discontinued.

Mr. M. A. Milliff, at the hearing in September, stated in his letter that three years before he had gotten a timberman interested, and he cut several hundred logs along that section of the river and tried rafting them to the International & Great Northern Railroad at Riverside, but owing to shoals and snags and overhanging timber that grew along the river bank he lost most of his timber and all of his money.

It appears that an Indiana company installed a hardwood lumber mill on the banks of the river somewhere between Hurricane Shoals and White Rock Shoals to manufacture timber for the construction of wagons.

Mr. D. A. Nunn, of Houston County, testified at the Galveston hearing that the man in charge of the mill told him that he was more concerned now over getting his lumber out from his mill than about anything else; that he could not truck it out and that it cost too much to haul it to Crockett, 20 miles away, by wagon; that he is still cutting lumber and stacking it, but has not shipped a plank to his factory because of lack of transportation facilities.

Mr. W. F. Bruton, of Houston County, testified that he had lately made a contract with a sawmill in that part of the country for $50,000 worth of timber, but that the contract had a proviso that if the company could not get the lumber down the river the contract was to be null and void. That they have put about $10,000 worth in the river about 15 miles up from the lower lock, and eventually the timber got torn loose and lost and they had to quit. That about eight months ago he also sold lumber at $10 a tree; that the buyers cut about 75 trees and quit because they had no transportation and could not get the trees out.

Surely it is scarcely to be imagined that this great natural wealth of timber, stone, lignite, gravel, and sand, of which the world is in such great need to-day, and these remarkably fertile bottom lands, with their power to raise the greatest supply of farm products so necessary for the life of the Nation and even countries abroad—surely, I say, it can not be contemplated that they are to be abandoned when a great natural waterway is at their door offering, with some improvement, an outlet for all their great latent commerce.

Criticism is made in the supplemental report to the effect that statistics do not show that the use of the pool immediately above White Rock Shoals has been very great, being 12,143 tons for 1917, 1918, and 1919 (p. 60 of H. Doc. 989). In the first place, the question of getting accurate statistics in these localities is very difficult, as witness the showing at the September hearing of the commerce in Chambers County, which was far in excess of the Government reports, and, secondly, the pool with 6-foot depth only extends 13 miles and can serve only a most restricted territory, giving it really a distinctly local character. In fact, the bottom land adjacent thereto may all be owned by one individual or company, as seems most likely to be the case, and the marketing or manufacturing of the timber on such property may be slower than would ordinarily be the case where in the hands of more active owners. The fact, however, that one hardwood mill has already located along the banks of the pool is a very good indication that with the opening up of additional territory by extending further the improvement of the Trinity other mills and industries will also be established upon the banks of the stream.

When the development or improvement of the river is made and the reaches extended so as to give assurance of its availability for more general use, prospective mill and lumber companies and other industries will organize with the knowledge that when they engage in any enterprise on a large scale there will be a fairly dependable and reliable means of getting both to and from their plants or mills the rough and finished material.

Witness after witness at the hearings has stated that if the improvement of the river is made additional lumber mills will be built along its banks and that steamboat lines will be established and boats built, and that they will ship their products down the river and utilize the stream for the hauling of material to build their highways, and for other purposes. Such men as Mr. D. A. Nunn, of Houston County, one of the most substantial and well-to-do citizens of that community; Mr. J. W. Cochran, a banker of Polk County; Mr. G. C. Clegg, a prominent lawyer with large farming interests, of Trinity County; Mr. M. A. Milliff; and a number of other witnesses confirm this statement in their testimony.

All these citizens argue irresistibly, it seems to me, for the continued improvement of the river.

It is true that the estimates of the cost of canalization of the lower Trinity are apparently large, but again it seems as if a greater use of the river for hauling materials could be made it would reduce these estimates considerably. To do this would no doubt involve cleaning out the lower river and removing the drift and snags and some of the bars, so that at periods of high water supplies could be transported to points where construction was being undertaken.

But this cleaning out and snagging of the river should be done in any event and without delay. The consensus of opinion testified to by those who live along the stream being that they have had no dangerous overflows where such cleaning and snag-

ging has been done. Overflows. I think the engineers generally concede, have a most damaging effect upon the navigable character of the stream.

So, if you should be of the opinion that under present conditions it might not be possible to substantially reduce the estimates and that prevailing costs will not justify the adoption at this time of the proposed lower Trinity River project as a whole, yet would it not be more in line with the declared policy of Congress to sanction at least the further improvement now of cleaning, snagging, and removing bars in not only the section from Galveston to Liberty but also in some other section or sections above the coastal plain and reaching more into the heart of the lower Trinity?

The supplemental report shows that this can be done even under existing conditions at no great expense. The estimate for the total work of thoroughly snagging and removing obstruction to navigation from the mouth of the river to Long Lake was only $438,000, and that the following estimates would cover such improvement in the following sections:

From the mouth of the river to—	
Trinity	$255,000
Liberty	72,000
From Lock 25 (White Rock Shoals) to Lock 20 (Hurricane Shoals)	124,000

It should further be considered that the undisputed testimony of witnesses, as well as the findings of the Government engineers, shows beyond question that a thriving open-river traffic was carried on in the early days, especially from 1867 to 1878, before the advent of the railroads. Within the period named it appears there were some 44 boats, ranging from 65 to 480 tons burden, engaged in trade between the mouth of the river and as far up as Porters Bluff, and even occasionally to Dallas. One vessel is mentioned as 150 feet long and 35 feet wide, with a carrying capacity of 700 bales of cotton, from Lock Ridges Bluff. Captain Van Devender testified that in 1869 two boats were built, with a cargo capacity of 1,800 bales of cotton, plying between Magnolia, near Long Lake, and the mouth of the river. Navigation was not considered hazardous at a reasonable stage of water.

The method by which the railroads destroyed the river traffic has already been discussed, and the changed conditions to-day, with the new statutory restraints imposed upon the railroads, as well as the recently declared policy of Congress, has been cited in verification of the fact that the conclusion is erroneous that commerce, because it has once been driven from the river, will never return. Even if the report of Colonel Barden, prepared in 1916, and before the present transportation needs and problems had become so acute, and before Congress had passed the remedial legislation referred to, attention was called by him to the vast timber resources of the region and the finding made that probably eight to twelve million tons of hardwood alone was available for river shipment below Dallas; and after pointing out that hardwoods were then being marketed by water in limited amounts further expressed the conclusion that "there seems to be no reason why an increasing amount can not be handled by small towboats and barges in the open river." (Sec. 53 of report.) So it is shown that even from the standpoint of Colonel Barden that as late as 1916 there was every reason to expect a profitable open-river commerce in lumber if the stream was kept clear of obstructions.

Regarding the improvement from the mouth to Liberty, the testimony shows in the most cogent way not only the value but the necessity of this part of the waterway to that section.

In fact, Judge C. N. Smith, the county judge, Liberty County, in testifying before the district engineer at Galveston on the hearing, stated that the county had experienced much trouble in securing transportation of material for roads both before, during, and since the war, and though an effort was made to utilize the Trinity River for hauling shell, boats could not get by the bar 3 miles below Trinity. This compelled the county to bear an enormous expense of hauling road material by railroad, and other tonnage as well. He estimated that the saving on the cost of transportation of shell by water would have been at least two-thirds of the rail rate. Liberty County, as stated, is now about to spend $2,000,000 for new roads and should be allowed to use that river to save on transportation costs by railroad.

Mr. J. F. Richardson, one of the county commissioners of Liberty County, also confirmed this statement and pleaded for relief.

It will also be remembered that on the hearing last September Judge Gordon, for the Anahuac Canal Co., stated that nearly 50,000 acres of rice were in cultivation in Liberty and Chambers Counties, which would make at least a half million sacks, worth, at the then market quotation, nearly $5,000,000, the bulk of which would have to be shipped by water.

The Robertson-McDonald Lumber Co. stated that the approximate tonnage of rice alone passing in and out of Anahuac Channel was from two hundred and fifty to three hundred thousand sacks per year, weighing from 180 to 200 pounds; also, that the lumber from their sawmill in Chambers County, located on Turtle Bayou, approximates from twelve to fourteen thousand tons per year that goes by barge in and out of the channel.

The Peden Iron & Steel Co., of Houston, stated that they have shipped a large quantity of material by water to Anahuac, Moss Bluff, and Wallisville, on the Trinity, and to Turtle Bayou, of an estimated annual value of $400,000.

The Mays Cattle Co., of Wallisville, in a most excellent and detailed statement, stated that by reason of failure to have water transportation for their herds, which ran between four and five thousand head, that they had to drive their live stock some 20 miles overland to either Liberty or White's ranch in order to obtain rail transportation. Calling attention to the fact that a twelve hundred pound steer loses two or three hundred pounds on such a drive; that if the Trinity were made navigable the cost of transportation would be cut fully 50 per cent in long drives for cattle, and little or no shrinkage; for in three hours they could be in Liberty and ship by rail from there; in 5 hours reach Galveston, and in 10 hours be in Houston; that under present conditions it takes between two to five days to get stock to a shipping point and another day or two before it reaches market.

It was also stated that they had about 20 clamshell banks on the river. In 1917 they contracted and sold 50,000 yards, but the contractors have been unable to haul it to market because channels have been clogged with snags, and so forth.

That opposite the village of Wallisville they have a large sawmill building located near reach of river bank with only machinery yet to be installed. A number of pieces of machinery have been purchased, and company will commence operations as soon as some definite assurance is given that river will be made navigable so they may ship upstream to Liberty or down to Galveston.

If this is done they estimate that they will ship per month, of beef, 500,000 to 1,000,000 pounds; pork, 75,000 to 100,000 pounds; hay, 5,000 to 10,000 bales; corn, 10,000 to 25,000 bushels; lumber, 10,000,000 feet; shell, 3,000,000 to 5,000,000 cubic yards.

Only recently the shoaling of the channel in Turtle Bayou, Chambers County, threatened to cause the gravest injury to the rice crop of the county, because such a large portion of the crop has to be transported to market through that channel, thence through Anahuac Channel and through Galveston Bay. There are no railroads in Chambers County except in the extreme southern portion of the county, and the roads are frequently so bad as to be impassable for wagons or trucks.

The rice crop planted in this county this year is estimated about 40,000 acres and will run conservatively about 10 sacks to the acre. The same estimate may be made of the rice crop in Liberty County, with a value now of about $3.75 per sack.

In view, therefore, of the remarkable showing of commerce available along this river, which is absolutely dependent upon it for an outlet, if it is to be moved at all, and in view of the declared policy of Congress to preserve, foster, and develop in full vigor the inland waterways of this country, and of the collapse of the railroad transportation system, the alarmingly high freight rates, the distressing situation confronting the industrial, business, housing, and public interests of the country by reason of inability to secure material for building and highway purposes, and the maximum need in general for inland waterways, especially for one with all the natural resources and wealth of material and farm products presented in the case of the lower Trinity River, I submit the improvement ought not to be abandoned, and that no report or recommendation to such effect should be made; but that, instead, the proposed project of the lower Trinity ought to be approved, and if not deemed wise to do so now in its entirety, in view of prevailing costs, yet ought to be done in sections.

A start, at least as recommended from the mouth on up to Liberty, ought not only to be made but the removal of obstructions in the rest of the lower river should be undertaken for all the reasons heretofore stated.

To illustrate how much this waterway improvement is needed, as well as showing its condition in November last, I quote part of a letter received then from one of my constituents, Mr. R. McDonald, who is a most worthy and excellent citizen. He said:

MY DEAR JUDGE: It has not rained on the watershed of the Trinity River in three months, so that the water would run in the branches, and as a consequence everything is drier than I have ever seen it, except twice, in 1860 and during the last war, and still the water is

20 feet deep and running over the gates at the lock and dam on the river just below town and raises the water 4 feet deep 25 miles above the dam, and still the Congressmen claim that the river can not be made navigable. To show that we need it, there was a man the other day that had to pay $72.60 freight on a carload of railroad ties from Carlisle, 11 miles down on the B. & G. N. R. R., to Trinity.

The flooded condition of the Trinity River and the overflows which have produced such distressing conditions not only call for the earliest relief for those who have suffered so keenly through the devastation of the river waters but demonstrates also that the stream is not a small waterway of insignificant character, but is a river of size and power, which, if properly developed, even through open channel work, by removing the snags and bars, cutting off bends, and clearing the stream generally, would afford relief from high rail transportation costs and supply the territory along such river and commerce generally, with cheap and yet efficient transportation by water which is a natural carrier, and which carrier deserves to be further developed.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn.

There was no objection.

The Clerk read as follows:

Pier in Delaware Bay near Lewes, Del.: And the Secretary of War is hereby authorized to dispose of the pier and such rights as the Government possesses in the land and the abutments thereof at public or private sale.

Mr. LAYTON. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Delaware offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. LAYTON: Page 9, strike out all of lines 10, 11, 12, and 13.

Mr. LAYTON. Mr. Chairman, this amendment is offered after full consultation with and approval of the chairman of the committee. This pier was constructed in 1872, just inside of Cape Henlopen, when it was contemplated to make it a point for ocean traffic by connecting the Pennsylvania Railroad with it; but the Pennsylvania Railroad never connected with this pier, and the pier has been allowed to decline, until to-day it is practically not usable. At first it was thought proper to give the pier and the abutting land to the town of Lewes. Later it was considered to be the proper thing to put the pier up at public sale and dispose of it to any private parties who might want to buy it, and with that thought in view I had this paragraph incorporated in the bill. But recently I got in touch with some mercantile, financial, and maritime interests there who desired to have the matter remain in status quo until they had an opportunity to make arrangement whereby they might either obtain the assistance of the Government in putting the pier in repair or else make financial arrangements to buy it in case it is disposed of at public sale hereafter.

Mr. McLAUGHLIN of Michigan. Will the gentleman yield?

Mr. LAYTON. Yes.

Mr. McLAUGHLIN of Michigan. Has there been an investigation and a report by the Corps of Engineers?

Mr. LAYTON. Yes.

Mr. McLAUGHLIN of Michigan. And does that corps recommend the abandonment of this work and the sale of the property?

Mr. LAYTON. Absolutely. But I will say that there is no disagreement between General Taylor and myself or the members of the committee specially interested in it, because before I offered this amendment I put the matter up to General Taylor, and he said he would be perfectly satisfied to let the matter remain in status quo until the next session of Congress.

Mr. McLAUGHLIN of Michigan. It is not the intention of the gentleman, then, to offer an amendment providing an appropriation or directing the expenditure of money on this work?

Mr. LAYTON. Absolutely not. There is no such intention here, nor, as I understand it, in any other body.

Mr. DEMPSEY. Will the gentleman yield?

Mr. LAYTON. Yes.

Mr. DEMPSEY. This matter was presented to this committee. It is simply the question of the abandonment of a pier. It was thought at one time that we should abandon it, but after consultation with the Chief of Engineers it was deemed best to leave this item out of the bill altogether.

Mr. LAYTON. Just one other thought. The people in interest there—the transportation interests, the pilot interests, and all of those who are interested in transportation and navigation on the Delaware River and Delaware Bay—have been to me, and they say this is the best place for a pier there is in that vicinity, the reason being that it is close under the lee of Cape Henlopen, and therefore is protected largely in wintertime and in early spring against the ice, and at other times against certain winds of a dangerous character and ocean currents.

Mr. GRAHAM of Illinois. Will the gentleman yield?

Mr. LAYTON. Certainly.

Mr. GRAHAM of Illinois. The gentleman has forgotten one of the best recommendations for this pier, and that is that there is good fishing off of it.

Mr. LAYTON. Yes; the gentleman and I found that out last summer when we caught many trout weighing from 3 to 7 pounds.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Delaware.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

SEC. 5. That the Secretary of War be, and he is hereby, authorized and directed to construct six seagoing hopper dredges for use in improvement and maintenance work on authorized projects on the Atlantic, Pacific, and Gulf coasts, the said cost of said dredges to be paid from appropriations heretofore made, or to be hereafter made, for the preservation and maintenance of existing river and harbor works, and for the prosecution of such projects heretofore authorized as may be most desirable in the interests of commerce and navigation: *Provided*, That the limit of cost of each of the dredges herein authorized shall not exceed the sum of $750,000.

Mr. ROACH. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 10, line 8, strike out lines 8, 9, 10, 11, and 12, including the word "navigation," line 13.

Mr. ROACH. Mr. Chairman and gentlemen of the committee, I hope you will realize the importance of the adoption of this amendment. To my mind, this raises sharply the issue whether or not we are going to invade the fund of $42,815,666 which we recently appropriated for river and harbor work. If I correctly understand this section as it is written now, the money necessary to construct these six seagoing hopper dredges is to be taken out of the fund which we recently appropriated for river and harbor work. In other words, it will mean that there will be taken out of this fund a total amount of $4,500,000 to pay for these six dredges. I want to remind you that at the time we had the appropriation up it was shown satisfactorily and conclusively that $42,815,666 was the minimum amount necessary to carry on the work on the projects that had been approved and were under construction in this country. I have no objection whatever to the construction of the six seagoing dredges provided for in this section, but I do strenuously object to taking the money out of the fund appropriated and necessary to carry on river and harbor work, because that appropriation was wholly inadequate and was the minimum amount deemed necessary.

It will be recalled that the Bureau of the Budget only recommended for rivers and harbors $13,500,000. When the matter of the inadequacy of that amount was brought to the attention of the committee the amount was increased to twenty-seven million and some hundred thousand dollars, and then here on the floor of the House we increased that amount to $42,815,666, and it was shown by the most satisfactory evidence that every dollar of that amount would be required and that such sum was the minimum amount necessary to carry on the work. Now, are you going to take $4,500,000 of that fund at this time? If not, adopt this amendment, and that will simplify the matter, and we will preserve the fund intact.

Mr. LAYTON. Will the gentleman yield?

Mr. ROACH. Yes.

Mr. LAYTON. The gentleman will remember that the Board of Engineers recommended $62,000,000 to be appropriated.

Mr. ROACH. Yes; as a matter of fact $62,000,000 was much nearer the figure actually needed than the sum we appropriated. I expect to vote for this bill, but I do not want to take the money to pay for these dredges out of that fund, which will mean that the improvements of the rivers will suffer to that extent and be deprived of that amount next year when they are entitled to all the fund, and it ought to be kept intact for the purposes for which we appropriated it.

Mr. DEMPSEY. Mr. Chairman and gentlemen, the gentleman from Missouri is entirely correct in saying that the evidence before the Committee of the Whole when we appropriated $42,815,000 for the improvement of rivers and harbors was needed, and he is correct in saying that that was the minimum amount. The gentleman, however, I think, will agree with me after I have made the explanation that, by the adoption of this provision as it is, we will not invade or lessen the appropriation of the $42,815,000, but that we will make it go further than it would go otherwise. There is no way of getting the dredges except in the way provided by this bill. We are not going to get any special appropriation through Congress for the dredges

this year. We are not going to get authority for the appropriation unless it is carried in this bill. These dredges will save $50,000 apiece each year. They will do more work and they will do what work they do do at a less cost. There has been an enormous advance in the construction of dredges. The dredge of to-day is no more like the old dredge than the locomotive to-day is like the old locomotive 30 years ago. If we can get the dredges they will make the $42,000,000 do more work—every dollar do the work of $1.50 or $2 all over the United States. If you adopt the amendment you will not get the dredges but you will go on with the old dredges and do the work at an increased cost, and your $42,000,000 will not go as far as it will if you accept this provision and get the new dredges to do the work.

Mr. ROACH. Will the gentleman yield?

Mr. DEMPSEY. Certainly.

Mr. ROACH. The cost of the dredges were not included in the estimates furnished by the War Department.

Mr. DEMPSEY. Yes; they were.

Mr. ROACH. As I recall it, the estimates that went to make up the total of $42,000,000 did not contain a single item for a dredge.

Mr. DEMPSEY. We have had the question of dredges up not only this year, but for two or three years. This is the first time we are near getting them. I want to say that I sympathize with the gentleman; I am in the same attitude he is. I want this money to go for rivers and harbors, because it is badly needed. But we are going to do better for rivers and harbors by passing this section as written in the bill than we will if we adopt the gentleman's amendment.

Mr. ROACH. I can not understand the gentleman's sympathy when he takes the money that might be used on the rivers in my country and builds dredges to be used on the Atlantic and Pacific Oceans.

Mr. DEMPSEY. Dredges are used everywhere—in rivers just as well as in harbors.

Mr. ROACH. These dredges, it is expressly provided in this bill, shall be used on the Atlantic and the Pacific Oceans.

Mr. DEMPSEY. But when you save $50,000 a year by the use of each of these dredges that $50,000 is going to remain in the general fund, to be expended for the rivers as well as for the harbors, and it is in the interest of economy that we have them. They will pay for themselves in a short time. It is absolutely the worst kind of extravagance and inefficiency and waste to continue the use of these old, worn-out, inadequate, obsolete dredges that we have.

Mr. ROACH. Does the gentleman realize that if we expend this money in this way some rivers and harbors are bound to suffer from a depletion of the appropriation which we make in paying for these dredges?

Mr. DEMPSEY. No; I think, on the other hand, we will have more money by adding these new dredges; that we will get more out of the $42,000,000 after subtracting the $4,000,000 for these dredges.

Mr. ROACH. I would like to have them, but I do not want to pay for them out of the $42,000,000.

Mr. DEMPSEY. I think what the gentleman wants will be accomplished better in the way that I suggest.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. COOPER of Wisconsin. There are a great many projects which have been partially completed.

Mr. DEMPSEY. Yes.

Mr. COOPER of Wisconsin. Some of them adopted 10 or 12 years ago.

Mr. DEMPSEY. Yes.

Mr. COOPER of Wisconsin. The Chief of Engineers reported, as I understand it, and I think the gentleman from Missouri [Mr. ROACH] is correct in his statement, that the $42,000,000 was necessary to complete the projects which had been adopted.

Mr. ROACH. To carry on, not to complete them.

Mr. COOPER of Wisconsin. Necessary to carry on the work. I will say to the gentleman from New York that this morning I was at the office of the Chief of Engineers, and I talked the subject over with him, not, however, having in mind the issue which the gentleman from Missouri has made by his proposed amendment. I asked him about the $42,000,000, and he said that that was the minimum amount that ought to be appropriated in order to properly carry on the work for projects already adopted.

Mr. DEMPSEY. That is true.

Mr. COOPER of Wisconsin. He told me that this morning. Let me ask the gentleman from New York this question.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. DEMPSEY. Mr. Chairman, I ask unanimous consent to proceed for three minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. If the Chief of Engineer's report on $42,000,000 was the minimum amount necessary to carry on the work properly on unfinished projects——

Mr. DEMPSEY. But that is not what he reported.

Mr. COOPER of Wisconsin. That is what was said here on the floor.

Mr. DEMPSEY. Oh, no; the estimates of the Chief of Engineers were in writing, submitted to the committee in writing, and they included, if the gentleman from Wisconsin will permit, the dredges which are provided for in this bill. That entered into the $42,000.000. I think the $42,000,000 is the minimum amount. I quite agree with the gentleman from Missouri [Mr. ROACH], but I do not think the gentleman from Wisconsin got the point I made with the gentleman from Missouri. The testimony of the Chief of Engineers before our committee shows that each of these dredges would save about $50,000 a year and that we would do more work and do it infinitely faster. It is in the interest of commerce not alone to economize but to expedite the work.

Mr. COOPER of Wisconsin. There are very many of these projects which are unfinished, which do not require the use of a dredge at all for their completion, such as the building of breakwaters.

Mr. DEMPSEY. I think the gentleman will find that 95 or 97 per cent of the work will require the use of the dredges. I do not think there is more than 3 or 5 per cent in the other category.

Mr. COOPER of Wisconsin. What I have in mind is the completion of an arrowhead harbor improvement. It is the making of the last link, the putting in of cribs, and the dredges that they have can do that work.

Mr. DEMPSEY. They dredge for that work. There is no work that can be done practically in an improvement of a harbor without the use of dredges. This is really as important almost as anything else in the bill.

Mr. COOPER of Wisconsin. Why did not the gentleman from New York include that in the original $42,000,000 appropriation?

Mr. DEMPSEY. I had that in view, and I made a very hard fight for the $42,000,000.

Mr. COOPER of Wisconsin. Why did not the gentleman insert in that a provision taking $4,000,000 and over of the $42,000,000 for the purpose of these dredges?

Mr. DEMPSEY. Because the Chief of Engineers in the estimates he has submitted had included an estimate for these dredges.

Mr. ROACH. Was that in the $62,000,000 estimate or in the $42,000,000 estimate?

Mr. DEMPSEY. I think it was in both. My sympathy was with the larger amount.

Mr. ROACH. I know the gentleman's sympathy was with us.

Mr. DEMPSEY. But I realized fully that the $42,000,000 was all that the condition of the country or the temper of the House would stand.

Mr. ROACH. The gentleman has made the statement here that the cost of these dredges was included in the $42,000,000.

Mr. DEMPSEY. That is my understanding. I am quite clear about it.

Mr. ROACH. The gentleman asserts that to be the fact?

Mr. DEMPSEY. Yes. That is my recollection. I will send out for the report, if the gentleman desires.

Mr. ROACH. I do have very serious doubt in my mind whether the estimates provided for six dredges, and in that connection the gentleman stated we would not get these dredges unless we carried an appropriation. Why can not we write in this bill an appropriation for $4,500,000 for these dredges? We have the votes in the House to carry it; we have them over in the Senate, so why mince matters, why not get the $4,500,000? We need it.

Mr. DEMPSEY. Because this is not an appropriation bill.

Mr. ROACH. We can authorize an appropriation, can we not?

Mr. DEMPSEY. But you will not get an appropriation, and if you leave it as it is, you will get the appropriation and the dredges.

Mr. ROACH. I want to have the dredges on the Atlantic and on the Pacific coast, but that is not going to do the middle West and the Mississippi States any good——

Mr. DEMPSEY. It is going to save money, and it is——

Mr. ROACH. By taking the money that would otherwise go to improve our rivers and harbors and build these dredges.

Mr. McDUFFIE. Mr. Chairman, I will say for the benefit of the gentleman from Missouri that on page 101 of the estimates, in which various items are included going to make up the $42,000,000, you will find the first item—I have not read the whole list—is for four seagoing dredges on the Atlantic coast at $3,000,000, and is included in the $42,000,000.

Mr. ROACH. How many?

Mr. McDUFFIE. Four, to cost $3,000,000.

Mr. ROACH. This bill provides six, to cost $4,500,000.

Mr. DEMPSEY. If the gentleman believes we should not have six I would rather see two of them cut out than to be left with all these old dredges. I think it would be entirely wrong not to do that. In the estimate of $42,000,000 four are provided for only, and here are six provided. We are going to economize; we are going to do this work faster on your rivers with these new dredges.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROACH. Mr. Chairman, this is an important item, and I ask unanimous consent that the gentleman may have five minutes additional.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. ROACH. Since it happens that the $3,000,000 was included in the $42,000,000 estimate for four dredges, is the gentleman willing to have this bill amended to conform with the estimate for the four dredges instead of six?

Mr. DEMPSEY. I think it would be a serious mistake made if it were done.

Mr. ROACH. The gentleman can see what it would mean—that we would lose $1,500,000, which we will do unless we limit the number of dredges to four.

Mr. DEMPSEY. I do not think it will. I think we will make good progress by it. One of these dredges will do as much work in one day as the old-fashioned dredge would do in three or four days, and one will excavate material at a dollar where it will cost with the old dredge $1.50 to $2. Now, we want every one of these dredges, we need them every one, and the men who are in favor of river and harbor improvements, and who need river and harbor improvements, should know that we need modern tools. You want modern tools with which to work, you want the tools that will accomplish the most for the money.

Mr. ROACH. What I want and what I get may be two different things. The gentleman is bound to admit that unless we cut the number of dredges down to the four dredges included in the estimate there is going to be $1,500,000 shortage.

Mr. DEMPSEY. No; I do not admit it.

Mr. ROACH. Somebody is going to lose $1,500,000, and who is it going to be? I predict it will be the inland rivers on the bottom of the list.

Mr. DEMPSEY. No; the gentleman does not understand that by the improved dredges we are going to save money; we are going to save money by the use of these dredges.

Mr. ROACH. I can see that the $42,000,000 is not enough to go around if this amount is included in the items provided for in the appropriation; I can see that very plainly.

Mr. McDUFFIE. May I suggest that the $1,500,000 is not going to be taken from this item, but if the gentleman will examine he will find in the estimate in many districts a certain amount is always expended for the construction and repair work on dredges and tools with which the engineers have to work.

Mr. DEMPSEY. Of course.

Mr. McDUFFIE. Some of these dredges are 20 years old; they have deteriorated and——

Mr. DEMPSEY. And it means waste to endeavor to use them.

Mr. COOPER of Wisconsin. Will the gentleman permit a question?

Mr. DEMPSEY. The gentleman from Alabama has very well stated—I stated it in a general way, but the gentleman was more specific—that every year on every kind of work there is so much expended for repairs for dredges, and you want your work done with the very best dredge you can get.

Mr. ROACH. The gentleman wants to be fair in his discussion. These dredges are not to be used on any river——

Mr. DEMPSEY. The gentleman does not follow my argument.

Mr. ROACH. But they will be used on the Atlantic and Pacific. They are seagoing dredges

Mr. DEMPSEY. The gentleman did not follow my argument.

Mr. ROACH. I am sorry I did not follow the gentleman's argument. It is my way of looking at this bill.

Mr. DEMPSEY. What I said was that in every great project each year there are sums of money expended in improving the tools with which the work is done. That will be true out in the gentleman's country just as well as it will be in the use of these two additional dredges to which he refers.

Mr. COOPER of Wisconsin. It is a fact, is it not, that in this bill you propose to authorize the construction of two more dredges than the Chief of Engineers suggested? He suggested that out of that $42,000,000 there should be four more dredges constructed at a cost approximately of $3,000,000.

Mr. DEMPSEY. Yes.

Mr. COOPER of Wisconsin. This committee now proposes, after we passed it and settled it——

Mr. DEMPSEY. The committee does not propose at all. The committee has not proposed anything here except upon a report made, first, by the district engineer, next by the Board of Engineers, and next by the Chief of Engineers, and we have acted only in accordance with favorable reports. Then, after all that was done, we did not take the report. We have not relied upon it alone, but we have called before us the assistant to the Chief of Engineers. We have examined him at length and we have found out that instead of needing, and needing badly, as they supposed at the time they made the estimate for the $42,000,000, only four dredges, they needed six. They told us where they needed them and why they needed them. They convinced the committee, and the committee was unanimous in finding that not only were they necessary but that securing them would be in the interest of economy and efficiency in completing these projects, such projects as the gentleman has on the Great Lakes, which are as worthy as any projects in the world. There is nothing that will result in doing the work better or more efficiently and at less cost than to provide these modern dredges. And I am sure the gentleman will be convinced of that if he reads the hearings.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. COOPER of Wisconsin. Mr. Chairman, I agree with the gentleman from Missouri that to bring in this provision at this time is bad policy. Originally the Chief of Engineers submitted a report recommending $42,000,000 of an appropriation as a minimum amount which could be properly appropriated, and that sum of $42,000,000 included $4,000,000 to be used to construct three dredges. The House passed that bill with that understanding of its provisions, based upon the recommendations of the Chief of Engineers. The chief had had a year in which to make up his report. That bill went over to the Senate some weeks ago. But now comes in this committee with a bill proposing to take out of the $42,000,000——

Mr. ROACH. Let me make a suggestion at that point.

Mr. COOPER of Wisconsin. I would like to finish my sentence, and then the gentleman can interrupt me and explain.

It proposes to take out of that $42,000,000, besides the $3,000,000 which the engineers recommended to be taken out of it for the purpose of constructing four dredges, an additional sum of more than $1,000,000 for the construction of two more dredges, thus making a total of six dredges. The gentleman from New York has said that his committee has in mind specific projects where these six dredges are to be used. Now, that raises the exact point in this controversy. Gentlemen who have projects that have waited for years and which ought long ago to have been completed, see now an attempt made, after that appropriation has gone to the Senate, to take a million and a half of dollars, or approximately that sum, from projects that do not need new dredges and put it onto somebody's projects which do need new dredges. We think that under the circumstances, Mr. Chairman and gentlemen, that ought not to be done by this House.

Mr. ROACH. Will the gentleman yield?

Mr. COOPER of Wisconsin. Yes.

Mr. ROACH. I want to call the gentleman's attention to the further fact that it costs considerable money, no doubt, to operate these large dredges which are provided for in this bill, and if these two extra dredges are built it will further invade this fund of $42,000,000 to operate those two dredges that were not taken into account in the estimate submitted to us by the Chief of Engineers in the $42,000,000.

Mr. COOPER of Wisconsin. I do not understand, Mr. Chairman, that the Chief of Engineers has ever issued or filed or sent to the House or submitted anywhere an official report in anywise modifying the recommendations in his annual report,

which he had a year to consider before submitting and which provided only four dredges out of that $42,000,000, at an expenditure of approximately $3,000,000.

Mr. DEMPSEY. If the gentleman please, first, it has not been stated by anyone they were intended for any particular work, but to be used at every place where they were needed.

Mr. COOPER of Wisconsin. I understand what the gentleman said. I think the RECORD will show he did say they had in mind specific projects.

Mr. DEMPSEY. I did not say that.

Mr. COOPER of Wisconsin. If that was not so, how did you come to arrive at a conclusion that two more were needed? If you had not in mind certain projects, what made you think two more were needed than the engineer had recommended?

Mr. DEMPSEY. I did not think about it at all. I am reading from the testimony on page 86 and page 87. Six dredges were recommended. It was not the thought of any member of the committee or of the chairman. It was the thought of the engineers. The gentleman from Missouri——

The CHAIRMAN. The time of the gentleman from Wisconsin [Mr. COOPER] has expired.

Mr. DEMPSEY. Mr. Chairman, I ask unanimous consent that the gentleman have two minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. DEMPSEY. If the gentleman from Missouri has any doubt as to the operation of the dredges, I find on page 86 of the testimony—and I will send the gentleman a copy of it if he has not seen it—that the steel dredge will excavate 20,000 yards in the same time that the old-fashioned dredge will excavate——

Mr. ROACH. If the gentleman please, I never raised any question as to that or disputed the value of these dredges. They are extremely valuable. I wish we were able now to include a hundred of them in this bill, and I wish we had the money to pay for them, and I wish we had some of them now out on the Missouri River.

Mr. DEMPSEY. The gentleman suggested that the price of the two additional steel dredges would come out of this amount. I wanted to call his attention to this fact—that where you get 20,000,000 yards from the new type of dredge and only 5,300,000 yards from the old dredge, there is a manifest advantage in having the new type. General Taylor says this, in answer to a question of the chairman:

> The CHAIRMAN. Now, what would be the relative cost to-day of these two dredges, the modern steel dredge and one of these old-fashioned small wooden dredges?
>
> General TAYLOR. A wooden dredge of the same size to-day would cost almost as much as the steel dredge.

I thought that referred to operations also, but the cost of operation is away out of proportion as between the two dredges, as well as the results.

Mr. ROACH. And generally the machinery of these new dredges is more costly than that of the old dredges. The point I was trying to impress on the gentleman was this, that we have only $42,000,000 for rivers and harbors, and if we go into that $42,000,000 for two extra dredges and the expense of operating them and paying for the high-priced engineers and machinists we shall so reduce the $42,000,000 that the rest of the country will not get any of it.

Mr. DEMPSEY. The gentleman from Wisconsin [Mr. COOPER] suggested that there was no report submitted by the Chief of Engineers. In answer to that I beg to hand to him a report dated May 5, 1921, in which an estimate is made for six seagoing hopper dredges, at a cost of $750,000 each, amounting in the aggregate to $4,500,000, so that it is not any new thought, it is not anything that has been injected since the passage of the $42,000,000 appropriation.

The CHAIRMAN. The time of the gentleman from Wisconsin has again expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I would like to have two minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. LAYTON. Mr. Chairman, will the gentleman yield there for a question?

Mr. COOPER of Wisconsin. Mr. Chairman, in reply to the last statement of the gentleman from New York [Mr. DEMPSEY], the chairman of the committee, I direct attention to the fact that he says there are to be six seagoing dredges purchased, at a cost of $750,000 apiece.

Mr. DEMPSEY. That is what the bill provides. That is in the bill. There is nothing uncovered and nothing that is in the nature of a nightmare.

Mr. COOPER of Wisconsin. I was not saying that it was "a nightmare." But none of these seagoing dredges will be used in the rivers or inland harbors of this country. They will be used only where seagoing dredges can be advantageously used, and it strikes me that it will subtract about a million and a half dollars of money from the funds that otherwise would be used for the completion of inland projects long delayed, and which in the original report of the Chief of Engineers were said to deserve early completion.

The CHAIRMAN. The time of the gentleman from Wisconsin has again expired.

Mr. LAYTON. Mr. Chairman, I move to strike out the last two words, or I make whatever motion necessary to obtain time.

The CHAIRMAN. The gentleman from Delaware asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. LAYTON. I may not need that much.

Mr. Chairman, as a matter of fact, did it not come out in the hearings that General Taylor said that in all probability, before the six dredges could be constructed, there would be a material reduction in the cost of them by reason of the decline in the prices that has taken place?

Mr. DEMPSEY. That is my recollection, that he said that the cost of machinery of this kind was constantly declining. I will say also to the gentleman from Missouri [Mr. ROACH] that it is my understanding that only a few of these dredges will be completed in the fiscal year. I do not think we can build even four of them, which are estimated for, in the $42,000,000.

Mr. ROACH. I have no doubt that is true, but the only way I knew of getting at it would be to adopt my amendment, or some similar amendment, to protect this $42,000,000 fund.

Mr. DEMPSEY. I think the general object contemplated is exactly what the figures provided.

Mr. ROACH. The gentleman cited a statement that $3,000,000 would be needed.

Mr. DEMPSEY. General Taylor estimated that for these dredges.

Mr. ROACH. But that is not in the estimates on which this $42,000,000 was based. That is a matter that came up in the hearings.

Mr. DEMPSEY. No.

Mr. ROACH. Did it not come up in the hearings?

Mr. DEMPSEY. It is in a report made May 5, 1921, which I hold in my hand.

Mr. NEWTON of Missouri. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. NEWTON of Missouri. In fact, the six dredges were included in the $63,000,000 estimated as necessary, and when that amount was cut down they cut out two of them.

Mr. DEMPSEY. Yes.

Mr. ROACH. If they cut down the estimates from $63,000,000 to $42,000,000 and estimated for dredges, they should cut down on the dredges here.

The CHAIRMAN. The time of the gentleman from Delaware has expired.

Mr. McDUFFIE. Mr. Chairman, I offer a substitute.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Alabama.

The Clerk read as follows:

> Amendment offered by Mr. McDUFFIE as a substitute for the amendment offered by Mr. ROACH: Page 10, line 8, after the word "of" insert "four of."

Mr. McDUFFIE. I think, gentlemen, that this substitute will absolutely meet the objections raised by the gentleman from Missouri [Mr. ROACH]. However much I think the bill should be passed as it is written, yet in order to meet his objections I prepared that amendment, which makes the paragraph read so that of these dredges which, as has been shown, were included in the estimate of the engineers, only four will be paid for out of the $42,000,000.

Mr. DEMPSEY. May I ask the gentleman this question?

Mr. McDUFFIE. Yes.

Mr. DEMPSEY. Just read your bill and see how the other two would be paid for. These dredges must be paid for out of appropriations either already made or to be made hereafter.

Mr. McDUFFIE. Yes.

Mr. DEMPSEY. The way the gentleman's amendment is worded is to cause four of the dredges to be paid for out of the appropriations already made or hereafter to be made. How are the others to be paid for? There is your difficulty.

Mr. McDUFFIE. Why not eliminate it?

Mr. BRIGGS. Will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. BRIGGS. As I understand the amendment, four of the dredges are to be paid for out of the appropriation heretofore made and the two remaining dredges are to be paid for out of the appropriation to be made hereafter.

Mr. DEMPSEY. The difficulty is that the appropriation has not yet been made. We have passed it in the House, but it has not passed the Senate. It will have to come back to conference, and when it becomes a law then the appropriation will be made.

Mr. McDUFFIE. I thought I was meeting the objection of the gentleman from Missouri [Mr. ROACH] in offering the amendment.

Mr. DEMPSEY. That was a very good intention, but I do not think it meets the objection. Let us find out what the committee want to do.

The CHAIRMAN. The question is on agreeing to the substitute.

Mr. McDUFFIE. I withdraw the substitute.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to withdraw the preferential motion to amend. Is there objection?

There was no objection.

The CHAIRMAN. The question is on the amendment of the gentleman from Missouri [Mr. ROACH] to strike out lines 8 to 13, down to the word "navigation."

The question being taken, the amendment was rejected.

Mr. ROACH. Mr. Chairman, I offer another amendment, in line 5, after the word "construct," by striking out the word "six" and inserting the word "four."

The CHAIRMAN. The gentleman from Missouri offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. ROACH: Page 10, line 5, after the word "construct," strike out the word "six" and insert in lieu thereof the word "four."

Mr. McLAUGHLIN of Michigan. Mr. Chairman, in my judgment this section is not necessary at all. It is evident that it is not, from the fact that the Corps of Engineers have included in their estimates the cost of building dredges, and having some knowledge of the work of the engineers on the harbors of the Great Lakes, I am under the impression that costs of boats and other paraphernalia necessary for the use of the engineers in the construction and maintenance of harbors and in carrying on of their work of all kinds are often, if not always, paid for out of the appropriation for the work, and that such use of money is made without any authorization whatever for the construction of boats.

Mr. DEMPSEY. No new dredge is ever paid for in any such way.

Mr. McLAUGHLIN of Michigan. In what way?

Mr. DEMPSEY. Out of the ordinary appropriation.

Mr. McLAUGHLIN of Michigan. I beg the gentleman's pardon.

Mr. DEMPSEY. The gentleman can beg my pardon, but he is all wrong. That is the only trouble. It does not change the situation any to beg my pardon.

Mr. McLAUGHLIN of Michigan. I am not wrong. I have knowledge of discussions as to the use of money for harbors on the Great Lakes, and I remember the position the engineers took. I remember the determination they made and their methods of expenditure of money.

Mr. DEMPSEY. So have I.

Mr. McLAUGHLIN of Michigan. I know something of the uses made of money appropriated for harbor work, all properly used, but each use not particularly set out in the law.

Mr. COOPER of Wisconsin. I move to strike out the last word.

The CHAIRMAN. The gentleman is recognized in opposition to the amendment.

Mr. COOPER of Wisconsin. Mr. Chairman, my objection to this provision increasing from four to six the number of dredges to be built arises out of this state of fact: When the bill making appropriations for rivers and harbors was passed by the House some weeks ago, the House, by a large majority, passed the bill containing the provision for $42,000,000.

Mr. ROACH. Will the gentleman yield right there?

Mr. COOPER of Wisconsin. Yes.

Mr. ROACH. I think the gentleman misunderstands my amendment. My amendment reduces the number of these dredges from six to four, four being the number carried in the estimates of General Beach, making up the total of $42,000 000.

Mr. COOPER of Wisconsin. I moved to strike out the last word. I did not rise to oppose the gentleman's amendment. I rose in support of his amendment.

Mr. ROACH. Very well.

Mr. COOPER of Wisconsin. I am in favor of the amendment. I am opposed to the provision in the bill; because when we passed that appropriation of $42,000,000 for river and harber improvements a few weeks ago, the understanding in the minds of all who understood anything at all about the bill was that that sum was to include work absolutely necessary to complete projects already adopted, and which ought to have been already completed. There was not a suggestion of the completing of six dredges or the taking of any part of that $42,000,000 to build the extra two dredges. To build seagoing dredges for use on the Atlantic, Pacific, and Gulf coasts will cost $750,000 each, which will absorb so much money that otherwise would have been used for the improvement of harbors on the Great Lakes and of the rivers throughout the country. But this provision for six dredges is exclusively for the benefit of the great harbors on the Atlantic, Pacific, and Gulf coasts.

Mr. DUPRÉ. Will the gentleman yield?

Mr. COOPER of Wisconsin. I yield to the gentleman.

Mr. DUPRÉ. I merely want to say that nobody would think that any of the $42,000,000 was for the purpose of building these dredges. It is merely an authorization the financing of which depends on future appropriations. It would not depend at all on the $42,000,000 appropriation which is now pending before the Senate.

Mr. COOPER of Wisconsin. The gentleman from Louisiana is, I think, plainly in error. If we authorize this, the engineers will never expend all of the $42,000,000 for the purposes for which we authorized it to be expended when the House passed that bill a few weeks ago. They will hold back in reserve more than $4,000,000 for the completion of these dredges, and the inland harbors and waterways will to that extent be deprived of the use of the money to which they would otherwise be legitimately entitled. When we passed that bill four or five weeks ago we did it upon the distinct understanding that there could not be more than four dredges built.

Mr. DUPRÉ. They were not authorized at all at that time.

Mr. ROACH. They were included in the estimate, though, to make up the $42,000,000.

Mr. DUPRÉ. They were not authorized, and therefore could not possibly be included in the bill appropriating that money.

Mr. ROACH. Certainly not; they were included in the $42,000,000 appropriation as a part of the estimates that went to make up the appropriation.

Mr. DUPRÉ. Estimates are not authorizations and authorizations are not expenditures.

Mr. ROACH. It is intended that the money shall be used in the manner in which the estimates are submitted.

Mr. COOPER of Wisconsin. The estimates of the $42,000,000 included the money necessary to construct four dredges.

Mr. DUPRÉ. In case Congress authorized them.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri.

The question was taken; and on a division (demanded by Mr. ROACH) there were—ayes 18, noes 50.

Mr. ROACH. I object to the vote because there is no quorum present.

The CHAIRMAN. The gentleman from Missouri makes the point that no quorum is present, and the Chair will count.

Mr. ROACH. Mr. Chairman, I will withdraw the point of no quorum.

Mr. ANDREWS of Nebraska. I renew the point of order.

The CHAIRMAN. The gentleman from Nebraska renews the point of order, and the Chair will count.

Mr. ANDREWS of Nebraska. Mr. Chairman, I withdraw the point of order and ask for tellers.

The CHAIRMAN. The Chair has counted up to 99, and there are still others that he had not counted. The gentleman calls for tellers. The Chair wishes to state that the demand for tellers is in order, but the question is as to whether a quorum is present. All those in favor of taking the question by tellers will rise.

Nine Members have risen, not a sufficient number, and tellers are refused.

So the amendment was rejected.

Mr. HULL. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 10, line 15, after the figures $750,000 insert: *"Provided further*, That no money authorized to be expended for the acquirement of any dredge or dredges shall be so expended for the purchase of any dredge or dredges from private contractors which at the time of the proposed purchase can be manufactured at any navy yard or other Government-owned factory for a sum less than it can be purchased for from such private contractor."

Mr. HULL. Mr. Chairman and gentlemen of the committee, Members seem to be concerned as to how you can get six dredges for the price of four. This amendment will solve the problem if you will adopt it. I know some of the objections that will be urged against the amendment, but I want to assure gentlemen of the House that they are not valid objections. This amendment has been put on appropriation bills for some four or five years, and it has resulted in every case in a great saving to the Government. It does nothing but put a limitation upon the purchasing bureaus of the Government. It does not compel them to manufacture at Government-owned factories; it simply compels them when they want an article to find out from these great Government institutions as to whether they can produce it less than the private contractor can.

Mr. RAKER. Will the gentleman yield?

Mr. HULL. Yes.

Mr. RAKER. If it can be produced as cheaply as it can at the navy yard, can the department award the contract to the Navy Department?

Mr. HULL. Certainly; and it has been done in hundreds of cases.

Mr. RAKER. What are the objections to this provision?

Mr. HULL. Objections come from the purchasing department of the bureau, or, to say the least, personal influence directing them to award the contract to a private contractor.

Mr. LAYTON. Will the gentleman yield?

Mr. HULL. Yes.

Mr. LAYTON. When are you going to follow the administration? I understood the President of the United States said it was nearly time for the Government of the United States to get out of private business.

Mr. HULL. I did not know that the President of the United States, and I do not believe it is true, wants to destroy navy yards and arsenals of the Government and go to purchasing munitions of war in peace times of private contractors.

Mr. LAYTON. Are the navy yards manufacturing dredges as a part of their work?

Mr. HULL. Certainly they are; and if they can not do it, the amendment will not compel them to do it.

Mr. LAYTON. Where has the Government ever manufactured a dredge?

Mr. HULL. At Government navy yards.

Mr. LAYTON. Will the gentleman give me one dredge in operation now, either old or new, that was built at a Government navy yard?

Mr. HULL. I do not know; but I will say if they have not done so, somebody is making money out of the Government. This proposition has been tried, and I want to say to the gentleman that the Director of the Budget issued a general order November 9 instructing the bureaus to submit the procurement program that they wanted to him and he would have an estimate made at the Government factory as to how much it would cost them to produce it.

Mr. RAKER. Will the gentleman yield?

Mr. HULL. Yes.

Mr. RAKER. We have passed the scrapping bill, and there is bound to be a great deal of material on hand belonging to the Government; can not the Government with that property build the dredges much cheaper by using this material than anybody else?

Mr. HULL. I have no doubt of it at all. I have no doubt that they will build it for less than 60 per cent of the price you have mentioned, $750,000.

Mr. RAKER. The Government ought to save that 40 per cent.

Mr. HULL. That is just what I want it to do. I want to read from the record of the Ordnance Department a few items where they did save the Government a good deal of money. This was tried from 1920 to 1921, and I have a list that was printed in the CONGRESSIONAL RECORD, page 1828, by the gentleman from Massachusetts [Mr. DALLINGER], giving the orders and what they saved. I am going to refer to only three or four of them. The Navy Department placed an order with the Frankford Arsenal for check-sight attachments. The lowest bid from the private contractor was $12,900.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. HULL. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HULL. The Frankford Arsenal produced them for $3,249.60 and paid an overhead of 60 per cent on the order.

Mr. COOPER of Wisconsin. That is about 25 per cent of the private bids.

Mr. HULL. Certainly; here is another one: The Navy Department placed with the Rock Island Arsenal an order for fuel water strainers. The lowest bid from an outside contractor was $1,582.50. The Rock Island Arsenal produced them for $746.20 and paid over 60 per cent of an overhead. I call attention to the fact that the overhead which they charged against these orders to the Government has to be paid in any case, because that goes right on. I am not advocating, however, that they should not charge the overhead. They should, just like any other institution, and they should pay a liberal overhead, and they are doing it on all these others. Here is another one: They produced for the Quartermaster's Department at the Rock Island Arsenal some bronze rings, and the lowest offer they had was $21,870 from a private concern, while they produced them for $10,720. For the Interior Department at the Rock Island Arsenal they produced some posts. The lowest bid on the outside was $52,750, and the Rock Island Arsenal produced them for $22,350. Hundreds of orders were taken at the Rock Island Arsenal alone, and on the orders they took they saved over $90,000 in a little over a year, and all saved to these other bureaus of the Government. Do you not think it is about time to utilize the facilities that we have in order to find out what it costs to produce these things? And that is all the amendment does. It simply puts a limitation upon the purchasing bureaus of this Government. Everyone talks about and preaches economy and about punishing the profiteers. Here is a chance not to punish them but to limit them. I submit that this amendment is perfectly safe, sane, and ought to be adopted.

Mr. DEMPSEY. Mr. Chairman, I have only one suggestion to make with reference to this matter. I am as anxious to save money as is anyone. General Taylor, in his testimony before our committee, used the following language, and I shall quote it verbatim rather than to say what he said:

General TAYLOR. Yes, sir; we have quite a number of manufacturers in this country now that are making very good Diesel engines, which are used to a great extent. That development has come within the last two or three years. A Diesel engine that is used very extensively by cargo carriers is the McIntosh & Seymour, a type of which the Shipping Board has about 22 of those engines on hand which were purchased for installation in ships which they expected to build, but which they did not build, and I am endeavoring to have 12 of those, which would be the number that I would need for 4 of these dredges, assigned to the Engineer Department of the War Department without charge. I have not yet been able to accomplish this, because the Shipping Board has a prospect of selling them for $60,000 apiece. I hope, however, that we will be able to get them at a considerable reduction under $60,000, even if we can not get them for nothing. That would mean that much saving in the cost of our dredges.

I understand now that General Taylor has made an arrangement, so the clerk of the committee tells me, by which the engines will be procured without cost. The only thing I have to say with reference to the amendment is that I would not want it to complicate the matter so that we could not use these engines, so that by adopting the amendment we would add the price of the engines to the cost of the dredges.

Mr. HULL. Oh, there is nothing in the amendment that would complicate that. That would do just what they want done—find out whether they have material on hand in the other Government departments or not and then use it if they have.

Mr. DEMPSEY. I am not sure about that, but that is all I have to say concerning the amendment.

Mr. RAKER. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. RAKER. Who will construct these dredges, the War Department, or will the matter be let out by contract?

Mr. DEMPSEY. The War Department, I assume. The gentleman means under the bill as it is?

Mr. RAKER. I mean under the suggestion he has made about the four Diesel engines. If the War Department constructs them, of course they can use these engines, but if they leave the matter to a private contract, where would the four engines come in?

Mr. DEMPSEY. If they make a private contract, why would it not be feasible to provide in the contract that the dredge should be constructed and that the Government furnish the engine?

Mr. RAKER. That would mean another contract for some one to spend ten or fifteen thousand dollars on in placing the engine.

Mr. DEMPSEY. I can not see any reason why it would not be an easy matter to make such a provision in a contract. If they give a contract, they can provide that the Government shall furnish the engine and they could have bids on that basis. That is what I want to be sure that this amendment will do.

Mr. HULL. There is no question about that. There is nothing in this amendment that will prevent that.

Mr. RAKER. Mr. Chairman, I move to strike out the last word. The suggestion made by the amendment and the explanation made by the distinguished chairman of the committee seem to be in accord, because if the Government can procure these four engines it leaves a contract for the dredges, and when you come to place the engines in the dredges it will possibly cost half as much as the engines to do that, unless it be specifically provided in the contract that we have these engines and they are to be placed in the dredges.

Mr. ANDREWS of Nebraska. Would not the adoption of the amendment clear the way for the use of the engines without the extra expense?

Mr. RAKER. Surely.

Mr. ANDREWS of Nebraska. The Government would be doing its best to use the material.

Mr. RAKER. That is all I have to say.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn. The question is on the amendment offered by the gentleman from Iowa.

Mr. WALSH. Mr. Chairman, may we have that amendment again reported?

The CHAIRMAN. Without objection, the amendment will be again reported.

There was no objection, and the Clerk again reported the amendment.

Mr. WALSH. Mr. Chairman, I move to strike out the last two words, to ask the gentleman from Iowa a question. Does the gentleman believe that the phraseology of his amendment will cover a case where the War Department enters into a contract for the construction of a dredge?

Mr. HULL. Certainly.

Mr. WALSH. The gentleman uses the term "purchase of a dredge." The gentleman knows how strictly they construe these statutes, particularly the provisions making limitations. Would that prevent the War Department from making a contract to construct the dredge in accordance with plans and specifications?

Mr. HULL. It certainly would not. The intention of the amendment—and I think it is properly drawn—is to put a limitation upon the purchase, and ask them to construct it themselves if they possibly can do it more cheaply than they can contract for it or purchase it.

Mr. WALSH. The gentleman has in mind an instance where they are going to buy a dredge already constructed. He would not prevent them from doing that unless they can manufacture or construct a dredge in a navy yard for less than they can buy it?

Mr. HULL. That is the point; if they can construct it for less, let them construct it; that is all.

The CHAIRMAN. Without objection, the pro forma amendment will be considered as withdrawn, and the question is on the amendment offered by the gentleman from Iowa.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

SEC. 6. That funds heretofore appropriated for improvement of rivers and harbors and which remain in the Treasury unexpended because the work or projects for which the same were appropriated have been completed, are hereby made available for expenditure by and under the direction of the Secretary of War and the supervision of the Chief of Engineers for the preservation and maintenance of any existing river and harbor works and for the prosecution of such projects of improvement heretofore adopted and authorized as may be most desirable in the interests of commerce and navigation.

Mr. BURTON. Mr. Chairman, I desire to move to strike out the last word. I would like to ask the chairman a few questions in regard to this paragraph. Suppose there is a project pending, a new project, and work has not been commenced, and there is a balance left from the old project; does that mean that the money goes back into the Treasury?

Mr. DEMPSEY. Well, as I understand it, this applies simply to completed projects. The provision is that where the project has been completed and there remains an unexpended balance to the credit of the project it goes back into the Treasury and becomes a part of the lump sum.

Mr. BURTON. Now, there are several projects on Lake Erie, Ashtabula, Fairport, and so forth, where there is enormous commerce, and there are balances remaining, and there have been also further improvements of projects recommended there. Would that money go back into the Treasury or would it remain to the credit of that improvement?

Mr. DEMPSEY. I think it would go back into the Treasury on existing projects which have been completed. It seems to me that that is clear. Suppose, say, a project has been conducted at Sandusky and the amount appropriated was $100,000, and there has been expended $90,000. That project has been completed; and I doubt very seriously whether it would remain for the new project.

Mr. BURTON. I would like to examine the provision further, but I shall not interpose an objection.

The CHAIRMAN. The pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

SEC. 8. That from the moneys available for the improvement of the Detroit River, Mich., not to exceed $45,000 may be expended by the Secretary of the Treasury for remodeling and flooring over the light well of the Federal building at Detroit, Mich., to better accommodate the demands for space and to enable the engineer department to remain in its present quarters.

Mr. BRENNAN. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Strike out section 8 of the bill and substitute the following:

"SEC. 8. That from the moneys available for the improvement of the Detroit River, Mich., not to exceed $45,000 may be expended by the Secretary of the Treasury in his discretion for remodeling the old Federal building or for renting quarters at Detroit, Mich., to better accommodate the demands for space and enable the engineer department to be properly quartered."

Mr. BRENNAN. Mr. Chairman, this is, of course, a purely local proposition. When section 8 was written in the bill by the committee it was thought desirable to provide the necessary quarters for the engineers in the Federal Building at Detroit by building over a light well, but there has been so much objection raised to that plan that it is suggested, with the consent of the committee, that this other method of procedure be adopted.

Mr. DEMPSEY. Mr. Chairman, the committee accepted the amendment suggested by the gentleman from Michigan, and I would simply say in addition to what the gentleman has said that there are two things involved here. First, the headquarters of the engineer force of the Great Lakes has been for many years in this building. Everybody who is interested in the navigation on the Great Lakes knows where their headquarters are. The engineer force will be driven out of the building because there is not sufficient space there, unless what is contemplated in section 8 is done, and if they are driven out not only will the work of navigation on the Great Lakes be discommoded, but in addition to that the Government will lose about $12,000 or $15,000 a year.

The CHAIRMAN. The question is on the substitute offered by the gentleman from Michigan.

The question was taken, and the substitute was adopted.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. That motion is not in order.

Mr. MONDELL. Mr. Chairman, I move to strike out the last two words; I move to strike out the paragraph.

The CHAIRMAN. That motion is not in order. The gentleman asks unanimous consent to proceed for five minutes.

Mr. MONDELL. The gentleman will make no such request.

The CHAIRMAN. The Clerk will read.

Mr. MONDELL. Mr. Chairman, why is a motion to strike out a paragraph not in order?

The CHAIRMAN. The gentleman from Wyoming propounds a parliamentary inquiry to the Chair. The Chair wishes to state that the committee has just adopted an amendment in the nature of a substitute for the paragraph under consideration. An amendment perfecting the amendment was in order before the committee adopted the amendment, but having adopted the amendment a motion to strike out can not be considered as in order, as that would negative the affirmative action that the committee has just taken in adopting the amendment. The Clerk will read.

The Clerk read as follows:

SEC. 9. That the Secretary of War is hereby authorized and directed to cause preliminary examinations and surveys to be made at the following-named localities, and a sufficient sum to pay the cost thereof may be allotted from appropriations heretofore made, or to be hereafter made, for examinations, surveys, and contingencies for rivers and harbors: *Provided*, That no preliminary examination, survey, project, or estimate for new works other than those designated in this or some prior act or joint resolution shall be made: *Provided further*, That after the regular or formal reports made as required by law on any examination, survey, project, or work under way or proposed are submitted no supplemental or additional report or estimate shall be made unless authorized by law: *And provided further*, That the Government shall not be deemed to have entered upon any project for the improvement of any waterway or harbor mentioned in this act until funds for the commencement of the proposed work shall have been actually appropriated by law:

Saco Harbor and River, Me.

Mr. ROACH. Mr. Chairman, I move to strike out the last word for the purpose of asking a question. I notice that section 9 provides for a large number of surveys to be made, totaling 118 in number. I want to inquire of the gentleman as to what information the committee had as to what these surveys are going to cost. I make that inquiry for the reason that the

cost of these surveys will also come out of the $42,000,000 which the House recently appropriated.

Mr. DEMPSEY. The gentleman is in error as to the facts. There was an appropriation of $250,000 for surveys in addition to the $42,815,000, so the surveys will be limited to that amount.

Mr. ROACH. I may be in error, and I wanted to inquire, as the language of the bill here is just a little uncertain to my mind, as to whether it was intended to take the cost of these surveys out of the $42,000,000, as it was easily susceptible of that construction unless there is some additional appropriation.

Mr. DUPRÉ. If the gentleman will look at the bill, he will find a certain amount in the military appropriation bill that is provided for the present surveys.

Mr. ROACH. My inquiry was to ascertain whether the cost of the surveys was to come out of the $42,000,000.

Mr. DUPRÉ. There was a certain amount fixed in the military appropriation bill set aside for that purpose—some $350,000.

Mr. ROACH. I am informed by the gentleman from Pennsylvania [Mr. BUTLER] that it was $250,000.

Mr. DUPRÉ. And beyond which no cost as to this will go.

Mr. MONDELL. Mr. Chairman, I rise in opposition to the amendment.

Mr. ROACH. Mr. Chairman, I ask unanimous consent to withdraw the pro forma amendment.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to withdraw his amendment. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Mr. Chairman, I move to strike out the last two words. I ask unanimous consent to proceed for 15 minutes.

The CHAIRMAN. The gentleman from Wyoming moves to strike out the last two words and asks unanimous consent to proceed for 15 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Mr. Chairman, there has been considerable question in the minds of many people of the country, considerable question in the minds of many Members of the House, as to whether we were justified at this time, in the present state of the Treasury, in bringing in a river and harbor bill. Gentlemen who believe that in the matter of public buildings, the housing of the public activities, there is quite as urgent need of expenditure as for rivers and harbors, realizing that there are very considerable river and harbor improvements already authorized and very considerable appropriations available, were, many of them, not inclined to think we should authorize more improvements at this time. To some of us who have no direct local interest whatever in rivers and harbors but who have always been favorable to river and harbor improvement, it seemed that there were some of the waterways of the country where it was absolutely essential to the best interests of the country that additional work should be authorized. I said to the gentlemen of the committee that so far as I was concerned I believed we were justified in taking up a river and harbor bill providing it was taken up and reported containing only projects that could be fully justified before the country.

We all remember that there was a time when river and harbor bills had a bad name in the country, so bad a name that it was something of a reflection on a man to vote for one unless he could justify himself before his constituents by claiming that he had received a large appropriation for his district, if that was justification.

The gentleman from Ohio [Mr. BURTON] became chairman of the Committee on Rivers and Harbors, and by insisting on a modification of the policy of the committee made river and harbor bills respectable again. And those who have no interest in rivers and harbors, except the general interest of the people of the country in having water navigation improved, have been very hopeful that when after the lapse of several years we took up authorization again they would be taken up with appreciation of the fact that care should be exercised; that nothing but projects that could be defended from every standpoint should be included in the bill. I hope the committee has done that. I think, in the main, they have.

My attention was called to one of the items of survey. I made a very proper inquiry of the chairman of the committee in regard to that item. I called his attention to the conditions as I knew them surrounding the stream where it was proposed to make the survey. I do not think the answer and explanation, to the effect that these surveys were frequently authorized on the request of Members without any considerable examination and were not of great importance in many cases because they entailed no great expense, was altogether satisfactory. Now, I am honestly interested in river and harbor bills. I want to continue to vote for them. I have voted for most river and harbor bills since I have been here, and no dollar of the expenditure has ever been made within hundreds of miles of my State.

I aided the gentlemen who are directly interested in these projects not only in persuading some of those who are opposed to this general purpose to withhold their objection, but also in bringing the bill on the floor. I hope they will justify support by at least keeping questionable amendments from the bill.

If we are to continue river and harbor development in this country as we should, it must be continued in a way that will keep the project free from suspicion.

Mr. LINTHICUM. I wanted to ask the gentleman whether the Rio Grande would not come better under the Mexican Boundary Commission, which we established some years ago, and whether that would not be an international matter that they should consider rather than have it come under a river and harbor bill?

Mr. MONDELL. I think that a survey of that stream is not justified under a river and harbor bill.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield to me for a serious question—not one like that?

Mr. MONDELL. Yes.

Mr. DUPRÉ. I think what the gentleman said about the Rio Grande River is probably true, and I think the best way of disposing of that proposition is to have a survey made and show officially that there is no possibility of making it navigable; to dispose of it from official sources. That is the theory upon which I acted to-day.

Mr. MONDELL. That is a theory that it will be very difficult to get the country to approve.

Mr. DUPRÉ. I will take my chances on that.

Mr. MONDELL. The gentleman may take his chances; but there are other folks that may take a different view. This committee has a much greater responsibility in this matter than I have, and if there is no better defense of a survey item than that it does not cost much, that anyone who desires a survey can have it, then such items ought to go out of the bill.

Mr. ANDREWS of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. ANDREWS of Nebraska. Could not this bill make it appear to the country that this session of Congress has created a $79,000,000 liability for rivers and harbors?

Mr. MONDELL. I am willing to take my responsibility of having agreed that the condition of the waterways of the country was such that as to some waterways it was necessary to have legislative action, and I regret, very sincerely regret, that the committee has not been better informed and more careful as to some of the survey items which they have placed in their bill.

Mr. DEMPSEY rose.

The CHAIRMAN. The gentleman from New York is recognized in opposition to the pro forma amendment.

Mr. DEMPSEY. Now, so far as the temper, so far as the manner, of the response of "the gentleman from New York" was concerned, if it was faulty I apologize before the House to the gentleman from Wyoming. If he answered in heat or in an ungracious manner he apologizes for it.

But the gentleman from Wyoming attacks this bill in the same manner as he did before. It is not fair. He says he is complaining of the creeks in this bill. There is just one creek mentioned in the whole project part of the bill, and yet the inference to be drawn from the gentleman's statement would be that this bill was made up of creeks.

Mr. MONDELL. Does the gentleman say there is but one creek in this bill?

Mr. DEMPSEY. There has not been a bill pending before the House for years that has contained such important items as make up this bill.

Now, let us take up the question of what has been done here and what the gentleman has criticized. The gentleman criticizes first the manner of the gentleman from New York, for which he has apologized and for which he again apologizes if apology is due. Next he criticizes the surveys. Now, let us see what is done as to surveys. Why, here is the situation: It has been the custom in the Committee on Rivers and Harbors for the whole committee to consider all the items of the bill except the surveys. They know that the item of surveys costs, year in and year out, about a quarter of a million dollars. They know that that is the cost regardless of the number of items; that if you have 20 items it will cost that amount; if you have 50 items it will cost that amount; if you have 75 items it will cost that amount. It did not make the slightest possible difference that the item to which the gentleman re-

ferred was included in the surveys. It could cost but a trifle. I personally knew nothing about the insertion of it. It is the custom to allow the ranking majority member to be the chairman of a subcommittee to deal with surveys.

We do not deal with it in the committee as a whole, because we know that we are not increasing the expense. We know that there is a certain limited expense and that it is a necessary and proper expense. It starts in the proper way. It says we shall not even consider an item until there has been a favorable report by the engineers. So when a thing comes in it is the custom to send it to the engineers, and if it is improper it is refused at once.

What is the history of surveys? It is minuted at page 2109 of part 2 of the Annual Report of the Chief of Engineers for 1920. We find that only 34 per cent of the surveys have been acted upon favorably. Now, why is it that it does not cost any more when you insert an additional survey? Nine-tenths of the data consists of geography. Nine-tenths of it is matter that the engineers have at hand. It involves at the most nothing but slight clerical work in the office. These men who ask for surveys are simply asking that there be an investigation made which will not cost anything to determine whether their project is worthy or not, and on the statistics they have one chance in three of having that report favorable. Now, it seems to me the difficulty is right here. I want to speak in entire good temper. I am sorry that this dispute arose. I regret it and have apologized so far as I can be charged with any fault in regard to it. But it arose in the early part of this bill; it was brought up before surveys were reached at all, brought up out of order, brought up by a man who had been opposed to the increase in the river and harbor appropriation. And when I saw it brought up in that way, when I saw that there really was nothing to it at all and yet that it was being magnified into an important part of this bill, might I not be pardoned? I ask this of all of you in good faith. [Applause.]

Mr. GARNER. Mr. Chairman, I move to strike out the required number of words.

The CHAIRMAN. The gentleman from Texas moves to strike out three words.

Mr. GARNER. Mr. Chairman, it is rather amusing in the House to see the leaders of two respective thoughts quarrel with each other about who should get the larger end of the swag as each terms the other's appropriation. I happen to occupy a position of advocacy of each one of their ideas. I believe in river and harbor work and I also believe in reclamation. I think these gentlemen had better get together and each one of them concede that there are merits in each of their ideas, and also they might concede that there is a little bit of pork that creeps into each one of these governmental activities, reclamation probably, as well as river and harbor work.

Now, referring to the particular item spoken of by the gentleman from Wyoming [Mr. MONDELL], I want to say that of course there is no possibility of navigation at El Paso. But this item was inserted in the bill, I imagine—though I have no authority to speak for it, because it was probably put in there by my colleague [Mr. HUDSPETH], who represents El Paso—for a very good reason, and a reason which I think will appeal to the House itself when the House understands it. Some of these days Mexico will be recognized by the United States, and we will resume our relations with that Republic. When we do that it is the hope of the people living in Texas along the Rio Grande that there will be negotiated a treaty with the Republic of Mexico concerning the waters of the Rio Grande. At the present time it is recognized as a navigable stream by a treaty existing between this country and Mexico. So a mere declaration on the part of this Government that the Rio Grande is nonnavigable would not carry the authority to take the water out of the river for irrigation purposes to the detriment of navigation. So I imagine that my colleague [Mr. HUDSPETH], or whoever had this item inserted, had the viewpoint that if a declaration could be obtained from the river and harbor engineers to the effect that the river is a nonnavigable stream at the present time it might be very valuable information to the State Department when they undertook to negotiate this new treaty. So I say for that reason I think they were justified in including it in the river and harbor bill. I agree with the gentleman from New York [Mr. DEMPSEY] that many surveys are authorized—and I think they were authorized when the distinguished gentleman from Ohio [Mr. BURTON] was chairman of that committee—that in all probability would receive no favorable report.

I will admit that this authorization for a survey at El Paso for river and harbor possibilities is an extreme case, but I think I have given a sufficient explanation that will justify retaining the item in the bill. The survey will be made from the office of the Board of Engineers rather than on the ground, and the result is that we will have a declaration that it is a nonnavigable stream at the present time, and so we will get the use of the water for more valuable purposes, which is the irrigation of arid land in Texas, and I know my friend from Wyoming is in favor of that.

Mr. CAMPBELL of Kansas. Will the gentleman yield?

Mr. GARNER. Yes.

Mr. CAMPBELL of Kansas. Aside from the Rio Grande proposition in the pending bill, I would like to know something about Goose Creek, where it is located, how much water it contains, and what its possibilities are. I see it is provided for here.

Mr. GARNER. I have no Goose Creek in my district, I have no survey in my district, I have no authorization for any work to be done in my district, and I have no interest as far as the river and harbor bill is concerned more than has the gentleman from Kansas. I am in entire sympathy with the work and have no objection to a survey of Goose Creek, wherever it is. The gentleman from Maryland says that it is in Pennsylvania. Probably if you get a letter from Mr. Pinchot he will tell you all about it. [Laughter.]

Mr. CAMPBELL of Kansas. The Goose Creek in this bill is located in Texas.

Mr. GARNER. I am not acquainted with it.

Mr. MONDELL. Mr. Chairman, the gentleman from New York can not write me down as an opponent of river and harbor development. Years ago in my early service there were bills that I could not vote for. Then came the gentleman from Ohio [Mr. BURTON], as chairman of the Rivers and Harbors Committee, and the bills became entirely defendable, and, as I suggested, we all voted for them. I not only approved but I voted for the appropriation, the very goodly appropriation, contained in the appropriation bill for river and harbor work. I did not believe that we were justified, taking into consideration the condition of the Treasury, the fact that we were holding down appropriations in other directions, that we were justified in increasing the appropriation as was done.

Now, with regard to this particular matter, if the gentleman from New York had in the beginning given the reason which he has recently advanced for this survey, I should have been reasonably satisfied, although I think it is rather a lame reason. I can not quite agree with the gentleman from Texas [Mr. GARNER], who from his very lively imagination has conjured up a theory as to the reason for the inclusion of the Rio Grande item in the bill. I think I know the reason, because I have made some inquiry. The people of El Paso have been anxious for a long time to have the War Department spend some money rectifying and establishing the banks of the Rio Grande, and my guess would be that the thought of the gentleman who was instrumental in having the survey item placed in the bill was that out of it might come some expenditure for bank rectification and protection.

Now, Mr. Chairman, I am going to support this bill. I am going to vote for it, unless it is loaded with amendments I can not support. Some reference has been made to creeks, and the gentleman from New York says that there is only one creek in the bill. Here is Glen Cove Creek, N. Y.; Big Timber Creek, N. J.; West Creek, N. J.; and others——

Mr. DEMPSEY. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. DEMPSEY. The gentleman knows that I said repeatedly in my remarks that I was not speaking about the surveys, I was speaking about the bill and what the bill provided—a great bill that is going to help the commerce of the United States, cheapen transportation, relieve the congestion; and when we had all these great questions before us that we were starting to consider, the question he propounded was as to a survey at the end of the bill. That is what the gentleman is talking about now—surveys. In the legislative part of the bill—the part that is of importance—there is only one creek.

Mr. MONDELL. Every one of the items of the river and harbor bill that have been objectionable began with a survey. There was the Trinity River——

Mr. DEMPSEY. That is abandoned in this bill.

Mr. MONDELL. Thank Heaven! How many millions were sunk in the Trinity River? Then there is the Brazos. All began with surveys. I am not objecting to the surveys because they are creeks; I know something about surveys. Goose Creek is not in Pennsylvania, as was stated; it is in Texas, and it has some navigation on it and is, perhaps, susceptible of improvement. I think it would be entirely proper to survey Goose Creek. I do not know as to the other creeks, and I regret that doubt should be raised in my mind as to survey items in a bill for which I desire to vote.

The Clerk read as follows:

Dorchester Bay and Neponset River, Mass.

Mr. FREEMAN. Mr. Chairman, on behalf of the committee I offer the following amendment.

The CHAIRMAN. The gentleman from Connecticut offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 12, between lines 15 and 16, insert the following paragraph:
"Mystic River, Mass."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Thames River, Conn.

Mr. FREEMAN. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Page 12, between lines 19 and 20, insert the following paragraphs:
"Guilford, Conn.
"Westport Harbor.
"Saugatuck River, Conn."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Great Kills, Staten Island, N. Y.

Mr. FREEMAN. Mr. Chairman, I offer the following committee amendment.

The Clerk read as follows:

Amendment offered by Mr. FREEMAN: Page 12, between lines 20 and 21, insert the following paragraphs:
"Fresh Kills, Staten Island, N. Y.
"Murderers Creek, N. Y.
"Hudson River at and near Stockport, N. Y.
"East Chester Creek, N. Y., with a view to extending the navigable channel to Sixth Street Bridge, in the city of Mount Vernon.
"Milton Harbor, N. Y."

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. FREEMAN. Yes.

Mr. LONGWORTH. Do I understand that all of these amendments that the gentleman is offering cost the Government nothing?

Mr. FREEMAN. Practically nothing. They are all in the hands of the Board of Engineers.

Mr. LONGWORTH. Let me see if I quite understand. As I understood the gentleman from New York, the chairman of the committee [Mr. DEMPSEY], there was a limitation of $250,000 somewhere—I do not know where; it is not in this bill—so that it makes no difference, as far as this bill is concerned, whether you have 1 survey or 10,000 surveys; it costs the Government the same thing.

Mr. DEMPSEY. That is exactly the truth.

Mr. LONGWORTH. Where does one find in this bill, or any other bill, a limitation as to the amount which can be expended for these surveys?

Mr. DUPRÉ. In the military appropriation bill, now pending in the Senate, making provisions for these surveys.

Probably the gentleman voted for that. I hope he did.

Mr. LONGWORTH. I did vote for it. Does that cover all of the surveys provided in this bill?

Mr. DEMPSEY. It does.

Mr. DUPRÉ. It covers all surveys that will not use up more than $250,000, which is the limitation.

Mr. LONGWORTH. Which are to be made in the next fiscal year?

Mr. DUPRÉ. Yes.

Mr. LONGWORTH. But there is no limitation as to the fiscal year.

Mr. DUPRÉ. There is no money to pay for these things. The engineers are dependent upon the appropriation bill.

Mr. LONGWORTH. How long does this authorization last? This authorization here is not limited to the fiscal year?

Mr. DUPRÉ. No.

Mr. LONGWORTH. Then it seems to me that we are in quite an absurd position; that it makes absolutely no difference as to the merits of these propositions—in fact, the less meritorious they are the better, because the Government will declare a stream nonnavigable which we now know to be nonnavigable.

Mr. DUPRÉ. Possibly.

Mr. LONGWORTH. Of all of the absurd procedures, it is to take it for granted that anybody can offer an amendment providing for a survey, no matter where, and that we accept it as a matter of course.

Mr. DUPRÉ. Nine-tenths of these will be disposed of at a cost of less than $100 each.

Mr. LINTHICUM. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman can not take a Member off the floor by a parliamentary inquiry without his consent.

Mr. DEMPSEY. These surveys are not made without examination. The practice has always been, and it was followed in this case, to refer the question of a survey to a subcommittee, of which the ranking majority member is the chairman, of which the next member on the majority side is a member, and of which the ranking minority member is a member. That committee of three goes into the question of surveys. They go into it just as extensively as they can, as the time will permit. They find out all they can find without the expenditure of money. All that has been said in regard to the matter is this, that only a limited amount is appropriated, and that the surveys, regardless of the number of them, will come within that amount. It has been said in addition that the vast majority of these surveys do not cause any expense, except a small, a very small amount of clerical work, that the data is largely in the hands of the engineers, and that where there has to be any work done it is done by the resident engineer, who is on the ground, who is paid a certain salary, who does not employ additional help, and it is all done within the appropriation.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. LONGWORTH. The gentleman is speaking about the procedure in the committee.

Mr. DEMPSEY. Yes.

Mr. LONGWORTH. But we are adopting now an entirely different procedure. A member of the committee rises here and offers one amendment after another, and he says it costs nothing.

Mr. DUPRÉ. But he stated that he was acting by approval of the committee.

Mr. LONGWORTH. He made no such statement.

Mr. DUPRÉ. Oh, yes; the gentleman did make that statement.

Mr. LONGWORTH. I did not so understand him.

Mr. DEMPSEY. He is the chairman of the subcommittee, which is composed of himself and the next ranking member and of Mr. DUPRÉ, the ranking minority member.

Mr. LONGWORTH. These are all committee amendments?

Mr. DEMPSEY. Yes.

Mr. LONGWORTH. Let me ask the gentleman this. I want to understand just how this procedure is done: I have in my district a very beautiful river, known as the Little Miami. Suppose I had come to the gentleman's committee and said I would like to have a survey of the Miami——

Mr. DUPRÉ. As far as I am concerned, I would have said, "All right, Nick, I will do it."

Mr. LONGWORTH. The river is very much more navigable than many other rivers, and I find that I have support from a very influential member of the committee.

Mr. DEMPSEY. And I would say in answer to the question of the gentleman from Ohio that the gentleman from Connecticut would sit down with him and members of the subcommittee and find out as far they could the facts with regard to this without the summoning of witnesses——

Mr. LONGWORTH. I would state to the gentleman under those circumstances there is no more chance of that river being declared navigable than there is of the Rio Grande being declared navigable, but that I wanted to have the people understand it is not navigable, and therefore I wanted to have it surveyed. What is the difference?

Mr. DUPRÉ. Will the gentleman offer an amendment?

Mr. LONGWORTH. Will the gentleman support it?

Mr. DUPRÉ. Certainly.

Mr. CAMPBELL of Kansas. Mr. Chairman, it has been stated here that the items now being put in the bill cost nothing——

Mr. DEMPSEY. No; it has not been stated; that has not been said. Let us state what has been said.

Mr. LONGWORTH. Practically nothing.

Mr. DEMPSEY. No; that has not been said.

Mr. LONGWORTH. Oh, yes; the gentleman from Connecticut said that.

Mr. DEMPSEY. The situation is this, that the expense of these surveys, a larger part of them, is largely negligible, owing to the fact the data is mostly in the hands of the engineers, and they do not have to do additional work, owing to which the expense is very small, indeed.

Mr. CAMPBELL of Kansas. Let me tell the gentleman what will happen. We have got $250,000 in the current military appropriation bill for making these surveys. The next time the military authorities appear before the Committee on Ap-

propriations they will ask for additional appropriation in order to make the surveys which we authorize in the bill providing for rivers and harbors.

Mr. DEMPSEY. I will say in answer to the gentleman from Kansas that he is a very poor prophet.

Mr. CAMPBELL of Kansas. Oh, I know what has been done in reference to these things.

Mr. DEMPSEY. The gentleman absolutely is misinformed. That has not been the experience.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAWLEY. Mr. Chairman, I move to strike out a sufficient number of words.

The CHAIRMAN. The gentleman is recognized in opposition to the pro forma amendment.

Mr. HAWLEY. Mr. Chairman, I think this matter of surveys can be cleared up by a short explanation of the procedure followed by the Board of Engineers. When a river and harbor bill has been passed and signed by the President it goes to them for execution. They ask the district engineers in all parts of the country where the surveys are authorized to make what they call preliminary examinations. That examination in many cases may never be made outside of the office, or may be made by the writing of a few letters, or it may require some hearing or investigation locally. They take what action is necessary to get a sufficient amount of information to convince them that a project is worthy or not worthy of improvement at the expense of the Government. The report is sent back to the Board of Engineers here in Washington, and if unfavorable nothing further is done usually with the project upon which they reported. Only those upon which they report after examination that they find them worthy of more detailed investigation is an investigation made on the ground or at any length, and only those cases cost any particular sums of money, but the preliminary surveys, such as the chairman has described, are made upon information in the office of the local engineer or as indicated above.

Mr. MONDELL. Will the gentleman yield?

Mr. HAWLEY. I will yield.

Mr. MONDELL. An amendment offered to make a survey of the Mississippi River would not cost anything?

Mr. HAWLEY. It might cost the district engineer of the district in which the river is located the writing of three or four letters, or possibly a local hearing or examination, if the information received indicates that the project is worthy of further consideration.

Mr. MONDELL. Even on the Mississippi and Missouri Rivers?

Mr. HAWLEY. I did not understand the gentleman to say Mississippi or Missouri. I thought he said on any river. If the local engineer makes a preliminary investigation and believes a project worthy of further development, he would report the matter back to the Board of Engineers of Rivers and Harbors. But no detail survey can be made until they examine the report of the district engineers upon the preliminary examination in Washington and direct the detail surveys.

Mr. MONDELL. Then I understand if any Member has a stream, a bayou, or a creek anywhere that he has not a survey or a report on it is because he has not been active in suggesting or recommending or asking that it be surveyed?

Mr. HAWLEY. The gentleman is not quite correct in that, because in my experience I go before this subcommittee with the data sent from my locality showing the commerce, present and prospective, and the possibility of development, and I find a number of times that the committee has been unfriendly to including that proposed project in the bill because we did not have the showing sufficient to justify the authorization of the survey.

Mr. CAMPBELL of Kansas. I rise in opposition to the amendment offered by the gentleman from Oregon [Mr. HAWLEY].

The CHAIRMAN. The gentleman from Kansas is recognized.

Mr. CAMPBELL of Kansas. Mr. Chairman, when I first came to Congress, some 20 years ago, the Committee on Rivers and Harbors were making up a river and harbor bill. It was intimated to me that I could get a project into that bill. I am now talking to the gentleman from New York [Mr. DEMPSEY] and others. "Well," I said, "I am not interested in rivers and harbors. There are no navigable streams in my district or State." They replied, "Oh, that does not make any difference. You can get an item in the bill just the same." Well, I had the name of a stream that ran through my district—a name that sounded good—and so I got it in for a survey, one of these preliminary surveys that was not going to cost the Government a sou.

Years after—five or six years after that—some young men representing the War Department spent months along the banks of that stream.

Mr. MONDELL. Was there good fishing?

Mr. CAMPBELL of Kansas. There were ponds in it during the summer that had fish.

Mr. DEMPSEY. Did the gentleman furnish the name of the stream and of the men so that they could be reported to the War Department?

Mr. CAMPBELL of Kansas. They made the survey authorized by this Congress.

Mr. FAIRCHILD. Will the gentleman give us the name of the stream?

Mr. CAMPBELL of Kansas. The Neosho.

Mr. LONGWORTH. We do not believe it. "There ain't no such name."

Mr. HAWLEY. Does not the gentleman know that the system has been entirely changed since that occurrence?

Mr. CAMPBELL of Kansas. Oh, no. The system only changed in this House when those practices became so odious to the country that they had to stop. Now they are putting in a lot more of surveys in this bill in order to secure support for a bill that should command the support of this House because it is meritorious. It is a cheap way of securing support for a bill.

Do not let anybody convince you that these surveys are not going to cost anything. They are. There is no question about it.

Mr. BEGG. Mr. Chairman, I make the point of no quorum.

The CHAIRMAN. The gentleman from Ohio makes the point there is no quorum present. The Chair will count. [After counting.] One hundred and two Members are present, a quorum.

Mr. LAYTON. Mr. Chairman, I rise to support the pro forma amendment of the gentleman from Oregon.

Mr. GERNERD. I move to strike out the last word.

Mr. LAYTON. As a member of the committee, I would like to have the floor.

Mr. GERNERD. I did not know that the gentleman was a member of the committee.

The CHAIRMAN. The gentleman from Delaware is recognized in opposition to the pro forma amendment offered by the gentleman from Oregon [Mr. HAWLEY].

Mr. LAYTON. Mr. Chairman and gentlemen, we are having a nice little tempest in a teapot, and it is very plain as to who is raising the tempest. I ask the Members of this House that they consider what this opposition means; where all the disturbance begins, and to what it is tending. It is not due, so it is said, to an opposition to the real bill. It is due to some matters of an incidental and negligible character—mere surveys. If the gentlemen who are interested in raising this disturbance against this bill want to go back to the vote that was taken, whereby certain gentlemen were offended not long ago in this House, let them come out frankly and say so. There is nothing in this fuss that is going on here about surveys, when surveys constitute an immaterial part of the bill. And the bill ought to be considered before this House on its merits. The committee has given honest, conscientious consideration to the bill, and deserves better treatment at the hands of certain gentlemen in the House. [Applause.]

Mr. ANDREWS of Nebraska. Will the gentleman yield for a question?

Mr. LAYTON. Yes.

Mr. ANDREWS of Nebraska. Having passed a bill carrying an appropriation of $42,000,000, what are the specific public necessities that call for a levy of $37,000,000 more of liability upon the country at this time?

Mr. LAYTON. In the judgment of the standing committee of this House that is composed of intelligent men, who have just as much right to report a bill to this House as any men who belong to any other committee, for the good of the country. Moreover, the gentleman's question is an assumption.

Mr. ANDREWS of Nebraska. That is no answer.

Mr. HAWLEY. Mr. Chairman, I ask unanimous consent to withdraw the pro forma amendment.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn.

There was no objection.

Mr. MONDELL. Mr. Chairman, can the gentleman from Connecticut [Mr. FREEMAN] give us some information as to the nature and character of the stream which he proposes to have——

The CHAIRMAN. The gentleman from Wyoming moves to strike out the last two words.

Mr. MONDELL. It seems to me, Mr. Chairman, that the committee is entitled to some information.

The CHAIRMAN. The Chair wishes to say to the gentleman from Wyoming that debate was exhausted when the pro forma amendments were withdrawn. The Chair was trying to follow the parliamentary practice of the House.

Mr. MONDELL. Will the gentleman from Connecticut yield? Do I understand the gentleman does not desire to give any information to the House?

Mr. FREEMAN. I will say to the gentleman and members of the committee that I know nothing about the amendment I offered. It was offered by direction of the committee.

Mr. MONDELL. I understand the chairman of the subcommittee that examined these cases——

Mr. FREEMAN. Those are printed in the bill. But these are amendments that have come in since the bill was printed, and have been passed upon by the full committee and not by the subcommittee alone.

Mr. MONDELL. The gentleman has no information, then, in regard to them?

Mr. FREEMAN. On that particular amendment that I offered I have not—the last one, the one in Connecticut. I know about the Westport Harbor and Guilford Harbor, but aside from that I know nothing about the amendment I have just offered.

Mr. MONDELL. How many amendments has the gentleman?

Mr. FREEMAN. About a dozen more.

Mr. GERNERD. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Pennsylvania is recognized.

Mr. GERNERD. Mr. Chairman, first, I ask unanimous consent to revise and extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to revise and extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. GERNERD. Mr. Chairman and gentlemen, I am going to try and divert your attention from this vacillating subject for a few moments to the subject of the emergency tariff bill and its effect on the importation of farm products.

Mr. STEVENSON. This is under the five-minute rule, is it not?

The CHAIRMAN. Yes; the gentleman has been recognized for five minutes.

Mr. STEVENSON. I make the point of order that the gentleman is not in order under the five-minute rule if he is going to discuss the emergency tariff.

Mr. GERNERD. Well, I am in favor of this bill.

The CHAIRMAN. The gentleman will confine himself to this amendment. The committee will be in order.

Mr. GARNER. Mr. Chairman, will the gentleman yield?

Mr. GERNERD. I will.

Mr. GARNER. Let me suggest to the gentleman, with all due deference to him, that it appears that the committee is not anxious to hear what he is saying on the tariff. Why does he not ask unanimous consent to extend his remarks in the RECORD on the tariff?

Mr. GERNERD. I will say to the gentleman very kindly that I have been here regularly and have listened patiently to many speeches from the gentleman from Texas and a great many of his colleagues from the South, and I think they would be very much interested in hearing what I have to say about the results of the emergency tariff.

Mr. GARNER. The gentleman has never heard the gentleman from Texas speak upon anything that was not pending.

Mr. ARENTZ. Mr. Chairman, will the gentleman yield?

Mr. GERNERD. Yes.

Mr. ARENTZ. The gentleman from Texas was referring only a few minutes ago to the question of reclamation. I suggest that that, too, was a question foreign to the subject matter of the pending bill.

Mr. GERNERD. Yes. I wish to say he also spoke of the election in Pennsylvania. I will say to the gentleman that we had an election there, and it was a very wholesome one, and I favored Gifford Pinchot for governor, if he cares to know. [Applause.]

Mr. CHINDBLOM. Mr. Chairman, will the gentleman yield?

Mr. GERNERD. Yes.

Mr. CHINDBLOM. The gentleman is making a survey of the results of the emergency tariff?

Mr. GERNERD. Yes. I shall shortly proceed to do that very thing.

Mr. STEVENSON. Mr. Chairman, will the gentleman from Pennsylvania yield?

Mr. GERNERD. I shall be very happy to, although I may have to ask for additional time.

Mr. STEVENSON. I want to ask the gentleman if he has noticed that the one southern product that is protected in that emergency tariff bill, to wit, long-staple cotton, has been imported to a greater extent in the first eight months of this fiscal year under the emergency tariff that ever was imported before in one single year in the history of the country when there was a tariff?

Mr. GERNERD. That is a fact which is gratifying to know. It has brought that much more income into the United States Treasury.

Mr. STEVENSON. I thought the gentleman wanted to stop competition with our home products. They have imported 254,000 bales in eight months, when they never did anything like that before.

Mr. ANDREWS of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. GERNERD. Yes.

Mr. ANDREWS of Nebraska. It shows that Republican prosperity has struck the South?

Mr. GERNERD. Yes.

Mr. BUTLER. Go ahead. I suggest to my friend not to yield, but to keep the floor.

Mr. GERNERD. Mr. Chairman, frequently one hears the question put: Has the emergency tariff worked out? Has it given relief to the farmer? Has it reduced the importation of foreign products? Have the results justified the hopes of its advocates? To all of these questions I reply by saying that it has had a marvelously wholesome effect in reducing imports and in stimulating the demand for our domestic farm products. It appears almost inconceivable that this measure was not put into effect a year earlier, when our markets were flooded with the world's surplus of farm products, for it was only in our market that the foreigner could sell for cash and for a currency that had not depreciated. During the calendar year 1920 we imported $1,660,000,000 worth of products which came in direct competition with those of our farmers, and at a time when they had exerted their greatest efforts in maximum production under the stimulus of the war and when he still had on hand large unsold crops occasioned by the sudden ending of the war. Immediately the markets of our farmers were broken, and the worst deflation known to economic history began. It is estimated that in the year 1920 the farm products of the United States depreciated the colossal sum of $7,000,000,000. Is it any wonder, then, that our farmers were financially paralyzed when they practically realized nothing from their crops and the live stock which they had produced at the peak of the cost of production? Under such circumstances it was but natural that distress, bankruptcy, and hardships of the severest character became the unhappy lot of the American farmer. Such a condition inevitably spells disaster, and it became imperative that Congress pass legislation that would speedily lessen the rigors of such a disheartening situation.

The 45,000,000 people engaged in agriculture and stock raising were employed in a business which formed the very basis of American prosperity. Their great misfortune almost immediately reflected itself in the business of the Nation and greatly reduced its vitality, with the result that it hastened the great depression that we have suffered during the past year and a half.

I am satisfied that if the existing duties on farm products and live stock had been in effect at the close of the World War we should have been spared the drastic losses that we have sustained. Our decline from war prices would have been gradual, and our domestic consumption would have largely taken care of our production.

I have carefully analyzed the importations for 1920 and of 1921, and I believe that you will agree with my observations; but in order that you may have the facts more clearly before you I shall discuss a number of the more important farm products that have been primarily affected during the operation of the emergency tariff.

POTATOES.

There is no question but that we can produce all the white or Irish potatoes that our people require at a fair and reasonable price to the consumer. We have very few localities that are not adapted to the growing of potatoes in the United States, but we have a number of States where the soil and climatic conditions are especially favorable to the growing of this very nutritious food product. They are Maine, New York, Pennsylvania, Michigan, Minnesota, Colorado, Idaho, Virginia, and California. Our normal annual productions during the past five years have been about 375,000,000 bushels. Nevertheless, in view of these facts, we imported, principally from Canada and Denmark, in the year 1920, 12,526,620 bushels. Potatoes being a perishable product, must be disposed of within a period of six to eight months after their harvesting. Therefore the farmer is unable to store his crop, and is compelled to ship to market after harvest and frequently at a time when

prices are most unfavorable. He has often been subjected to the most vicious competition through the importation of foreign potatoes, imported by the produce merchants of the larger cities for speculative purposes, and at times intended solely to depress the market.

It can readily be seen what effect a cargo of several hundred thousand bushels of potatoes shipped from Denmark will have upon the Philadelphia and the New York markets, or the unloading of 500,000 bushels on the Chicago market from Canada. Whenever the potato market is impaired by such practices its recovery is naturally very slow, requiring weeks and sometimes months before a normal price level is reached, with the result that great harm is done to the shipper. Frequently such situations were created, and they were comparatively easy to create, while our markets were free and open to the world. The effect of the emergency tariff of 25 cents per bushel upon the importation of this product is rather interesting. During the month of May, 1921, which was the last month that potatoes were imported free, we imported 173,643 bushels, whereas the importations dropped the very next month after duties had gone into effect to 23,805 bushels. The statistics of imports for the corresponding seven months of 1920 and 1921, beginning with the month of June of each year, show that our decline of imports during this period amounted to 1,783,459 bushels:

Free of duty, 1920.		*Duty of 25 cents per bushel, 1921.*	
June	399,637	June	23,805
July	65,400	July	5,122
August	268,847	August	55,214
September	236,696	September	116,249
October	443,170	October	160,536
November	615,612	November	136,865
December	321,334	December	69,446
Total	2,350,696	Total	567,237

Decrease of imports for seven months, 1,783,459 bushels.

WHEAT.

It is most interesting to examine the importations of wheat for the years 1920 and 1921. In the year 1920 we imported 35,808,668 bushels of wheat for domestic consumption, practically all of which came from Canada, but to this total should be added 3,555,757 bushels more, for the reason that this amount was imported in terms of flour, thereby making the actual total for 1920, 39,354,213 bushels. From September 1, 1920, up to June 1, 1921, at which time the emergency tariff went into effect, the most active influences were at work, for during that period we imported 50,335,818 bushels of wheat. This does not include the grain shipped through the United States by Canada for export through our American ports, for all of this wheat was shipped in bond. I make mention of this fact in order that no doubt may arise in the mind of anyone as to the actual quantity that came into direct competition with our own domestic product.

In view of these figures who can successfully contend that this large importation of wheat did not influence and affect the price of wheat in this country? How effectually this great flow of wheat into the United States was stopped by the emergency tariff act is evidenced by the table below, which shows an immediate drop from the month of May, 1921, which was the last month wheat was imported free of duty, of from 1,902,667 bushels to 89,807 bushels for the month of June, 1921, the first month that a duty of 35 cents per bushel was imposed. The comparative figures for the corresponding seven months of 1920 with those of 1921, after the tariff became effective, show a decisive drop of imports amounting to 27,911,203 bushels:

Free, 1920.		*Duty of 35 cents per bushel, 1921.*	
January	756,228	January	4,504,856
February	534,692	February	4,403,712
March	665,154	March	2,671,043
April	227,284	April	4,451,304
May	474,891	May	1,902,667
		DATE EMERGENCY TARIFF TOOK EFFECT.	
June	283,010	June	89,807
July	100,334	July	713,669
August	364,827	August	239,559
September	1,842,397	September	81,031
October	9,802,149	October	878,115
November	9,522,578	November	1,184,776
December	11,235,112	December	2,052,247
Total	33,150,407	Total	5,239,204

Decrease of imports for seven months beginning June 1, 1921, 27,911,203 bushels of wheat.

IMPORTS OF CONDENSED AND PRESERVED MILK AND CREAM.

I am certain that the producer of milk in our country is welcoming the beneficial influence that the emergency tariff is exerting upon the demand and price of his product. We all appreciate the great hazard and arduous labor that is involved in the production of milk. His herds of cows are constantly in danger of being subjected to quarantine and the most rigid sanitary laws are being enforced in order to insure a pure milk supply. I am sure that we have no industry that is watched and guarded with such vigilance as is that of the dairy industry of America. Marvelous progress has been made in building up the finest milk-producing cows in the world and thereby insuring the health of our infant population. Surely these farmers are entitled to our encouragement and protection against unfair foreign competition. In 1920 we imported 23,755,780 pounds of condensed and preserved milk and cream free of duty. During the month of May, 1921, we received from foreign countries 2,684,392 pounds free of duty, whereas the following month—being the month of June, 1921—after a duty of 2 cents per pound was imposed, the imports dropped to 354,681 pounds. What a marked contrast is shown by the comparative figures of imports during the corresponding periods of the seven months of 1920 and 1921.

Free of duty, 1920.		*Duty of 2 cents per pound, 1921.*	
June	4,196,279	June	354,681
July	4,584,718	July	623,398
August	2,628,895	August	594,007
September	1,190,632	September	3,501
October	1,560,298	October	34,963
November	978,867	November	43,390
December	962,242	December	1,491
Total	16,101,931	Total	1,655,431

Difference, 14,446,500 pounds.

BUTTER AND OLEOMARGARINE.

The statistics concerning importation of butter and oleomargarine are rather illuminating. Being a part of the dairy industry, it naturally follows that a free market would have a marked influence upon the price of this all important food product. Again, a tariff duty of 6 cents per pound showed a decrease in importation of butter during a period of seven months of 1921 over the corresponding months of 1920 of 18,937,940 pounds. During the year 1920 we imported free of duty 37,454,172 pounds.

Free of duty, 1920.		*Duty of 6 cents per pound, 1921.*	
June	3,186,559	June	33,884
July	8,311,404	July	191,748
August	2,737,265	August	149,886
September	2,574,064	September	397,929
October	2,455,315	October	1,858,409
November	2,798,684	November	1,925,560
December	4,033,754	December	2,601,689
Total	26,097,045	Total	7,159,105

Decrease of imports for seven months beginning the 1st of June, 1921, of 18,937,940 pounds.

CORN.

We all know that the United States is the world's great producer of corn. About 70 per cent of the entire corn crop of the world is grown in this country. Not over 20 per cent ever enters the channels of trade, and practically all of this is sold in the Eastern and Southern States. The Atlantic seaboard receives all the imported corn. The question then arises, Why should there be any need for a duty on corn? The answer naturally follows, To prevent speculators from depressing the natural market price of this product.

Why should we import corn from the Argentine, 6,000 miles from our eastern ports, if for any other reason than to create an artificial market and thereby lessen the price of corn for speculative purposes?

In 1920 we imported 7,784,482 bushels of corn, 7,028,422 bushels of which came from Argentina. All of this importation had a very serious influence upon the price of corn grown in Pennsylvania and Ohio. How quickly the importation of corn ceased with the enactment of the emergency tariff which put into effect a duty of 15 cents per bushel. The marvelous decline of importation for the corresponding seven months of 1921 as compared with those of 1920 amounts to 6,548,876 bushels:

Free of duty, 1920.		*Duty of 15 cents per bushel, 1921.*	
June	937,204	June	17,615
July	2,343,445	July	17,671
August	1,300,418	August	5,366
September	1,066,449	September	3,137
October	608,064	October	472
November	128,600	November	1,086
December	166,125	December	6,082
Total	6,600,305	Total	51,429

Decrease of imports for corresponding seven months of 6,548,876 bushels.

FRESH LAMB AND MUTTON.

One of the most startling injustices ever inflicted upon a great and sturdy people—the cattle and sheep growers of America—occurred when our markets were flooded by the importation of more than 100,000,000 pounds of fresh lamb and mutton during 1920 from New Zealand and Australia. They dumped their surplus supplies upon our market and thereby nearly ruined our sheep industry. The disastrous effect of this cruel and un-

warranted competition will require years of courageous effort to rehabilitate this important business. If we had had a protected market I am positive we should never have had this sad experience. How any American can advocate an open market after acquainting himself with all these facts and the suffering that it brought to the cattlemen of the West and Southwest is beyond my understanding. Beginning with the 1st of June, 1920, and comparing the imports with the corresponding imports of these products for 1921, for a period of seven months, we shall, in a measure, be able to appreciate the significance of this unrestricted competition.

Free of duty, 1920.		*Duty of 2 cents per pound, 1921.*	
June	2,033,200	June	103,826
July	5,181,526	July	113,801
August	13,956,578	August	617,243
September	18,460,700	September	1,237,402
October	27,024,972	October	1,301,338
November	13,791,198	November	1,244,103
December	10,648,347	December	1,416,208
Total	91,096,521	Total	6,033,921

Decrease of imports for seven months amounted to 85,062,600 pounds.

In view of the foregoing facts and figures how happy all must be who helped to enact this important legislation into law. It has dissipated every argument advanced against a protective tariff for farm products.

Personally I never agreed with the theory that a protective tariff should only apply to manufactured articles. The farming industry is just as essential to the well being of our country as are the great industrial plants of the Nation. The one is dependent upon the other. If the tariff is a good thing for the steel mills, the silk mills, the woolen mills, and the cotton mills, why then should it not be equally good for the farmers who raise potatoes, wheat, cotton, wool, milk, and all other farm products?

Our recent agricultural depression demonstrates this fact, and I confidently trust that the great inequality that has existed since 1913 may never again happen. If the Underwood tariff law enacted in 1913 under the Wilson administration had not placed all farm products upon the free list, I am positive the shock to our farming industry and its resultant harmful effect upon the Nation would not have been so severe. Let us take heed of this costly experience and resolve in the future to protect as well as preserve all the industries of this common country of ours. [Applause.]

The best market in the world is our own. We export but 15 per cent of our production. Why seek those distant and uncertain markets, far removed from our shores, while the American market waits upon us for action? Why not put our own strength to the test by stimulating mutual confidence and putting into effect the great dynamic energy that so successfully brought us to an early victory when the hope of triumph appeared afar off?

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. GERNERD. I ask that my time may be extended.

Mr. LINEBERGER. Mr. Chairman, I ask unanimous consent that the gentleman's time be extended five minutes.

Mr. LINTHICUM. Mr. Chairman, I make the point that there is no quorum present.

The CHAIRMAN. The gentleman from California asks unanimous consent that the gentleman's time may be extended five minutes, and the gentleman from Maryland makes the point of no quorum. The Chair will count. [After counting.] Two hundred and one Members are present—a quorum.

Mr. LINEBERGER. I ask unanimous consent that the time of the gentleman from Pennsylvania [Mr. GERNERD] be extended five minutes.

The CHAIRMAN. Is there objection?

Mr. LINTHICUM. I object.

The CHAIRMAN. The gentleman from Maryland objects.

Mr. STEENERSON. Mr. Chairman, is there any time on this amendment?

The CHAIRMAN. All time on the pending amendment has expired.

Mr. STEENERSON. I move to strike out the last word.

The CHAIRMAN. That is not in order.

Mr. STEENERSON. I just wanted to stay a word about these surveys; but I suppose I will have to wait until the next item is read.

The CHAIRMAN. Without objection the pro forma amendment will be withdrawn. The question is on the amendment offered by the gentleman from Connecticut [Mr. FREEMAN].

The question being taken, on a division (demanded by Mr. FREEMAN) there were ayes 45, noes 35.

Mr. LONGWORTH. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Ohio makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred Members present, a quorum.

Mr. LONGWORTH. I ask for tellers, Mr. Chairman.

Tellers were ordered, and the Chairman appointed Mr. FREEMAN and Mr. LONGWORTH.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, a parliamentary inquiry. Is this a vote on the amendment?

The CHAIRMAN. This is a vote on the amendment.

The committee again divided; and the tellers reported—ayes 53, noes 32.

Accordingly the amendment was agreed to.

The clerk read as follows:

Big Timber Creek, N. J.

Mr. STEENERSON. Mr. Chairman, I move to strike out the last word. I just wish to make a few remarks on the question of these surveys. I have had several surveys in the river and harbor bill in past years. I have had several preliminary examinations of rivers and harbors, and I have never yet known of one that did not cost something. I think the statement that has been made here that it is absolutely without any expense, that all that is necessary in most instances is to write a letter or two, is inaccurate. It may be so in some cases, but I have known of none in my experience of 20 years. I have known preliminary surveys to cost a good many thousands of dollars and to result in adverse reports, so that there was no subsequent detailed survey made.

Mr. MONDELL. Would the Chief of Engineers be doing his duty if he did not make a survey when the Congress had ordered it made?

Mr. STEENERSON. Naturally, the Congressman who is instrumental in getting the item inserted in the bill will insist on the survey. It is rarely refused. In one case I recall the report on the preliminary survey was adverse. The first proposition was to improve the river for navigation by means of a reservoir system, and in the next river and harbor bill I got an item inserted for a survey to improve the river generally for navigation. That was also turned down on the preliminary examination. The last time I got an item inserted in the river and harbor bill providing that this survey should be made with a view not only to the improvement of the river for purposes of navigation but with a view to preventing floods and for purposes of drainage, in cooperation with local interests. That survey went through and cost something like $5,000.

A detailed survey was made with plans and estimates, and as a result the recommendation was made that drainage and flood prevention part of the project amounted to nine-tenths of the last improvement. That the interests of navigation would be improved by only a very small extent. I think the total improvement was estimated to cost $800,000, and that the improvement to navigation would amount to only $10,000. So you see the item of improvement to navigation was very small indeed. The improvement is now going on at the expense of more than $1,000,000, and will reclaim hundreds of thousands of acres of land, besides improving river navigation.

So these preliminary surveys are not as they have been represented here. They may be quite expensive, and I have known a preliminary survey costing a considerable sum to result in an adverse recommendation. You may insert such an item here without any knowledge as to what the proposition is. An item has just been adopted, and the gentleman offering it says he knows nothing about it. Nobody on the committee seems to know anything about it. It is simply an accommodation to a member. A member of the committee stated on the floor jocularly that all he needed was that somebody ask for a survey, and he said, "All right, let us put it in."

Now, I don't believe that ought to be done; I do not think the Government would be justified in spending its money blindly without any information as to the merits.

Mr. LAYTON. Upon what basis did the gentleman proceed in the first place when this proposition was turned down, as he says, three times?

Mr. STEENERSON. It was a scheme to improve navigation by means of reservoirs. It was meritorious, but not sufficiently important as a navigation proposition. The next survey of the same river resulted in the adoption of a plan or project valuable for reclamation by drainage and flood control, and the cost of that part of the project to be assessed against the land instead of charged to the Government.

Mr. LAYTON. Then the gentleman's scheme depended upon something that he knew nothing about.

Mr. STEENERSON. No. It depended on the cooperation of local interests, which pay nine-tenths of the cost, the Government only paying for improvement of navigation.

I protest against including items for surveys unless some one can give information and assurance that there is merit in the project.

Mr. WATSON. Mr. Chairman, I move to strike out the last word. The gentleman from Wyoming stated many of us are not directly interested in the development of rivers and harbors. Many of us are not directly interested in the sagebrush of the Middle West, but by reciprocity between the East, the West, the North, and the South, the one helping the other, it has developed a great Nation, until to-day we are the strongest Republic in the world. [Applause.] We are richer than any empire every known in the history of man. [Applause.] Although very much has been said against the surveys, I want to emphasize the wisdom of the committee in authorizing a survey of the Delaware River from Trenton to Easton.

Mr. MONDELL. Will the gentleman yield?

Mr. WATSON. Yes.

Mr. MONDELL. Will that survey cost anything?

Mr. WATSON. Of course it will.

Mr. MONDELL. I understood that the survey did not cost anything.

Mr. WATSON. All surveys do.

Mr. MONDELL. How much does the gentleman think it will cost?

Mr. WATSON. I do not know how much it will take. The cost, of course, will depend upon the time required, and the Government will pay the bill.

Mr. MONDELL. It would cost money, of course.

Mr. WATSON. Let me give an experience. A few years ago the Rivers and Harbors Committee authorized the survey of the Delaware River from Philadelphia to Trenton. That survey was made by Colonel Ledue. The Government brought him from the West that he would not be under the influence of the people of the East. Colonel Ledue was probably three months in making that survey, and he submitted a very extended report. He employed an assistant, several clerks, had a yacht at his command, and, of course, it cost money. He made an adverse report, but we appealed to the Committee on Commerce, which reversed the report because it believed in the development of the Delaware River and that it would be beneficial to the State of Pennsylvania as well as to the Federal Government.

In 1869 Congress appropriated a certain amount of money to deepen the channel 6 feet between Philadelphia and Trenton. No doubt at that time the Members of Congress opposed it, as they are opposing such appropriations to-day. In 1909 it was found that the channel was not deep enough, and there was an appropriation for a 12-foot channel. The result was that in 1919 over 800,000,000 tons of commodities were transported to and from Trenton. That city recently expended over $1,000,000 for terminal facilities. Now we want an 18-foot channel. There will be a fight against that, but it will come later.

The idea of developing the upper Delaware from Trenton to Easton will be on account of the coal mines, the great cement industries, the stone quarries, the fertile lands on either side of the banks, which produce agricultural products for the great cities of Philadelphia and New York, and I believe it is a wise thing to develop the upper Delaware River, and I congratulate the committee upon its action. [Applause.]

The CHAIRMAN. The pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

Northeast River, Md.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. Is there any gentleman on the committee who can give us some information in regard to this particular stream that it is proposed to have surveyed? I think these surveys ought to be made where there is some probability of developing navigation.

Mr. GOLDSBOROUGH. What stream does the gentleman refer to?

Mr. MONDELL. Any one of these streams, if the gentleman knows about them.

Mr. GOLDSBOROUGH. Northeast River, Md., is off the upper part of Chesapeake Bay, and is navigated principally by fishing vessels.

Mr. MONDELL. I am glad to have the information from the gentleman, but my inquiry was as to what the committee knew about the item and the reason for including it in the bill.

I yield to the gentleman from Maryland. He seems to be the only one who has information, although he is not a member of the committee.

Mr. GOLDSBOROUGH. I am not a member of the committee, but this particular improvement is in my district, which is the Eastern Shore district of Maryland. I gave the gentleman the information about the Northeast River.

Mr. MONDELL. Did the gentleman appear before the committee and make a statement in detail in regard to the stream?

Mr. GOLDSBOROUGH. I will give the gentleman the information about the items, if he desires it.

Mr. MONDELL. Did the gentleman appear before the committee?

Mr. GOLDSBOROUGH. That is a confidential matter between me and the committee which I do not feel disposed to discuss. I am willing to give the gentleman the information.

Mr. MONDELL. I would not have the gentleman discuss anything that is purely confidential. I had supposed that this was public business.

Mr. GOLDSBOROUGH. It is public business; but that question is not germane to the inquiry.

Mr. MONDELL. But if it is purely confidential I would not want the gentleman to divulge it. This is a confidential improvement of a river, I presume.

Mr. LAYTON. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. LAYTON. I can give the gentleman some specific information about one item. I refer now to the Christiana River, Del., from Newport to Christiana. It lies about 6 miles north of the city of Wilmington and it has three towns of considerable size upon its banks. It runs through the midst of a rich farming section, and it is desirable to have it surveyed to determine whether or not that part of the river can be dredged to accommodate a growing industrial and agricultural community.

Mr. MONDELL. Has the stream been improved at all?

Mr. LAYTON. Yes; up to Wilmington and a little beyond it. It runs through a section of the country with no rock of any kind, a section that is easily susceptible to dredging at a very low cost. We are simply asking for a survey to let the experts of the Government determine whether the river shall be further improved.

Mr. MONDELL. This is a very proper item, I should say, for survey.

Mr. LONGWORTH. Can we get some confidential information as to how much this will cost?

Mr. GOLDSBOROUGH. The gentleman can get all the information he desires.

Mr. LONGWORTH. Nobody will say anything outside of this Chamber about it, I assure the gentleman.

Mr. GOLDSBOROUGH. The gentleman can get the information if he wants it. Take Crisfield Harbor: That is the fourth port of entry in the United States, so far as the number of ships, not the size, that enter it is concerned. It is in the lower part of Chesapeake Bay, near the Virginia shore. Black Walnut Harbor, Md., is traversed by the packet boats from Baltimore to the eastern shore.

Mr. MONDELL. I have one other inquiry that I would like to submit to the gentleman: He has given us some valuable and interesting information; what is there about it that is confidential?

Mr. GOLDSBOROUGH. There is nothing about it that is confidential that I know of.

Mr. DEMPSEY. Mr. Chairman. If the gentleman will permit, the gentleman from Wyoming did not ask the gentleman from Maryland to divulge the testimony before the committee, but merely as to whether or not he appeared before the committee.

Mr. GOLDSBOROUGH. He asked for facts.

Mr. DEMPSEY. He asked whether the gentleman appeared before the subcommittee.

Mr. GOLDSBOROUGH. I did not appear before the subcommittee, but I talked to Mr. DUPRÉ, and also to Mr. LAYTON.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. LINTHICUM. Mr. Chairman, I move to strike out the last two words. I think these are very important surveys in Maryland, especially at Crisfield and at Cambridge Harbor. If more Members of this Congress would visit Crisfield and Cambridge and ascertain the amount of shipping done at those points they would readily see that these surveys are necessary. I am always interested in river and harbor bills, especially under the new system of appropriating just what money is necessary to efficiently do the work. I can see no reason why these surveys should not be made, if necessary, and submitted to Congress, because, as has been stated, their necessity will be determined mostly upon data which they have already; and if it is not worth a real survey it will not be provided. This bill does not provide anything particularly for the city of Balti-

more, because the Congress has already been fair and just to Baltimore City, in that it has granted surveys of the harbor and river, so that we are well provided for so far as the present needs are concerned.

You talk about making a river and harbor bill popular with the people and to have them deeply interested in it. I will tell you how to do it, and that is let the people who are benefited by these appropriations and surveys do like Baltimore did—cooperate with the Government in developing its port and its channel. We have appropriated $50,000,000 in Baltimore for improving our harbor and channel. Now let the people in other parts of this country where these improvements are provided and these appropriations are made to carry them into effect cooperate with the Government and show by their own taxation, by their own appropriation, by their own efforts, that the project is worthy, and you will never find any objection on the part of the people with reference to appropriations for rivers and harbors. Let them go down into their pockets as do the people of Baltimore, and you will accomplish great popularity for this bill.

Mr. DEMPSEY. I call the gentleman's attention to part 2, page 2109, of the Report of the Chief of Engineers, and he will see that, as against 98 surveys in this bill, in 1902 there were 170; 1905, 176; 1906, there were 2; in 1907 there were 200; 1909, 274——

Mr. LINTHICUM. I hope the gentleman will not take all of my time, as it will be impossible for me to get any more.

Mr. DEMPSEY. I will get the gentleman additional time.

Mr. LINTHICUM. The gentleman can not do it. I can not yield further. I do not know about the items the gentleman read because he has not stated to me what they are; but I repeat that Baltimore is cooperating and her harbor and channels have been taken care of in the appropriation bill which was passed for the purpose some time ago. Our surveys have been provided for, and we are quite well satisfied at this time. What I want to impress upon this committee is cooperation upon the part of the people who receive the benefit of these appropriations. If they will get busy and appropriate from their own pockets, provide by their own taxation and cooperate with the Government work, we will find no objection on the part of the people of this country to appropriations in a river and harbor bill. [Applause.]

Mr. FAIRFIELD. Mr. Chairman——

The CHAIRMAN. The gentleman is recognized in opposition to the pro forma amendment.

Mr. FAIRFIELD. Mr. Chairman, I want to call the attention of the chairman of the committee to this. This bill makes a wholesale appropriation, and these funds are not distributed, are they?

Mr. DEMPSEY. No.

Mr. FAIRFIELD. I mean authorizations; they are not distributed. How many survey provisions are authorized and under investigation?

Mr. DEMPSEY. I will have to examine to see.

Mr. FAIRFIELD. The gentleman is not aware of the number?

Mr. DEMPSEY. No; I think the reports are pretty well up to date. I do not think there are a very large number of surveys which have not been acted upon, and the reason I say that to the gentleman is that reports which have been referred to the Board of Engineers within a few weeks have been reported back within a few days.

Matters referred to them only a few weeks ago, some in this report, for instance, one in regard to Newark Bay was referred to the engineers only a few weeks ago, and the report was received about two weeks ago.

Mr. FAIRFIELD. Now, will these surveys, if they are authorized, necessitate specific appropriations, or can the money be taken out of the lump sum which has been already appropriated for rivers and harbors?

Mr. DEMPSEY. The military appropriation bill contains a specific item for examination of surveys and contingencies for rivers and harbors, for which there may be no special appropriation, of $325,000, provided that no part of this sum shall be expended for any preliminary examination of a survey project or estimate not authorized by law.

Mr. FAIRFIELD. When authorized, then every one of these projects will take money from the projects already authorized and for which a survey has not been made?

Mr. DEMPSEY. To such extent as may be necessary, but the amounts will be small.

Mr. FAIRFIELD. I know there are some very important ones it might very seriously interfere with.

The Clerk read as follows:

Mulberry Creek, Lancaster County, Va.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. Can the gentleman give us any information in regard to Mattox Creek, Va.?

Mr. DEMPSEY. I am not a member of the committee, but the matter came before the subcommittee, and I should say that the gentleman from Virginia [Mr. BLAND] could give the information.

Mr. BLAND of Virginia. Mr. Chairman, there was a bill introduced by me for a preliminary examination and survey of Mattox Creek. At the time this bill was considered I had other creeks and rivers to be considered, and so I submitted to the subcommittee a written memorandum of the information which had been received by me. I still have that report. I have the Mattox Creek item. I am informed that for many years the creek was used by steamers, but was finally abandoned on account of inadequate depth of water. I am advised that the commerce in that vicinity which can use this stream would aggregate about $150,000. And on that I ask that there be at least a preliminary examination and survey.

Mr. MONDELL. The gentleman says that the stream has been abandoned by commerce.

Mr. BLAND of Virginia. It was abandoned by steamers because it had begun to fill up to such an extent that steamers no longer came up the stream. Commerce would still be on the creek in the way of small boats and fishing craft, and the hope in having this preliminary examination and survey is that it will show that the creek can be dredged out without unreasonable expense to such an extent that it can be used.

Mr. MONDELL. Of course, such a survey as the gentleman in his opinion desires, as in the opinion of Congress, will call for a survey that will take a considerable time to ascertain the measurements and depths, and all that sort of thing, and might cost quite a considerable sum of money.

Mr. BLAND of Virginia. I will say to the gentleman from Wyoming that I have had experience in some of these preliminary examinations and surveys. There were two creeks, or two authorizations, examined in my district. On them the total cost to the Government was probably about $25, because an engineer from Wilmington came down and examined one on one day and examined the other the next. He was accompanied by a stenographer. Hearings were had at night. He was entertained in the community by people living there, and his only cost was his railroad fare from Wilmington to the eastern shore of Virginia and return.

Mr. MONDELL. Was the report favorable or unfavorable?

Mr. BLAND of Virginia. The reports on those cases were unfavorable. There has been a favorable report in one case, but the——

Mr. MONDELL. If the facts were so patent as to the nonnavigability of the stream and the inadvisability of spending public money in the improvement of it, why could not that have been developed here in Washington as well as to have some gentlemen visit the community and enjoy the hospitality of Virginia, and tell the people that it was not navigable and could not be used?

Mr. BLAND of Virginia. Because it was a great deal easier for the people of that country to have one engineer go there and take the evidence of those people than to impose the burden upon those hard-working people to come to Washington and testify before a committee here.

Mr. MONDELL. They did not need to come.

Mr. BLAND of Virginia. They did need to come. The evidence was taken by the engineer on the ground. People were notified, 50 or 100 of them, and in each of these cases, I believe, there were at least 100 people there who testified as to the commerce on those streams, testified as to the commerce in that neighborhood, and as to the benefits to be derived therefrom.

Mr. MONDELL. I hope that will all redound to the credit of our friend from Virginia, although leading to an adverse report. Does the gentleman think that Mattox Creek could be examined for $30?

Mr. BLAND of Virginia. I will answer the gentleman that I believe it could be examined for less, and I was going to give him the reason why I say so. I had other surveys——

Mr. MONDELL. Does the gentleman expect the result of the examination will also be adverse, as it was in the other cases?

Mr. BLAND of Virginia. I hope that it will be granted. It is impossible for me to say what the report will be.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

Mr. BLAND of Virginia. Mr. Chairman, the item for Mulberry Creek was read. I rose at the same time as did the gentleman from Wyoming to offer an amendment to that item.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. BLAND of Virginia: Page 14, line 4, after the word "Virginia," strike out the period and insert a comma and add the words "and entrance thereto from channel of Rappahannock River, Va."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Virginia.

Mr. MONDELL. Mr. Chairman, I think we ought to know something about this amendment. It is highly important to know whether or not this committee is prepared to accept every amendment offered for a survey, without knowledge. I would like to hear from these gentlemen as to the matter of these surveys.

The CHAIRMAN. The gentleman from Virginia is recognized for five minutes in support of his amendment.

Mr. BLAND of Virginia. Mr. Chairman, the bill which I have introduced applied for a survey of Mulberry Creek and the channel connecting that creek with the Rappahannock River. When the committee framed the bill it only framed the bill for a survey of Mulberry Creek. The information which I gave to the committee was to the following effect:

I understand that there is adequate water in the creek itself, but that there are sand bars near the mouth where the creek empties into the Rappahannock River, and these sand bars need to be dredged in order to afford proper transportation facilities. The *proposition* is recommended to me as a necessary one. I understand that the people of that community are largely engaged in fishing and oystering, and an estimate given to me of the business for the year 1920 is in the sum of $300,000, consisting of oysters, lime, lumber, oyster shells, potatoes, coal, gasoline, wood, canned tomatoes, farm products, and general merchandise. I understand that at present the products must be handled on lighters; that about 300 yards need to be deepened to furnish a much-needed harbor for small craft.

The idea is to get rid of these bars, which are 300 feet long, so that there will be an open entrance to that creek.

Mr. DEMPSEY. How long is this channel?

Mr. BLAND of Virginia. The creek is of considerable size.

Mr. DEMPSEY. What about the channel?

Mr. BLAND of Virginia. The channel to be dredged is about 300 yards.

Mr. BUTLER. How wide is this creek?

Mr. BLAND of Virginia. I really do not know. I have not seen it myself. I speak only from information that has been given to me.

Mr. MONDELL. How wide is the channel?

Mr. BLAND of Virginia. I want to say to the gentleman from Wyoming that this stream, which is designated here as a "creek," would appear to the people of Wyoming as great as the Atlantic Ocean. [Laughter.] It is as wide almost as the Potomac River.

Mr. MONDELL. The gentleman is long on assertion but short on argument.

Mr. BLAND of Virginia. Well, the gentleman can place any interpretation he pleases on what I have said.

Mr. LONGWORTH. Is the committee in favor of this amendment?

Mr. DEMPSEY. I think the committee is opposed to the amendment, but I have not given it consideration.

Mr. LONGWORTH. We desire, you know, to follow the committee. [Laughter.]

Mr. DEMPSEY. I have no knowledge as to the necessity for a survey.

Mr. LONGWORTH. Then the gentleman advises that we oppose the amendment?

Mr. DEMPSEY. I would not so advise the gentleman, but if he desires to do so he can.

Mr. LONGWORTH. Will the gentleman suggest that we vote against it?

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the Chairman announced that the "noes" appeared to have it.

Mr. BLAND of Virginia. Mr. Chairman, I call for a division.

The CHAIRMAN. The gentleman from Virginia calls for a division.

The committee divided; and there were—ayes 31, noes 43.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

Mr. ANDREWS of Nebraska. Mr. Chairman, I object to the vote on the ground that there is no quorum present.

The CHAIRMAN. The gentleman from Nebraska makes the point that there is no quorum present. The Chair will count. [After counting.] One hundred and six Members are present, a quorum. The Clerk will read.

The Clerk read as follows:

Onancock River, Va.

Mr. MONDELL. Mr. Chairman, can some member of the committee give us some information in regard to this river in Virginia?

The CHAIRMAN. The gentleman from Wyoming moves to strike out the last word.

Mr. DEMPSEY. Mr. Chairman, my understanding was that this bill was to be considered by sections. We are now on the ninth section, and the section has not been completely read.

Mr. LONGWORTH. Mr. Chairman, the gentleman asked unanimous consent himself to have the bill read by paragraphs.

The CHAIRMAN. The Chair will state that it was the order of the committee that the bill should be read by paragraphs. It is a reasonable request to make for information.

Mr. BLAND of Virginia. What is the item concerning which the gentleman asks?

Mr. MONDELL. Onancock River, Va.

Mr. BLAND of Virginia. Onancock River was passed, but I will be very glad to give the gentleman what information I have. I shall not try to make arguments of facts, but I will try to give facts.

This is an existing project, but the channel provided for in the existing project is a channel across the outer bar, a distance of 1,000 feet, 200 feet wide, 8 feet in depth at mean low water, and for straightening the river channel by cutting off projecting shoals to a depth of 7 feet at mean low water. It is desired to increase the depth at bar to 9 feet, and otherwise to 8 feet. The waterway is a very important one.

Mr. MONDELL. What is the gentleman reading from?

Mr. BLAND of Virginia. I am reading from the memorandum I gave to the subcommittee on surveys of the Committee on Rivers and Harbors, which memorandum collected the information that was in my possession at that time, and which is as complete information on the subject, in a few words, as I am able to give the gentleman. This is a copy of the paper that I gave to the members of the subcommittee.

Mr. DEMPSEY. Will the gentleman yield?

Mr. BLAND of Virginia. Yes.

Mr. DEMPSEY. I will suggest also that he will find the matter treated in part 1 of the report of the Chief of Engineers at page 590.

Mr. BLAND of Virginia. Yes.

Mr. MONDELL. If this river has been improved, why is another survey necessary?

Mr. DEMPSEY. We sometimes make second improvements on rivers and harbors throughout the United States. That is not an uncommon practice.

Mr. MONDELL. If the river is being improved, I should assume that they would know something about it.

Mr. DEMPSEY. As has been stated, it began in the Delaware River with an improvement to a depth of 6 feet, and then they got to a depth of 12 feet, and then it went to a depth of 18 feet. River and harbor improvements are progressive, and sometimes they find, for instance, that they have to improve up to a wharf where a wharf had not been placed before. Great industries grow up along the stream and they make necessary corresponding improvements.

Mr. MONDELL. My recollection is that where that is done the item specifically provides for the character and purpose of the survey. Here is a stream that has been partly improved, and I understand from the gentleman from Virginia that the purpose is to improve it to a greater extent or in some other part of the stream.

Mr. BLAND of Virginia. To increase the depth.

Mr. McLAUGHLIN of Michigan. The engineers will recommend the improvement of a river or harbor in a particular manner and to a particular extent. The Congress of the United States adopts that recommendation, and that becomes a project. When it is carried out and completed, the authority of the engineers over that project ceases. If the project is to be changed in extent or character, it must have authority to make a survey to determine whether or not it is advisable to the extent of the proposed change.

Mr. MONDELL. I think we understand that; and yet, if the gentleman will allow me, it occurs to me that where a river has been improved and it is the purpose to make still further improvement, the item for the survey ordinarily makes some reference to and provision for the character of the new survey.

The CHAIRMAN. The time of the gentleman from Wyoming has expired. Without objection, the pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

Mattaponi River, Va., from Walkerton to Aylett.

Mr. LOWREY. Mr. Chairman, I offer an amendment, which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from Mississippi offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. LOWREY: On page 14, between lines 10 and 11, insert the following paragraph:

"Tallahatchie and Coldwater Rivers, Miss., and the tributaries of these rivers, with a view to devising plans for flood protection and determining the extent to which the United States should cooperate with the State and other communities and interests in carrying out such plans, its share being based on the value of protection to navigation."

Mr. LOWREY. Mr. Chairman, I agree with the gentleman from Wyoming [Mr. MONDELL], and I voted against the increase of the appropriation to $42,000,000, because I did not believe in wasting money on small streams and unnecessary projects; but the situation here is just this: The hill country extends away to the east and slopes very much like this floor, and there have been a lot of drainage districts organized, and the creeks up there have been straightened by means of canals, and the water rushes rapidly from those hills, and when it reaches the Mississippi bottom, in this flat country, in the last two or three years the flood waters have spread out over everything. In this way a great deal of valuable land is being ruined. Legally these streams are navigable. The Government has appropriated money in the past to keep them open, and there has been a little navigation on them. So they are under Government control and not local control. The people there are desperately anxious to get at some means by which they can cooperate with the Government to protect their lands from the floods and still, if desired, keep these streams open as navigable streams.

Mr. MONDELL. Will the gentleman yield?

Mr. LOWREY. Yes.

Mr. MONDELL. Is not this more a matter for the Committee on Flood Control rather than the Committee on Rivers and Harbors?

Mr. LOWREY. I have an idea that it would go to the Flood Control Committee, but the matter has to do with navigation of these rivers, and that will have to be disposed of. The amendment asks for a survey in order that they may determine between the National Government, the State, and so forth, as to the extent to which each shall participate in protecting that country from these rivers.

Mr. LONGWORTH. Has the gentleman presented his amendment heretofore to the committee?

Mr. LOWREY. Yes; I went with my map twice to the committee room with the amendment. The committee had accepted the amendment, but when they began to make so many objections to the committee amendments I took it back from the committee and have offered it myself.

Mr. LONGWORTH. The gentleman received his amendment from the gentleman from Connecticut [Mr. FREEMAN]?

Mr. LOWREY. Yes.

Mr. LONGWORTH. The gentleman from Connecticut would have offered it?

Mr. LOWREY. I left it with the committee.

Mr. DEMPSEY. The committee has taken no action as a committee in regard to it, but I am going to ask for some information.

Mr. LONGWORTH. The gentleman from Mississippi says it was authorized by the committee.

Mr. CAMPBELL of Kansas. The gentleman from Connecticut said he presented a committee amendment, and the gentleman from Mississippi said that he got the amendment from the gentleman from Connecticut.

Mr. LOWREY. I want to state that I went twice to the committee room with my map, and on yesterday morning when they had their final meeting I went to present it to the full committee; but they were very busy. I had given it to the chairman and the secretary, and we had gone over it, and I told them that if they wanted any further information I was ready to give it to them.

Mr. LONGWORTH. Was the objection of the committee based on the large cost for such a survey?

Mr. LOWREY. I do not think it would be very large. The citizens who have written me seem to want the Government to adopt some plan by which matters can be adjusted between the State and the Government. They expect to bear their share when they have authority to do what is agreed to be done.

Mr. LONGWORTH. I thought by the reading of the amendment that it not only called for a survey with reference to this creek but to the tributaries, and it occurred to me that the committee might object to it by reason of the cost.

Mr. LOWREY. I would be willing to have the tributaries stricken out. All I want is the survey of the stream.

Mr. DEMPSEY. All I can say is that the committee has not had an opportunity to consider it as a committee. The gentleman came to us a little late, and I am sorry we did not have the time to investigate it.

Mr. LOWREY. I say I got my appeal from the citizens very late; they are in agony now over the flood in that district.

Mr. SISSON. Mr. Chairman, I am somewhat familiar with the situation there. The people themselves want to know what they themselves may do. They do not object at all to paying whatever is necessary or what is right for them to pay, but they want, of course, permission from the Secretary of War or the Federal Government. The only way the Federal Government can determine the matter is by a survey.

Mr. DEMPSEY. Will the gentleman state to the committee in a brief way what is involved in the matter?

Mr. SISSON. I can not tell, of course, how many acres of land are involved.

Mr. DEMPSEY. What are the streams; are they navigable; can they be made navigable?

Mr. SISSON. There are so many streams called navigable which I doubt are navigable, but they are put on the maps as such.

Mr. LONGWORTH. How many streams are involved in the amendment?

Mr. SISSON. Only one stream involved. I presume that they put in the word tributaries because where the other streams come in it may require a little work. How much of this matter is flood control and for protection of the land, and how much relates to the navigation of the river, the survey will determine. I do not believe the people themselves know. It requires no engineering work. It is just a survey to determine how much the Federal Government should pay, if anything.

Mr. DEMPSEY. I understand this involves the Tallahatchie and the Coldwater Rivers. I find that both of these are under improvement. The projects have been adopted, and the facts are set out at page 1157 of Part I of the Report of the Engineers for 1921. They have a small tonnage.

Mr. SISSON. I will state to the chairman that this is not so much a question of importance to the Federal Government, so far as navigation is concerned, as it is to the local property owners. I do think that these people ought to be permitted to know just what they may and may not do.

Mr. DEMPSEY. I will say to the gentleman that in this present bill there is provision for doing certain work up in Wisconsin, the cost of which will be $15,000 to the Government, while to the State of Wisconsin it will be over $700,000. The entire cost, except simply the cost of supervision, is borne by the locality. That is not an infrequent thing, I would say. The commerce on these two streams was $5,000,000 in 1919 and $3,000,000 in 1920.

Mr. SISSON. I say frankly that I do not think there is that much or that there ever will be that much navigation on the Tallahatchie River. That is not the question, but the question is how much will the people be permitted to do themselves, whether or not this can be altogether a reclamation project or how much of it is navigation.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. MONDELL. Mr. Chairman, I rise in opposition to the amendment. I want to ask the gentleman from Mississippi [Mr. SISSON] this question: Does he not think, if we are going to legislate for rivers and harbors, that it would be well to keep the river and harbor bill free from drainage and reclamation projects?

Mr. SISSON. I think so. I agree with my friend about that. There is no difference of opinion about that. This thing does not involve the expenditure of a dollar by the engineers. It is simply a question of a survey for the purpose of classifying the river and this work.

Mr. MONDELL. I shall be very glad to support that in the proper place.

Mr. SISSON. This is the only place to put it.

Mr. LITTLE. How is it classified now?

Mr. SISSON. As a navigable stream.

Mr. LITTLE. That is what is the matter with it, is it not? You want to get it unclassified, so to speak?

Mr. SISSON. Personally, I do not care one way or the other. But it should be either declared navigable or not, as facts are.

Mr. LITTLE. That would be the result of this survey.

Mr. SISSON. I do not know what the result would be. The engineers might say it is navigable.

Mr. MONDELL. It is not going to be the result unless the Congress acts, because a navigable stream is navigable until it is declared nonnavigable by act of Congress. Some one stated here in the course of the debate that one of the purposes of these surveys was to declare streams nonnavigable. That

could only result in case Congress acted, and Congress very infrequently acts along those lines.

Mr. LITTLE. Is it not the fact that the folks down there can not do anything because it is a navigable stream?

Mr. SISSON. That is correct.

Mr. MONDELL. Mr. Chairman, it is highly important that the river and harbor bill be kept a river and harbor bill, free from questionable projects.

Mr. SISSON. But the Committee on Rivers and Harbors does not want to give up control of navigable streams, except with its own consent and on information obtained by their own engineers. I think it is right. I think it is the proper thing to do. I do not think it involves an expenditure necessarily of one single dollar, but I do believe the people down there have a right to know where they stand.

The CHAIRMAN. Without objection the pro forma amendment will be withdrawn, and the question is on the amendment offered by the gentleman from Mississippi [Mr. LOWREY].

The question was taken; and on a division (demanded by Mr. SISSON) there were—ayes 55, noes 25.

Mr. LONGWORTH. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Ohio makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and four Members present, a quorum.

Mr. LONGWORTH. Mr. Chairman, I demand tellers.

The CHAIRMAN. The gentleman from Ohio demands tellers. As many as are in favor of taking the vote by tellers will rise and stand until counted. [After counting.] Seventeen Members have risen, not a sufficient number and tellers are refused.

So the amendment was agreed to.

The Clerk read as follows:

Cape Fear River, below Wilmington, N. C., and between Wilmington and Manassa.

Mr. LYON. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 14, line 15, after the word "and," strike out the word "Manassa" and insert "Novassa."

Mr. LYON. Mr. Chairman, I ask to withdraw the amendment.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

The Clerk read as follows:

Mill Gut, North Harlowe, Craven County, N. C.

Mr. CAMPBELL of Kansas. Mr. Chairman, I would like to know something about the item on line 18. Who knows something about Mill Gut?

Mr. WARD of North Carolina. That is within the district of Mr. Brinson, who died lately. I am sure it is in his home county, where he lived. I can not give the gentleman any information, but simply rose because I knew that was so.

Mr. CAMPBELL of Kansas. Can anybody give any information about this?

Mr. CONNALLY of Texas. Possibly the clerk of the committee.

Mr. DEMPSEY. Mr. Chairman, a bill was introduced by Mr. Brinson to cover this matter. He appeared before the subcommittee in reference to it. Personally, as I say, I was not a member of this subcommittee on surveys and I have no information in regard to it.

Mr. CAMPBELL of Kansas. Is Mill Gut a creek or a river?

Mr. BARKLEY. Does it not speak for itself?

Mr. CAMPBELL of Kansas. Apparently nobody else speaks for it.

Mr. GARNER. At least it will have the assumption of innocence.

Mr. CAMPBELL of Kansas. Are we to pass this item without information from anybody in respect to it?

Mr. LAYTON. Move to strike it out if you want to do so; that is the way to do business, instead of delaying the passage of a bill reported by a standing committee.

Mr. CAMPBELL of Kansas. Do members of the committee want this item to pass without any information?

Mr. DUPRÉ. We do. [Laughter.]

Mr. DEMPSEY. In response to the inquiry of the gentleman from Kansas I will say in reference to these surveys——

Mr. CAMPBELL of Kansas. No; this item.

Mr. DEMPSEY. I may say in reference to this item it is utterly impossible for a committee to take testimony with regard to surveys and to preserve the evidence.

Gentlemen who are members of that subcommittee do not any of them live in the vicinity; they have to take testimony and act upon it as it appears to them at the time. They have no way of preserving it. They can not come on the floor of the House weeks and perhaps months later and remember the testimony. This bill was introduced the 7th day of March, as the gentleman from Kansas will remember. That is about two months ago. Testimony was probably taken two months before that—four months ago. With no means of preserving what was said and with no personal familiarity with the subject it is very natural that gentlemen should not remember all the facts. It would be utterly impossible for any member of the committee to remember the testimony as to all of these items.

Mr. CAMPBELL of Kansas. Was there evidence taken in respect to this?

Mr. DEMPSEY. The subcommittee obtained information as to every item.

Mr. CAMPBELL of Kansas. And no record kept of the evidence?

Mr. DEMPSEY. They do not take evidence in the sense of having the service of a stenographer, and never have. They simply have them appear before the subcommittee and state the facts, and the subcommittee reports upon the evidence which is taken.

Mr. LONGWORTH. Is there a member of the subcommittee here on the floor?

Mr. DEMPSEY. Mr. Dupré is a member of the subcommittee, and he is at the service of the gentleman from Ohio.

Mr. LONGWORTH. The gentleman from Louisiana said he wanted us to take it without information.

Mr. DUPRÉ. I beg the gentleman's pardon.

Mr. LONGWORTH. He disagreed on the ground that there was no information.

Mr. DUPRÉ. All I can state with reference to information on the subject is that the gentleman from North Carolina [Mr. Brinson] spoke to me about the item. I do not recall the details of the matter. He has departed this life, and it seems to me it is a very ill time for the gentleman from Kansas to try to make us believe he is a wit—which he is not.

Mr. CAMPBELL of Kansas. The "gentleman from Kansas" would never endeavor to measure his wit with the gentleman from Louisiana—at times.

Mr. LONGWORTH. Mr. Chairman, I move to strike out the last two words.

I want to see if I thoroughly understand this situation. As I understand it, the Army appropriation bill, which passed the House and is now slumbering, possibly, in the Senate, carried an appropriation of $250,000 to be expended next year on such surveys, or a portion of such surveys, as might thereafter be authorized by Congress. Now, is or is this not the fact, I ask the gentleman from New York [Mr. DEMPSEY]? The Secretary of War, being authorized and directed to select certain of these projects—in fact, directed to select them all eventually—would it not be possible to expend that whole $250,000 this year on the first 10 surveys provided for?

Mr. DEMPSEY. Theoretically possible, but not humanly possible. That has not been the experience of the committee. You have to reach a decision, not in some absurd way, not in some impossible way, not in some way that the wild flight of fancy of the gentleman from Ohio might suggest, but in a way that experience with the matter in the past has demonstrated it will result in in the future. We find the present situation to be this: We have just looked over the surveys, and we find that there are 80 of them that have not been reported upon. That is all that are left at the present time. We find, for instance, as I stated a few minutes ago, a report on Newark Bay, a very important project, indeed, one of the most important in the United States, was sent to the engineers for reexamination perhaps six weeks ago. It passed through the district engineer, the Board of Engineers, the Chief of Engineers, and was back on the Speaker's desk within probably two to three weeks from the time that it was rereferred. So experience demonstrates two things.

First, that within the appropriation which has been made annually for many years, and which is about the amount that was appropriated this year, the surveys, whatever their number—and in most years the number is much larger than this year, generally two or three times as many—are made within the appropriation, and the reports are made with reasonable dispatch.

Mr. LONGWORTH. Surely, if the gentleman will pardon me, some of these surveys will take more than a year.

Mr. DEMPSEY. Now, coming to the second question as to whether the engineers would arbitrarily select the first 10 surveys in the bill——

Mr. LONGWORTH. I do not think they would, of course.

Mr. DEMPSEY. Or select any 10——

Mr. LONGWORTH. Any 10.

Mr. DEMPSEY. What the engineers would do is what they have done in the past. When they found a survey was as important as the Newark Bay project—and I could call attention to a number of projects in the present bill where our experience has been similar to that with the Newark Bay project—they select surveys that are important to the commerce of the country—they see that those surveys are reported on promptly and returned to the Speaker's desk at the earliest date possible. The others, that are relatively unimportant, they see if they have the data, which they can gather in the office of the Chief of Engineers, from geographies, from encyclopedias, by writing letters to the district engineers, and get such information as they can get from them. The testimony before the committee is and always has been that with a great number of the smaller surveys they get their data and make up the report without finding it necessary to go upon the ground. So two things result. First, as I say, they can not exceed the appropriation, and within the appropriation they are able to report promptly upon all of the surveys included in the bill, and they are taken up in the order of their importance. I again call attention to the fact that while this bill started out with an attack upon the surveys which are of trivial importance there is much in this bill that is of vital importance to this country.

Mr. LONGWORTH. I agree with the gentleman.

Mr. GARNER. Mr. Chairman, I rise in opposition to the amendment of the gentleman from Ohio.

Mr. Chairman, it seems that it is nearly 6 o'clock, and I do not think the House has been treated at this session with the kind of performance that we have seen here this afternoon. [Applause.] You Republicans are always talking about disorganization. How can you expect the Republican Party in the House to stay organized when you have a unanimous report from a standing committee of the House, the Committee on Rivers and Harbors; you have a steering committee that passed upon the proposition of its consideration, composed of the gentleman from Ohio and others; a rule brought in by the Committee on Rules, a partisan committee, and a unanimous report; and then you have the leader of the Republican Party here attacking the bill on the floor of the House? [Applause.]

Mr. LONGWORTH. Will the gentleman yield?

Mr. GARNER. Certainly.

Mr. LONGWORTH. The only question that I have asked, the only opposition I have made to this in any way, was to an amendment or two introduced on the floor of the House.

Mr. GARNER. The gentleman is attacking an amendment that was already in the bill.

Mr. LONGWORTH. The gentleman did not attack it.

Mr. GARNER. The gentleman from Wyoming did.

Mr. MONDELL. The "gentleman from Wyoming" did nothing of the kind. The "gentleman from Wyoming" asked for information.

Mr. LAYTON. Will the gentleman from Texas yield?

Mr. GARNER. Certainly.

Mr. LAYTON. It is just as plain as the nose on another man's face only 2 feet away that certain gentlemen in this House have been endeavoring to delay the passage of this bill.

Mr. GARNER. I can understand how they can delay the passage, but can not understand, to save my life, how the Republican organization, through its leader, through its chairman of the Rules Committee, through one of the most influential men on the steering committee, will undertake to repudiate your own action. You talk about keeping your organization together. If we did that on our side of the House, if we would not keep together, we would beat the motion.

Mr. BEGG. Will the gentleman yield?

Mr. GARNER. Certainly.

Mr. BEGG. Does it worry the gentleman much?

Mr. GARNER. It worries me to the extent that you are keeping me after 6 o'clock.

Mr. BEGG. If the gentleman wants a quorum, I will call for one.

Mr. GARNER. The Chairman always counts a quorum. I merely rise to call attention to the fact when the gentleman from Wyoming [Mr. MONDELL], the gentleman from Kansas [Mr. CAMPBELL], and the gentleman from Ohio [Mr. LONGWORTH] refuse to stand with the organization. I think it proper to call attention to their performance here this afternoon. It will not lie in their mouths in the future to chide their brethren for not following their organization, because they have repudiated their own action. I think the attention of the country ought to be called to it. It only emphasizes the disorganization of the Republican Party throughout the country. [Applause on the Democratic side.]

Mr. MONDELL. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Texas.

Mr. BEGG. Mr. Chairman, I make the point that there is no quorum present.

Mr. MONDELL. It is quite proper for the gentleman from Texas to lecture this side.

The CHAIRMAN. Does the gentleman from Ohio [Mr. BEGG] withhold his point of no quorum?

Mr. BEGG. I will withdraw it.

Mr. MONDELL. The gentleman from Texas has not stated the facts quite accurately. It was said that at the beginning of the discussion an attack was made on a survey item. An inquiry was made. When did it occur that an inquiry in regard to a provision in a bill was an attack? Have we reached the point where gentlemen may not make inquiries in regard to legislation pending before the House without being charged with making an attack upon it?

Now, "the gentleman from Wyoming" has endeavored to aid the Committee on Rivers and Harbors to bring in a bill. The gentleman has cooperated with the committee to that end. But members of the Committee of the Whole are entitled to know the facts. When a lot of items are offered from the floor in regard to which it is confessed that we have received no information, certainly gentlemen can not be criticized if they insist that that is not the proper procedure.

So far as "the gentleman from Wyoming" is concerned, he hopes that this committee will keep its bill defendable. It is true the committee put on a drainage item a moment ago, and other items will be offered, no doubt. The gentleman desires to support the bill, but notwithstanding the majority that appears to be interested in these items, I think it is in the interest of the country as well as of the committee that this bill shall be kept in some reasonably defendable form. At any rate, I understand that we are not to be called upon to vote on certain amendments that were to have been presented; that is so much gained by the inquiries that have been made. [Applause and cries of "Vote!"]

Mr. DEMPSEY. Mr. Chairman, I simply want to correct one misapprehension. The chairman of the committee did not state that the committee has no information. The chairman of the committee simply said that this testimony as to these surveys was taken about four months ago, was taken orally, was taken in the way it is ordinarily taken, and it could not be hoped that the members of the committee could carry in their minds all of the data for the long period which had elapsed. On the other hand, it is true that as to most of these items ample information has been furnished. Occasionally you can pick out an item where the members of the committee do not have a distinct recollection of what occurred so long ago, but they did deal with it fairly and intelligently at that time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Tombigbee River, Ala. and Miss., and canal connecting the Tombigbee and Mississippi Rivers.

Mr. DUPRÉ. Mr. Chairman, by direction of the committee I offer the following amendment.

The CHAIRMAN. The gentleman from Louisiana offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. DUPRÉ: On page 15, between lines 12 and 13, insert the following paragraphs:

"Waterway from Bayou Teche, La., to the Mermenteau River.

"Waterway from Lake Charles, La., to the Sabine River, Tex. and La., through the Calcasieu River and the Intercoastal Waterway from Calcasieu River, La., to the Sabine River, Tex. and La."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Louisiana.

Mr. CHINDBLOM. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. CHINDBLOM. We had not reached that point, had we?

The CHAIRMAN. What is the point of order that the gentleman makes?

Mr. CHINDBLOM. That we had not reached that point in the reading.

The CHAIRMAN. We had.

Mr. LONGWORTH. Do I understand the gentleman from Louisiana to say that this is by direction of the committee?

Mr. DUPRÉ. By direction of the Committee on Rivers and Harbors.

Mr. LONGWORTH. The full committee.

Mr. DUPRÉ. The entire committee.

The CHAIRMAN. The pending amendment is virtually two amendments, one relating simply to waters within the State of Louisiana and the other relating to waterways partly in Louisi-

ana and partly in Texas; but the Chair thinks it is in order in this way. The question is on agreeing to the amendment offered by the gentleman from Louisiana.

Mr. MONDELL. Has the gentleman any information with regard to this particular waterway?

Mr. DUPRÉ. I happen to have some information on the subject, but I do not know whether the gentleman will avail himself of the information if I give it to him, so perhaps he will let the amendment go through at this late hour without any further discussion.

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

The Clerk read as follows:

Rio Grande River, at El Paso, Tex.

Mr. NEWTON of Missouri. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Missouri offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. NEWTON of Missouri: On page 15, between lines 20 and 21, insert the following:
"Missouri River, between Kansas City, Kans., from the upper end of Quindaro Bend, and Sioux City, Iowa."

Mr. NEWTON of Missouri. Mr. Chairman, I offer this amendment at the request of the gentleman from Nebraska [Mr. JEFFERIS]. We had it up before the full committee and the full committee adopted it.

Mr. LONGWORTH. It is by direction of the committee?

Mr. NEWTON of Missouri. Yes.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri.

The amendment was agreed to.

The Clerk read as follows:

Tillamook Bay and River, Oreg.

Mr. HAWLEY. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Oregon offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HAWLEY: Page 17, line 9, strike out "Tillamook Bay and River, Oreg.," and insert in lieu thereof the following paragraph:
"Tillamook Bay and entrance, Oreg.; Tillamook River, Oreg."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Deer Island Slough, Oreg.

Mr. HADLEY. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Washington offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HADLEY: Page 17, between lines 18 and 19, insert the following paragraph:
"Deep River, Wahkiakum County, Wash., and entrance thereto."

Mr. HADLEY. Mr. Chairman, I wish to say for the information of the committee that I offer this amendment on behalf of my colleague [Mr. JOHNSON of Washington], who is unavoidably absent on account of illness. I regret to say that I know nothing about the merits of the proposition. The amendment was handed to me this afternoon, and my colleague has been in the hospital for several days.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington [Mr. HADLEY].

The amendment was agreed to.

The Clerk read as follows:

Entrance to Port Orchard Bay, Wash.

Mr. HADLEY. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Washington offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HADLEY: Page 17, between lines 19 and 20, insert the following paragraph:
"Skagit River, Wash."

Mr. HADLEY. Mr. Chairman, this is a large river in my district, and there is an old improvement with reference to the local project; but I think the conditions of the river are such that there should be a general survey above the point where it has been improved. It will take some time to explain it, but I am quite sure that Members would agree that it is a meritorious project.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington.

The amendment was agreed to.

The Clerk read as follows:

Entrance to Port Orchard Bay, Wash.

Mr. ROACH. Mr. Chairman, I move to strike out the last word. I only intend to take a moment of your time. This afternoon when I offered an amendment to section 5 of this bill there was some confusion as to just what the estimates covered in the $42,000,000 appropriation that was estimated as money necessary for river and harbor improvement. I have since that debate arose secured a copy of the printed estimates by the Chief of Engineers office setting forth the particular items that go to make up the $42,000,000 that was estimated to be the minimum amount required for river and harbor improvement. In those estimates are contained contracts for four seagoing dredges for use on the Atlantic and Pacific Oceans, $3,000,000.

I call attention to that for the reason that I expect to make a motion to recommit the bill in order that the amendment may be voted upon. I want the committee to understand that if this amendment that I have offered is not adopted that we are taking out of the $42,800,000 fund the sum of $1,500,000, and I do not believe there is a Member of this House that intended that any sum should be taken out of that. If the committee wants to take out $1,500,000 from the $42,000,000 fund for the construction of dredges to go on the Pacific Ocean and Atlantic Ocean and thus rob the inland rivers of that amount, it is their right, but I expect to carry it to the floor of the House, because the $42,000,000 was inadequate to begin with, and it should have been $62,000,000. I am not going to subscribe to any bill that will take any portion of it, particularly a sum as large as $1,500,000, and spend it on the Atlantic and Pacific Oceans, and where it will not do the inland rivers any good.

The Clerk completed the reading of the bill.

The CHAIRMAN. The committee having completed the reading of the bill for amendment, and no Member desiring to offer a further amendment, the committee under the order of the House will rise.

Accordingly the committee rose; and Mr. WALSH, Speaker pro tempore, having taken the chair, Mr. STAFFORD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10766, authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, and having adopted sundry amendments, he reported the bill back to the House with the amendments.

The SPEAKER pro tempore. Is there a demand for a separate vote on any amendment?

Mr. LONGWORTH. Mr. Speaker, I demand a separate vote on all the amendments to section 9. In the interest of the speedy passage of the bill, I ask unanimous consent that they may be voted on en bloc.

The SPEAKER pro tempore. The gentleman from Ohio asks unanimous consent that the amendments to section 9 be voted upon en bloc. Is there objection?

There was no objection.

Mr. BEGG. Mr. Speaker, I make the point that no quorum is present.

The SPEAKER pro tempore. The gentleman from Ohio makes the point that no quorum is present. Evidently there is no quorum present.

Mr. MONDELL. Mr. Speaker, I move that the House do now adjourn.

The question was taken; and on a division (demanded by Mr. STAFFORD) there were 44 ayes and 53 noes.

Mr. MONDELL. Mr. Speaker, I ask for tellers.

The SPEAKER pro tempore. The gentleman from Wyoming asks for tellers. Those in favor of taking the vote by tellers will rise. Thirty-six Members have arisen, not a sufficient number, and tellers are refused.

Mr. GARNER. Mr. Speaker, I move a call of the House.

The question was taken, and the motion was rejected.

Mr. MONDELL. Mr. Speaker, I ask unanimous consent that when the House adjourn to-day it adjourn to meet on Monday.

The SPEAKER pro tempore. That request is not in order, as there is no quorum present.

Mr. STAFFORD. No business can be transacted until a quorum is present.

The SPEAKER pro tempore. The gentleman from Wisconsin is correct.

Mr. GARNER. Mr. Speaker, having no quorum present, and the House having refused to adjourn, I guess we will all be seated to await developments by the gentleman from Wyoming.

The SPEAKER pro tempore. The Chair will state that in the absence of a quorum the House can vote to adjourn, can order a call of the House, and order the Sergeant at Arms to bring in the absentees. No other business is in order.

ADJOURNMENT.

Mr. MONDELL. Mr. Speaker, I renew the motion that the House do now adjourn.

The question was taken; and on a division (demanded by Mr. BARKLEY) there were—ayes 68, noes 28.

So the motion was agreed to. Accordingly (at 6 o'clock and 20 minutes p. m.) the House adjourned until to-morrow, Saturday, May 20, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

613. Under clause 2 of Rule XXIV, a letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and a partial survey of Tennessee River and tributaries, in North Carolina, Tennessee, Alabama, and Kentucky (H. Doc. No. 319), was taken from the Speaker's table, referred to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. BLAND of Indiana: Committee on Industrial Arts and Expositions. H. J. Res. 170. A joint resolution to approve the holding of a national and international exhibition in the city of Philadelphia in 1926 as an appropriate celebration of the one hundred and fiftieth anniversary of the signing of the Declaration of Independence; with amendments (Rept. No. 1017). Referred to the Committee of the Whole House on the state of the Union.

Mr. BLAND of Indiana: Committee on Industrial Arts and Expositions. S. J. Res. 173. A joint resolution authorizing the President to appoint a commission to represent the Government of the United States at the centennial celebration of the independence of Brazil, to be held at Rio de Janeiro in September next; with amendments (Rept. No. 1018). Referred to the Committee of the Whole House on the state of the Union.

Mr. VOLSTEAD: Committee on the Judiciary. H. R. 9218. A bill to incorporate the American Mathematical Society; with an amendment (Rept. No. 1019). Referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on the Post Office and Post Roads was discharged from the consideration of the bill (H. R. 6339) for the relief of Carrol A. Dickson, and the same was referred to the Committee on Claims.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MILLER: A bill (H. R. 11706) granting a certain right of way with authority to improve the same across the old canal right of way between Lakes Union and Washington, King County, Wash.; to the Committee on Military Affairs.

By Mr. HUDDLESTON: A bill (H. R. 11707) to regulate interstate commerce in the products of child labor; to the Committee on Interstate and Foreign Commerce.

By Mr. HAYDEN: Joint resolution (H. J. Res. 328) reappropriating $150,000 for completing construction of a diversion dam on the Gila River Indian Reservation, Ariz.; to the Committee on Appropriations.

By Mr. LEHLBACH: Joint resolution (H. J. Res. 329) authorizing the President to require the United States Sugar Equalization Board (Inc.) to take over and adjust the importation or importations of sugar from the Argentine Republic, which importation or importations were made at the request of the Department of Justice to relieve the shortage during the year 1920, and direct the said board to pay the losses sustained on such importations; to the Committee on Agriculture.

By Mr. HAMMER: Joint resolution (H. J. Res. 330) to authorize the Commissioners of the District of Columbia to effect daylight saving; to the Committee on the District of Columbia.

By the SPEAKER (by request): Memorial of the Legislature of the State of Kentucky, urging the same relief for those who lost in the operation of their business during the year 1920 regarding tax exemption as those who lost during the years 1919 or 1921; to the Committee on Ways and Means.

By Mr. CAREW: Memorial of the Legislature of the State of Kentucky regarding tax exemption to those who lost in the operation of their business during the year 1920 the same as those who lost during the year 1919 or 1921; to the Committee on Ways and Means.

By Mr. KISSEL: Memorial of the Legislature of the State of Kentucky regarding tax exemption to those who lost in the operation of their business during the year 1920 the same as those who lost during the year 1919 or 1921; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BELL: A bill (H. R. 11708) granting a pension to John H. Hubbard; to the Committee on Invalid Pensions.

By Mr. BROOKS of Pennsylvania: A bill (H. R. 11709) granting a pension to Sarah J. Heilman; to the Committee on Invalid Pensions.

By Mr. BROWNE of Wisconsin: A bill (H. R. 11710) to make a preliminary survey of the Wolf and Fox Rivers, State of Wisconsin, with a view to the control of floods, and for other purposes; to the Committee on Flood Control.

By Mr. FESS: A bill (H. R. 11711) granting a pension to Mary E. Hart; to the Committee on Invalid Pensions.

By Mr. GOLDSBOROUGH: A bill (H. R. 11712) for the relief of Roland Webster; to the Committee on War Claims.

By Mr. KETCHAM: A bill (H. R. 11713) granting a pension to Alice Hadsell; to the Committee on Invalid Pensions.

By Mr. MILLER: A bill (H. R. 11714) granting a pension to Francis M. Meadows; to the Committee on Invalid Pensions.

By Mr. OLDFIELD: A bill (H. R. 11715) granting a pension to William D. Gibson; to the Committee on Pensions.

Also, a bill (H. R. 11716) granting an increase of pension to Mary C. Bowen; to the Committee on Invalid Pensions.

By Mr. SCOTT of Tennessee: A bill (H. R. 11717) granting an increase of pension to Brooklyn Hodges; to the Committee on Pensions.

By Mr. SEARS: A bill (H. R. 11718) granting a pension to Clara S. Schuler; to the Committee on Invalid Pensions.

By Mr. SNELL: A bill (H. R. 11719) granting an increase of pension to Ann Starkey; to the Committee on Invalid Pensions.

By Mr. STRONG of Pennsylvania: A bill (H. R. 11720) granting an increase of pension to Anna M. Miller; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5671. By the SPEAKER (by request): Resolutions adopted by the National Association of Builders' Exchanges at their last annual convention, relative to certain tax legislation; to the Committee on Ways and Means.

5672. Also (by request), resolutions adopted by the Presbytery of Boston, at Boston, Mass., indorsing H. R. 9753, to secure Sunday as a day of rest in the District of Columbia; to the Committee on the District of Columbia.

5673. Also (by request), resolutions adopted by the Presbytery of Boston, at Boston, Mass., indorsing House Joint Resolution 131, relative to polygamy and polygamous marriages in the United States; to the Committee on the Judiciary.

5674. Also (by request), resolutions adopted by the Presbytery of Boston, at Boston, Mass., indorsing Senate Joint Resolution 31, relative to regulating marriage and divorce in the United States; to the Committee on the Judiciary.

5675. By Mr. ANSORGE: Petition of the National Republican Club, New York City, congratulating President Harding upon his appeal to Congress to maintain a United States Navy strength of 86,000 men and favoring a minimum strength of 150,000 men for the United States Army; to the Committee on Appropriations.

5676. Also, petition of J. F. Bingham Lodge, No. 155, Brotherhood of Locomotive Firemen and Enginemen, indorsing H. R. 10798; to the Committee on Interstate and Foreign Commerce.

5677. By Mr. CANNON: Petition of citizens of Illinois, in behalf of an amendment to the Constitution prohibiting Congress from making appropriations for sectarian use; to the Committee on the Judiciary.

5678. Also, petition of citizens of Illinois, for an amendment to the Constitution to prohibit polygamy; to the Committee on the Judiciary.

5679. Also, petition of citizens of Illinois, praying for adoption of a constitutional amendment authorizing Congress to enact uniform laws on the subject of marriage and divorce; to the Committee on the Judiciary.

5680. Also, petition of citizens of Illinois, for adoption of H. R. 9753; to the Committee on the District of Columbia.

5681. By Mr. COOPER of Ohio: Petition of Mrs. Hattie J. Kamenetzsky and other residents of Youngstown, Ohio, urging the recognition of Palestine as the Jewish homeland; to the Committee on Foreign Affairs.

5682. By Mr. FULLER: Petition of the Salesman's Association of the American Chemical Industry, favoring a tariff based on American valuation; to the Committee on Ways and Means.

5683. By Mr. GRAHAM of Illinois: Petition of Mrs. Jennie G. Morgan and others, relative to Senate bill 3083; to the Committee on the District of Columbia.

5684. By Mr. JOHNSON of South Dakota: Resolutions adopted by the Presbytery of Huron at Madison, S. Dak., indorsing Senate Joint Resolution 31, relative to uniform laws on the subject of marriage and divorce; to the Committee on the Judiciary.

5685. Also, resolutions adopted by the Presbytery of Huron at Madison, S. Dak., relative to prohibiting polygamy and polygamous marriages in the United States; to the Committee on the Judiciary.

5686. Also, resolutions adopted by the Presbytery of Huron at Madison, S. Dak., indorsing House bill 9753 to secure Sunday as a day of rest in the District of Columbia; to the Committee on the District of Columbia.

5687. By Mr. KISSEL: Petition of the First National Bank, Louisville, Ky., relative to Senate bill 3255 and House bill 9527; to the Committee on Banking and Currency.

5688. Also, petition of the Metropolitan Dealers' Association, New York City, N. Y., favoring the Stephens-Kelly bill; to the Committee on Interstate and Foreign Commerce.

5689. By Mr. STAFFORD: Resolutions adopted by Milwaukee citizens at a mass meeting held at Plankinton Hall, Milwaukee, Wis., May 15, 1922; to the Committee on Interstate and Foreign Commerce.

5690. By Mr. STEENERSON: Petition of citizens of Minnesota, favoring the bill to prohibit the manufacture of filled milk; to the Committee on Agriculture.

5691. By Mr. STRONG of Kansas: Resolutions adopted by the Concordia Presbytery, United Presbyterian Church, at Manhattan, Kans., indorsing H. R. 9753, to secure Sunday as a day of rest in the District of Columbia; to the Committee on the District of Columbia.

5692. Also, resolutions adopted by the Concordia Presbytery, United Presbyterian Church, at Manhattan, Kans., indorsing Senate Joint Resolution 31, relative to regulating marriage and divorce in the United States; to the Committee on the Judiciary.

5693. Also, resolutions adopted by the Concordia Presbytery, United Presbyterian Church, at Manhattan, Kans., indorsing House Joint Resolution 131, relative to prohibiting polygamy and polygamous marriages in the United States; to the Committee on the Judiciary.

SENATE.

SATURDAY, *May 20, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MOSES in the chair). The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Frelinghuysen	McKinley	Shortridge
Ball	Glass	McLean	Simmons
Borah	Gooding	McNary	Smoot
Brandegee	Hale	Moses	Spencer
Bursum	Harris	Myers	Sterling
Calder	Harrison	Nelson	Sutherland
Capper	Heflin	New	Underwood
Caraway	Hitchcock	Newberry	Wadsworth
Colt	Johnson	Norbeck	Walsh, Mass.
Culberson	Jones, N. Mex.	Oddie	Walsh, Mont.
Curtis	Jones, Wash.	Overman	Watson, Ga.
Dial	Kendrick	Page	Watson, Ind.
Dillingham	Keyes	Pepper	Williams
Edge	Ladd	Pomerene	Willis
Ernst	Lenroot	Ransdell	
Fletcher	McCormick	Robinson	
France	McCumber	Sheppard	

Mr. DIAL. I wish to announce that my colleague [Mr. SMITH] is unavoidably absent. I ask that this announcement may continue through the day.

The PRESIDING OFFICER. Sixty-five Senators having answered to their names, a quorum is present.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Presiding Officer [Mr. MOSES] as Acting President of the Senate pro tempore:

S. 1162. An act declaring Lake George, Yazoo County, Miss., to be a nonnavigable stream;

H. R. 2193. An act to amend the act entitled "An act to prohibit the importation and use of opium for other than medicinal purposes," approved February 9, 1909, as amended; and

H. R. 11645. An act making an appropriation to enable the Department of Justice to investigate and prosecute war frauds.

PETITIONS AND MEMORIALS.

Mr. NELSON presented resolutions adopted by the Presbytery of Mankato, Presbyterian Church, at Edgerton, Minn., favoring amendments to the Constitution prohibiting polygamy and providing for uniform marriage and divorce laws, which were referred to the Committee on the Judiciary.

He also presented resolutions adopted by the Presbyteries of Duluth and Mankato, Presbyterian Church, at Edgerton, Minn., favoring the enactment of legislation providing for Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. CAPPER presented a memorial of sundry dry-goods merchants of Salina, Kans., protesting against the proposed tariff duty on kid gloves, which was referred to the Committee on Finance.

He also presented resolutions adopted by the Shawnee Parent-Teachers' Association, of Shawnee, and the Park School Parent-Teachers' Association, of Kansas City, both in the State of Kansas, praying for the enactment of legislation creating a department of education, which were referred to the Committee on Education and Labor.

Mr. WILLIS presented the petition of Mrs. L. Jewell and sundry other citizens of Toledo, Ohio, praying that only a moderate duty be imposed on kid gloves in the pending tariff bill, which was referred to the Committee on Finance.

He also presented the memorial of C. S. Zigler and sundry other citizens of Delaware, Ohio, remonstrating against the enactment of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MCNARY:

A bill (S. 3628) authorizing the Secretary of the Interior to grant a patent of certain lands to Truman H. Ide; to the Committee on Public Lands and Surveys.

By Mr. CALDER:

A bill (S. 3629) granting relief to Red Cross nurses who served with the Army or Navy of the United States in the War with Spain or the Philippine insurrection; to the Committee on Pensions.

By Mr. WADSWORTH:

A bill (S. 3630) to amend an act entitled "An act to amend an act entitled 'An act for making further and more effectual provision for the national defense, and for other purposes,' approved June 3, 1916, and to establish military justice," approved June 4, 1920; to the Committee on Military Affairs.

TARIFF BILL AMENDMENT.

Mr. JOHNSON submitted an amendment intended to be proposed by him to House bill 7456, the tariff bill, which was referred to the Committee on Finance and ordered to be printed.

AMENDMENT TO HOUSE RIVER AND HARBOR BILL.

Mr. CALDER submitted an amendment providing for the improvement of Glen Cove Creek, Long Island, N. Y., intended to be proposed by him to the bill (H. R. 10766) authorizing appropriations for the prosecution and maintenance of public works on canals, rivers, and harbors, and for other purposes, which was referred to the Committee on Commerce and ordered to be printed.

AMENDMENT TO PENSION BILL.

Mr. CALDER submitted an amendment intended to be proposed by him to the bill (H. R. 4) granting relief to soldiers and sailors of the War with Spain, Philippine insurrection, and Chinese Boxer rebellion campaign; to widows, former widows, and dependent parents of such soldiers and sailors; and to certain Army nurses; which was ordered to lie on the table and to be printed.

PRESIDENT HARDING ON NOMINATING CONVENTIONS.

Mr. HARRISON. Mr. President, on the 11th day of February the President made a speech in the city of Washington to the League of Republican Clubs, in which he advocated at that time a return to the party convention system of nominating candidates for office. I desire to incorporate in the RECORD that speech. I ask unanimous consent to do so.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

[From the Washington Post, February 12, 1922.]

THE PRESIDENT'S SPEECH.

In his speech President Harding said:

"I do not think there is occasion for me to make any remarks, except to congratulate myself that I had the good fortune to come in as I have. I have been edified and encouraged and delighted, though I have not shared the full program of the evening.

"I want to thank Colonel Cattel and Mrs. Speel for the very great pleasure they have afforded us all.

"I bring, I think for the first time, the mistress of the White House to a Republican banquet, and I want to convey to you my more than cordial greetings and to say how deeply and sincerely I am interested in Republican organization and everything that becomingly tends to promote party interest and party spirit and party activity.

GIVES CREDIT TO PARTY.

"I do not regret—nor ought you—I do not forget that I first acquired an expression of the trust of the Republican Party before I could have a position of trust in the Nation.

"I never forget that it was not I, the individual, who won the elections of 1920, but the United States of America gave its expression of confidence and hope in the party of Lincoln and McKinley and Roosevelt.

"I believe in political parties. Ours is a representative, popular Government through political party, and if I could express one outstanding wish to-night I would rather have a little more of the party spirit of Lincoln's time than some I know of nowadays.

CITES LINCOLN'S EXAMPLE.

"I do not mean that as Republicans who serve party, but as Republicans committed to the trust we serve the Republican honor of the party. Nor do I forget that Lincoln in his matchless career came to that time in his life when he met defeat, and he thought he was retiring into the shadows, never to know public service again. But he had stood for principles; he believed in parties, he supported party dictum and party policy, and because he was a partisan, and all that that means, somehow he came again into public service.

"Ladies and gentlemen and fellow Republicans, I would rather trust the declaration of a party in national convention, expressing the conscience of its membership in representative convention, looking forward to a successful appeal to the conscience and convictions of the country, than I would to the ephemeral whims of passing moments in public life.

FAVORS PARTY CONVENTIONS.

"Lincoln was the great partisan. No greater or better Republican ever lived. And he believed, as I know you believe, that the greatest possibilities for service are in the party. Of course, parties can not always foresee and declare upon all contingencies under our present system.

"I wish I dared—I will say it—I crave the return of intelligent conventions in the Republic. I had rather have men appeal for popular support on the pronouncements of party conventions, uttering their convictions, than to have the appeal of the individual for his particular locality.

"It has been said repeatedly men in Congress represent the Nation rather than the districts. That ought to be true; but, ladies and gentlemen, there is no party service worth while that is not in the end of the highest service to the Nation.

SERVICE HONORS PARTY.

"When you serve the Nation you honor the party that trusted you. I care not what our associations may be, if I did not believe with all my heart that a party policy was for public good, then I would seek to have my party alter the policy.

"There will never come a time when personalities and leadership do not impress themselves; there will never be a time when genius and talents are without their impress; but I believe in the collective judgment, and I said what I did a little while ago because I believe in that collective vision of the convention; I believe in the dictum of the party.

"I thought when Colonel Cattel was talking, speaking from his surpassing privilege of observation of American advancement, how we of America, the only truly representative popular Government that I know of in the world, how we of America have made the surpassing record of human progress of all the nations of the earth. That is no unseemly boast.

"In a century and a third, or a little more, we have outstripped all the peoples of the world. It is not because of our personality or individuality; it is not an extraordinary inheritance, because we of America are a blend of all the peoples of the world. It must have been, my countrymen, because of the foundation of the Republic on which we builded this representative Government. And as we developed it through political parties, I rejoice that we belong to the party which has made this surpassing contribution to American achievement.

"Men in public life and women in public life—I hope there will be more of you in public life before this administration is closed—you are not to be discouraged because the task is difficult and criticism is rife. Do not forget how they came to the master martyr who was lashed by angry tongues as no public servant was ever lashed. He drank from as bitter a cup as ever touched human lips, but his faith was unaffected, his courage was undaunted, and he wrote the supreme chapter in the life of the Republic, because in the commitment of his party he was devoted to union and nationality, and martyrdom revealed him as the colossal statesman of all times.

"It is a joy to gather with you to drink inspiration from his memory and to find ourselves resolved anew to give the most and the best that is in us to maintain the Republic—aye, the united Republic—he handed on to us, and make it worth the best citizenship in the world."

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, the pending amendment of the Committee on Finance being in paragraph 203, page 32, line 17, to strike out "17" and insert "20," so as to read:

Other cement, not specially provided for, 20 per cent ad valorem.

Mr. WILLIAMS. Mr. President, my attention has very recently been called to some words of wisdom at which I wonder, considering their party source. I am reading from a preliminary report from the select committee on reconstruction and production made by the Senator from New York [Mr. CALDER] in which, among other things, he said:

There is no doubt that there exists a serious shortage of housing not only in the great cities but in the smaller cities, as well even in the far West and South—

Now, our situation must be very serious when the Senator from New York takes notice of the far West and the South—

and that this shortage has a material effect upon industrial growth and upon public health and *morals*. The total housing construction during the last four years is hardly equal to that of a normal year. Rentals have increased from 25 to 150 per cent. Four years ago a house for workingmen cost on the average about $3,000.

A house for a workingman in Mississippi did not cost that. I call attention to that fact because I want the Senate and the country to know that the Senator from New York has not made any overstatement. He has made the cost four years ago greater than it really was, and he has made the cost to-day less than it really is, and still he has won his argument. I compliment him upon the conservatism of his statement.

I go on with the reading now.

To-day that same house costs $6,000.

Which, by the way, is an increase of 100 per cent. I continue the reading:

Houses produced at such cost are beyond the purchasing power of the workingmen of this country.

I will stop the reading there because that is sufficient. I have reached the point where high Republican authority informs me and you that houses for workingmen at the date of this report, December 14, 1920, "are beyond the purchasing power of the workingmen."

I compliment the Senator from New York upon his report. He was telling the truth and he was telling it conservatively. He understated it rather than overstated it. That is the situation. He says that this cost of construction in the large cities has extended even to the smaller towns in the far West and the remote South, which are parts of the Union by the general silent permission of the Northeast. I know it reaches further. It has gone out into the country—to the plantations. Some time ago I wanted to construct a few walks around the flower garden and the yard, and I inquired the price of cement, because I had to use it as a part of the raw material, with gravel and other things to make the mixture for the walk. I found it was far beyond my present ability with a restricted income to indulge in a luxury of that description. That was away out on a plantation where I could furnish the gravel, at any rate, for the hauling and have nothing much to buy except the cement and the lime.

Mr. President, as I sat here a moment ago while the roll was being called I was wondering if I could contribute to the harmony of this occasion and to the self-satisfaction of the Republican Party by calling attention to the high cost of construction, to the scarcity of homes, and to the peculiar remedy which the Republican Party is suggesting. They propose to cure the high cost of construction of homes for the workman, who already can not construct one, as the Senator from New York has asserted most conservatively, an assertion from which he can not retreat—they propose to remedy that condition by two pieces of rather inexplicable conduct, if anybody except the Republican Party had been guilty of the conduct.

Upon yesterday at adjournment they left a high duty upon bricks which are used in construction, and this morning they are proposing to put a duty of about $1 a ton, I believe it is, upon cement. What they are going to do with lumber everybody is aware. Mr. President, I want to call attention to the remarkable lucidity of the intellectual processes of the Republican Party when called upon to solve great and distressing problems which are announced to exist by one of their main constituent elements, the Senator from New York. It consists in this: That "when a difficulty is discovered the increase of the difficulty will cure the difficulty." They have tried that in this bill as to nearly everything concerning which one may speak. There is a high cost of living, and yet the Republican Party is priding itself upon the fact that it is going to make foodstuffs higher and ordinary textiles and wearing apparel still higher. There is a shortage of houses, and a great cry of distress has gone up in the District of Columbia, so extreme

that it has produced the abnormal Ball law, which we are going to be asked to renew in a few days, and the cure the Republicans propose for that is to render it still more expensive to build houses, unless you do not build them out of either lumber, brick, or cement. Of course, adobe houses down in Arizona and New Mexico have thus far not been increased in price by the Republican Party, and I am not aware now that any adobe mud has been imported or is threatened; but the last time I inquired as to the price of cement and was looking into it, things were in such a condition as to the prices that even if cement had been brought here in ballast it would not have threatened those who were trying to profiteer in selling it to me.

Mr. President, it seems to me when the Republican Party discovers an apostle, a man who comes out with "glad tidings of a new birth," and amongst other things announces that there must be a reduction in the cost of construction, especially for workingmen's houses, that even the Republican Party ought to have respect enough for an apostle in its own ranks not to undertake to stultify itself and him and counteract all his ameliorating influence by increasing the price of the very thing that he has said was already so high that "the workingman could not afford a home."

Mr. President, if the workingman can not afford a home, then we are in a bad fix. We have been threatened with a bad fix for a long time, because even in normal conditions at normal prices of construction only a very small percentage of workingmen have been able to afford to own a home. The remainder of them have rented their homes or their joint tenements, crowded to death. They have become a dissatisfied element of American citizenry. The most threatening thing which can happen to any republic in the world, where one vote is equal to another, is that a large number of comparatively uninstructed people shall find their way in life hard to travel. They had already found that even before the World War and now, in consequence of the natural evolutions of war, that way has become still more difficult and still more hard to travel.

The Senator from New York has called attention to that in words which are convincing and eloquent; his party has heard his voice crying in the wilderness, and it now comes forward with a solution of the difficulty which consists of making bricks still more costly and in making cement still more costly, or, if not that, in providing a tariff against the day when they shall fall in price by natural evolution, by natural readjustment of industry to its normal basis.

Mr. President, I am not a great believer in dwelling too much upon the schedules of a tariff bill. When I know the object of the tariff is either to increase the cost of living to the consumer or to decrease it, I take my side at once in favor of the tariff that decreases and in opposition to the tariff that increases the cost of living of the consumer; but I am aware of the fact that I occupy a peculiar and, just at this point, an unpopular, or, at any rate, an unfashionable attitude upon that subject. So I did think that even I with my unfashionable views would dwell just a moment upon what seemed to my poor uninstructed Mississippi Democratic intelligence rather a contradiction in the position which the apostles of the Republican Party have assumed and which the Committee on Finance, legislatively representing the Republican Party, has assumed.

I would be delighted to hear some justification of an attempt to raise the price of brick and to raise the price of cement so that the American producers of these two articles may make a larger profit or may, at any rate, earn a larger sum of gross income from these products, when the conditions of things is such that the ordinary man in the city or town or even upon a plantation to-day can not afford to build, and when the condition is such at the Capital of the Nation that the Ball rent bill has been a law for quite a while and is going to be extended very soon, and doubtless by the vote of the Senator from New York amongst others, though as to that I am not fully informed.

Then there is the White House crying, "Back to normalcy"—not very good English, but at least comprehensible by the American people—and here is the Republican Party attempting to keep us from getting back to "normalcy" with all the power and influence of the Committee on Finance and with the votes of the Republican Members of this august debating body behind the obstruction.

I should like to hear some defense made by the Senator from New York, in view of his report, concerning this attempt to raise the price of cement by an increased duty on its importation. I am aware that he may say that it "will not result in raising the price," but, Mr. President, the *intention* of every increase of duty is to raise the price. That is its intention, whatever may be its effect; otherwise the man who proposes it is a fool; he has not the sense with which he was born. The only object of increasing a duty is to protect the American producer, and the only way in which increasing a duty may protect the American producer is to enable the American producer to sell at a higher price. So I hope that when the Senator goes into his reply to me he will not commit the further Republican stultification of saying that the object of the increased duty is not to raise the price.

THOMAS B. FELDER.

Mr. CARAWAY. Mr. President, late yesterday afternoon the Senator from New York [Mr. WADSWORTH], by unanimous consent, had placed in the RECORD a letter written to him by Thomas B. Felder, an attorney, of New York City. In presenting the letter the Senator from New York said that it was an answer, in the truest sense, of the criticism that had been offered against the reputation of Mr. Felder.

Personally, I have no interest in Felder; so far as I know, I never saw him but once, and that was when he came to my office to convince me that he and not the present Attorney General was instrumental in securing a commutation of sentence for Charles W. Morse, who at that time was confined as a prisoner in the penitentiary at Atlanta. Because I did not agree with Mr. Felder he wrote me a letter which I incorporated in the RECORD. The Senator from Georgia [Mr. WATSON] thereupon made a statement as to the reputation of Felder while a citizen of Georgia. After that I received a very offensive letter from Mr. Felder, written from New York City. In that letter he wanted me to waive my personal immunity. He wanted me to infer that he was going to inflict some kind of punishment on me. I immediately wrote him a letter and waived all personal immunity, and then had a letter from Mr. Felder saying that he did not want to come to see me because I had been discourteous when he had done so previously. Then he sought the aid of the Senator from New York, who, I am persuaded, knew of all these matters, because every Senator has had a copy of those letters placed on his desk. Therefore, I repeat, I am sure the Senator from New York had full knowledge of this correspondence when he inserted in the RECORD on yesterday the letter in defense of Mr. Felder. I had no objection to that being done. I never would have discussed Mr. Felder's reputation at all if it had not been that he was connected—and boasted of the fact—with the Attorney General, Harry Daugherty, in securing this pardon. He thrust himself into the controversy and his reputation became an issue.

I have here on my desk letters, papers, and reports dealing rather freely with Felder's reputation in Georgia and South Carolina. I shall insert them in the RECORD after quoting from them. I shall then be glad, if the Senator from New York wants to indorse Mr. Felder's record and reputation, to have him do so.

First, however, Mr. President, this whole controversy grew out of a reference I made to a report, which was common, that Daugherty before he became Attorney General had been instrumental in procuring a commutation of sentence for Morse. When I made reference to that fact the Senator from Indiana [Mr. WATSON]—and I notified him that I was going to take up this matter and asked him to be present, but he sees fit not to do so—had insisted that the Attorney General told him he had absolutely nothing to do with the pardon or commutation of sentence of Morse.

I want to read again the exact language of the Senator from Indiana, and then I hope that when I shall put into the RECORD a letter that I have here in my possession, he and the Attorney General will adjust this question of veracity between themselves.

This is the statement of the Senator from Indiana:

I meant by that that my understanding—

He was speaking of his understanding from numerous conversations had with the Attorney General about this particular question—

I meant by that that my understanding of the situation is that he was representing his client, and that the testimony of Mr. Morse was necessary, and that in that way he had contact with Mr. Morse; but he did not get him out of the penitentiary; he had not anything to do with getting him out of the penitentiary; and he received no fee for getting him out of the penitentiary.

The Attorney General told the Senator from Indiana [Mr. WATSON] that he had nothing to do with the Morse commutation. I know this because the Senator from Indiana said so on the floor of the Senate.

Mr. HARRISON. May I ask the Senator to give the date of that colloquy on the floor of the Senate?

Mr. CARAWAY. May 2, 1922.

I now have in my hand a photostatic copy of the contract between Harry Daugherty and C. W. Morse, in which for $25,000, contingent, he would get him out of the penitentiary. I shall

read it for the benefit of the Senator from Ohio [Mr. WILLIS], who rushed to the defense of the Attorney General. I shall read it for the benefit of the Senator from Indiana [Mr. WATSON], who purposely absents himself from the floor when he knows this question is to be discussed. He may read it in the RECORD.

The first is a letter written by Daugherty to Morse after he was pardoned. It is as follows:

LAW OFFICES OF DAUGHERTY, TODD & RAREY,
WYANDOTTE BUILDING,
Columbus, Ohio, April 30, 1913.

Mr. C. W. MORSE,
New York City,

MY DEAR SIR: I inclose you herewith copy of the letter setting forth the contract you made of August 4, 1911, with Mr. Felder for his services and mine. You will observe that I was correct in the statement that there was a balance due of $25,000 when you were commuted. I also hand you a copy of a paper you handed me in the prison some time after that time, and I have to-day asked Mrs. Daugherty to send to you by express the papers which I got from Harry and others from time to time—

"Harry," I understand, is the son of Mr. Morse—

which you spoke to me about.

As I advised you, I have telegraphed Mr. Felder, and written him, to meet me there with you next Monday or Tuesday. I will advise you as soon as I have a confirmation from him of this engagement.

Yours very truly,

H. M. DAUGHERTY.

Here is what he transmitted in that letter, Mr. President:

(Clifford L. Anderson, James L. Anderson, Thomas B. Felder, jr., Daniel W. Rountree, Charles G. Wilson, George P. Whitman.)

ANDERSON, FELDER, ROUNTREE & WILSON,
ATTORNEYS AT LAW,
Atlanta, August 4, 1911.

Mr. C. W. MORSE, *Atlanta, Ga.*

DEAR SIR: In further relation to the employment of Hon. H. M. Daugherty and myself, permit me to say that we will undertake to represent you in your civil and criminal matters upon the following basis:

1. You are to pay Hon. H. M. Daugherty a retainer of $5,000 and the actual expenses incurred by him in looking after your matters, expenses not to exceed $1,000.

2. I will pay such expenses as I may incur in connection therewith.

3. You are to direct counsel heretofore employed to withdraw your appeal in the habeas corpus proceedings heretofore instituted.

Now, look here:

4. We are to receive, in the event we secure an unconditional pardon or commutation for you, the sum of $25,000, which is to be in full compensation for services rendered in connection with your application for pardon.

5. We are to receive 25 per cent of whatever sums we may be able to recover by compromise or litigation in the matter of the Metropolitan Steamship Co., said transaction being fully described in your letter addressed to me dated August 2, 1911. If we find it necessary in the prosecution of these matters to have associated with us other counsel, we are to select such counsel, subject, of course, to your approval, and they are to be provided for out of our compensation.

6. In all matters herein undertaken in your behalf we are to have full and absolute control, and you are to accept implicitly our counsel and advice.

If the above and foregoing terms are satisfactory, you will signify your acceptance thereof in writing.

I remain, yours very truly,

THOMAS B. FELDER.

P. S.—You can terminate this contract at any time after January 1, 1912, by giving 10 days' notice in writing.

THOMAS B. FELDER.

I accept the above, this the 4th day of August, 1911.

C. W. MORSE.

Mr. President, the Attorney General for some reason assured the Senator from Indiana, and had him repeat here on the floor, that he had had nothing to do with Morse's commutation of sentence. There is another Republican Senator sitting here on the floor to whom the Attorney General made the same statement not a great while ago. There is some reason for the Attorney General to have made that statement; what is it, Mr. President? If it were a transaction of which a man should be proud, if it were a transaction that involved nothing dishonorable, the Attorney General would not have given this assurance to the Senator from Indiana, his close personal friend. And he is the close friend and associate of the Senator from Indiana. I have that on the statement of the Senator from Indiana, that they are closely associated, and have been for years, and that they frequently have social engagements, and that at these times the Attorney General assured him he had nothing to do with this case. Well, he did.

The Attorney General knew that he did, and he took advantage of the Senator from Indiana when he had him repeat that statement upon the floor of the Senate assuring the Senate and the country that the Attorney General had nothing to do with the Morse case, when the Attorney General knew that that statement was not true. He induced the Senator from Indiana to make it in good faith, he, the Attorney General, knowing at the time that the statement was not the truth, for he did represent Morse in getting this commutation.

Felder becomes of interest in this case from another point. Felder, in his letter to me, said that he and the Attorney General were close and intimate friends and associates—I am not quoting his exact language—and had cooperated together, and that that was the reason he selected Mr. Daugherty to help him get the pardon or commutation for Morse. My information is, however, in passing, that at that particular time Mr. Daugherty was acting as the campaign manager for Mr. Taft, who was running for a second term, and was being pursued by a man named Theodore Roosevelt, and about that time Mr. Taft made his famous speech in Ohio in which he said he "was like a rat in a hole and had to fight." I do not assert upon my own information that Mr. Daugherty was acting as his campaign manager in Ohio, though I have been assured that that is true by numbers of people who tell me they were familiar with the facts; but I want to qualify the statement that I have no personal knowledge as to that.

Before I go further I want to call attention to the fact that this association, this partnership in taking care of people charged with crime between the Attorney General and Thomas M. Felder seems to be a continuing partnership, or else a man whose reputation never has heretofore been questioned is not truthful. I want to read a statement and letter which were put in the CONGRESSIONAL RECORD on the 15th day of May, 1922.

Felder—the same Thomas B. Felder—is the man mentioned here. I want to read the letter, and then a word of explanation will be necessary.

This letter is addressed to Hon. ROY O. WOODRUFF and bears date of May 5, 1922. It is as follows:

MAY 5, 1922.

Hon. ROY O. WOODRUFF,
House of Representatives, Washington, D. C.

MY DEAR MR. WOODRUFF: Before bringing to your attention my memorandum to Col. Guy D. Goff, Acting Attorney General, dated March 18, 1922, and incorporated in your speech to Congress on April 11, I desired to be sure that Hon. H. M. Daugherty, the Attorney General, was personally acquainted with and fully informed as to all matters involved in the situation at the Department of Justice, in order that he might act in the premises if he desired to do so.

I was informed that Col. T. B. Felder was a very close personal friend of Mr. Daugherty, and I was brought in contact with Colonel Felder and explained the situation to him and requested him to call the attention of the Attorney General to the reports that I had filed and to inform him that unless he acted I would pursue the course indicated in the memorandum referred to. The next day I was called to the office of the Attorney General, and he stated to me that he had my reports before him, and I then ascertained that he had been personally acquainted with the situation.

The Attorney General stated to me that he would call me into conference on the following Tuesday, but I heard nothing further from him, and after waiting a sufficient time to give him every opportunity to act, I formally transmitted the matter to you, as is now well known. I might add that I had never known Colonel Felder before meeting him on this occasion and for the purpose stated, and subsequent thereto have only seen him casually until last night.

Yesterday I had a message from Colonel Felder to meet him in his room at the Shoreham Hotel, which I did last night, and in the presence of a witness I engaged with him in an extended discussion of conditions in the Department of Justice, of which I had complained. I stated to him that I had no animus against the Attorney General, but that I felt most bitter against the conditions which he was permitting in the Department of Justice. During the course of the conversation Colonel Felder stated that he had been retained as counsel for the Bosch Magneto Co. and that he desired to associate me with him in the case. He told me that he had been with the Attorney General during the afternoon and had gone into the matter with him fully and that the Attorney General wanted him to see me. He stated that the Attorney General had agreed to cooperate with us and that he had also talked with Col. Guy D. Goff for an hour and a half during the afternoon, and that everything had been arranged for us to proceed.

Before leaving his room in the Shoreham Hotel Colonel Felder stated that he was going to spend the night with the Attorney General at the Wardman Park Hotel and that they would talk about the matter until 3 o'clock that night. Each time Colonel Felder broached the subject of my employment I shifted the subject, and when we parted he asked me to do nothing in my fight until he could see me next day. When we parted Colonel Felder took a taxi for the Wardman Park Hotel and asked me to join him that far out on my way home, but I declined. This morning I received a letter from Colonel Felder notifying me that I had been retained in the Bosch Magneto case, a copy of which is hereto attached.

While I think it is eminently proper that a suit should be brought to set aside the Bosch Magneto sale, and while under ordinary circumstances I would have had no hesitation in being employed in the case, when Colonel Felder disclosed the fact that he had come to me from the Attorney General and with the arrangements that had been suggested, the impropriety of the proposal I consider reprehensible, and I desire that you be acquainted with the facts.

In order that there may be no misconception of my true position and intentions in the matter in case I am further approached, I am reducing the foregoing statement to writing and will have this letter duly witnessed.

Very truly yours,

H. L. SCAIFE.

Here is the Felder letter:

SHOREHAM HOTEL, *Washington.*

DEAR CAPTAIN SCAIFE: Am obliged to return to New York to-night. Sorry I did not see you before my departure——

Mr. WILLIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Ohio?

Mr. CARAWAY. I yield.

Mr. WILLIS. Will the Senator kindly give the page of the RECORD? I have been looking for the document.

Mr. CARAWAY. This is dated May 5.

Mr. WILLIS. Will the Senator give me the page?

Mr. CARAWAY. It is page 7613. Here is the letter. I will begin it again. It reads:

SHOREHAM HOTEL, *Washington.*

DEAR CAPTAIN SCAIFE: Am obliged to return to New York to-night. Sorry I did not see you before my departure. I expect to return on Monday or Tuesday next, when I will complete our tentative arrangements. You may consider yourself retained in the Bosch Magneto case. We will discuss the details on my return.

Very truly yours,

THOS. B. FELDER.

The above letter was undated, but bears postmark of May 5, 1922.

The Attorney General never has denied it. The Bosch Magneto case is one of the big cases pending before the Department of Justice. It is one in which it is contended that the Government was robbed of anywhere from two to ten million dollars, and Scaife is the special agent of the Department of Justice who made the investigation. He is the man who wanted the Attorney General to proceed. He is the man whom the Attorney General discharged, not for not telling the truth but because he gave out information to ROY JOHNSON and ROY WOODRUFF, two Members of the House, two former soldiers in the World War, two men who have been honored by their people. They made public the report which Scaife gave to them, and the Attorney General discharged him, saying, "You have been disloyal to the Department of Justice"; not that what he said was not true. Even the Attorney General did not dare to say that.

He discharged Scaife, saying, "You have been disloyal to the department," not that "You have given out statements that are not true," but "You have given out true information, and the department did not want it given out, and therefore you are discharged."

Felder knew that this man Scaife was the principal investigator for the Government, the man who had made the investigations on which the Government is expected to recover from this company anywhere from two to ten million dollars, and coming directly from the Attorney General, where he had a conference about this case, and at the request of the Attorney General wanted to hire this man to become the head of the defense in this lawsuit which the Attorney General is presumed to bring against the Bosch Magneto Co.

In other words, at the request of the Attorney General, Thomas B. Felder was undertaking to hire away from the Government the investigator on whom the Government must rely if it is to recover judgment against this company.

The association, therefore, which Felder bragged about existing in 1911, that did exist in obtaining commutation of the sentence for Charles W. Morse, according to this testimony, which has been in the RECORD for a week, and undisputed, still exists, the Attorney General representing the Government and Thomas B. Felder representing the defendant and hiring, or trying to hire, the Government's witnesses away from the Government at the request of the Attorney General.

I say there is but one decent thing for the Attorney General to do, and that is to resign. He ought not to embarrass the administration by longer continuing in office, because he has not denied, for a whole week, this statement in the RECORD that he induced Thomas B. Felder, his close associate and former colleague in the procuring of a commutation of sentence for Morse, to hire the Government's witnesses in this case, which he, the Attorney General, is, under his oath of office, compelled to prosecute.

I did not want to go into these matters further, but the Senator from New York, in his anxiety to put Mr. Felder "right" before the country, compels me, and I shall therefore meet the issue; and I want to say now, for fear I forget it, if the Attorney General wants to make an explanation he may do so. If he does not, there are other statements coming along regularly now, signed documents, which the Attorney General and none of his apologists truthfully dispute. I merely drop that information for the benefit of the Attorney General and his associates.

Here is a paper, the Lincoln Journal, published in Lincoln, Ga. It is dated Thursday, May 11, 1922, and contains an editorial bearing upon Colonel Felder's reputation. The headline is, "The ex-Georgia lobbyist," and the article reads:

Everyone who has been in the Georgia Legislature any time within the last 20 years prior to 1916 remembers Thomas B. Felder. Suave, full of gush and bombast, he was known as the king-bee lobbyist. He represented the liquor interests and fought every temperance measure until the first prohibition law was enacted. Realizing then that public sentiment had reached a point which would not tolerate a return of the old-fashioned saloon, and knowing that the mill would no longer grind, as an evidence of his craftiness he joined the ranks of the Antisaloon League as their paid lobbyist, and assisted in putting through the bone-dry law, which prohibited the shipment of whisky into the State for personal or medicinal use.

No one who knows Felder, the professional lobbyist and corruptionist for over 20 years, believes he experienced any change of heart. The antisaloon people may have thought they needed him, but they didn't. Public sentiment had done the work in spite of the efforts of Felder and those he represented. A lot of perfectly good money was thrown away in employing him, but he was shrewd enough to make the gullibles believe that his services were necessary.

After the "drought" hit Georgia in earnest Felder moved to New York, where, through the liberal use of publicity, he has kept himself more or less in the limelight.

That is from a paper published in Georgia by a member of the State senate, and if the Senator from New York thinks that a man whose reputation was as stated there deserves his indorsement here in the Senate, I am perfectly willing that he should extend it. But that is not all.

Mr. POMERENE. What is the date of that last article?

Mr. CARAWAY. The paper bears date Thursday, May 11, 1922, and the article appears on the second page of the paper.

Here is a paper published in Savannah, one of the larger cities of Georgia. I shall read a statement from it:

WE ARE MAD WITH TOM WATSON ABOUT ABUSING TOM BOSH FELDER.

A general wave of indignation went up from Savannah when they read what Senator WATSON said about "our own Tom Bosh."

Senator WATSON was called on by the Senator from Arkansas to tell what he knew about the "Hon. Thomas B. Felder."

The two Senators must have made it up to skin "our own Tom Bosh."

WATSON said Felder was a crook; that he was not a lawyer but a lobbyist.

WATSON knows Felder as well as anybody on earth knows him.

Felder is the duck who wanted to stick his knife in the Hawkeye in the Kimball House lobby in Atlanta because we printed the same thing about him that Senator WATSON said about him on the floor of the Senate.

He is the same duck that came down here and induced ex-Mayor Pierpont to give him $1,000 to save his hide before the Georgia Legislature.

It was through this source the prohibition ranks were swelled by the number of two men. Pierpont "j'ined," and so did Felder. Felder got Pierpont's money and Pierpont retired to private life at the end of his term.

That seems to be Felder's reputation. In my hand is a letter written to the Senator from Georgia [Mr. WATSON] from a former official of Georgia, and I shall read part of it, as follows:

Your denunciation of "T. Bosh Felder" was rich and well merited. Everybody who has ever been in the legislature knows that he was nothing but a professional lobbyist and corruptionist. He was about the worst one we ever had. I was in the convention when you denounced him to his face, and, just as you stated, he turned very pale, but made no attempt to reply or to refute what you said about him. He could not, because he knew it was true.

As I expect the Senator from New York to defend Felder again, I have some other testimonials about the Hon. Thomas B. Felder, and I want to say that I notice him at all in this controversy because, and only because, it is shown that he and the Attorney General have had a working partnership for years, and the Attorney General must have known and does know the reputation of Felder, and he chooses him with knowledge. According to Felder's statement he and the Attorney General have been closely associated, and according to Felder's statement of the 4th or 5th of this month, he, the same Thomas B. Felder, and the Attorney General, Daugherty, were closeted together arranging an agreement to settle the Bosch magneto case and agreeing that Felder should hire the Government's investigator away from the Government.

This is a report of a former Governor of South Carolina, under date of January, 1913. It reads:

FELDER'S MOTIVES.

About 15 months ago information came to me that one T. B. Felder, of Atlanta, Ga., had attempted to bribe certain officials of this State, and that he had endeavored to form a conspiracy to defraud the State and her people.

Letters written by this man were placed with me, showing conclusively his guilt.

As your chief executive, it was my duty, if it were possible for me to do so, to have Felder placed on trial in your courts. Seeking to carry out the law of the State, I attempted to have Felder arrested. Being a man of some ability, possessed of considerable wealth, connected with certain influences and interests in the State of Georgia, supported by some men in South Carolina who hated me more than they loved their State, being unscrupulous in his methods, knowing that he was guilty of the charges that I had brought against him, and fearing to face an honest South Carolina jury, Felder evaded arrest and has continuously since remained a fugitive from the justice of this State.

Mr. WADSWORTH. Mr. President, will the Senator state the name of the governor?

Mr. CARAWAY. Gov. Cole Blease. Under the law as it used to be in South Carolina there was a dispensary commission. The dispensaries handled all the liquor. The commissioners bought the whisky, and it was sold through the dispensaries, which were governmental agencies. If I am not right the Senator from South Carolina [Mr. DIAL] will correct me. In 1911 and 1912 among the commissioners was one H. H. Evans. I

think a man named Towill was another. Does the Senator from South Carolina remember who the other member was?

Mr. DIAL. I do not remember who the commissioners were at the different times. There were three who composed the board.

Mr. CARAWAY. Anyway, I have here their sworn testimony about what occurred, but fortunately a lot of it does not rest on their sworn testimony. I want to read for the benefit of the Senator from New York, who wanted to know who the governor was, a letter from the Senator's friend, Mr. Felder. Here is the letter. It starts by giving the name of the hotel, and it says "Fireproof." I rather think he was wise in selecting that hotel.

(Will V. Zimmermann, manager; C. J. Owens, assistant manager. Europlan and amiplan.)

THE PIEDMONT,
Atlanta, Ga., October 2, 1905.

DEAR HUB:—

That is H. H. Evans—

I have just returned from Peoria, Ill. I have framed up our company in such a way that we will be able to make all the money out of it by the time your term as commissioner expires as we will reasonably need and you can then retire. I want you to think seriously of the plan which I submit and make an appointment as soon as possible, either here or elsewhere, and I can discuss with you more fully and satisfactorily the details. The plan is sufficiently feasible to justify our taking your associates in on the ground floor—

That is, the other two commissioners, you know. That part of it might be entirely good form in some States.

The plan is sufficiently feasible to justify our taking your associates in on the ground floor. It is this: The capital stock of the company at present is $100,000—owned by you and I—

That is the first time Evans ever knew he owned half of the stock—

It is all paid for, and I have the actual custody of the stock. Hull, the general manager of Clarke Bros. & Co., wants an interest, and we may need him, but not a present. If we can get for October, November, and December large orders from Carolina—

That is, if this commissioner will buy large quantities of whisky—

I can issue $500,000 of preferred stock of the company, sell it to parties who have already agreed to purchase, we can divide the proceeds from the sale of the preferred, and then do one of two things—sell the common and let some new company run it or run it ourselves. Meantime we will have in hand $250,000 each, less such sums as we may have to pay to others to secure business in the meantime. Now, Hub, I want you to give this matter your serious consideration and cooperation. If you will do it, I will make you a fortune, and that very quickly. Wire me when and where you will meet me upon receipt of this. We have very little time in which to "pull the scheme together."

Have been working on the plan several months and now have it perfected. I have a brother-in-law in Indiana, a millionaire, who assisted me in working out the plans and will assist me in selling the preferred stock as soon as we can make a good showing. He has, as all other very rich men, accumulated his fortune by the manipulation of stocks. There is enough in this plan to justify us in paying more for business than anyone else can afford—

That is, we can corrupt the officers because we have more than anybody else—

There is enough in this plan to justify us in paying more for business than anyone else can afford, as you will perceive. Then, too, as Clarke Bros. & Co. are the largest distillers in the United States no one can be criticized for giving them large orders. Whatever is done must be speedily done. Can you get your associates to meet us here or in Augusta right away? Now, Hub, don't dillydally about this, for after months of labor my plans are mature and we can make a killing.

Yours, T. B.

That is Thomas B. Felder. There are many of these ethical letters. Here is the sworn testimony of the man to whom they were addressed, their sworn testimony as to the proposition he made to them when he met them. Here is the proclamation of the governor that he was a fugitive from justice.

I am perfectly willing for the Senator from New York to indorse him. He says Felder has moved to his State, and if he wants to defend his record I am not going to criticize him. The Senator has a right to do it. The record shows that Daugherty & Felder had a written contract to secure a pardon or commutation for Morse on what lawyers call a contingent fee; that is, "if we do not get you out, you do not owe us a cent." It is a kind of contract, so far as I know, that reputable lawyers nowhere make in dealing with criminal matters. I never knew in my experience a lawyer to undertake a criminal matter on what is called a contingent fee.

The Attorney General made that contract and the Attorney General, with Thomas B. Felder, got Morse out of the penitentiary by means of a representation that Morse was dying of Bright's disease, when, in fact, he was not a sick man at all, I am informed.

The Senator from Ohio [Mr. WILLIS] had placed in the RECORD a letter that Mr. Taft is said to have written to Attorney General, then Mr. Harry M. Daugherty, when he, Daugherty, thought he was a candidate for office in Ohio, saying that Daugherty had nothing to do with this case—that is not exactly the language, but that he told him he was merely employed as attorney and did not make any recommendation. I promise to produce the record that will show that former President Taft had forgotten. In the meantime Mr. Taft, after he retired from the Presidency by unanimous consent, wrote "What the President can really do" and had it published in the Ladies' Home Journal. One of the installments appears in the April, 1914, issue, and I presume everybody will recognize this case as the Morse case. I read from page 82:

One never knows until he has been in the Presidency the amount of pressure that is brought in one way and another to stay the prosecutions and to pardon criminals. I had two cases before me in which it was represented to me that both of the convicts were near death, and I instituted an investigation to find out the truth through the Army Medical Corps. Examinations were made, watches were established over the sick men, and it was reported to me that both were in the last stages of a fatal disease. One of them died soon after he was released from the penitentiary. Another of them is apparently in excellent health and seeking to reestablish himself in the field in which he committed a penitentiary offense. This shakes one's faith in expert examination.

The President said they put up a job on him, in the language of the street; at least, that is what he seemed to say as politely as he could.

I wrote to Chief Justice Taft about this case and have a letter from him. I thoroughly appreciate his position. He says he does not want to become mixed up in it. I did not intend to do it, but the Senator from Ohio, his friend, feeling the necessity of coming to the rescue of the Attorney General, brought the former President into this controversy by having published a letter that the former President gave out to help Mr. Daugherty when he was assaulting—I mean, attempting to run for office in Ohio. So, in order to bolster up his reputation, the Senator from Ohio [Mr. WILLIS] produced a letter from the present Chief Justice, former President Taft, written in 1915, when Mr. Daugherty had appealed to the former President to help him out, and that letter was placed in the RECORD. I do not blame the Chief Justice for not wanting to be mixed up in this case. I do not blame anybody for wanting to keep away from it.

Mr. President, yesterday evening the Attorney General gave out an interview, and the headlines are as follows:

Daugherty to name Democratic grafters. Promises exposé in frauds to jar Nation.

In this interview he says that he is having trouble to get a lawyer who will prosecute these Democratic criminals, and that if he can not get a good lawyer he is going into court and do it himself. If the Attorney General imagines any Democrat is going to change his course because he gives out these big interviews, the Attorney General does not know Democrats.

But to show how much real fear that threat ought to inspire, I shall read a newspapers clipping. First, I wish to ask the Senator from Ohio if he is familiar with a paper published in Ohio called the Ohio State Journal?

Mr. WILLIS. Yes; I know that paper very well.

Mr. CARAWAY. A Republican paper?

Mr. WILLIS. No; it is not.

Mr. CARAWAY. When did it cease to be—when the Senator ran for office?

Mr. WILLIS. Oh, no. There are three papers in the city of Columbus, and the Senator can ascertain by talking with anyone familiar with the situation there, that there is no Republican paper in the capital city of the State of Ohio. The best that can be said of the Ohio State Journal is that it is an independent paper.

Mr. CARAWAY. I rather imagine from the denials that there are no Republican papers anywhere; that all of the papers have turned Democratic. The Senator from Missouri [Mr. SPENCER] denounced the St. Louis Globe-Democrat as being a Democratic paper, and said it had ceased to be a Republican paper, although it has been known as the leading Republican paper west of the Mississippi River long before the junior Senator from Missouri blessed the Senate with his presence.

Now the Senator from Ohio denies that the Ohio State Journal is a Republican paper. Anyway, here is what it published the other day:

Our own further unparalleled offer for the day:

That is the headline.

We will give $2,500 in gold for every grafting war contractor put in jail by Harry Daugherty, with an extra prize of a genuine Packard Single-Six in every case where said grafting war contractor so placed in jail is a Republican.

Anyway, that is a leading newspaper published in the town where the Attorney General lives. I merely read that for the

consolation of the people whom Daugherty now threatens. In conclusion, the Attorney General must admit that he was joking—I will say that to be polite—when he induced the Senator from Indiana to deny that he had anything to do with the Morse case. If he is not joking now about prosecuting Democrats, I want him to make his threat good to prosecute Democrats and pardon Republicans, because that is what the interview implies. The warning is that, "You Republicans who grafted need not fear, because I am your own Harry Daugherty, but all Democrats whom Wilson appointed to office had better make your peace with God, because I, Harry Daugherty, am after Democrats."

Mr. President, he ought now to make good that threat. I promise him that if he does not do it another document that he will not like is going to be printed in the CONGRESSIONAL RECORD right away. I will give him time to make up his mind. We are threatening each other now, and I am going to make good; he is not.

I want here, Mr. President, to waive all personal immunity for the benefit of Thomas B. Felder or any of his friends. I do not waive any legal right, for I do not want to be harassed by a lot of blackmailing lawsuits; but I waive all personal immunity. Felder said he wanted me to put that in the RECORD, and I do so. I include in that waiver the Hon. Thomas B. Felder and any of his friends or apologists.

Mr. WATSON of Georgia. Mr. President, I went on duty at my office yesterday morning at 9 o'clock; answered the roll call over here about 11 o'clock; and remained continuously in the Chamber, or in the adjacent reading room, throughout the day, until about 6 o'clock. Nine hours' continuous work just about uses up all my strength; so I did not return to the Senate after dinner at the hotel, because I am paired with the junior Senator from Arizona [Mr. CAMERON]. Therefore my absence was not an injury to the public service. My vote was virtually recorded on the Democratic side each time the roll was called, just as the vote of the Senator from Arizona was practically recorded on the other side. As an accommodation to the Senator from Arizona, who is a most pleasant gentleman, I made the pair, which has existed now for several weeks. I was glad to extend him that courtesy.

However, Mr. President, had I been here last night I would have objected to the unanimous-consent request made by the Senator from New York [Mr. WADSWORTH]. I think the CONGRESSIONAL RECORD ought to be kept clean and undefiled, but with Felder's letter in it, it is unclean and defiled. The Senator from New York said:

> I have no method of ascertaining the truth or falsity of any statement that Mr. Felder has made in his letter. Mr. Felder is a constituent of mine, and I met him for the first time about a week ago.

Mr. President, the Italian fish dealer who murdered the brave policeman in New York day before yesterday is also a constituent of the Senator from New York, and no doubt there are many other of his constituents whom he might be cautious enough not to vouch for upon a week's acquaintance. Had the Senator from New York wished to treat with consideration two of his colleagues on this side, who have never given him personal offense, he might have directed some inquiry to us.

Mr. WADSWORTH. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. PEPPER in the chair). Does the Senator from Georgia yield to the Senator from New York?

Mr. WATSON of Georgia. With pleasure.

Mr. WADSWORTH. I thank the Senator. I presented the letter addressed to me by Mr. Felder immediately at the close of the roll call, which occurred, I think, in the neighborhood of 6 o'clock yesterday evening. My recollection is that during that roll call the Senator from Georgia [Mr. WATSON] and the Senator from Arkansas [Mr. CARAWAY] were both present.

I think they both answered to the roll call. It never occurred to me that they would care one bit whether the letter went into the RECORD or not, because the letter does not mention either of them or cast any reflection upon them, but is merely a statement by Mr. Felder in his own defense. If I had thought for a moment that there was in Mr. Felder's letter anything offensive personally to the Senator from Georgia or to the Senator from Arkansas, of course I would have consulted them first, and I shall be glad now, if there is anything that may be pointed out in the letter which is offensive to any Member of the Senate, to express my regret.

Mr. WATSON of Georgia. Mr. President, I take the word of the Senator that what he says is absolutely true; I have no disposition to question his veracity or to wound his feelings; but my colleague [Mr. HARRIS] has, according to my understanding, been serving with the Senator from New York on the Committee on Military Affairs, and had the Senator from New York asked my colleague, "What about this man Felder?" he would have obtained from my colleague just about the same statement that I made in reply to a question which was directed to me by the Senator from Arkansas [Mr. CARAWAY].

I did not voluntarily get into the controversy. This is a man whom I would not touch. He is a man whom ordinarily I would not notice, whom I would not dignify by noticing, and neither would my colleague. But the Senator from Arkansas [Mr. CARAWAY] asked me what about him, and I could not do anything less than answer his question, briefly, as I did.

Now, I will point out to the Senator from New York the offensiveness implied in Felder's letter, and I assure the Senator I do not want to be offensive. The Senator from Arkansas asked me what about Felder, and I said I had known Felder for many years as a crook, as a lobbyist, as a knave. Now, here comes into the RECORD a page and a half of testimony from Georgia, apparently contradicting her junior Senator. I think the Senator from New York will at once see that this brings up an issue of veracity between myself and the Georgians who signed these testimonials; and it seems to me that a Senator ought to hesitate before joining in a controversy between a Senator and a former resident of his State, who is apparently backed up by testimonials from that State.

If the Senator from New York will turn to those letters he will see that they bear no date. That ought to have impressed him as a suspicious fact.

Mr. WADSWORTH. Mr. President, will the Senator yield?

Mr. WATSON of Georgia. Certainly.

Mr. WADSWORTH. I thank the Senator. That matter had not occurred to me before, but for the Senator's information, permit me to say that in the one interview which I have had with Mr. Felder he showed me the originals of these letters.

Mr. WATSON of Georgia. I am not doubting their genuineness, Mr. President.

Mr. WADSWORTH. And my recollection is—and I only give this in order to keep the RECORD as clear as possible—my recollection is that they were written to or about Mr. Felder at the time he left the State of Georgia and removed to the State of New York, which I think was about four years ago.

Mr. WATSON of Georgia. Mr. President, the Senator is mistaken as to the date. Felder left the State of Georgia 10 years ago, benefiting the State of Georgia very much by doing so. His occupation as a lobbyist was gone; he had been denounced in the newspapers so often, and was denounced to his face in the Democratic State convention of Georgia, as Representative WRIGHT, of Georgia, here knows, for he was present when I denounced Felder to his face. He could no longer be useful to any corporation as a lobbyist, and he went to New York, and is now lobbying in Washington City, as is shown in the letter which Representative WOODRUFF, a Republican from Michigan, placed in the RECORD on May 15. That very letter shows that when I characterized Felder as a lobbyist I placed him where he belonged. That letter shows that he is still at that dirty work which he was doing in Georgia.

I call the attention of the Senator from New York to the fact that the letters attesting Felder's character were signed in 1912. Some of the men who signed are dead; and here is this man Felder, who would get fresh testimonials from Georgia if he could procure them, using 10-year-old letters of dead men. Some of the men who signed the letters are political back numbers; they are down and out. One of the letters was signed by a governor who was the only governor who was not given a second term. His first term was unsatisfactory, and when he offered for reelection he was overwhelmingly defeated. The same thing is true of some of the other signatories; but I do not wish to say anything unpleasant about them. What I say is this: Those of the gentlemen who are still living would not now give "Bosh" Felder a certificate of good character. Why did he not get some fresh testimonials? Why did he not get something up to date?

Again, Mr. President, he has lived in New York 10 years. If he has established a good character there, why should he have to go to Georgia to get a certificate of character? Why not bring some New York lawyer to vouch for him—the New York governor, the mayor of the city? Why not bring some testimonials from New York? One who lives in a big city like New York for 10 years practicing law, as he says he is, ought to have established a good character by this time if he has got one. Why not a testimonial from Judge Alton B. Parker, for instance, or Judge Samuel Seabury? Why none from eminent members of the bar? And most of us know who the leading lawyers there are. Why did he not get some testimonials from one of them?

Since he has been in New York he has belonged to the firm of Felder, Gilbert, Campbell & Barranca, but for some reason

they put him out. That firm is still doing business under the name of Gilbert, Campbell & Barranca. He has formed two other connections with law firms in New York, but he is not now a member of either. Why was he put out? Why does he not get a certificate of good character from Gilbert, Campbell & Barranca, his former partners? That is a fair question. If he is an honorable man, an honorable lawyer, a square partner, why does he not get a certificate from those who were his partners?

Mr. President, he denies that he was indicted in South Carolina. I can only repeat that the records show that he was indicted. Governor Cole Blease put a requisition upon Governor Joseph M. Brown, of Georgia, to have Felder brought across the Savannah River into South Carolina, to be tried under that indictment. Felder had influence enough, somewhere—and I admit that he has some influence, somewhere—to induce Governor Brown not to grant that requisition. That is the first time in the history of Georgia, so far as I know, that the governor has refused a requisition legally presented. Governor Brown's conduct in that case was so unpopular that he was defeated when he next appeared before the people. Felder left the State, and he could not now go into the State and dare to say in Atlanta, or elsewhere, what he said in the New York papers about daring me to meet him behind a closed door. I invite him to try it. Let him go to Georgia and say what he said in New York.

He was the lobbyist for the whisky ring for years and years and years. He suddenly changed when he saw that we had him beaten. I myself wrote the first antisaloon plank that ever was in a political platform in the South, and I am proud of it. I campaigned the State to close up the saloons. We did close them up. This man fought us at every step. We whipped him at every step; and finally, when he saw that he was completely beaten, he suddenly turned to the other side—doubtless for a consideration—and noisily, dramatically, assisted a man from Ohio, Meikelheim, as I remember, in framing what is called the bone-dry law.

Mr. President, the whisky men who had been paying Felder to lobby for the whisky ring, were so indignant that one of them cursed him black and blue on the streets at Atlanta, and applied to him an epithet with which I will not soil my tongue—and Felder took it. Another one lost control of himself in the Kimball House and he almost riddled Felder with his knife—cut him almost to death. Why, it must have been 20 years ago that Felder was denounced on the floor of the State Senate of Georgia as a lobbyist by a State senator—Kinch Overstreet, of Screven County. Upon coming out of the senate chamber, Felder attacked Overstreet about his speech, and they had a fight in the lobby. Every member of the Georgia delegation in the other House knows him just as I know him. They are here in the Chamber, and from them the Senator from New York can get information as to what kind of a constituent this particular man is.

Mr. President, an obscener bird never flapped his vulture wings than T. Bosh Felder. A slimier reptile never crawled the earth than T. Bosh Felder; and I would not say it here, Mr. President, if I had not, in 1912, said virtually that to his face, in the Democratic State convention of Georgia.

Mr. WILLIS. Mr. President, we have consumed now about an hour and a half in the discussion of this matter, most of that time having been given to the discussion of T. B. Felder, whom I never saw and of whom I never heard and about whom I care nothing at all. Therefore I do not propose to go into any defense or vituperation or anything of that sort. I care nothing about Mr. Felder; but I do want to say one or two things touching some matters that have been mentioned here, particularly by my friend the Senator from Arkansas [Mr. CARAWAY].

I think the Members of the Senate and the country, so far as it pays attention to our deliberations here, are not interested in local politics and the local newspaper situation in Ohio. I repeat what I said in substance to the Senator from Arkansas, a thing that we can prove by anybody who is acquainted with the political situation in Ohio, that there is not in Columbus a Republican Party daily paper. Two of the papers in that city are under one management, and I am very certain that I express a thing that would be looked upon as a matter of pride by that management when I say that those papers are at least independent papers. At any rate, they have no leaning toward Republicanism. To that statement I only want to add, as a matter of fairness, a thing that always ought to be taken into consideration when we are hearing witnesses—that there is a bitter personal feud between the management of the two leading papers in the city of Columbus and the Attorney General. That much is a matter of common information with anybody that knows anything about the Ohio political situation, so I pass that point with that remark.

As to the Bosch Magneto case, I know nothing whatever about it. I think my information in regard to it is about as extensive as that of the Senator from Arkansas. I understand that there is some case of that sort, under that title, pending. I think it will be very much better to wait until that case is tried and finally decided. I know nothing at all about the case.

Mr. CARAWAY. Mr. President, may I ask the Senator a question?

Mr. WILLIS. Certainly.

Mr. CARAWAY. I wonder if it would not be well, then, for the Attorney General to wait until he indicts people before he sends out threats about what he is going to do.

Mr. WILLIS. Mr. President, I do not know what the Attorney General has said.

Mr. CARAWAY. Oh, but that was not what I asked the Senator.

Mr. WILLIS. He is able to take care of himself. What I say is that in a matter which is pending in court, and about which I know nothing—and I think my friend from Arkansas can not know much more about it than that—it will be well to wait until that matter is determined before he discusses it.

Mr. CARAWAY. Just wait; will the Senator let me ask him a question?

Mr. WILLIS. Certainly.

Mr. CARAWAY. Would it not be just as well, then, for the Attorney General to wait until he gets into court before he threatens what he is going to do?

Mr. WILLIS. Oh, well, Mr. President, the Attorney General is able to take care of himself. I have not seen the statement that he has made, and he is entitled to make any statement that he wants to make, so far as that is concerned. I do not care about that; but let us wait on this case until we find out how the matter is determined.

My friend the Senator from Arkansas and my friend the Senator from Georgia are both of them good lawyers. They seem to have discovered a new method of qualifying a witness and establishing his credibility. I understood my friend from Georgia just now, amongst other phrases, to use this interesting expression—that this man Felder was a "slimy serpent," or something to that effect. I could not pretend to quote the language that he used, but it is in the RECORD. Furthermore, on May 3, when this interesting subject was first brought up, my friend from Arkansas turned to my friend the Senator from Georgia and made inquiry of him as to this man Felder, called him as a sort of a character witness, and this is what the Senator from Georgia then said:

> Mr. President, for the last 40 years I have known Thomas B. Felder well, and I have known him to be a crook. I know him to have been a professional lobbyist of the whisky ring, opposing every one of the temperance laws that I was advocating and other temperance people were advocating in Georgia. He combated us at every step. We had to close the barrooms over his protest; and he never ceased to be a lobbyist in Georgia until the attack made upon him by myself and by others destroyed his usefulness as a lobbyist. Then he left the State and went to New York.

The Senator further said:

> I would not say this here if I had not said it to his face, in a State convention in Atlanta. I denounced him to his face in that convention, and he turned about as white as a piece of paper and did not open his mouth. I am asserting a fact in saying that he was not a lawyer, but a lobbyist; not an honest man, but a knave; not a witness whom anybody would believe, but a man who, in the State of Georgia would be impeached if offered as a witness on the trial of a case by men of the highest standing and character, who would say that from their general knowledge of his character they would not believe him on oath.

That is what the Senator from Georgia said about this gentleman on May 3, and what he has said to-day is of like tenor.

The Senator from Arkansas has read from documents tending to prove that this man was guilty of very serious misconduct in the State of South Carolina, that he was a lobbyist, that he was mixed up with what, according to the documents from which he read, was a very questionable transaction, if not an illegal one, and for which, if these allegations are true, he should have been punished. Having thus established the character of the witness as a lobbyist, as a knave, as a person whom no one would believe on oath, having thus laid the foundation, my friends introduce their witness, and my friend from Arkansas then proceeds with that witness to convict the Attorney General of sundry and divers things.

Mr. President, all I want to say about this matter at this point is this: Here is the testimony of Mr. Felder, whom, I repeat, I do not know and about whom I do not care. If he is half as bad a man as the Senator from Arkansas and the Senator from Georgia have stated that he is, he is not worthy of

belief, and yet his testimony and his letters are relied upon in the statement that is made here this morning.

Mr. CARAWAY. Mr. President, will the Senator yield?

Mr. WILLIS. That is buttressed——

Mr. CARAWAY. Just a minute; will the Senator yield?

Mr. WILLIS. Oh, certainly.

Mr. CARAWAY. What letter did I read that I relied upon that Felder wrote?

Mr. WILLIS. I do not know the extent to which the Senator relied upon it, but he read a letter from Mr. Felder.

Mr. CARAWAY. Oh, to the dispensary commissioner in South Carolina? I read the letter of the Attorney General showing the relationship between him and Felder and with the Morse case.

Mr. WILLIS. I understood the Senator to read a letter from Mr. Felder. I think the RECORD will so show.

What I am about to say is that these Senators rely upon the testimony of a man who the Senator from Arkansas and the Senator from Georgia agree is unworthy of belief, and that buttressed by the testimony of another gentleman who has been discharged from the service of the Government. I know nothing about him except as I have read the letter here put in the RECORD on page 6990. They rely upon the testimony of those two witnesses, one a discharged official, the other one convicted by those who bring him here as a witness as being unworthy of belief. Before I can believe the charges of two witnesses of that sort I shall have to have some stronger testimony, particularly in view of the fact that a former President of the United States and a former Attorney General of the United States, on page 6920 of the RECORD of May 5, make very definite statements to the contrary. I am perfectly willing to put those two witnesses against the witnesses who have been adduced here by the Senator from Arkansas.

Mr. DIAL. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from South Carolina?

Mr. WILLIS. I yield to the Senator.

Mr. DIAL. Mr. President, I have nothing to do with this controversy, but I want to say that I know Capt. H. L. Scaife. He is a native of my State; he is a lawyer of high standing and of good reputation, and a man of unimpeachable veracity. I would believe any statement Captain Scaife would make. He is deeply interested in the Government getting justice out of those who were profiteers during the war. He feels that we have been robbed and that the Government has been neglectful in prosecuting people who ought to be in the penitentiary.

Mr. WILLIS. Mr. President, I have made no attack upon the constituent of my friend the Senator from South Carolina. I do not know him, and know nothing of him at all except as I see this letter. But the Senator knows, as every other Senator knows, that a man in that position, having been discharged, naturally has a certain amount of bitterness in the statements he may make. I am calling that to the attention of the Senator so that he may properly weigh the testimony brought in by this man.

Mr. CARAWAY. Mr. President, the Senator from Ohio proceeds to set up a straw man and then to knock him down. I do not know anything about Thomas B. Felder except what his record and his reputation show. I do know, however, that he is the associate of the Attorney General. That comes both from the Attorney General and from Felder. I do not care how bad his reputation is, the Attorney General chose him as his confederate in his dealings in these matters.

Mr. WILLIS. Mr. President——

The PRESIDING OFFICER (Mr. MOSES in the chair). Does the Senator from Arkansas yield to the Senator from Ohio?

Mr. CARAWAY. I yield.

Mr. WILLIS. I am interested in that statement. I did not understand the Senator to make it before.

Mr. CARAWAY. Oh, yes; the Senator did.

Mr. WILLIS. Of course, the Senator must not say that.

Mr. CARAWAY. I did make it.

Mr. WILLIS. I want to ask the Senator a question in perfect good humor: I understand him now to make the statement that this man Felder is now the associate of the Attorney General—connected with him in some fashion?

Mr. CARAWAY. The Senator did not understand me to say that if he understood me at all.

Mr. WILLIS. I misunderstood the Senator, then.

Mr. CARAWAY. Just wait a minute, then. I wish the Senator would just pay attention to what I do say, if he wants to answer me. I said this, that Felder and the Attorney General were associated together, and both of them say it. I put in the RECORD a letter Felder wrote me in which he said they cooperated in this matter. I hold in my hand a letter of the Attorney General in which he says they were employed in this matter. If the Senator thinks that is setting up a witness like Felder to convict the Attorney General, of course he is welcome to put any construction on it he wants to.

Mr. WILLIS. What I wanted to ask my friend was whether he claims that the Attorney General and Mr. Felder are now associated, or that they were associated at this other period. That is what I am trying to elicit.

Mr. CARAWAY. I shall show that. I say they were associated, or else both of them are not worthy of belief, because each one of them over his signature has said so. Does the Senator doubt they were associated in the Morse case?

Mr. WILLIS. I do not know.

Mr. CARAWAY. The Senator does not know?

Mr. WILLIS. I do not know about that, and I want to get any information the Senator has.

Mr. CARAWAY. The Senator wants to ask the Attorney General, I reckon.

Mr. WILLIS. I have never talked with the Attorney General about this matter, I will say to the Senator. I am not the mouthpiece of anybody here. The Attorney General has never talked to me about it, nor have I talked to him about it.

Mr. CARAWAY. I do not care whether the Senator talks to him about it or not. The Senator says he does not know whether they were associated. Both of them over their signatures have said so, and if he does not believe both of them, of course I can not help him. The Senator knows that, and he is entitled to give credit to the witness of the Attorney General or not. But I do know that the Senator knows that the Senator from Indiana said that the Attorney General told him he had nothing to do with this case. The Senator from Ohio undertook to deny that the other day, but he had evidently not read all the RECORD, because the Senator from Indiana did say the Attorney General had nothing to do with the Morse case. I have in my hand right here a photostatic copy of the letter and the contract which the Attorney General, Harry M. Daugherty, made with Morse in that case, and now the Senator says he does not know whether they had anything to do with each other or not.

I do not care what the reputation of Felder is. Unless it becomes imperative, the private reputations of private citizens should not be dragged into debate by way of a criticism of their reputations. It is not fair if it can be avoided, but in this particular case it came about this way, and I am going to reiterate it:

I was making a statement here on the floor about a reputed arrangement which existed between the Attorney General, before he became Attorney General, and Morse, in securing a commutation of sentence, and the Senator from Indiana [Mr. WATSON], who was invited to be present to-day and did not come, got up and said it was not true, that the Attorney General was not representing Morse. Then going on down with the colloquy, he finally said that he had talked with the Attorney General about it many times, and the Attorney General assured him he had nothing to do with the case at all. I believe that the Senator from Ohio will say that he believes that Jim Watson was reporting what the Attorney General said to him, will he not?

Mr. WILLIS. Mr. President, I did not hear that particular colloquy, but I certainly would have believed Senator WATSON if I had heard it.

Mr. CARAWAY. The Senator has read it in the RECORD, has he not?

Mr. WILLIS. Yes; I have.

Mr. CARAWAY. The Senator believes that the Attorney General told the Senator from Indiana that, does he not?

Mr. WILLIS. I would believe that the Attorney General told Senator WATSON whatever Senator WATSON said the Attorney General told him.

Mr. CARAWAY. That is what he said he said. I have a photostatic copy of the contract which the Attorney General did make with C. W. Morse to get his pardon or commutation of sentence, and the Attorney General will not deny it. Then why does the Attorney General tell Senator WATSON and another Republican Senator who is on this floor that he had absolutely nothing to do with this case? Does the Senator know why he should have done that?

Mr. WILLIS. Mr. President, I know nothing about that, and I want to ask the Senator to absolve me from the knowledge which he attributes to another Republican Senator, because I am not the custodian of that information.

Mr. CARAWAY. The Senator has absolutely no information touching Daugherty!

Mr. DIAL. Mr. President, I have not kept up with the details of this controversy, but I want to state that so far as Captain Scaife's discharge by the Attorney General is concerned, that is a matter of no great importance to him. Cap-

tain Scaife is not dependent upon his position in the Government for a living. He rendered great service during the war; he is a man of exceptional ability; and, as I said before, he is well posted, having investigated some of these wrongs against the Government, and he thinks a great number of people ought to be prosecuted and put in the penitentiary.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the amendment on page 32, line 17.

Mr. McCUMBER. Mr. President, in order that we may fully understand the relevancy of the two hours' debate this forenoon and connect it up with the particular question before the Senate, I ask that the Secretary may read the proposed amendment.

The PRESIDING OFFICER. The Secretary will state the amendment.

The ASSISTANT SECRETARY. In paragraph 203, page 32, line 17, the committee proposes to strike out "17" and insert "20," so as to read:

Other cement, not specially provided for, 20 per cent ad valorem.

Mr. HITCHCOCK. Mr. President, last night while we were considering the cement schedule the fact was made public that the Government of the United States is prosecuting the cement manufacturers of the United States in the Federal Court of the Southern District of New York. I desire to put into the RECORD, in part by reading and possibly otherwise, the charges which the Department of Justice makes against the cement manufacturers.

In the first place, let me say that these documents of the Department of Justice reveal the fact that the country is divided into districts, and that in each district there is a cement association, composed of the dealers and manufacturers in that district, and the case in New York is brought against the district of the manufacturers whose headquarters are in New York, and whose business is largely in the Eastern States. Reading from the indictment filed August 8, 1921, by the attorneys of the Department of Justice, I proceed as follows:

In the District Court of the United States of America for the Southern District of New York. Of the August term, in the year 1921. The United States of America *v.* The Atlas Portland Cement Co. et al. (Filed August 8, 1921.)

INDICTMENT—FIRST COUNT.

SOUTHERN DISTRICT OF NEW YORK, *ss:*

The grand jurors for the United States of America empaneled and sworn in the District Court of the United States for the Southern District of New York at the August term of said court in the year 1921, and inquiring for said district, upon their oath present, that, throughout the period of time extending from August 10, 1918, to the day of the finding and presentation of this indictment, Portland cement, extensively used in the construction of buildings, subways, sidewalks, wharves, docks, bridges, sewers, retaining walls, dams, and pavements has been manufactured in large quantities by certain corporations, a list of which, showing their corporate names, the States of their incorporation, and the location of their several mills, is as follows, to wit:

Name.	State of incorporation.	Location of mills.
The Atlas Portland Cement Co.	Pennsylvania	Coplay, Pa.; Northampton, Pa.; Hudson, N. Y.
The Allentown Portland Cement Co.	New Jersey	Evansville, Pa.
Alpha Portland Cement Co.	do	Manheim, W. Va.; Alpha, N. J.; Martins Creek, Pa.; Cementon, N. Y.; Jamesville, N. Y.
Bath Portland Cement Co.	Pennsylvania	Bath, Pa.
Coplay Cement Manufacturing Co.	do	Coplay and Saylors, Pa.
Dexter Portland Cement Co.	do	Nazareth, Pa.
The Edison Portland Cement Co.	New Jersey	New Village, N. J.
Giant Portland Cement Co.	Delaware	Egypt, Pa., and Norfolk, Va.
The Glens Falls Portland Cement Co.	New York	Glens Falls, N. Y.
Hercules Cement Corporation	Pennsylvania	Hercules, Pa.
Knickerbocker Portland Cement Co. (Inc.).	New York	Hudson, N. Y.
The Lawrence Cement Co.	do	Siegfried, Pa.
Lehigh Portland Cement Co.	Pennsylvania	Ormrod, West Coplay, Fogelsville, and Newcastle, Pa.; Fordwick, Va.
Nazareth Cement Co.	do	Nazareth, Pa.
Penn-Allen Cement Co.	do	Do.
Pennsylvania Cement Co.	do	Bath, Pa.
The Phoenix Portland Cement Co.	do	Nazareth, Pa.
Security Cement & Lime Co.	West Virginia	Security, Md.; Martinsburg, W. Va.
The Vulcanite Portland Cement Co.	New Jersey	Vulcanite, N. J.

said corporations being made defendants to this indictment together with certain of their officers and agents hereinafter named; that the above-named corporations, during said period of time, together have manufactured and sold, as hereinafter shown, approximately 25,000,000 barrels of such cement annually; that is to say, approximately 90 per cent of all such cement manufactured in the States above mentioned and approximately 25 per cent of all such cement manufactured in the United States—

I call attention to that, Mr. President, because it shows the existence in the eastern district of the United States of what is in fact a practical monopoly, if this statement of the Department of Justice, upon which the trial is now proceeding, is correct—

that each of said corporations, throughout said period of time, has sold practically all of the cement so manufactured by it to dealers in States other than the State or States in which it was manufactured, and large quantities to dealers in said southern district of New York, and, in pursuance of such sales, has continually during said period shipped such cement to said dealers over common-carrier routes; that such sales and shipments by said corporations throughout said period, by reason of the facts that cement is a commodity of great weight and little value and the freight rates charged for transporting it comparatively high, have necessarily been confined to States near said places of manufacture, to wit, to the States of Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, and West Virginia, and by reason of the same facts practically no cement manufactured in other States than those above named has during said period been sold in those States; that said dealers to whom said cement has been so sold and shipped by said corporations are so numerous that it is impracticable to set forth their names in this indictment; that said corporations throughout said period of time in so selling and shipping the cement so manufactured by them as aforesaid to dealers in other States than those in which it was manufactured have carried on trade and commerce among the several States of the United States within the meaning of the act of Congress approved July 2, 1890, and entitled "An act to protect trade and commerce against unlawful restraints and monopolies"; and that because said corporations in so carrying on said trade and commerce were throughout said period separate entities independent of each other, as said grand jurors upon their said oath charge the fact to be, they should have refrained from engaging in any unlawful combination and conspiracy in restraint of said interstate trade and commerce.

And the grand jurors aforesaid, upon their oath aforesaid, do further present, that said corporations throughout said period of time respectively have had divers officers and agents who have been actively engaged in the management, direction, and control of their affairs and business and of their said trade and commerce; and that a list of the names of such officers and agents, so far as they are known to said grand jurors—Christian names unknown to said grand jurors being indicated by initial letters—showing with which of said corporations they have during said period been respectively connected, and the character of their several officers and agencies is as follows, to wit:

Mr. President, I shall not read the names of those corporations. They seem hardly necessary in this connection—

said officers and agents being also made defendants to this indictment.

And the grand jurors aforesaid, upon their oath aforesaid, do further present that, continuously throughout said period of time, at and within the Borough of Manhattan, in said southern district of New York, said corporate and individual defendants, each then well knowing all the premises aforesaid, unlawfully have engaged in a combination and conspiracy in restraint of said interstate trade and commerce in cement so carried on by said corporate defendants; that is to say, in a combination, now here described, which has unlawfully restrained said trade and commerce in the manner hereinafter set forth:

Throughout said period of time said corporate defendants, under said management, direction, and control of said individual defendants, have, in pursuance of an understanding and agreement among them so to do, carried on their said interstate trade and commerce without any competition between any of said corporate defendants as to discounts, as to charges for bags, as to credit allowances for bags returned, as to charges for bin tests, as to the prices at which they have so sold and shipped such cement, or as to customer dealers to whom they have so sold and shipped the same, and under these circumstances have so sold and shipped said cement in said trade and commerce at arbitrary, noncompetitive, and excessive prices, and in quantities fixed by agreement among said defendants from time to time during said period.

And the grand jurors aforesaid, upon their oath aforesaid, do further present that, as a means of securing compliance on the part of each of said corporate defendants with the terms of said understanding and agreements, said defendants have, throughout said period of time, caused said business, trade, and commerce to be carried on in pursuance of a plan known as the "Eddy plan of open competition," under which each of said corporate defendants has made to the Cement Manufacturers' Protective Association, of which said corporate defendants were the only members, detailed daily, monthly, and special reports of all current and completed transactions pertaining to its said business, trade, and commerce, which said reports have been summarized by said association, and which said summarizations have been promptly sent by said association to each of said corporate defendants as members of said association, so that each of said corporate defendants, at all times during said period of time, has had full information as to the business and as to said interstate trade and commerce of all the other corporate defendants.

In that charge the Department of Justice outlines the workings of this conspiracy among the cement manufacturers of the Eastern States, who absolutely control the market to the exclusion of all competition from any other cement manufacturers of the United States. He outlines how these manufacturers, in violation of the Sherman antitrust law, have entered into a conspiracy, that as a result of the conspiracy they agree absolutely as to the price they are to charge for the cement, that there is only one price charged over all the whole area of country subject to varying freight rates, that each of those corporations sends a report, daily, weekly, and monthly, to the

head office, and that the head office reports to each one of the members of the conspiracy the information gathered from those reports, so that they are enabled to keep in close touch with each other as to the prices, and are practically doing exactly what the head office from time to time directs them to do with regard to the sale of cement.

And so the grand jurors aforesaid, upon their oath aforesaid, do say that said corporate and individual defendants, throughout the period of time, at the place, and in manner and form aforesaid, unlawfully have engaged in a combination and conspiracy in unlawful restraint of a part of the trade and commerce among the several States, against the peace and dignity of the United States, and contrary to the form of the statute of the same in such case made and provided.

Now, notwithstanding that charge of the Department of Justice and the trial which has been going on now for five weeks, seeking to convict these men of a penitentiary offense for absolutely controlling the market in that district, embracing New England, New York, and other States, and in that district selling practically all of the cement which is sold and raising the prices to the consumer, it is proposed by the pending tariff bill to exempt this criminal conspiracy from any competition from abroad.

I come now to the second count.

And the grand jurors aforesaid, upon their oath aforesaid, do further present that said corporate and individual defendants named in the first count of this indictment on said August 10, 1918, at said borough of Manhattan, in said southern district of New York, by agreeing, under the circumstances in that count specified, as they then and there did agree, to adopt and follow the "Eddy plan of open competition" mentioned in said first count, under which each of said corporate defendants was to make to said Cement Manufacturers' Protective Association, of which said corporate defendants were the only members, detailed daily, monthly, and special reports of all current and completed transactions pertaining to the business, trade, and commerce mentioned in said first count as having been carried on during the period of time therein set forth, which said reports were to be summarized, and which summarizations were to be promptly sent by said association to each of said corporate defendants as members of said association, as in said first count charged, and under which plan said members of said association were also to hold, to wit, in said borough of Manhattan and southern district of New York, monthly meetings to discuss said reports and to give to each other further information pertaining to the conduct of said business, trade, and commerce, so that each of said corporate defendants, at all times after said August 10, 1918, would have full information as to the business, and as to said interstate trade and commerce, of all the other corporate defendants, unlawfully did make a contract in restraint of said trade and commerce, in that the natural and inevitable effect of such adoption and following of said plan, as said defendants each then and there well knew and intended, would be to eliminate all competition between said corporate defendants, in the several particulars set forth in said first count, in the carrying on after that date of said interestate trade and commerce against the peace and dignity of the United States and contrary to the form of the statute of the same in such case made and provided.

WILLIAM HAYWARD,
United States Attorney.

Now, Mr. President, that is the charge which the Department of Justice makes against this large number of cement manufacturers, whose corporate names I have read into the record. They control the cement business of a great area of the eastern part of the United States. They control the cement business of Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, and West Virginia. This combination, controlling those States, has entered into another conspiracy with other combinations in other portions of the United States, by the terms of which those other associations agree not to ship into the district which these corporations control.

What are the people in those States to do, Mr. President? These indictments may or may not prove to be effective; on some technicality the defendants may escape. If they do escape, and if the arrangement they have continues in force, what hope have the people in the Eastern States for relief?

Now, that those people have suffered is easy to see by reading the prices they have been compelled to pay for cement. I have here the tabulated statement furnished by the Tariff Information Survey, and from it it appears that the value per unit, which is a barrel of cement, during the periods named was as follows:

In 1913 the price was $1.47 a barrel; in 1917 it was $1.74 a barrel; in 1918, when the trust was formed, according to the charge, it was $2.65 a barrel; in 1918, for that fiscal year, the price was $2.75 a barrel; in 1919, for the fiscal year, the price was $3.92 a barrel.

I see that those figures vary according to the quality of cement; but, beginning with 1918, the price runs $2.71, $3.92, $6.04, and in 1920 the price was $3.39 per barrel.

Mr. SMOOT. I will say to the Senator from Nebraska that the price went even higher than that in that year. The price on October 4, 1920, went to $4 a barrel.

Mr. HITCHCOCK. So much the worse. I have not the complete figures for 1920.

The result of the war was to shut off foreign competition in cement. Thereupon in 1918 this Cement Trust was formed. What has been the result of the formation of that trust? The result of the formation of the trust was to put up the prices to over $4 per barrel. What has been the result of that increase in the cost of construction? Mr. Untermyer, counsel for the joint legislative committee on housing in the State of New York, sent a memorial to the Senate and House of Representatives recently, and in that memorial here is one of the allegations which he makes:

In brief, this investigation (which is still under way) has disclosed an alarming and increasing shortage of housing accommodations throughout the State, and more particularly in the city of New York, due in large measure to the operations of illegal combinations among manufacturers of and dealers in well-nigh all the various lines of building materials and supplies that are necessary in construction, and in no small measure to corruption among labor leaders and to illegal rules, regulations, and practices of labor unions.

Later in the same memorial he uses this language:

The exactions of manufacturers and dealers in building materials due to this scarcity of supply have resulted in abnormal price increases and in some instances in the inability to meet the demand on any terms. Manufacturers and dealers are either unable or unwilling to satisfy these demands upon a basis of reasonable prices over and above the actual cost. This situation prevails not only in the city of New York but in many of the cities throughout the country and for the same reason. Unless corrected it threatens to paralyze the efforts to correct the present crisis.

Mr. President, Mr. Untermyer intimates that in the one city of New York something like 400,000 people are suffering for lack of housing accommodations. Everybody who has investigated the situation in New York knows that for poor people or people of moderate means it is almost impossible to rent quarters, either houses or apartments, at any time. This condition is aggravated by the high cost of building, and the high cost of building is largely due, as Mr. Untermyer says, to a combination among the building interests that have put up the price of building material. According to the charges made by the Department of Justice in the criminal case now on trial in New York, one of the combinations, one of the criminal conspiracies that have put up the price on necessary building material, is what we popularly refer to as the Eastern Cement Trust, which has a monopoly in that district. It has entered into contracts with the cement manufacturers of other districts not to enter the district in the Eastern States, and thus secured a monopoly because, during the war, the importation of cement from other countries was practically impossible. Now at the time cement is beginning to be imported and giving prospect of affording relief to the people in the Eastern States, insuring the possibility that they are going to have competitive conditions in the charges for cement, the Republican majority in Congress steps in and proposes to impose a tariff duty upon the importation of cement from other countries, thus acting as a direct servant of the trust in endeavoring to protect it from any competition from abroad.

Mr. President, that is not the only case that is pending in New York. That is the one on trial now, but there is a larger case there which the Department of Justice is prosecuting against the cement interests of the United States. It is brought against all of the associations in the United States that have divided up the country into districts, one of the districts being the New York district, to which I have referred.

After that case has been completed, I assume that the case against the national or larger trust will be taken up. I will now quote from a copy of the indictment in the larger case. This indictment has been brought in the southern district of New York against a large number of corporate defendants, cement manufacturers in all parts of the United States, some 74 in number. They do business in Alabama, Arizona, Arkansas, California, Colorado, Georgia, Illinois, Indiana, Iowa, Washington, Kansas, Kentucky, Maine, Maryland, Michigan, Minnesota, Missouri, Montana, Nebraska, New Jersey, West Virginia, New York, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, Tennessee, Texas, Utah, and Virginia.

In this indictment the grand jury declares:

That substantially all, to wit, 85 per cent, of the Portland cement moving in interstate commerce as herein described has been manufactured and produced, shipped and delivered by the defendants herein named—

That is to say, the 74 corporations that manufacture and sell substantially all the cement manufactured in the United States and consumed by the American people, 85 per cent being specified as that which moves in interstate commerce—

That substantially all, to wit, 85 per cent, of such cement consumed in the United States during the 15 years aforesaid has been manufactured and produced by the said defendants; and said defendants during said 15 years have, respectively, sold large portions of the cement manufactured by them to consumers of and dealers in such cement whose several places of consumption and business have been situate

in the Territories of the United States, in the District of Columbia, or in other of said States than the one wherein said cement was so manufactured by said defendants, respectively, and consigned other large portions thereof to such dealers and to their own agents in said Territories and districts and such other States for sale there by such dealers and agents. * * *

In furtherance of said conspiracy—

Which has been in operation, as the Department of Justice claims, for 15 years—

In furtherance of said conspiracy and with the purpose and intent of restraining said trade and commerce, eliminating competition therein, and enhancing the price of said cement to the consuming public, the defendants combined, conspired, and agreed together—

(a) To create and maintain uniform selling prices for their cement throughout the United States.

(b) To divide and allot to mills of the defendants within certain territorial subdivisions of the United States certain portions of said trade and commerce, and to eliminate competition among the defendants and others with mills in said respective territorial divisions of the United States.

(c) To withhold the cement from the market and prevent it from becoming a commodity of free and unrestricted barter and sale.

In other words, this combination has not only monopolized the business but has conspired to withhold cement from the market for the purpose of starving the market and compelling the consumers to pay a higher price for it.

(d) And to curtail and restrict the production and manufacture of cement.

A. Also, in furtherance of said conspiracy, and with the purpose and intent aforesaid, in order to create and maintain uniformity in price and to eliminate competition, the defendants conspired, combined, and agreed to—

(1) Adopt uniform prices for cement at all points of delivery with certain territorial subdivisions of the United States and to adopt arbitrary freight basing points with the purpose, intent, and effect of insuring the establishment and maintenance by all the defendants and others of uniform quotations and delivered prices for cement to purchasers at any given point in the United States, irrespective of the location of the respective mills manufacturing and producing said cement and irrespective of the actual difference in freight from said mills to any given point of delivery.

That is to say, a consumer could not get the benefit of lower freight if he was near an operating mill, but he was required to buy the cement and pay for it upon the freight basis of a town farther removed from his place for using the cement. He was compelled to pay the freight rate from the basing point to which all of the manufacturers in the district had agreed upon, even if they shipped it from a nearer point.

(2) To adopt and maintain the uniform practice of refusing to quote prices of cement, except f. o. b. the point of delivery for consumption, and to adopt the uniform practice of charging contractors and consumers using cement for construction work, irrespective of the quantity purchased, a uniformly higher price than would be charged to dealers.

(3) To adopt and maintain uniform charges for bags in which said cement was to be placed for shipment and of uniform allowances for such bags as might thereafter be returned by the consumers of said cement.

(4) To adopt and maintain uniform terms of credit and rates of discount for cash payment for said cement.

B. Also in furtherance of said conspiracy and with the purpose and intent aforesaid and in order to divide and allot trade to the respective defendants by territorial subdivisions and to eliminate competition, the defendants combined and conspired:

(1) To refuse to sell cement to be delivered by mills in a given territorial subdivision outside of said subdivision and to suggest to dealers and consumers outside of said given subdivision that they could best be served by mills located outside such given territorial subdivision, and within the territorial subdivision where such consumers and dealers were located.

In other words, Mr. President, they divided up the country, and they dictated to the consumers where they should buy their cement. They refused to quote prices on cement or to sell cement to any consumer in the territory of another mill or association.

(2) To adopt for each of certain territorial subdivisions of the United States arbitrary freight basing points from which, to the points of delivery of cement, freight rates were to be calculated and uniformly added to the price of said cement at the point of delivery, regardless of the freight rate actually paid or charged, resulting not only in a uniform price quoted to purchasers and consumers, by all of the manufacturers within any such given territorial subdivision, but in excluding manufacturers outside of such territorial subdivision from the market therein.

(3) To advocate before the Interstate Commerce Commission a readjustment of freight rates which would assist in such territorial subdivision of the United States and facilitate an allotment and division of trade in cement to mills of the defendants located within respective territorial subdivisions.

In other words, Mr. President, just as this criminal trade conspiracy, this Cement Trust, has sent its agents here to Washington to appear before the House Committee on Ways and Means and before the Senate Committee on Finance, so it has conspired to send its agents to the Interstate Commerce Commission for the purpose of trying to induce that commission to fix freight rates so as to discriminate in favor of its basing points and make it easier for the Cement Trust to compel all cement buyers to buy upon the freight basing point that the Cement Trust selects.

(4) To procure the adoption and adopt in large cities a zone system regulating and making uniform the drayage and cartage charges of all the respective defendants engaged in shipping or delivering cement in such cities.

They were afraid somebody might make a cut, somebody might make a reduction, so they are going to compel the railroads to charge a higher price from other points.

C. Also, in furtherance of said conspiracy and with the purpose and intent aforesaid, in order to withhold cement from the market and thus prevent it from becoming a commodity of free barter and sale, the defendants combined, conspired, and agreed:

(1) To restrict the acceptance of orders for future delivery of cement to dealers to orders for deliveries to be made within 15 days or less after the receipt of the respective orders.

In other words, they would not sell to a dealer in cement except to supply his demands for 15 days. They wanted to keep the cement market starved at all times, so that the consumers would be easily induced to pay these excessive and these increasing prices under the compulsion of the trust.

(2) To prevent and restrict sales of cement except in quantities and only sufficient for consumption in specific works, buildings, or other structures or articles which had been planned and arranged for at or before the date of sale, and in instances where more cement would be delivered to a contractor or consumer than required for a particular job to prevent such contractor or consumer from using it on other jobs.

Think of that, Mr. President! Not only restricting the dealers in cement to the purchase of cement for the following 15 days, but compelling a contractor to limit his purchases to jobs he had in hand, and not to permit him to use upon one job any cement which he had purchased for another job. The same men, or their representatives, come to the Congress of the United States and now ask in the pending bill to have cement taken off the free list, so that they may be freed from the possibility of competition from abroad!

(3) To refuse to sell to such dealers as were not "recognized" dealers, such recognized dealers to be made known by the defendants to each other by the compilation and publication of an arbitrary list containing their names and to prevent sales of cement to dealers not listed upon such publication.

D. In furtherance of said conspiracy and with the purpose and intent aforesaid, and in order to curtail the production of cement and enhance the price thereof, the defendants combined and conspired—

(1) To close down for fixed periods of time their respective mills and to advise their competitors of the time and extent of such periods, and to procure similar curtailment of production by such competitors.

I have been told this morning that there is a cement mill out here at Hancock, Md., which had been in operation for many years—now doubtless controlled by this trust—which has now been closed down and stands idle, not because the people have no desire for cement but in order to assist the trust in starving the market—a mill closed down here within 150 miles of the seat of government.

(2) To prevent the organization of new cement concerns and the construction of new mills for the production and manufacturing of cement by such concerns.

(a) To circulate false rumors as to the character of the persons that might form such new concerns.

Mr. President, that is not the charge of a partisan. That is not the charge of anyone who is seeking to prevent the imposition of a tariff. That is not the charge of some one who is trying to prevent cement from being taken off the free list. That is the charge of the sworn officers of the United States, ratified and indorsed by a grand jury in New York City. That is an indictment brought in the name of the Government of the United States against this combination, which controls 85 per cent of all of the cement manufactured in the United States, just as it is the charge in the other indictment against the concerns which constitute one of the subsidiary associations of this trust and which control the cement in all of the Eastern States. Those very associations which are indicted here under criminal charge, and one of which is now on trial in New York, send their representatives here to Washington to appear before the committees of the Congress and induce those committees to erect a tariff against the possible importation of cement from abroad.

Mr. SMOOT. Mr. President, I will say to the Senator that no one appeared before the Finance Committee on behalf of this industry. I do not know whether they appeared before the House committee or not.

Mr. HITCHCOCK. They appeared before the committee in the House.

Mr. SMOOT. I say I have not looked that up.

Mr. HITCHCOCK. It was not necessary to appear before the Finance Committee. I am, nevertheless, surprised that they did not. Almost every other concern in the United States that wanted a subsidy from the Government, that wanted a tariff from it, did appear before the Finance Committee. The corridors of the Senate Office Building, adjoining the Senate Finance Committee, have been crowded for months during the secret sessions of the Finance Committee, and persons representing various manufacturing institutions that are favored in this bill have access to the committee room and met in secret with the Republican members of the committee. If the Cement Trust did not appear there, it is very remarkable. They certainly could not have been excluded. Apparently, the committee

has not been aware that there was a Cement Trust. Apparently, the committee which brings in this recommendation to the Senate to take this great article off the free list was not aware that the Government of the United States was prosecuting this trust. The committee did not know that it was prosecuting the corporations which constitute the Cement Manufacturers' Association and prosecuting individually the corporations and their officers which constitute the trust.

Mr. SMOOT. Mr. President, I want to make a correction there. A Mr. O'Brien did appear before the Finance Committee and ask for an increase of the House rate from 5 to 8 cents, but the committee did not grant it.

Mr. HITCHCOCK. I thought it was inconceivable that although so many selfish manufacturers came to the committee for the purpose of getting the committee to approve a plan of exploiting the American public this criminal conspiracy had not sent some one for the purpose of urging the committee to raise the House rate, after they had been to the House and induced the House committee to take the article off the free list.

Mr. SMOOT. In answer to that I may say that the committee also listened to the criminal importers, I think, if the word could be used, as to the manufacturers. We listened to everybody who wanted to come before the committee; and, in fact, I will say to the Senator frankly that I think we spend too much time in hearings. There was no importer, no one desiring to be heard, but that the Finance Committee gave a chance to be heard; and I say frankly that I think the privilege was abused and extended far beyond any reason. The committee, however, started to hold open hearings and let anybody come, and gave notice in the press that there would be hearings upon the bill, and they came, both for a duty and for no duty.

Mr. HITCHCOCK. Mr. President, there were some open hearings, and undoubtedly there were some importers heard. I have no doubt that the Senator is entirely justified in making that statement, but it is very evident from an examination of the bill that the pleas made by the importers fell upon deaf ears, because the committees, both of the Senate and of the House, brought in a bill which takes one article after another off the free list and subjects it to a tariff and the Senate committee has taken one article after another and subjects it to a higher tariff than carried in the House proposal.

Mr. SMOOT. I think the Senator is mistaken there. Nearly all the rates which the Senate committee reported are lower than the House rates.

Mr. HITCHCOCK. I have not made a very critical examination, and I do not care about that. I know that the bill as it appears in the Senate, whether we consider the rates proposed by the House or the rates recommended by the Senate committee, represents an enormous increase——

Mr. SMOOT. Over existing law.

Mr. HITCHCOCK. Over the existing rates, and it includes a large number of articles which are necessary for the ordinary consumption of the American people, and it takes a large number of those articles off the free list and subjects them to a tariff.

Mr. SMOOT. Most of the articles which have been taken off the free list are articles which are not produced in this country, and we have taken them off for revenue. There are some which have been taken off the free list and put upon the dutiable list, and one of them is Portland or Roman cement, with 5 cents a hundred pounds imposed on it, which was taken off by the House. I do not want to take any more time of the Senate to speak on that subject. As was said last night, I think the only competition would come from Canada. Canada imposes a duty of 11 cents a hundred upon cement going from America into Canada, and we have imposed a rate of 5 cents. If I had my way, I would put Portland cement on the free list and put a proviso in the law that wherever any country imposed a duty upon the cement made in America entering that country, cement coming from that country into America would carry the same rate. That would meet that difficulty.

Mr. HITCHCOCK. Mr. President, Canada imposes a tariff of 11 cents a hundred because Canada is afraid of the competition from the United States. It is stated here in the report of the Tariff Commission that cement can be manufactured in the United States cheaper than in Canada on account of the cheaper fuel, and the reason Canada imposes that tariff, higher than the tariff the Senate committee proposes, is that she is afraid of United States competition. The Senator knows that America is exporting large quantities of cement.

Mr. SMOOT. There is no doubt about that; a great deal more than we import. The Senator made a statement in relation to the manufacture of cement in Canada. There are sections of Canada where the making of cement would cost more than it would to make it in the United States, and there are locations in Canada, with the water power she has at her command, where they can make it a little cheaper than they can in the United States. But, taken as a whole, I have no doubt at all but what it can be made in the United States, as far as the great bulk of the production in the United States is concerned, so cheaply that cement coming from Canada or anywhere else in the world could not get in and compete. The Senator from Alabama [Mr. UNDERWOOD] made a statement last night that was absolutely correct. It is a freight proposition, without a doubt. The question of protection does not cut any figure to speak of, and I agree with the Senator as to that.

Mr. HITCHCOCK. Mr. President, I have for many years believed that the great vice of the so-called protective tariff was that it encouraged trusts, and here we have a case in point. You have imposed a tariff upon this article, and you have listened to the voice of the representatives of the Cement Trust, in both the committee of the House and the committee of the Senate, and at the very time you were writing that tariff on cement the cement manufacturers were being prosecuted in the criminal courts of the United States for the formation of a trust. Yet, knowing that they were being prosecuted, knowing that they had formed a trust, and that, as the Department of Justice declares, they controlled 85 per cent of all the cement produced in the United States, knowing that they had raised the price from something like 80 cents or a dollar a barrel, as it formerly was, to four or five dollars a barrel, you have sought to give them a protection against foreign competition after they have wiped out local competition.

Mr. SMOOT. Does not the Senator know that all this rise in the price of cement he has spoken of occurred when cement was on the free list, and that cement to-day is on the free list, and all of this alleged conspiracy was under the free-trade conditions?

Mr. HITCHCOCK. If the Senator had been listening last night, he would have heard my figures. He would have heard me state that the importation of cement was temporarily killed by the war, and that it has only now begun again to be a factor.

Mr. SMOOT. Mr. President, I listened to the Senator's figures, and I did not see anything in them, because now the total importations into the United States do not amount to more than one-half of 1 per cent and that was true before the war and after the war.

Mr. HITCHCOCK. Then why are you putting this tariff on it?

Mr. SMOOT. I am not saying anything about that now.

Mr. HITCHCOCK. How do you justify it?

Mr. SMOOT. The justification of it is simply Canada. Some cement is sent around to the Pacific coast for ballast, and it furnishes the Los Angeles and San Francisco markets with cement. It is wholly a freight proposition, as I told the Senator. In Canada there are some cement factories so located that they can pay the 5 cents a hundred and get into the American market.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER (Mr. DIAL in the chair). Does the Senator from Nebraska yield to the Senator from Idaho?

Mr. HITCHCOCK. I yield.

Mr. GOODING. The Senator from Nebraska charges that the protective tariff is responsible for this Cement Trust, and yet cement is on the free list at the present time, and has been for eight years, I understand. Yet, of course, the protective tariff is entirely responsible for it.

Mr. HITCHCOCK. I did not charge that. The Senator is putting words in my mouth.

Mr. GOODING. The Senator said that the tariff was responsible for trusts, and he was talking about the Cement Trust at the time, which he said existed, and I say that cement has been on the free list for eight years, put there by a Democratic administration.

Mr. HITCHCOCK. The answer to that is that while it was on the free list, the war prevented its importation in any considerable quantities, but now that the war is over and the Cement Trust is afraid of foreign competition, this criminal conspiracy comes to Congress and induces your committee, sir, to raise this tariff. You listened to its representatives, though they represented a criminal conspiracy, according to the Department of Justice. The House committee listened to the representatives of the criminal conspiracy, and you have brought in here a recommendation to protect that criminal conspiracy. That is what I am saying. I did not say that the tariff had created this particular trust, but I say that there is a connection between a trust and a tariff, and a trust can not exist in this country when competition is made free and fair. It could only exist for any considerable length of time when a tariff wall is put around the country so as to exclude foreign competition.

Mr. SMOOT. There has not been a tariff wall around it.

Mr. HITCHCOCK. You are proposing to put a tariff wall around the country.

Mr. SMOOT. No; we are not going to put it around. Here is a part of the testimony in relation to Canada, and it is from Canada the importations come here, as I said before. I read from the testimony:

> I am speaking for the Michigan companies, into whose territory the entire 500,000 barrels, roughly speaking, of last year's importations came from Canada. Right across the Canadian border, in plain view from the windows of our offices, they are beginning the erection of a large cement plant and the construction of a steel plant near the town of Windsor, Ontario.

I do not want to take any more time to read that, but that is all there is in the question. I want to say to the Senator that I do not know whether this company is involved in the Huron-Portland Co. or not, but if the Senator had been a member of the committee, and had come from Michigan, and a constituent of his had asked that he be taken over to the committee and permitted to testify, I do not think the Senator would have objected to doing that, particularly as long as the case had not been decided. I do not approve of what the companies have done. I do not think there is a Senator here who would, but that does not mean that the committee shall not listen to a statement of things as they actually exist. Nearly all of the importations, as I said before, have come from Canada. In the West we have a Portland Cement Co., of Portland, Oreg., we will say, but they can not ship any of their cement into Canada unless they pay a duty of 11 cents a hundred. We can not ship to Canada from the cement factories along the border between the United States and Canada without paying a tariff of 11 cents, and besides that they impose a 2-cent sales tax on everything that goes in. It is a little affair, as far as the great business is concerned, but I think we can take care of Canada just as well by allowing this to go on the free list, with the proviso I have suggested.

Mr. HITCHCOCK. There we have it again; it is a little affair. While we were talking about some of these chemicals they did seem little affairs, but in the United States there is a consumption of something over 80,000,000 barrels of cement a year.

Mr. SMOOT. My reference to this being a little affair is entirely different from what the Senator refers to. I say the importations were so little compared with the whole production of the United States that they are negligible.

Mr. HITCHCOCK. That is all the more reason for not putting on a tariff. If there were a great importation, the Senator would be here saying, "We must erect a tariff wall. See the flood of cheap cement coming in"; but now he admits it is a little affair, and yet the committee recommends a tariff because little is coming into the country. Do you not want competition at all?

Mr. SMOOT. If the Senator had waited until I concluded, he would have seen my point. It is a little affair, so far as the whole product of the United States is concerned, but it is not a little affair to the manufacturers of this cement near the border of Canada. It is their life, and that is what I intended to say before the Senator interrupted me.

Mr. HITCHCOCK. There is another side to that. There may be a little manufacturer there who is doing business at a disadvantage, but there are in this country a hundred million people who are suffering for inadequate housing. There are a hundred million people who are paying taxes upon good roads, in which cement is used. There are a hundred million people who are compelled to pay excessive prices for cement for their public buildings. There are a hundred million people paying excessive prices for cement for use in the construction of bridges, hospitals, and for all other purposes, and, as the Senator says, without any proof, so far as I know, just because there are one or two manufacturers near the Canadian line who are operating at a disadvantage, he proposes to make it possible for a cement trust to exist in this country, without any competition, and allow them to maintain the present exorbitant rates on cement.

Mr. SMOOT. Mr. President, the Senator certainly does not mean to say that.

Mr. HITCHCOCK. Exactly that.

Mr. SMOOT. Out of the whole 100,000,000 people, the only people who could possibly be affected by this would be on the border. The Senator from Alabama [Mr. UNDERWOOD] said last night that cement could not be shipped 100 miles into the interior, and if it could come in from a foreign country it could not affect at all the 100,000,000 people.

Mr. HITCHCOCK. Such a statement can not stand the test for a moment. You have millions of people right in the city of New York, to begin with. You have another million or more in Boston. You have millions all along the coast, who will certainly suffer immediately if deprived of any form of competition from abroad. The truth is that the Senate Committee on Finance never seems to think at all of the consumer.

Mr. SMOOT. Even under free trade we have not had anything coming from any foreign country, with the exception of the Pacific coast, to speak of. It comes from Canada, along the border line, under free trade.

Mr. HITCHCOCK. I do not sympathize with the idea of destroying business with Canada.

Mr. SMOOT. No; of course the Senator does not.

Mr. HITCHCOCK. Canada has imposed most of her tariffs against the United States in retaliation for what we have done.

Mr. SMOOT. Oh, no.

Mr. HITCHCOCK. There is no more reason why we should destroy business with Canada than that we should separate the States of the Union from doing business with each other.

Mr. SMOOT. Did Canada impose the 11 cents tariff on cement as a retaliation for free cement?

Mr. HITCHCOCK. I do not happen to know; but I say that most of the tariffs which Canada has imposed against our products have been due to a spirit of retaliation, because we have imposed tariffs and attempted to erect a tariff wall against Canadian products.

Mr. SMOOT. The Senator knows that Canadian tariffs are higher than tariffs in the United States. Did Canada retaliate against the United States when she imposed a duty upon all agricultural implements going into Canada and levied a tax, I think, of either 25 or 30 per cent, while we allow hers to come in free?

Mr. HITCHCOCK. I understand that many of the duties of Canada at the present time have been raised, and that they have been raised in retaliation for what the United States has done against her products.

Mr. SMOOT. But most of them are on items which come from Canada into the United States free. Why should Canada impose 25 per cent on harness and manufactures of leather when those articles come in here free from Canada?

Mr. HITCHCOCK. Because we impose duties on some of the things that she admits free.

Mr. SMOOT. What are they?

Mr. HITCHCOCK. There are a great many things in the line of agricultural products. I do not suppose she has a tariff on corn, nor on wheat particularly.

Mr. SMOOT. Yes; there is a duty on Canadian wheat.

Mr. HITCHCOCK. It has been put on by us within a couple of years, and it was an insane thing to do, a perfectly foolish thing to do. It did not affect the wheat raisers of the United States one bit.

Mr. SMOOT. The Senator can not make them believe it.

Mr. HITCHCOCK. I can easily make them believe it by reading the facts, which show that after the duty was imposed the price of wheat continued to fluctuate just as it had before on the downward scale.

Mr. SMOOT. Like it did every place in the world and on nearly every article, just as cement went from $4 a barrel down to $2, where it is now. That is why wheat went down. It was not the duty that made the wheat go down. If the Senator will take the prices at Minneapolis he will find out whether the farmers did not receive an advantage from it.

Mr. HITCHCOCK. I would not be so insane as to say the duty which we put on it brought the price of wheat down, but Senators were so insane as to stand here and advocate a duty on wheat for the purpose of keeping the price up. I read into the RECORD months after the emergency tariff had been put on the market reports which showed that wheat had continued on its downward course uninterfered with by the tariff.

Mr. SMOOT. And if it had not been for the tariff it would have gone that much lower.

Mr. HITCHCOCK. We do not know anything about that.

Mr. SMOOT. Yes, we do; because we know the price of wheat in Canada and in the United States.

Mr. HITCHCOCK. We are dealing with facts, not imaginings, and vain imaginings at that.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Idaho?

Mr. HITCHCOCK. I yield.

Mr. GOODNG. I want to say to the Senator from Nebraska that the record of the wheat markets at Winnipeg and Minneapolis will show, since the emergency tariff law was enacted, an average of about 24 cents a bushel more in Minneapolis than in Winnipeg. The records will show that before the emergency tariff law was enacted wheat at times was higher in Winnipeg than in Minneapolis. Those are the records, and the chairman of the Finance Committee will submit them day by day for the time since the enactment of the emergency tariff law.

Mr. HITCHCOCK. What does the Senator argue from that?

Mr. GOODING. I argue that the emergency tariff law gave the wheat growers of this country a higher price than they got in Canada or in the world market, so far as that is concerned.

Mr. HITCHCOCK. It did not give them a higher price than they had before.

Mr. GOODING. Yes; it did, in proportion to the others.

Mr. HITCHCOCK. Oh, no; it did not; the Senator is mistaken.

Mr. GOODING. In proportion to what the Canadian wheat grower right alongside of the American wheat grower has received, we have beaten him 24 cents a bushel, on an average, ever since the emergency tariff law was enacted.

Coming back for a moment to harness, I want to say to the Senator that before it was put on the protected list Canada had a duty of 35 per cent on harness, saddlery, and all kinds of leather goods in existence.

Mr. HITCHCOCK. I have not stated anything to the contrary.

Mr. GOODING. Now, let me come back to the cement business a moment. I can accept the argument of the Senator from Alabama [Mr. UNDERWOOD] as being fair and reasonable and intelligent. I will now have to use the words the Senator from Nebraska has used so often, and I regret to use them, too——

Mr. HITCHCOCK. The Senator is welcome. I have no monopoly on them.

Mr. GOODING. It has been said that this is "all bunk." That is what you have thrown across the aisle for a year now, to my knowledge, about anything and everything that has been discussed in connection with the tariff. The Senator knows and every man of intelligence must know that, so far as the cement duty is concerned, there are only a few people along the border who can possibly be affected. Whether cement is 90 cents a barrel or $4 a barrel, it can not get very far into the interior. Of course, there is only a little cement imported. There will never be much cement imported, because it can not get into the interior cities of this country. It can not go around and through the canal and reach the western coast cities at all, but it does come in along the border.

While Canada is putting a tariff of 11 cents a hundred on cement, is it a crime for us to put 5 cents a hundred tariff on Canadian cement coming into this country, remembering, too, that Canada has a 2-cent sales tax, doubling the duty that we are paying? What would the Senator do with our cement plants along the border? Would he not give them at least a fair chance with Canada, and let us play fair?

Mr. HITCHCOCK. In the first place, I will have to repudiate the Senator's statement that I ever used the word "bunk." That is not in my vocabulary. In the second place, I have not any sympathy with this attempt to hurt Canada by legislation in the United States. Canada is our neighbor, and we ought to do business with Canada just as freely as the States of the Union do business with each other.

Mr. GOODING. Make the duty 5 cents and we will do business with each other.

Mr. HITCHCOCK. I would not be afraid to see a little of Canadian cement or a good deal of Canadian cement come into this country and give relief to the American people, who are now paying twice as much for cement as they ought to pay. I would not regret to see some Canadian cement come into this country to create a little competition for the trust, which is robbing the American people in the prices that it puts on cement to-day. I would not be afraid to have a little Canadian cement or a good deal of Canadian cement come in and be sold to the American people while the American trust, as stated by the Department of Justice, is starving the market, refusing to sell dealers more than 15 days' supply of cement at a time, refusing to permit a contractor who buys cement and finishes his job to use any part of that cement upon another job. I would not be afraid to have a little Canadian cement come into this country to supply the American demand for cement when the American trust is trying to starve the market by closing the cement mills and shutting the mills down, as the Department of Justice states it has been doing.

I want to say to my friends on the other side of the aisle who are trying to impose a tariff on this trust-made article in the United States while the Department of Justice is prosecuting that trust as a criminal, that they take a very serious chance before the American people, because the American people have suffered so long from the high cost of living, have grown very impatient, indeed, with the toleration of the party which proposes to shut out foreign competition and prevent prices from coming down to their legitimate basis.

Mr. TOWNSEND. Mr. President——

The PRESIDING OFFICER (Mr. MOSES in the chair). Does the Senator from Nebraska yield to the Senator from Michigan?

Mr. HITCHCOCK. I yield.

Mr. TOWNSEND. I do not know whether the Senator from Nebraska has any cement factories in his State or not. We do have a good many in Michigan. We have them situated along the Canadian border. I do not know what strictures have been made upon the conduct of cement factories. I do know from my own personal knowledge that some of these factories have had a hard struggle. They are not limiting the production of the amount of their cement. They are trying to manufacture cement to meet the demands of the public. They are perfectly willing to go in and meet free and open competition on equal terms. They are not willing, however, situated on the border, to have Canada place a tariff almost amounting to prohibition upon the imports of cement into that country and at the same time allow Canadian cement to come in here free. All that we ask, and all that any of us ask, is that we shall be placed on equal terms with our competitors.

If it were true that Canada admitted American cement free I would have no objection to Canadian cement coming into this country free. But I am an American. I believe in treating our own industries as fairly as other countries treat their industries. I do not believe we should condemn this great industry, which is trying to meet the demands of the country for cement and which during its life has had a most precarious existence, many of the factories having failed, many of them having produced cement at a very low profit.

While there is competition in the United States, I care not what they may say of them, no one will condemn more than I the combination of any concerns for the purpose of creating a trust; but these political statements and arguments weigh nothing with me as against the facts. What I insist upon, and nothing else, is a fair competitive market for American products.

Mr. HITCHCOCK. The Senator denominated my charge of the existence of a cement trust as a political statement.

Mr. TOWNSEND. Not particularly that item, but every time a Senator rises in opposition to the tariff bill he charges that it is all in the interest of the trusts.

Mr. HITCHCOCK. This is in the interest of the trust.

Mr. TOWNSEND. It is in the interest of American production of a product that ought to be produced in the United States.

Mr. HITCHCOCK. If the Senator had been in the Chamber he would have heard me read two indictments brought by the United States against two cement trusts. One is a comparatively small trust in the eastern part of the United States, and the other is the great national trust, of which the eastern trust is a part. They have divided up the country, as the Department of Justice states. In the eastern district are New York, Pennsylvania, the New England States, Delaware, New Jersey, Maryland, Virginia, and West Virginia. That association is now under indictment and is now on trial in the courts of New York.

Mr. TOWNSEND. How will it interfere with the prosecution of the law, if they have violated it, if we put a tariff on cement?

Mr. HITCHCOCK. Will the Senator please wait until I conclude? I gave him an opportunity to make his statement. I am going to nail him right to the indefensible position he has taken.

The other indictment is against the national trust, and your Department of Justice and my Department of Justice has declared, and the grand jury of New York has ratified the declaration, that that Cement Trust, composed of 74 corporations, many of them in your State, sir, controls 85 per cent at least of the cement business of the United States, and the figures show that the prices on cement have been gradually raised from where they used to be. It is not I who charge that there is a trust. The Department of Justice charges that there is a trust. The indictments were brought last summer, and Congress should have known that they were brought; and yet both the committee of the House and the committee of the Senate permitted the representatives of that trust to come before them and ask to have cement taken from the free list and put upon the dutiable list. That is not a political charge. That is a charge sworn to by the officers of the Department of Justice of the United States Government. Moreover, I am tired of hearing of this myth about Canadian competition. Perhaps the Senator does not know what this cement business is as it affects his State.

Mr. TOWNSEND. I think I know quite as much about it as does the Senator from Nebraska.

Mr. HITCHCOCK. I will tell the Senator something about it. The nonpartisan Tariff Commission makes a report upon the cement business in the United States.

Mr. SMOOT. Is that Brother Miles's statement?

Mr. HITCHCOCK. No. This is the official report of the Tariff Information Survey relating to cement. As the Senator from Utah has accepted it on so many other subjects, I hope

he will accept it on this or state why he does not do so. These are the figures.

Mr. SMOOT. I thought the Senator said the nonpartisan Tariff Commission.

Mr. HITCHCOCK. No——

Mr. SMOOT. I will ask the reporter to read exactly what the Senator said.

Mr. HITCHCOCK. I said the nonpartisan Tariff Commission.

Mr. SMOOT. "The nonpartisan Tariff Commission." That has nothing whatever to do with the Tariff Commission. I have quoted from the report of the Tariff Commission which was organized by Congress.

Mr. HITCHCOCK. Yes; organized by Congress; and I am quoting from the same authority. Is it not nonpartisan?

Mr. SMOOT. No; I think it is bipartisan.

Mr. HITCHCOCK. Well, call it bipartisan. I want to meet the Senator's views, and will call it bipartisan; at least, its reports appear to be nonpartisan. They appear to be unanimous and they appear to give the facts.

What are the facts regarding Michigan, as to which the Senator is so disturbed? The manufacture of cement in Michigan in 1914 was 4,200,000 barrels; in 1915 it was 4,700,000; in 1916 it was 4,900,000 barrels; in 1917 it was 4,600,000 barrels; in 1918 it was 3,554,000; in 1919 it was 4,620,000 barrels. That would not look as though the cement industry of Michigan was languishing. I guess, if the Senator from Michigan will make the computation, he will find that Michigan made about a barrel of cement for every head of population in the State, at least.

What were the imports from Canada which were so destructive as against this production of 4,000,000 barrels every year all through the free-trade period on cement? What were the terrible Canadian imports that threatened to ruin those concerns which were making 4,000,000 barrels of cement a year? Let us look at the figures.

I will go back a little. During the period that cement was subjected to a tariff, under the Payne-Aldrich law, of blessed memory, in 1910, the importations of cement from Canada were 16,000,000 barrels; in 1911 they were 543,000 barrels; in 1912 they were 490 barrels.

Mr. SMOOT. Does not the Senator mean 490,000 barrels?

Mr. HITCHCOCK. No; the importations were 490 barrels; that is all; in 1913 the importations of cement were 963 barrels; in 1914, 163 barrels; in 1915 there were 915 barrels imported; in 1916 there were 1,463 barrels imported; in 1917 there were 3,900 barrels; in 1918 there were 3,566 barrels. I am reading the figures for the fiscal years. The figures for calendar years slightly vary.

Mr. UNDERWOOD. Mr. President, if I may, I desire to ask the Senator a question. The Senator is comparing the total imports of the whole United States to the production in merely one State.

Mr. HITCHCOCK. To the production in the State of Michigan alone. Michigan made 4,000,000 barrels a year, and the entire imports of Canada into the United States along a line of 4,000 miles in extent only amounted to a few thousand barrels. The Senator from Michigan is following the committee in imposing a tariff upon what is a mythical danger. The Tariff Commission itself says that cement may be made cheaper in the United States than in Canada, because of the cheaper fuel, the great item of expense, is cheaper in the United States than in Canada. Does the Senator from Michigan not know that the United States makes practically half of all the cement which is manufactured in the world and sends it to other countries and sells it in competition with all the world? Yet he is following a committee here which proposes to take that article off the free list and put it on the dutiable list simply for the protection of a trust, an organization which the Department of Justice has denounced as a trust, which sent its representatives here to the Halls of Congress, who appeared before the committees in public hearings. I do not know whether or not they appeared before them at private hearings, but, whether they did or not, the fact is that this is a trust, controlling 85 or 90 per cent of the product of the United States. It is a trust under prosecution by one of the arms of our Government at this time; it is a trust that has raised the price of cement until it is twice as high as it ought to be, or, at least, much higher than it ought to be. It is a trust which has paid enormous dividends and made men rich; it is a trust which has deliberately, as appears from the indictment which I read to the Senate while the Senator from Michigan was not present, starved the American market in order to extract high prices from the American consumer; which dictates to the consumer on what job he shall use his cement; which dictates to the retailer and prohibits him from buying more than 15 days' supply of cement at a time in order to starve the market; which resorts to all those practices, although cement is one of the most important necessaries of life to the American people. It goes into the construction of homes; it goes into the construction of hospitals; it goes into the construction of bridges; it goes into the construction of highways, for which we are spending hundreds of millions of dollars in the United States at the present time.

Mr. FLETCHER. Mr. President——

The PRESIDING OFFICER (Mr. STERLING in the chair). Does the Senator from Nebraska yield to the Senator from Florida?

Mr. HITCHCOCK. I yield to the Senator from Florida.

Mr. FLETCHER. I have listened with a great deal of interest to the discussion of this subject on both sides of the Chamber, and it seems to me the whole matter resolves itself into this situation: Those who are supporting the provisions of the bill want this duty for one of two reasons. First, the prime reason and the only reason in the minds of some, is that the duty, if imposed, will prevent a reduction of the price of cement in this country. The other reason is that it will protect the American manufacturer to the extent that it will keep out importations, and thereby enable the manufacturers to get together and form a combination or trust, such as the Senator from Nebraska has mentioned. There are two effects, therefore, as a result of the imposition of the duty; first, to prevent the lowering of prices and the next is to keep up the price and to facilitate the combination or conspiracy in restraint of trade.

The other proposition urged by the Senator from Utah is that inasmuch as Canada imposes a duty on cement the United States ought likewise to impose a duty. That is a pure spirit of retaliation; it can not be put upon any other basis. We propose to levy a duty on a product simply because Canada levies a duty on that or some other product. I submit that that is not a sound economic basis upon which we can conduct our affairs. Canada is one of our very best customers; she is our next-door neighbor; we take a great many of the products of Canada and she takes a great many of our products. The spirit of retaliation certainly ought not to be encouraged but ought to be discountenanced. We can not afford to proceed along that line.

Mr. President, I happen to have before me a statement of Canada's trade for 12 months, which shows, if the Senator from Nebraska will allow me to put it in the RECORD at this point, that imports for consumption into Canada for the 12 months ending December, 1919, from the United States were valued at $739,597,697; for the year ending December, 1920, the imports from the United States for consumption in Canada were valued at $921,235,401. They fell off somewhat in the next year, the imports from the United States into Canada for the 12 months ending December 31, 1921, being valued at $559,380,193.

Those figures indicate to some extent the significance of Canada as a customer of the United States, and we ought not to pursue any course or any policy, it seems to me, that would discourage that commerce. The argument that we should levy a duty simply because Canada levies a duty on a product is wholly unjustifiable.

Canada exported to the United States during the similar periods for the 12 months ending December, 1919, to the value of $454,595,204; for the 12 months ending December, 1920, $559,977,503; and for the 12 months ending December, 1921, $326,969,382. That is a tremendous trade, and it seems to me we should make a mistake to pursue a policy of levying duties in the United States simply because Canada has seen fit to levy duties either upon the product named or upon some other product.

Mr. TOWNSEND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from Michigan?

Mr. FLETCHER. Let me say to the Senator from Michigan that he has not shown as yet, and I do not suppose he can show, that cement can be produced in Canada any cheaper than it can be produced in Michigan. The Michigan manufacturers can compete with Canada. Irrespective of the Canadian markets, they need not be afraid that the Canadian producer will run them out of the market in the United States, and, so far as we are advised, the cost of production in Canada is just as great as it is in the United States.

Mr. TOWNSEND. Mr. President, I know that this question is out of order now, and ought not to be discussed. I had supposed it would be discussed when we reached it in proper order, and I had intended to reserve anything that I might say until that time. I understand, however, why it is being discussed now. It is simply for delay and obstruction. The whole subject will

come up later when in due course the item is reached for consideration.

However, I merely wish to say a few words in reply to the Senator from Nebraska [Mr. HITCHCOCK]. He has said that there have been indictments brought against the cement industry or cement companies of the United States. It is true that indictments have been secured, as I understand, by the Department of Justice, and I am not complaining about that at all; I am not here to defend any violation of law by cement companies or any others; but it is known that indictments are not convictions. These people are entitled to the same consideration as other people are until convictions are had. Then, if they are guilty, the law will be enforced against them, and I shall not object in the least, but rather ask Godspeed to the efforts of the Government to bring all violators of law to justice. However, this particular matter is here and the question is this: Is the cement industry entitled to protection against foreign competitors? The Senator has read the number of pounds of imports into the United States, all of which should be multiplied by 100, because the table deals in 100-pound packages; 100 pounds is the unit basis, and the figures in question refer to 100-pound units.

I am not particular about that, however. If it is true that Canada is not infringing upon the markets of the United States, if she is not shipping anything of any consequence into the country and is unable to do so, how would a small amount more or less interfere with the American market, or tend to reduce or furnish an embargo against the shipment of this stuff into the United States?

A few years ago, contrary to the majority of my party, I advocated reciprocity with Canada. Early subsequent events showed that I made a mistake. There were certain things as to which I thought we could enter into reciprocal relations with her with profit to both countries. It was believed that Canada would agree to it. She did not. She did, however, accept the provisions which the United States Congress had inserted in that bill. Inserted with our understanding that they would not be binding upon the United States unless reciprocal action was taken by Canada. Now, sir, living across the border from Canada, as I do, where they have great cement factories, I believe that we should treat Canada exactly as she treats us. You can put cement on the free list if you wish, but accompany it with a provision that the country which gets the advantage of our free markets shall give us the same advantage in her markets.

Mr. President, I do not care to discuss this subject now because I know it is brought up for delay, and I do not wish to be a party to such a policy in the consideration of the bill. When the item comes up in due course, as it will come up, I probably will discuss it further.

Mr. HITCHCOCK. Mr. President, before the Senator takes his seat, I understand that he corrects my figures in that where I have reported on the imports from Canada, instead of using the term "barrels" I should have said "hundred-pound lots."

Mr. TOWNSEND. Instead of the term "pounds," which I understood the Senator to use.

Mr. HITCHCOCK. I supposed I was using the term "barrels."

Mr. TOWNSEND. No; the Senator used the term "pounds."

Mr. HITCHCOCK. The production is in barrels.

Mr. TOWNSEND. I realize that it does not make any difference with the Senator's argument or with mine, but I simply wanted it to be correct.

Mr. HITCHCOCK. It makes a great deal of difference. It makes my statement still stronger, because when I read of the production in Michigan I said 4,000,000 barrels, and when I spoke of the small imports from Canada I said "barrels," but I should have said "hundred-pound lots," and that makes the imports only one-third of what I credited to Canada.

Mr. TOWNSEND. The Senator used the term "pounds."

Mr. HITCHCOCK. I thought I was using the term "barrels"; but the fact is that comparing the production in barrels with the import in barrels, the import is only one-third of what I credited to Canada; so that makes all the more exaggerated the monstrosity and the myth of Canadian importations.

Mr. POMERENE. Mr. President, I find that I shall be compelled to leave the Chamber after a little, and out of its order now I want to call attention to the amendment to paragraph 202 in lines 23 and 24 on page 31.

Mr. SMOOT. The Senator requested that those amendments go over last night, and they went over.

Mr. POMERENE. I know; but they went over at my request, in order that I might investigate further. I stated, in substance, last night that this matter had been called to my attention once before, and there seemed to be some discrimination against certain products based upon color. I was informed this morning by a Member of the other House that the matter I had in mind was corrected by these amendments, and I simply wanted to make that statement now.

Mr. SMOOT. The Senator has no objection, then, to our agreeing to those amendments?

Mr. POMERENE. I have no objection to that language. I know nothing about the rates; and whenever the Senate is ready to take up that matter it can do so if I am not here. That is all I care to say about it.

Mr. McCUMBER. Mr. President, the only question that is now before the Senate is the question of whether 20 per cent ad valorem on the foreign valuation is an excessive duty upon these cements that come into this country in barrels, sacks, or other packages. In the two days' argument upon the amendment I have not heard one word said about the real question at issue, except the statement of five minutes which I made yesterday. I took not to exceed five minutes in explaining what the difference was based upon and why we asked for a duty of 20 per cent ad valorem, instead of 17 per cent ad valorem, upon the American valuation.

It does seem to me that we have come now to the time to vote upon some of these items. The Senator from Alabama [Mr. UNDERWOOD] stated yesterday, in substance, that we might have in our minds any idea that we saw fit to retain concerning the attempt to delay in the discussion of this bill. I think I can say in all good faith that we are justified in doing so when for nearly two whole days we have discussed a matter that is not before the Senate at all in the amendment, and can not be before it until the matter comes up for the consideration of general amendments.

I think it proper at this time, however, to put in the RECORD a few figures that I hope the Senator from Nebraska [Mr. HITCHCOCK] will ponder upon a little by the time he gets ready to say and declare, as he has some four hundred times within the last year, that our emergency tariff was a mere gold brick to the farmer. I want to call his attention to some figures that I have just obtained from the department.

I want to compare the difference between Manitoba or Winnipeg and Minneapolis prices before the emergency tariff and the prices after the emergency tariff. We will all admit that Winnipeg prices—which of course means Fort William prices—are based upon the Liverpool prices, because all of that grain that goes to those markets is exported, and therefore the price is entirely dependent upon what they can get for it in the Liverpool market.

I have the Minneapolis price of wheat for every day in the week except Sunday; then I have taken the same month in 1921 when we had the emergency tariff law upon the statute books.

The difference in price between Minneapolis and Winnipeg in 1920 during the month of October was 10 cents a bushel in favor of the United States. In October of 1921 it was 27 cents a bushel. The difference in the grades between Minneapolis and Winnipeg—the Winnipeg grade being much better than the Minneapolis grade—is, to say the very least, 5 cents a bushel. Therefore we can safely add 5 cents a bushel in addition to the difference that is indicated here; and the 27 cents plus the 5 cents is 32 cents to the advantage of the American producer of wheat.

I will take November of 1920, before the passage of the emergency tariff bill, when the difference was 5 cents. In November of 1921, when we had the emergency tariff bill, the difference was 29 cents. Add your 5 cents difference and you have a real difference of 34 cents in favor of the American farmer.

Now I will take December of 1921, and I find that the difference between the American and the Canadian wheat was 26 cents a bushel. Add your 5 cents, and you have 31 cents a bushel to the advantage of the American producer.

In January of 1922 the difference was 27 cents, which, plus the 5 cents, would give 32 cents advantage to the American producer of wheat.

In February of 1922 the difference between the Canadian and the American wheat was 27 cents, the Minneapolis being No. 1 dark northern, and the Winnipeg No. 1 northern, and the Winnipeg being worth at least 5 cents more per bushel, so that adding the 5 cents to the 27 cents the actual difference would be 32 cents a bushel in favor of the American farmer.

Take the month of March, 1922, and the difference was 22 cents, which, plus 5 cents, is 27 cents a bushel in favor of the American farmer.

In April of 1922 the difference was 25 cents, which, plus the 5 cents, is 30 cents a bushel in favor of the American farmer.

That is what the emergency tariff has done for the American producer of wheat; and it seems to me it is getting about time

that the Senator from Nebraska should cease to throw that old chestnut at us.

The PRESIDING OFFICER. Does the Chair understand that the Senator from North Dakota wishes to insert in the RECORD the statement to which he has referred?

Mr. McCUMBER. No; I will just put in the figures that I have read. I will put the entire table in the RECORD at some future time.

Mr. UNDERWOOD. Mr. President, it has been repeatedly stated in debate that the question we have been discussing about Portland and Roman cement is not before the Senate. I do not know how it could be before the Senate more thoroughly than when the paragraph in reference to the matter had been read and is pending before the Senate now. Of course, under the unanimous-consent rule that we courteously allowed the Senator from North Dakota to adopt, we are powerless at this time to offer amendments ourselves and can only consider the amendments offered by him; but in connection with the paragraph, when he has offered an amendment, it is certainly pertinent to the paragraph to discuss the general situation relating to the paragraph.

That, however, is neither here nor there. We must get away from this idea that the Senate now, because a sacred Republican tariff bill is before it, must change the line of procedure that it has followed from time immemorial about talking about something that is not before the Senate. There is no more irrelevant talk to-day on this tariff bill than there is on every other bill that comes before the Senate.

I tried to have a cloture rule passed in the Senate some years ago, to limit debate in this body and try to hold the debate to the question before the Senate. I think I came nearer to having it passed than has ever been accomplished in the Senate. I came within seven votes of having the rule passed; but I think most of my friends on the other side who are now complaining voted against me on that occasion.

Mr. GOODING. Mr. President, I ask the Senator if he will try it again. He will have a lot of help if he will.

Mr. UNDERWOOD. I hope the Senator from Idaho will live up to that. The Senator has not been here very long. I have not changed my view about the matter, but I notice that time weathers a Senator. He becomes enamoured of his own voice and concludes to vote against a cloture rule. I am not referring to the Senator yet, because he has not had time enough.

Mr. GOODING. I assure the Senator he need have no fear about that. My mind is made up. I have been here long enough to know that the Senate can not transact the business of the country with its present rules. When the Senator gets ready to make that fight, or when anyone else gets ready to make it, he will find me alongside of him.

Mr. UNDERWOOD. I have not changed my viewpoint about a reasonable limitation of debate and about discussing the question before the Senate, but in the midst of a tariff fight, for the convenience of the gentlemen who did not vote for a limitation of debate when they had an opportunity, and merely want it limited now for the benefit of their own particular bill, I must say their criticism does not go very far.

The pending amendment relates to cement other than Portland cement, although it is in the same paragraph. I have just one word to say why I think the amendment should not be adopted. The present rate of taxation on that class of cement is 10 per cent ad valorem. It is not building cement; it is cement used for other purposes, for cementing furniture, or a thousand other small purposes.

The present tax is only 10 per cent ad valorem, and under that in 1918 the imports amounted to a little over $10,000, with a revenue of a little over $1,000; in 1919 the imports were $9,980, with a revenue of $998. In 1920 the imports had increased to $49,000, with a revenue of $4,910. In 1921 they had fallen off to $21,064.

I merely read that to show that the imports of that class of cement in an industry of this magnitude are very small now. There is comparatively little income raised, and the tendency of increasing this tax would be to cut off revenue. There are certainly not enough imports to jeopardize American industry or American business, and I see no testimony here and I have heard nothing said on the floor to indicate that it would.

Mr. SMOOT. I will say to the Senator that the consumption of this cement is very small.

Mr. UNDERWOOD. It is vastly more than the importations.

Mr. SMOOT. Yes; it is more than the importations.

Mr. UNDERWOOD. A great deal more.

Mr. SMOOT. Certainly; but I mean to say that the consumption is small. It is pipe cement and cement that comes in little bottles and packages.

Mr. UNDERWOOD. I understand that; but the consumption is not small. I do not happen to have the figures with me now, but it mounts up to a million dollars. I am talking about the American consumption of cement.

Mr. SMOOT. Keene cement is provided for otherwise.

Mr. UNDERWOOD. The amount of cement that is used in this country, outside of Portland cement, is very large, though not large compared with Portland cement. These imports are very small. This cement is not an item of any very great importance, but the Portland cement is of great importance, and we will consider it further at a later time. I see no reason in the world why the House should have increased the rate of duty from 10 to 17 per cent unless it was that they just wanted to increase every rate found in the present law, which seems to have been the case. If they found a rate was so much in the present law and did not have any other reason for increasing it, they just put it up anyhow. I know of no other reason that is given. I have not heard any on the floor and I have not seen any in the hearings, except that they wanted to put up the rates.

The House put the rate up to 17 cents, and on top of that, although the Senate committee has repeatedly stated that its rates are lower than the House rates, raised the rate from 17 to 20 per cent. The difference between 17 and 20 per cent is not a great deal, and I am not going to ask for a roll call, because we will come back to the real questions in this paragraph; but I intend to vote against the increase, even though it is small, because there is no justification for it.

The PRESIDING OFFICER (Mr. MOSES in the chair). The question is on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

Mr. McCUMBER. I ask that the Senate proceed to consider paragraph 74, which we passed over.

Mr. UNDERWOOD. What is covered by that paragraph?

Mr. McCUMBER. It provides for the duty on zinc salts.

The PRESIDING OFFICER. The Secretary will state the amendment.

The PRINCIPAL LEGISLATIVE CLERK. In paragraph 74, page 28, line 2, the committee proposes to strike out "1½" and to insert in lieu thereof "1¾," so as to read:

> Zinc oxide and leaded zinc oxides containing not more than 25 per cent of lead, in any form of dry powder, 1¾ cents per pound.

Mr. JONES of New Mexico. Mr. President, this paragraph involves another very important commodity. It is used chiefly in the manufacture of paints and paint pigments, and the duty is increased considerably in these different items. The present law reads as follows:

> Zinc, oxide of, and pigments containing zinc, but not containing more than 5 per cent of lead ground dry, 10 per cent ad valorem; when ground in or mixed with oil or water, lithopone, and white sulphide of zinc, 15 per cent ad valorem.

The bill as it came from the House made the following provision:

> Zinc oxide and leaded zinc oxides containing not more than 25 per cent of lead, in any form of dry powder, 1½ cents per pound; ground in or mixed with oil or water, 2 cents per pound; lithopone and other combinations or mixtures of zinc sulphide and barium sulphate, 1½ cents per pound.

The Senate committee recommends increases in these duties over the House rates, and both of them quite an increase over the present law. I read the proposal of the Finance Committee:

> Zinc oxide and leaded zinc oxides containing not more than 25 per cent of lead, in any form of dry powder, 1¾ cents per pound; ground in or mixed with oil or water, 2½ cents per pound; lithopone and other combinations or mixtures of zinc sulphide and barium sulphate, 1¾ cents per pound.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from North Dakota?

Mr. JONES of New Mexico. I yield.

Mr. McCUMBER. The Senator recognizes that we have given 1½ cents a pound upon the zinc itself, and therefore we necessarily have to give a higher compensatory duty upon those products which are made from zinc. As those products take about 80 per cent of zinc itself, we would necessarily have to add the equivalent of 80 per cent of 1½ cents to each one. The Senator from Utah [Mr. SMOOT] has the figures, and I think he can probably present the relation better than I could.

Mr. JONES of New Mexico. I was quite aware of the fact that there had been this raise on the zinc itself, and really that question might very well be considered in connection with this question, because it is important. However, it is one in which I am not taking any special interest, except that on the zinc slabs and the manufactures coming from the zinc ore in its cruder form there is an increased duty over the zinc content of the ore.

Mr. SMOOT. Of one-eighth of a cent a pound.

Mr. JONES of New Mexico. One-eighth of a cent a pound; that is quite true. I have not been able to find in any of the data upon the subject justification for that increase. All the data bearing upon the subject indicates that the smelters of the United States can smelt that ore just as cheaply as any smelters on earth, and any duty which is beyond the compensatory duty, which should be equal to the duty upon the zinc content of the ore itself, is a mere gift to the smelting interests of the country.

Mr. SMOOT. May I ask the Senator a question, so that I can know what position he will take?

Mr. JONES of New Mexico. Certainly.

Mr. SMOOT. I understand, now, the Senator is not objecting to 1½ cents a pound on the zinc content in the ore?

Mr. JONES of New Mexico. I can only reply to that the same as I did as to the 1½ cents a pound on lead. I am going to accept that, so far as my argument is concerned, as the basis for the discussion.

Mr. SMOOT. Then I will know the position of the Senator and I think I can answer him. As soon as he gets through I will state the position of the committee.

Mr. JONES of New Mexico. Very well. It is a big increase over the present rate, but I take it that we are increasing enormously the duties to the manufacturing interests of the country, and when I know that is going to be done I do not see why I should stand here arguing against an increase upon those who produce the raw products of the country. The amount of duty upon the zinc ore is simply arbitrary. There is no basis upon which to found it that I know of. By some concerns I think it is produced as cheaply as it can be produced anywhere. By a great majority of concerns I do not believe it can be produced as cheaply as it is produced in Mexico. Mexico, as regards zinc, is in precisely the same relative situation as regards lead. In the discussion on lead oxide I chose to discuss it solely upon the basis of the manufactured product from the crude ore. I think that is as far as we need to go at this time in the discussion, because I assume that, regardless of the discussion, the majority of the Senate are going to adopt the figures which have been recommended by the majority of the Finance Committee.

While I said that there is some justification—and, for the purpose of the argument, admit that there is full justification—for the duty which is to be put upon zinc ore, I do not believe that anybody can justify any additional duties by reason of the smelting or manufacturing of zinc ore. I shall not at this time go into the question of the converting of the zinc content of the ore into spelter or slabs, but there is not a line of testimony in any of the surveys that I have been able to find which indicates that we can not smelt that ore just as cheaply in this country as anywhere else. There are some advantages which other smelters have, but they are compensated by advantages in this country. The fact that the committee recommends a differential of only one-eighth of a cent per pound would seem to indicate precisely that, but one-eighth of a cent per pound when applied to all of the zinc production of this country makes a very large sum of money.

Mr. SMOOT. Let me at this point read what the Tariff Commission said.

Mr. JONES of New Mexico. I shall be very glad to hear it.

Mr. SMOOT. This is what the Tariff Commission says:

> The crux of the tariff situation on zinc is similar to that in the case of lead except that, unlike lead smelting, the reduction of zinc ore in the United States is at some disadvantage when compared with smelting in European countries. This difference, however, is not great, and the chief problem is the adjustment of the duty that shall be at least compensatory to the duty that may be levied on the zinc content of imported ore, bearing in mind that the recovery in zinc smelting is not greatly in excess of 80 per cent of the zinc content of the ore as delivered at the works.

Mr. JONES of New Mexico. I understand that.

Mr. SMOOT. All the committee has given is one-eighth of a cent differential.

Mr. JONES of New Mexico. I think it is in that same connection that the Tariff Commission proceeds to tell what the advantages are and what the disadvantages are in the smelting of zinc ore in this country and abroad. I have read what the Tariff Commission said upon the subject.

Mr. SMOOT. Just before what I read they give the competitive conditions. I only read the summary of those conditions.

Mr. JONES of New Mexico. If we will read those competitive conditions as stated by the Tariff Commission, it seems to me that anyone would realize that there is no practical difference or practical advantage which any other country has over us.

Mr. SMOOT. In answer to that, I wish to say to the Senator that I, like he, believe there ought to be a 1½-cent duty on the zinc content in the ore. I do not want that rate interfered with or decreased by allowing the importation of the spelter or the sheets or the bars or the oxide. If we allow that and there is any advantage at all, then we might just as well lower the rate upon the ore.

Mr. JONES of New Mexico. I agree with the Senator.

Mr. SMOOT. The Senator will agree with that, will he not?

Mr. JONES of New Mexico. Certainly.

Mr. SMOOT. I think that the one-eighth of a cent is no more than will keep out the spelter to take the place of the ore if the rate is the same. My object in this is just the same as that of the Senator from New Mexico. If spelter is placed at 1½ cents and the ore content at 1½ cents we will not get the ore. We will then get the spelter or else we will not get the protection of 1½ cents on the ore content.

Mr. JONES of New Mexico. Right in that connection the Tariff Commission uses language which is most interesting. It involves a very important economic problem for us to consider in connection with this tariff duty. The Tariff Commission says:

> The indications are that the United States will continue to supply its own vast needs even under the existing tariff—

Now, mark that language.

Mr. SMOOT. I should think that would be true.

Mr. JONES of New Mexico. And then they say—

> and possibly have a small excess for export to near-by countries.

Mr. SMOOT. I think there is a differential to-day, I will say to the Senator. Of course, it all, then, depends upon whether we are going to have the rate on the ore and what it will be. I think that statement is correct.

Mr. JONES of New Mexico. That is under existing rates. The duty upon the oxide is only 10 per cent ad valorem; ground in or mixed with oil or water, lithopone, white sulphide zinc, 15 per cent ad valorem. Under the existing law the Tariff Commission has this to say:

> The indications are that the United States will continue to supply its own vast needs even under the existing tariff and possibly have a small excess for export to near-by countries.

Mr. SMOOT. I want to say that the existing law has a 5 per cent differential and we only give one-eighth cent, so I agree with the Tariff Commission on that. Give us the differential; we are asking a differential of only one-eighth cent, and the Senator will note that under the existing law there is a 5 per cent differential.

Mr. JONES of New Mexico. Let us see how the differential figures out. I do not have before me the existing law showing the rate on zinc slabs. It is paragraph 390, I believe.

Mr. SMOOT. Yes; paragraph 390 is ore and paragraph 391 is spelter and pig and bar. The equivalent to-day would be one-tenth cent and the metal rate itself is three-fourths cent, and the differential would be a little over one-half cent under the existing law and the prices of the metal to-day. We only give one-eighth cent, so the differential we have in the bill is not as great as the differential in the existing law.

Mr. JONES of New Mexico. There is nothing, however, to show that the present differential is justified by the facts. There is nothing in the record to show that even the present differential is justified.

Mr. SMOOT. No; I do not think the differential in the existing law can be justified, because it is very much higher than we have proposed.

Mr. JONES of New Mexico. That depends on the price of the ore.

Mr. SMOOT. Oh, no.

Mr. JONES of New Mexico. The committee is putting it at so much per pound, and the present law is on the ad valorem basis.

Mr. SMOOT. The metal weight is three-fourths of a cent and the equivalent under the ad valorem rate is one-tenth of a cent, so the difference between them would be sixty-five hundredths of a cent. That is the differential.

Mr. JONES of New Mexico. I do not see where the Senator gets three-fourths of a cent. The present law, as I have it before me, carries an ad valorem rate.

Mr. SMOOT. That is 15 per cent on the value of the ore.

Mr. JONES of New Mexico. Fifteen per cent on the bars and 10 per cent on the ore content.

Mr. SMOOT. And this is three-fourths of a cent, with a 15-cent value on the ore.

Mr. JONES of New Mexico. But, as I said, it depends upon the value of the ore as to how much it is, whereas the committee proposes a specific rate.

Mr. SMOOT. It would be 15 per cent on the slabs at 5 cents a pound. The Senator knows that the slabs hardly ever go lower than that, and 15 per cent on 5 cents a pound on the slabs

would be just three-fourths of a cent. The rate under the Underwood law on the ore is equivalent to one-tenth of a cent based on the Mexican ore, and that is where we have to base it. One-tenth of a dollar is 10 cents. Three-fourths of a dollar is 75 cents. Three-fourths of 1 cent is three-fourths of a cent. The difference, therefore, is between one-tenth and three-fourths, which is sixty-five hundredths. We only give twelve hundredths, while the differential in the Underwood law is sixty-five hundredths.

Mr. JONES of New Mexico. I agree that the present differential rate is not large and that there is a differential under the existing law.

Mr. SMOOT. It is five times the amount that is proposed in the bill.

Mr. JONES of New Mexico. But the amount that is necessary does not appear anywhere at the present time or under the existing law or under the conditions as they existed at the time that act was passed.

Mr. SMOOT. But the Tariff Commission does not agree with the Senator.

Mr. JONES of New Mexico. I should like to know in what respect they differ from me.

Mr. SMOOT. I just read it to the Senator. The Tariff Commission agree with the Senator as to lead—that is, if the ore is at the works—and as to zinc they refer specifically to zinc at the works. The only difference between the Senator and myself as to lead is that I claimed if the lead is at the works the American smelters can smelt the ore as cheaply as it may be smelted at any place in the world, just as is stated by the Tariff Commission, but they can not do it and pay transportation on the ore carrying three times the amount of weight as does the bullion. In the case of zinc there is often an even greater difference than that. Now, let me read it again to the Senator, so that he may understand it.

> The crux of the tariff situation on zinc is similar to that in the case of lead, except that, unlike lead smelting, the reduction of zinc ore in the United States is at some disadvantage when compared with smelting in European countries. This difference, however, is not great, and the chief problem is the adjustment of the duty that shall be at least compensatory to the duty that may be levied on the zinc content of imported ore, bearing in mind that the recovery in zinc smelting is not greatly in excess of 80 per cent of the zinc content of the ore as delivered at the works.

And so as to lead they reported that what the Senator says is true, if the ore is at the works, but they admit here that the American smelter is often at a disadvantage as compared with the European smelter as to the ore at the works. They do not, however, admit that as to lead. In this case we have only given one-eighth of a cent; that is all there is to it. It amounts to a differential of twelve and one-half one-hundredth of a cent, whereas the differential under existing law is sixty-five one-hundredths of a cent, or a differential of five times the amount that is proposed to be given under the pending bill.

Mr. JONES of New Mexico. If I am able to follow the Senator, he argues himself out of court. He says that, given the ore at the smelter, the smelter in this country can reduce it as cheap as it may be reduced anywhere.

Mr. SMOOT. I have not said that as to zinc. I said that as to lead, but even the Tariff Commission states that, so far as zinc is concerned, it can not be reduced so cheaply here at the works as it can abroad.

Mr. JONES of New Mexico. I shall read what the Tariff Commission says about it.

Mr. SMOOT. I have just read what they say.

Mr. JONES of New Mexico. I certainly misunderstood the Senator. I had supposed he made his statement with regard to zinc.

Mr. SMOOT. I just read what the Tariff Commission said in reference to zinc.

Mr. JONES of New Mexico. But I thought as to smelting charges and costs the Senator applied his statement to zinc.

Mr. SMOOT. I did.

Mr. JONES of New Mexico. And that the smelting of zinc could be done as cheaply in this country as anywhere.

Mr. SMOOT. No; the Senator is mistaken.

Mr. JONES of New Mexico. Very well. I acquit the Senator from Utah of having intended so to state; but he admits that, so far as lead is concerned, the smelting may be done as cheaply.

Mr. SMOOT. At the works.

Mr. JONES of New Mexico. At the works.

Mr. SMOOT. Yes.

Mr. JONES of New Mexico. Then as to zinc, of course the Senator does not agree that the situation is the same, but I will read what the Tariff Commission states. Assuming that it is the same, then there is no excuse for a differential as between the slabs and the ore if after the ore reaches the smelter it may be smelted just as cheaply as anywhere else. There is no excuse for a differential for this reason:

Unless the duty is high enough to prevent importations of the foreign ore, it will come in and will be smelted just as cheaply as the American ore. So it is solely a question of putting enough duty on the zinc or lead content to prevent the foreign ore from getting to the reduction works in the United States.

Mr. SMOOT. The Senator should take the amount of loss into consideration.

Mr. JONES of New Mexico. The Senator's statement as to loss relates only to the ore, because from wheresoever the ore comes the loss is there, and the Senator from Utah simply states himself out of court when he says that the smelting processes may be conducted just as cheaply in this country as anywhere else. When the Senator says that in effect he says the only question to be considered is the cost of getting the ore to the smelter.

Mr. SMOOT. I am glad the Senator has stated that, because that is the vital question so far as lead is concerned. The question is the same in regard to zinc, only with added difficulties which the Tariff Commission says exist. I have read the statement of the Tariff Commission as to zinc.

Mr. JONES of New Mexico. The Senator has read a part of it, but I will read the remainder of it. I know that the Senator from Utah did not deliberately, for any purpose, omit any part of it.

Mr. SMOOT. I read the conclusion of the commission, but I did not read the statement in reference to the competitive conditions upon which the conclusion was arrived at by the commission. The Senator may read what I omitted if he wishes to do so.

But let the Senator take a piece of paper and figure what the compensatory duty is. If the loss on zinc is 20 per cent; that is, if the yield of zinc in smelting the zinc ore is 80 per cent and we give a duty of 1½ cents on the ore, then we must necessarily give a compensatory duty of 1¾ cents on the slabs.

Mr. JONES of New Mexico. But the foreign smelter has the same loss.

Mr. SMOOT. But if the ore is smelted in a foreign country in slabs, it does not have to pay the freight here to be smelted in this country; only the freight is paid upon the slabs and not upon the ore.

Mr. JONES of New Mexico. I can understand all those factors; I can see those factors; but when it comes to applying the facts it does not make any difference, so far as this argument is concerned, in my judgment. The Senator from Utah differs from me about that.

Mr. SMOOT. I certainly do. Now I wish to read further, and I will begin at the same point:

> The indications are that the United States will continue to supply its own vast needs, even under the existing tariff, and possibly have a small excess for export to near-by countries. The export trade would be supplied largely by the smelting of Mexican and Canadian ores in bond. The European smelteries may be expected to divide the world trade among themselves; but they are not likely to be a large factor in the domestic market, which will be kept down by the pressure of potential importations for consumption of the metal produced from foreign ore in bonded works and by the large domestic capacity—both reserve and smelter output as stimulated by the war.

Mr. JONES of New Mexico. I believe if the Senator will examine the Tariff Commission Survey he will find that there are large exports of the slabs which we have been talking about—spelter and slabs——

Mr. SMOOT. That was during the war.

Mr. JONES of New Mexico. I do not believe that the statistics are confined merely to the war period, according to what I have before me. On page 59 of the Tariff Commission Survey I find the statement that in 1910 of zinc in pigs, bars, plates, and sheets we exported 1,816,289 pounds; in 1911, 12,894,298 pounds; in 1912, practically 19,500,000 pounds; in 1913 nearly 15,000,000 pounds. Then the war came on.

The figures also show that in 1918 we exported 132,000,000 pounds; in 1919, 219,000,000 pounds; in 1920, 148,000,000 pounds; and for nine months of 1921, 2,257,000 pounds.

Of zinc cast in pigs, slabs, and so forth, produced from foreign ore, we exported in 1918, 40,000,000 pounds; in 1919, 24,000,000 pounds; in 1920, 56,000,000 pounds; and in 1921, 1,280,000 pounds.

Of zinc rolled in sheets, strips, and so forth, in 1918 we exported 27,750,000 pounds; in 1919, 39,000,000 pounds; in 1920, 23,000,000 pounds: in 1921, 2,605,000 pounds.

I will state that the first figures given show the exports of the product manufactured from domestic ore and the other figures the exports from the imported ore on which there was a drawback of the duty.

Mr. President, we find this concrete fact that we were smelting these ores and exporting them abroad in large quantities

for the years before the war, and we have kept it up since the war, and that export trade has been carried on in competition with the world. That statement comes from the Tariff Commission. Will any Senator tell me in the face of figures of that kind that a differential is needed for the smelting of the ore, if during all these years we have been smelting our ores and foreign ores in bond and sending the pigs, slabs, and sheets all over the world?

Mr. President, that sheds much light upon the further element of which the Tariff Commission treats.

> Costs of zinc smelting vary between wide limits, depending on unit fuel, freight and labor costs, and plant efficiency; but there are indications that the cost of producing zinc in the United States is slightly higher * * * than in the large European centers. The smelters of the United States have exceptional advantages as regards fuel supply—the domestic coals are much cheaper and are generally of better quality than the European varieties—and are not greatly handicapped in securing the refractory material needed in the process. In addition, the high zinc tenor of middle western ores cheapens the smelting process by conserving fuel and reducing handling charges and refractory costs.
>
> On the other hand, domestic smelters obtain less fuel efficiency than the foreign and are handicapped by wage rates from double to four times the European scale.
>
> There is a large excess of smelting capacity in the United States, and it was demonstrated during the war that American mines can produce ore in quantity more than sufficient to keep all the plants supplied.
>
> However, due in large measure to the length of railroad hauls from the western mines to eastern consuming centers, the cost of American ore is generally greater than the cost of foreign ore.

Those are the factors which have been mentioned here, some on one side and some on the other; but when you come to get results you find that these smelters are actually smelting this ore and sending it abroad in competition with the world, and all this information comes from the tariff survey.

Mr. SMOOT. Mr. President, if the Senator is interested in zinc ore, I will ask him whether he would like to see conditions exist such as existed in the months of March and April of 1921? If the Senator will look at the importation, not of ore but first of zinc in blocks and pigs, he will find that it jumped in three months from 101 pounds for the year 1920 to 13,064,016 pounds. Did not that take the place of twice that amount of ore? Not only that but look at the exportations at the same time. For the full nine months when this report was made, of zinc cast in pigs, slabs, and so forth, produced from domestic ore, the quantity exported was 2,257,468 pounds. Now, suppose they had continued to import as they did in 1921, in three months over 13,000,000 pounds of zinc in blocks or pigs, and then over 13,000,000 pounds of zinc sheets, a total in three months of over 26,000,000 pounds, taking the place of zinc ore during the year 1921. I am not going to be unfair in that statement. I am going to tell the Senator why that occurred.

Mr. President, there was an overproduction of zinc in Belgium and in England and in Spain, and what did they find? They found the American price in 1921 high, and they did not ship the ore. That was not shipped. They shipped zinc in blocks or pigs and zinc sheets to the amount of 26,000,000 pounds in those three months; and if the trade journals are to be taken into consideration, and if they state the truth, they dumped their surplus into the United States and broke the market here until they were compelled to sell their pigs and blocks lower than it cost to produce them in the United States.

I want to say to the Senator that if that thing happens, it simply means the shutting down of the zinc mines of Missouri and the shutting down of the zinc mines of the West, because they produce the ore, and when the slabs and the bars and the spelter are sent into this country that stops the production of the ore. That is what I want to do; and I am only asking for one-eighth of a cent differential, and the Tariff Commission says it is justified.

If the Senator is interested in the ore, I know that he would not want such a condition to exist; and another thing the Senator knows is that in order to produce the pigs and slabs and spelter they have to run continuously. Do we want the market here to be the dumping ground of Belgium and England and Spain and Germany? I do not think the Senator wants that.

Mr. JONES of New Mexico. May I ask the Senator if he agreed to the provisions of this bill by reason of the things he has just been stating?

Mr. SMOOT. Why, certainly.

Mr. JONES of New Mexico. That was the moving factor?

Mr. SMOOT. Absolutely; and not only that but the difference in the freight, too. I want to say to the Senator now that I would not have supported a duty of a single penny on a ton of the conversion of lead if the ore was at the mill, the same as the ore would be at the mill in the foreign country. We can compete with the world; but the Senator knows that we have to get our ore from Mexico, and the freight rate on zinc, we will say—it is about the same as the other—is $9 a ton from the border of the United States to St. Louis and the Mississippi Valley, where it is smelted. If the Senator will get that into his mind, and he is interested in the content of the ore, he must know that if it is not protected with a differential the ore must go down in price.

Mr. JONES of New Mexico. Does not the Senator realize that if the freight rate is so high the way to remedy it is to raise the rate on the ore? Would not that remedy it?

Mr. SMOOT. Why, no, Mr. President. We could put the ore at 5 cents a pound if we wanted to, and then what would they do? They would build a smelter in Mexico, as the American Smelting Co. has already done, smelt the ore there, and ship the bullion here. That is what would happen, and I would not care if you put a dollar a pound on the content and left the bullion at this rate; no ore would come in here, but the bullion would.

Mr. JONES of New Mexico. If the Senator thinks he is right about it, should not the differential be much greater than it is? One-eighth of a cent per pound will not pay that freight bill.

Mr. SMOOT. I am quite sure of that. The present differential of one-eighth of a cent is virtually the differential in the loss. It is not much over that; but take the metal, in paragraph 391, at 1½ cents a pound, and I was going to tell the Senator that it is too low. The average loss in smelting is 15 per cent, and in certain cases it is more; but when you take into consideration the fact that we have many of the ores produced in Missouri and worked by the same plants as the ores coming from Mexico, I think perhaps in balancing it up they could get along with that differential; but it is very, very close, indeed.

Mr. JONES of New Mexico. Certainly that one-eighth of a cent a pound would not cut any material difference in offsetting the freight rate which the Senator talks about.

Mr. SMOOT. One-eighth of a cent a pound, of course, is considerable on a ton. I will tell the Senator just what it is. The Senator says that the ore is 40 per cent. It will take me a little time to figure it out.

Mr. JONES of New Mexico. Mr. President, this is a small item, and I will not take up time with it. I see that the Senator has his calculation rule there. He can figure that out by and by and say what it is, but it is only a small fraction of the freight rate the Senator has been talking about.

Mr. SMOOT. I am quite sure that the differential on the zinc is very close, as I have already said—very close, indeed.

Mr. JONES of New Mexico. Yes; and it would not overcome the factors to which the Senator has been referring. It would not offset the freight rate; but they would not ship those slabs in here for the purpose of putting them on the American market when they would have to pay a tariff on them equivalent to the cent and a half a pound upon the zinc content, when in this country we are smelting those ores and sending the slabs and sheets and bars to the four corners of the earth. We are doing it now, when the rate upon the zinc content is very much less than is proposed under this bill; but let that one-eighth of a cent go. Assuming that you have your ore here, in my judgment you can compete with the world in making slabs or zinc sheets. The Senator says he wants a differential of one-eighth of a cent per pound, which, of course, is to be applied only to the comparatively pure zinc, the bars and the slabs and the sheets.

What do we find, however? So far as these oxides are concerned, these materials which go into paint pigments, we find here that on the zinc oxide containing not more than 25 per cent of lead in any form of dry powder the duty is 1¼ cents per pound. There we have another differential—1¼ cents per pound. That zinc oxide is produced directly from the ore, and the oxide is not all zinc. The zinc content of the oxide is only 80 per cent. There is a difference of 20 per cent, and here is another one-fourth of 1 cent per pound specifically mentioned.

I should like to know how that can be justified. That process of making those oxides from zinc, the American process, was developed in this country. It is not used, I believe, to any material extent anywhere else in the world.

There is no intimation that any nation can compete with us on a free-trade basis, so far as the manufacture of zinc oxide is concerned, and here they give a differential of one-fourth cent per pound upon the oxide itself, and the oxide contains only 80 per cent of zinc. That is an absolute gift.

Mr. SMOOT. They can get only 80 per cent of the oxide out of the ore, too, I will say to the Senator.

Mr. JONES of New Mexico. Yes; but that is the smelting process.

Mr. SMOOT. It is the same with the oxide. You can not get more out of any product of oxide than you can in making spelter.

Mr. JONES of New Mexico. Mr. President, the duty upon the importations of these ores is based only on what you get out of them. That is what your duty is based on, and that is what we are talking about when we refer to the smelting of any kind of a zinc ore. We are talking about what we get out of it, and what we get out of it is just as much as any other concern on earth would get out of it.

Mr. SMOOT. Whatever rates are imposed are imposed upon the metal content, and when it goes into the spelter or the lead bullion, in either case the duty is imposed upon the metal content, whereas the recovery is only 80 per cent.

Mr. JONES of New Mexico. Does not the Senator know that the proviso to the paragraph imposing a tariff on the zinc ore takes care of that loss, because it is designed specifically to bring that ore into the United States, and then let you export the zinc produced from it and get a drawback? The Senator would not stand here for a minute and permit a law to pass this body which would penalize the smelting of foreign ores in the United States, and this bill does not propose to do it.

Mr. SMOOT. Of course the Senator may speak for himself, but he can not speak for the Senator from Utah. I will support any kind of a bill that will bring the foreign ores into the United States in bond, to be smelted by American labor and with American capital, the content to go, when smelted, not into the commerce of the United States but to a foreign land, and we are just that much ahead in the United States. We give that much work to the laboring man in the United States, and I am in favor of any kind of a law which will allow the manufacturing of any article for exportation in bond.

Mr. JONES of New Mexico. The law provides that on all importations of zinc-bearing ores the duty shall be estimated at the port of entry and a bond given in double the amount of the estimated duty for the transportation of the ores by common carrier, bonded for the transportation of appraised or unappraised merchandise to properly equipped sampling or smelting establishments, whether designated as bonded warehouses or otherwise. On arrival of the ores at such establishment they shall be sampled according to the commercial methods under the supervision of Government officers, who shall be stationed at such establishments, and who shall submit the samples thus obtained to a Government assayer designated by the Secretary of the Treasury, who shall make a proper assay of the sample and report the result to the proper customs officer.

Anybody who is dealing with the sampling of ores which are sold at a smelter knows that those ores are sampled according to the amount of the metal which can be obtained from the ore.

Mr. SMOOT. That is, what can be produced from those ores.

Mr. JONES of New Mexico. At any smelter.

Mr. SMOOT. The Senator is wrong. It is not what can be produced from the ore; it is what it contains when smelted. That is what they collect the duty upon.

Mr. JONES of New Mexico. My information is not to that effect.

Mr. SMOOT. I will say to the Senator that if he will telephone to the Treasury Department and the Treasury Department does not say that that is the fact, he can write the rates in this bill.

Mr. JONES of New Mexico. The other day, when we were discussing lead, the Senator stated that if you would look at any contract which a smelter made for buying lead ore you would find that the contract specifically provided for a reduction on account of the loss in smelting, and that is precisely what this means. If I am wrong about it——

Mr. SMOOT. The Senator is wrong.

Mr. JONES of New Mexico. If I am wrong about it, there is nobody who would be quicker than the Senator from Utah to correct it, because it would be a crime to undertake to say to the smelters of this country, "We are going to give you an opportunity to smelt foreign ores in bond, but we are going to penalize you, not only by the 1 per cent drawback but we are going to penalize you with 15 or 20 per cent more for loss in smelting those ores."

The Senator must know that is absolute folly, and if he actually believed it he would be offering an amendment to this bill providing that in these assays you shall make such deductions as are necessary to account for the loss in smelting.

Mr. SMOOT. Now, the Senator is getting off again. I say now—and I want to put it in the RECORD, so that the Senator will know—that if ores are withdrawn from bond, with the duty paid on all zinc content in the ores, allowances for loss are made on canceling the bond when those ores are shipped to a foreign country. Does the Senator understand that?

Mr. JONES of New Mexico. I was speaking only with reference to the smelting and exporting of the commodity. The Senator misinterprets me if he thinks I was talking about that sort of a situation. We are not discussing that.

Mr. SMOOT. That is what the Senator has been arguing about.

Mr. JONES of New Mexico. Not at all.

Mr. SMOOT. Then I can not understand the Senator.

Mr. JONES of New Mexico. What I have been arguing is just this, when these bars are brought in for the purpose of being smelted and exported, converted into bars, slabs, and so on, for export; and where they are coming in competition with the world the processes employed here are not such as to penalize the industry in this country.

If that be so, I do not see any evidence here that there is any necessity for imposing any duty upon these oxides beyond the duty imposed upon the ore. The oxides are made out of the ore or the zinc content of the ore. It is admitted we can smelt these ores just as cheaply as any country on earth and manufacture the oxide as cheaply as any country on earth, and there is no competition under existing law.

In regard to this oxide, we are now getting down to a practical basis on the thing which we are discussing. After describing zinc oxide the Tariff Commission tells us about the two processes for its manufacture, one the French process and the other the American process. Under the French process it is made from the metal. By the American process it is made from the ore direct, and usually contains a percentage of lead.

This bill refers to the "zinc oxide and leaded zinc oxides containing not more than 25 per cent of lead." The American oxides do not contain more than 25 per cent of lead. In fact, the percentage is very much less. So, under this provision all oxides are included. This is what the Tariff Commission say after describing this process:

> The output of American-process oxide is in excess of the domestic consumption and leaves a small margin for export.

We are making these oxides and sending them abroad in competition with the world. I would like to have some one suggest why we should put a tariff upon importations of such a commodity as that. The zinc oxides which are produced in the United States since 1912 have ranged from 84,000 short tons of the zinc oxide, which is made by the French process, up to as much as 109,000 short tons, and in 1920, after business became depressed, we produced 89,000 tons. Of the leaded zinc oxide we produced 30,000 tons in 1920. Our imports have amounted to practically nothing since the war; in 1921 only 955,000 pounds, as against nearly 100,000 tons in 1920.

Of the zinc oxides in 1919 we exported 24,000,000 pounds, and in 1921 we exported 3,500,000 pounds. We are advised that during all the time we have been making these oxides at all the importations never exceeded 2½ per cent, while the exports have averaged 20 per cent. The average exports of zinc oxide and leaded oxide combined from 1910 to 1917 were about 31,000,000 pounds. I would like to have some one explain why there should be any tariff upon imports of zinc oxide.

Our exports have averaged 20 per cent of the domestic production. Our imports have never at any time exceeded 2½ per cent. Yet it is desired to have a duty upon those oxides. I repeat that from an economic standpoint the only possible result is to enable the few manufacturers to increase the price of paints to the consumers throughout the country and levy further tribute upon the American people and put it in the pockets of the few manufacturers, when if they would be content with the same profits with which the smelters and producers of other sections of the world will be content they would still make a reasonable profit. But this is to be in addition a special levy of tax upon the American people for the specific benefit of the few manufacturing industries.

The Senator from Utah has referred to some supply of slab zinc being dumped on the American market. We have now an antidumping law. It became a law as a part of the so-called emergency tariff law. The same provision is incorporated in the pending bill against dumping, the sporadic happenings of which we hear once in a while. That can not be done any longer; it can not be done under the existing law, and the pending bill proposes to prevent it also.

Mr. SMOOT. But it was done in 1920.

Mr. JONES of New Mexico. No; I do not think that was dumping. The Senator called it that, but what I think occurred then was that the American prices were so high that they could ship it over here, sell it in this market, pay the duty on it, and still make a profit. Doubtless it was something of a supply that was on hand as a result of the cessation of the war, but there is no evidence that that was a regular transaction. It may not have been dumping. I do not think it was. I think that the people of this country had their prices so high that the

foreign commodity could be brought here. The economic result was to prevent the domestic concerns from further profiteering upon the American people as they did during the war.

Moreover, Mr. President, it is more than likely that the closely dominated industry in this country bought it. That is what has happened with regard to wood alcohol, calcium carbide, and other commodities where they are closely controlled in this country. Where there is a limited supply that comes in, the producers here purchase that supply in the controlled market, and themselves sell it at a profit to the American consumer.

By the way, Mr. President, these oxides, when ground in or mixed with oil or water, carry 2¼ cents per pound. That is an increase from 1½ cents per pound on zinc ore to 2¼ cents. I am not going to discuss that, but it largely involves the same discussion as the other items.

Mr. SMOOT. I wish to say for the RECORD, if the Senator is going to leave zinc oxide, under the Underwood law the differential is six-tenths of a cent per pound, and under the bill it is proposed to be one-fourth of a cent per pound.

Mr. JONES of New Mexico. It figures out about that on the basis of the prices. I think the Senator is right. The Senator proposes in the bill to reduce it to one-fourth of a cent per pound.

I think the Senator will understand that I do not believe this is the time to levy a tax upon the American people merely because at some period in the past some other Congress levied some other rate of duty. Quite frequently we find this Congress going back not only to 1913, when the Underwood-Simmons law was enacted, but going back to 1909, when the Payne-Aldrich law was enacted, and imposing duties simply because the Payne-Aldrich law imposed them, or else they now discover no difference between the situation as it existed then and it exists now.

Mr. WALSH of Montana. Mr. President, will the Senator permit me to make a suggestion in that connection?

Mr. JONES of New Mexico. I am glad to yield to the Senator from Montana.

Mr. WALSH of Montana. It has often been argued in favor of the principle of a protective tariff that the effect of it would be to protect a domestic manufacture to such an extent as that after it had passed the period of infantile development it would be able to stand on its feet and compete with the foreign producer, so that the protective tariff would no longer be necessary. In other words, the logical development of that idea would be that the protective tariff would be greatly reduced as the domestic manufacturers established their manufactures and perfected their processes and that kind of thing, so that in the regular development of the system there could be a reduction in the rate of duty and in any differential which existed between the tariff upon the manufactured product and the raw material. So it seems to me it is a very poor answer to the argument the Senator is so persuasively making to say that the differential is no greater than was the differential in the case of the Underwood tariff law or the Payne-Aldrich law.

Mr. JONES of New Mexico. Mr. President, the situation reminds me of the registration laws that I have seen in certain localities in New Mexico. About 1885 the law provided for fixing up the registration list. It also provided that those lists might be combed out and the names of the absentees and deceased citizens eliminated. As a practical operation, however, the only change in the registration list was simply to add to it the newcomers.

That is the way with this tariff proposition. They keep all they have ever had and simply add something new. They continue to increase, and even if the necessity for it has disappeared, if the citizen has moved away, they will keep up the old system, the thing which first started. They are never willing to give up anything or to consider the thought of reducing anything, but they are looking for additions and accretions.

I now come to lithopone. Lithopone is another pigment that goes into the production of paints. The production in the United States has steadily increased from 25,000,000 pounds to about 178,000,000 pounds. The imports have been less than 2 per cent, and those imports have existed for reasons other than tariff conditions. That is what the Tariff Commission has said.

I have been fortunate in ascertaining that the Tariff Commission has made a survey of production costs in the lithopone industry of the United States. It shows that notwithstanding the depressed times production has been very greatly increased; that while overhead charges have been greatly increased, all but one or two concerns in the United States to-day are making this commodity at a profit.

This little pamphlet is one of the most interesting documents which I have seen during the discussion of the pending tariff bill. It is the only document that I have seen which purports to give a survey of the cost of production in the United States. Here is what this document shows in a general way as to the items of cost: It compares the first six months of 1919 with the first six months of 1921, and shows that in 1919 the material cost was 42.6 per cent; that the direct labor cost was 16.9 per cent; that the sales cost was 5 per cent; and that the factory overhead cost was 35.5 per cent. In 1921 the material cost was 42 per cent; the direct labor cost was 13.1 per cent; the factory overhead cost was 41.2 per cent; and the sales cost was 3.7 per cent.

The production of these concerns was reduced to about one-third of their normal capacity. The figures which I have quoted are average figures, what is known as the weighted average cost; but the cost in the individual concerns has varied greatly. There were eight concerns which were examined, and I feel assured from the evidence in this pamphlet that the costs of those eight concerns were carefully estimated. The costs in the case of lithopone averaged from 5.00045 cents to 7½ cents—more than 2 cents a pound, or nearly 50 per cent. The total factory overhead costs varied from 2 cents a pound to about 3¼ cents per pound—more than 50 per cent. The other costs average about in the same proportion.

Six of those eight concerns were making a profit in these depressed times, although we all understand that when a factory cuts down its output the overhead keeps on and must be applied to the small production.

Mr. President, I desire at some later date to comment upon this document, which demonstrates, to my mind, the impossibility of writing a tariff bill at this time upon any scientific theory. The Senator from North Dakota [Mr. MCCUMBER], in the first speech which he made upon the bill, said that that was the purpose—to write a bill based upon the difference in the cost of production in this country and abroad. However, in this one industry eight concerns were examined and we find that their costs, on the average, have varied more than 50 per cent.

I will call attention to some of the percentages which are a little more striking. Column 3 shows that as to the material cost per pound of lithopone—I shall not read the figures—there was a variation of 62 per cent; the direct labor cost varied 125 per cent; the overhead expense varied 160 per cent; the sales expense varied 600 per cent. The factors entering into these computations are all presented and discussed, and they demonstrate that this is no time to write a general tariff bill covering all these commodities. There can not be found a scientific basis upon which to write a bill which may be put into practical effect to do justice to the consumers of the country as well as to the manufacturers of the country.

Mr. President, I think this document is so important that it is worthy of being published in the RECORD, and I ask that it be published as an appendix to my remarks.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The Senator from New Mexico asks unanimous consent that the document to which he refers be published as an appendix to his remarks. Is there objection? The Chair hears none, and that order will be made.

APPENDIX.

[United States Tariff Commission, Washington—Tariff Information Series, No. 24.]

PRODUCTION COSTS IN THE LITHOPONE INDUSTRY FIRST SIX MONTHS OF 1921.

INTRODUCTION.

This pamphlet is a survey and compilation of costs of production in the lithopone industry during the first six months of 1921. The Tariff Commission in a previous report—Barytes, Barium Chemical and Lithopone Industries, Including Costs of Production, 1919—compiled costs of production in this industry for the calendar year 1919.

The present report gives in tabular form the cost of production of lithopone by individual companies, and shows in detail the various items of expense which make up the total cost. In addition, the costs previously reported to the commission for 1919 are shown along with those for the first six months of 1921, for convenience in comparison. The pamphlet contains a discussion of conditions in the lithopone industry during the first half of 1921 and a detailed discussion of the cost tables.

In the preparation of this report the Tariff Commission had the services of C. R. DeLong, of the Chemical Division, and E. M. Whitcomb, of the Accounting Division, of the commission's staff, and of others.

PRODUCTION COSTS OF LITHOPONE.

The Tariff Commission was requested by a committee representing the manufacturers of lithopone in the United States to ascertain the cost of production of lithopone during the first half of 1921 in order that costs, as reported by the commission (Barytes, Barium Chemical, and Lithopone Industries, Including Costs of Production, 1919—Tariff Information Series No. 18. The report gives a description of lithopone, its uses, statistics of production, imports, and prices, and a discussion

of competitive conditions in the industry) for the year 1919, might be brought to date and be available to committees of Congress in connection with the revision of the tariff act of 1913. A detailed schedule was submitted to various manufacturers, with the request that they submit their costs of production in accordance with the schedule. The reports, as received from the various manufacturers, were tabulated and were later verified by comparison with the books of the companies by members of the commission's staff.

Costs were reported on a more uniform basis by the manufacturers and in greater detail than in the previous investigation, which facilitated the comparison of costs between individual firms. There is still, however, a noticeable lack of uniformity among the various manufacturers in methods of treating certain cost items. These outstanding differences occur in the methods of handling raw material charges, determining sales expense, and in the treatment of administrative expenses.

The average cost of lithopone, shown in this report, is in all cases the weighted average; in no case has a simple average been used in presenting the various items of lithopone cost. It is believed that the costs as shown are representative of conditions existing in the lithopone industry during the first six months of 1921.

SUMMARY OF CONDITIONS IN THE INDUSTRY.

Only 8 out of a total of 13 firms previously engaged in lithopone production were in operation during the first half of 1921. One of the five firms not operating reported that its plant was being dismantled.

In order to show what percentage of the productive capacity of the industry in the United States was in actual operation during the period for which costs were taken, manufacturers were requested to submit the productive capacity of their plants and the actual output of lithopone during the first half of 1921. An analysis of this information shows that only about one-third of the entire capacity of the domestic industry was in operation during that period; the eight firms which were in operation manufactured lithopone equal to about 40 per cent of capacity. The production of productive capacity of the various plants in operation ranged from a minimum of 14 per cent to a maximum of 65 per cent.

From the fact that such a small proportion of the domestic industry was in operation during this period the deduction should not be made that this inactivity was due to competition from imported lithopone. A study of production and import statistics shows that imports in 1920 were 3,427,321 pounds, or only 2.5 per cent of the domestic marketed production of 178,746,000 pounds. Imports for the first six months of 1921 were slightly less than 2 per cent of the domestic output. Pre-war imports were fairly constant at between 5,000,000 and 6,000,000 pounds per annum and supplied only a small proportion of domestic consumption. It is therefore evident that inactivity in the lithopone industry must be attributed to causes other than active competition from foreign sources.

In presenting these lithopone costs it should be pointed out that the costs as reported are undoubtedly higher than if all companies reporting had been operating at somewhere near capacity. Therefore, in considering the competitive strength of the domestic industry for tariff purposes allowance must be made for this fact. It is difficult to estimate to what extent costs would have been lowered if the industry had been operating at or near capacity. The effect of this suppressed production of lithopone is most accurately reflected in the increase in factory overhead cost, as compared with the year 1919, when the industry was operating—at least, during the last half of that year—at maximum capacity.

TOTAL COST OF LITHOPONE IN 1921, AS COMPARED WITH 1919.

Table 1 shows the weighted average cost of lithopone for all companies during the first six months of 1921 as compared with the same six months' period in 1919. This table shows also the distribution of total cost to the items—material, direct labor, factory overhead, and selling expense. Column 9 shows the average profit for the industry by deducting the total cost from the average net sales price, as shown in column 8.

TABLE 1.—*Weighted average cost of lithopone for 1919 and first six months of 1921.*

[Per pound.]

1 Period.	2 Production (pounds).	3 Total cost.	4 Material cost.	5 Direct labor cost.	6 Factory overhead.	7 Selling expense.	8 Average net sales price.	9 Apparent average profit.
1921 (first 6 months)	45,150,036	$0.0626	$0.0263	$0.0082	$0.0258	$0.0023	$0.0676	$0.0050
1919 (first 6 months)	53,092,739	.0605	.0258	.0102	.0215	.0030	[1].0671	.0066
1919 (last 6 months)	89,426,437	.0600	.0259	.0111	.0199	.0031	[1].0653	.0053
1919 (12 months)	142,519,176	.0602	.0259	.0108	.0204	.0031	[1].0667	.0065

[1] Sales price for 1919 is gross price.

The total production of lithopone (column 2) for the first six months of 1921 amounted to slightly more than 45,000,000 pounds. As compared with the same period for 1919, this is a decrease of approximately 8,000,000 pounds and is only about one-half the output during the last six months of 1919.

This restricted production during the first half of 1921 is undoubtedly responsible for an increase in the total cost of manufacturing lithopone during 1921, as compared with 1919. The total cost (column 3) for the first six months of 1921 amounted to $0.0626 per pound, which is an increase of $0.0024 per pound over the average cost for 1919. This increase in total cost is accounted for by the increase of factory overhead expense (column 6), which was greater by $0.0054 per pound than for the year 1919. The increase in the factory overhead expense more than compensated for a decrease of $0.0026 per pound in direct labor cost (column 5) and a slight decrease in selling expense. The material cost per pound of lithopone shows only a slight increase over the material cost in 1919. At first glance it seems surprising that material cost should show an increase over the average cost for 1919; but the material cost, as shown, includes freight on material to plant, or, in other words, is the actual cost of barytes delivered at the various plants of the companies reporting costs. It is very likely that the cost of material, disregarding freight charges, was less than in 1919, but that any decrease in price of materials has been offset by a greater increase in freight rates since 1919.

The various items going to make up total cost of lithopone are shown graphically and by percentages in Figure 1 (see p. 7). This shows that the total cost of lithopone—$0.0626—was made up of 42 per cent for material, 13.1 per cent for direct labor, 41.2 per cent for factory overhead, and 3.7 per cent for sales expense. Figure 1 shows also the distribution of these items of expense for the first six months of 1919 and for the whole year 1919. Whereas in 1919 direct labor was 17.9 per cent, in the first six months of 1921 it had decreased to 13.1 per cent of the total cost. On the other hand, the factory overhead increased from 33.9 per cent of total cost for the year 1919 to 41.2 per cent during the first half of 1921. The cost of material during this period remained practically constant between 42 and 43 per cent of total cost. Sales expense showed a slight decrease from 5.2 per cent of the total cost in 1919 to 3.7 per cent during the first six months of 1921.

The average net price (column 8) received for lithopone sold during the first half of 1921 was $0.0676 per pound. This is an increase of $0.0009 per pound over gross sales value as reported in 1919. Column 9 shows that the industry during this period made an apparent average profit of $0.005 per pound of lithopone. Table 2, which is discussed later, shows, however, that three of the eight firms lost money on lithopone sales during the first half of 1921.

VARIATION IN COST OF LITHOPONE BY COMPANIES.

The cost of manufacturing lithopone by individual companies during the first half of 1921 is shown in Table 2, as well as costs by companies for the year 1919. Company numbers have been arranged in the sequence of total cost of production, both in the first six months of 1921 and for 1919. In no case are the costs shown for any one number comparable as being costs of the same company for both periods.

TABLE 2.—*Detailed average cost of lithopone by companies, 1919, and first six months of 1921.*

[Per pound.]

1921—FIRST SIX MONTHS.

1 Company No.	2 Total cost.	3 Material cost.	4 Direct labor.	5 Factory overhead.	6 Sales expense.	7 Net sales price.	8 Profit or loss (—).
1	$0.0558	$0.0263	$0.0079	$0.0203	$0.0013	$0.0668	$0.0110
2	.0575	.0303	.0106	.0143	.0023	.0668	.0093
3	.0576	.0232	.0104	.0205	.0035	.0674	.0098
4	.0580	.0282	.0059	.0228	.0011	.0676	.0096
5	.0676	.0205	.0091	.0371	.0009	.0698	.0022
6	.0697	.0264	.0133	.0288	.0012	.0668	.0029
7	.0728	.0232	.0066	.0370	.0060	.0666	—.0062
8	.0773	.0332	.0098	.0321	.0022	.0699	—.0074
Weighted average	.0626	.0263	.0082	.0258	.0023	.0676	.0050

1919—TWELVE MONTHS.

1	$0.0529	$0.0248	$0.0058	$0.0203	$0.0020	$0.0649	$0.0120
2	.0536	.0258	.0105	.0151	.0122	.0631	.0095
3	.0574	.0221	.0124	.0218	.0011	.0646	.0072
4	.0586	.0230	.0154	.0166	.0036	.0649	.0063
5	.0609	.0232	.0083	.0028	.0066	.0660	.0051
6	.0635	.0283	.0090	.0208	.0054	.0687	.0052
7	.0643	.0288	.0135	.0201	.0019	.0627	—.0016
8	.0653	.0307	.0211	.0121	.0014	.0696	.0043
9	.0697	.0251	.0111	.0324	.0011	.....	.....
10	.0744	.0303	.0095	.0276	.0070	.0714	—.0030
11	.0751	.0329	.0085	.0274	.0063	.....	.....
Weighted average	.0602	.0259	.0108	.0204	.0031	.....	.....

Column 2 shows that the variation in total cost of lithopone by companies ranged from a low of $0.0558 to a high of $0.0773 per pound, or a variation of 38 per cent of the low cost. Four firms reported a cost less than the weighted average cost. On the basis of actual production, approximately two-thirds of the total output during the first half of 1921 was produced at a cost less than the weighted average. Although not shown in the table, it is significant that neither in 1919 nor in the first half of 1921 did the cost of production vary according to the size of output of individual firms. However, it may be said, in general, that the companies reporting lowest costs in 1921 were those operating at a maximum percentage of productive capacity.

Column 3 shows that the material cost per pound of lithopone ranged from $0.0205 to $0.0332, or a variation of 62 per cent of the low cost. Three firms reported a material cost which was lower than the average of all firms.

The direct labor per pound of lithopone (column 4) ranged from $0.0059 to $0.0133, or a variation of 125 per cent of the low cost. Three firms reported a direct labor cost which was less than the average.

Factory overhead expense, shown in column 5, ranged from $0.0143 per pound of lithopone to $0.0371, or a variation of 160 per cent of the low cost. Factory overhead shows a greater variation than any other item of factory cost. This may be readily accounted for by the wide discrepancy in the percentages of the productive capacity of the firms which were in operation.

Sales expense reported for 1921 ranged from $0.0009 per pound of lithopone to $0.006, or a variation of 600 per cent of the low cost. This wide variation in sales expense is due to the fact that some of the companies consumed practically all of their own production, and therefore they had little sales expense, while some of the other firms had to market practically all of their output.

Column 7 shows that the net sales price received for lithopone during the first six months of 1921 was fairly uniform, and varied only 5 per cent from the low, $0.0666 per pound, to the highest net price received, $0.0699. Six firms reported a net sales price equal to or below the weighted average of $0.0676 per pound.

Column 8 shows the actual profit or loss during the first half of 1921. Three firms had a loss on their lithopone sales ranging from $0.0029 per pound to $0.0074, whereas the remaining five firms reported a profit which ranged from $0.0022 to $0.011 per pound. As there was very little difference in the net price received for lithopone during 1921, profits were in inverse ratio to the total cost of production. Interest on capital investment and Federal taxes were not included as items of expense in arriving at total cost, and therefore these factors have had no influence on the average profit or loss shown in column 8.

DETAILS OF MATERIAL COST.

Table 3 shows details of material cost by companies compared with the total factory cost of lithopone. The determination of material costs was somewhat complicated by the fact that the method of treating materials varied between the various companies. Some kept separate accounts for barium sulphide—made from barytes—and for zinc sulphate liquor, and these intermediate materials were charged to the lithopone account at cost of manufacture. In such cases the charges for barium sulphide and zinc sulphate, which were reported in detail, were segregated into details of material, direct labor, and factory overhead, so as to make the details of the total cost of lithopone comparable by companies. This distribution in no case has changed the total cost of lithopone as reported by these companies.

TABLE 3.—*Details of material cost compared with total factory cost of lithopone, by companies, for first six months 1921, and weighted averages compared with 1919.*

[Costs are per pound. Percentages are of total factory costs.]

1921—FIRST SIX MONTHS.

Company No.	Total factory cost.	Total material.		Barytes.		Zinc.		All other materials.	
		Cost.	Per cent.	Cost.	Per cent.	Cost.	Per cent.	Cost.	Per cent.
1	2	3	4	5	6	7	8	9	10
1	$0.0545	$0.0263	48.26	$0.0103	18.90	$0.0101	18.53	$0.0059	10.83
2	.0552	.0303	54.90	.0095	17.21	.0105	19.02	.0103	18.67
3	.0541	.0232	42.90	.0083	15.34	.0089	16.45	.0060	11.11
4	.0569	.0282	49.56	.0099	17.40	.0117	20.56	.0066	11.60

7	.0668	.0232	34.73	.0077	11.52	.0108	16.17	.0047	7.04
8	.0751	.0332	44.21	.0093	12.38	.0129	17.18	.0110	14.65

WEIGHTED AVERAGES FOR ALL COMPANIES.

Period.	Total factory cost.	Total material.		Barytes.		Zinc.		All other materials.	
		Cost.	Per cent.	Cost.	Per cent.	Cost.	Per cent.	Cost.	Per cent.
1	2	3	4	5	6	7	8	9	10
1921 [1]	$0.0603	$0.0263	43.61	$0.0091	15.09	$0.0107	17.74	$0.0065	10.78
1919 [1]	.0575	.0258	44.87	.0079	13.74	.0123	21.39	.0056	9.74
1919 [2]	.0569	.0259	45.52	.0078	13.71	.0126	22.14	.0055	9.67
1919 [3]	.0571	.0259	45.37	.0079	13.84	.0124	21.72	.0056	9.81

[1] First 6 months. [2] Last 6 months. [3] 12 months.

The total factory cost (column 2) does not include sales expense, but is the sum of material, direct labor, and factory overhead charges. This column shows a range in cost per pound of lithopone from $0.0541 to $0.0751. It is interesting to note that the company which had the third lowest total cost of lithopone had the lowest factory cost. The weighted average factory cost for the first six months of 1921 amounted to $0.0603 per pound of lithopone as compared with $0.0571, the average for the year 1919.

It is seen from table 3 (column 4) that the total material cost during the first half of 1921 was about 44 per cent of the total factory cost. Of the two primary materials—zinc and barytes—entering into the manufacture of lithopone, zinc was slightly more expensive, and amounted to $0.0107 per pound, or nearly 18 per cent of the total factory cost, whereas the barytes amounted to $0.0091 per pound, or 15 per cent of total factory cost.

The average purchase cost of crude barytes as reported by all firms was $14.93 per short ton, as compared with an average of $13.60 in 1919, or an increase of about 10 per cent. This may be largely, if not wholly, attributed to the increase in freight rates from barytes mines to the lithopone plants, as by far the larger part of the barytes consumed during the first half of 1921 was of domestic origin.

An analysis of the reports submitted by the manufacturers shows that on an average 1.22 pounds of barytes ore and 0.207 pounds of zinc (Zn) were consumed for every pound of lithopone produced.

The cost of all other materials, which includes coal used for reduction of barytes, ranged from $0.0047 to $0.0110 per pound of lithopone. The weighted average of all firms was $0.0065, or about 11 per cent of the total factory cost. This was a slight increase over the cost of all other materials in 1919, when the average for the year was $0.0056.

DETAILS OF FACTORY OVERHEAD.

Table 4 shows in detail the factory overhead expense compared in percentages with total factory cost.

Column 4 shows that the total factory overhead amounted to 42.8 per cent of the total factory cost. The actual cost per pound of lithopone is shown in column 3, and amounted to $0.0258 for factory overhead expense. As previously pointed out, factory overhead chiefly accounts for the increase in the total cost of lithopone during the first half of 1921 over 1919. Column 3 shows that the increase was $0.054 per pound of lithopone, or approximately 25 per cent over the average factory expense for 1919.

The average total factory overhead expense (column 3) was $0.0258 per pound of lithopone; this item was made up of $0.0144 per pound for works expense, $0.0020 for bags and barrels, $0.0039 for fixed charges, $0.0007 for laboratory, and $0.0048 for administration expense.

TABLE 4.—*Details of factory overhead compared with total factory cost of lithopone, by companies, for first six months of 1921 and weighted average compared with 1919.*

[Costs are per pound. Percentages are of total factory costs.]

1921—FIRST SIX MONTHS.

Company No.	Total factory cost.	Total factory overhead.		Details of factory overhead.

During the speech of Mr. JONES of New Mexico,

Mr. McCUMBER. Will the Senator from New Mexico yield to me to ask unanimous consent that when the Senate closes its business for this calendar day it shall recess until 10 o'clock on Monday? I have stated the reason why this is done, and it was practically agreed last night that on Monday morning the tariff bill might be temporarily laid aside and the bill (H. R. 10972) to readjust the pay and allowances of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service be taken up for an hour or two.

Mr. JONES of New Mexico. I expressed the hope yesterday that it might be thought that we could do enough work from 11 o'clock until 10 at night; but if the Senator on mature reflection thinks that we should recess until that hour on Monday, I shall not object. I think he is quite right in wanting to have the bill to which he refers disposed of.

The PRESIDING OFFICER (Mr. MYERS in the chair). Is there objection to the request of the Senator from North Dakota? There being none, it is so ordered by unanimous consent.

After the conclusion of the speech of Mr. JONES of New Mexico,

The PRESIDING OFFICER (Mr. WILLIS in the chair). The question is on agreeing to the committee amendment.

Mr. JONES of New Mexico. Mr. President, I shall ask the Senate to disagree to the committee amendment on page 28, line 2, striking out the numerals "1½" before the word "cents" and inserting the numerals "1¾." First, however, I desire to say that if there is any differential which would be thought by anyone necessary in the conversion of the zinc into oxide it is fully compensated for by the difference between the zinc content and the weight of the oxide. I disclaim any intention of penalizing the smelter itself. I do not believe the rate as it comes from the other House would do so, and I therefore trust that the committee amendment may be disagreed to.

The PRESIDING OFFICER. The question is on agreeing to the Senate committee amendment in paragraph 74, page 28, line 2.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The READING CLERK. On page 28, paragraph 74, line 3, before the word "cents," it is proposed to strike out the numeral "2" and to insert the numerals "2¼," so as to read:

Ground in or mixed with oil or water, 2¼ cents per pound.

Mr. JONES of New Mexico. I move to amend the committee amendment by striking out "2¼" and inserting "1¾."

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from New Mexico to the amendment of the committee.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question recurs on the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next committee amendment.

The next amendment of the Committee on Finance was, on page 28, paragraph 74, line 5, before the word "cents," to strike out the numerals "1½" and to insert the numerals "1¾," so as to read:

Lithopone, and other combinations or mixtures of zinc sulphide and barium sulphate, 1¾ cents per pound.

Mr. JONES of New Mexico. I trust the committee amendment in this case may be rejected, leaving the rate at 1½ cents.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. SMOOT. The amendment just acted on is the last amendment in the paragraph.

Mr. McCUMBER. Mr. President, I think the Senate has put in a pretty strenuous week, and I am now ready for the Senate to take a recess. I am informed, however, that before doing so it is the desire to have a short executive session.

The Senator from North Dakota [Mr. STERLING] also has stated that he desires to ask for the consideration of a joint resolution, which he understands will occasion no debate and which he should like to have acted on. I am not disposed to interfere with his wishes in that regard.

LABOR CONDITIONS IN CUBA.

Mr. STERLING. I ask unanimous consent for the present consideration of the Joint Resolution No. 178.

Mr. SMOOT. I desire that the joint resolution may be first read by title, because if it is going to lead to any debate I shall object to its consideration.

Mr. CURTIS. Let the joint resolution be read by title.

The PRESIDING OFFICER. The joint resolution will be read by title.

The READING CLERK. A joint resolution (S. J. Res. 178) authorizing the Secretary of Labor to investigate and report on labor conditions in Cuba.

The PRESIDING OFFICER. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which had been reported from the Committee on Education and Labor with an amendment, on page 2, line 8, after the word "hereby," to insert "authorized to be"; so as to make the joint resolution read:

Resolved, etc., That in order to enable the Secretary of Labor to furnish to the State Department for the use of the special representative to the Cuban Government information on the subject of labor conditions in Cuba, the Secretary of Labor be, and he is hereby, authorized to investigate and report, through the Commissioner of Labor Statistics, on this subject, at a cost not to exceed $25,000; and the aforesaid sum of $25,000, or so much thereof as may be necessary, the same to be available until used, is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, for the carrying out of the provisions of this joint resolution: *Provided*, That the information obtained may be furnished to the special representative accredited to the Cuban Government as soon as available and in advance of publication by the Department of Labor.

The amendment was agreed to.

The joint resolution was reported to the Senate as amended, and the amendment was concurred in.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

The preamble was agreed to.

Mr. STERLING. I ask unanimous consent that that part of the report of the committee on the joint resolution which quotes the letter from the Secretary of the Interior may be read.

Mr. SMOOT. I suggest to the Senator that he ask that the report may be printed in the RECORD without reading.

Mr. STERLING. Very well. I ask that that part of the report may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, the portion of the report referred to by the Senator from South Dakota [Mr. STERLING] will be printed in the RECORD.

The matter referred to is as follows:

The Secretary of Labor, in a letter sent to the several members of the Committee on Education and Labor, after referring to correspondence with Gen. E. H. Crowder relative to a survey of and report upon the labor conditions in Cuba by the Department of Labor as an essential and necessary preliminary to his duties there, adds the following:

"In this connection I desire to say that neither the Department of Labor as such nor the Bureau of Labor Statistics has at this time the funds to make the survey and report upon Cuban conditions which General Crowder so strongly urges. I believe the investigation should be made and made at once. I am therefore writing to you to suggest that a bill authorizing that a labor survey of Cuba shall be made by the Department of Labor through its Bureau of Labor Statistics, and that the information so obtained shall be compiled and placed in the hands of General Crowder as a special representative of this Government to Cuba at the earliest possible moment and without waiting for final publication of the same, such bill to carry with it an appropriation sufficient to cover the expense entailed, entirely apart from the present appropriations for the Department of Labor or the Bureau of Labor Statistics. I may say that if in your judgment the introduction and passage of such bill is advisable, this should be done at the earliest possible moment, as it takes time to prepare for, execute, and compile the results of an investigation of this sort. You are advised that a similar letter to this has been sent to each member of the House Committee on Labor and to the members of the Senate Committee on Education and Labor."

JOHN BURKE.

Mr. WALSH of Montana. Mr. President, on the last call of the calendar I asked unanimous consent for the consideration of Orders of Business 621 and 622, being bills for the relief of John Burke. The measures were rather extensively explained at that time, but objection was made to their consideration. The Senator from Utah [Mr. SMOOT] asked that the bills go over. I sincerely trust that we may have unanimous consent for the consideration of those two measures at this time.

Mr. SMOOT. Mr. President, I have not any objection to the present consideration of the bills referred to by the Senator from Montana, but I wish to say for the record, so that the matter may be cleared up, that on the morning of the day when the bills were reached on the calendar I found in my mail a letter purporting to come from an employee of the Government. I had just started to read the letter, but did not have time to conclude its reading before I was called to a committee meeting. Though I had not entirely read the letter, I noticed in casting my eyes over it that it referred to Mr. Burke, former Treasurer of the United States. When I returned to my office and found time to read my mail I discovered that the letter was anonymous. I wish to say that I have no respect for a person who will write a letter and fail to sign his name to it. I pay no attention to such letters, although in my daily life I receive a great many of them. I wish to assure the Senator from Montana that had I known the letter to which I refer was anonymous I never should have mentioned it upon the floor of the Senate.

The PRESIDING OFFICER. The Senator from Montana asks unanimous consent for the present consideration of a bill, the title of which will be stated.

The READING CLERK. A bill (H. R. 6523) for the relief of John Burke, former Treasurer of the United States, for lost bonds without default or negligence on the part of said former Treasurer.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized to pay the sum of $5,000, or so much thereof as may be necessary, for the purchase, at not more than par and accrued interest, of second Liberty loan converted 4¼ per cent bonds to the face amount of $5,000, and for the payment of an amount of interest equivalent to the interest of $5,000, face amount of such bonds from November 15, 1918, to the interest payment date next preceding the delivery of such bonds, for the purpose of the relief of John Burke, former Treasurer of the United States, on account of the loss of second Liberty loan converted 4¼ per cent coupon bonds Nos. 1141320, 1141321, 1141322, 1141323, and 1141324, in the denominations of $1,000 each, contained in a sealed registered package forwarded to the Treasury Department by the Peoples National Bank, of Hillsboro, Ill., to be held as security for deposits of postal savings funds to be placed with said bank, which registered package containing said bonds was lost without fault on the part of the said John Burke, former Treasurer of the United States.

That the Secretary of the Treasury be, and he is hereby, authorized to pay the sum of $2,950, or so much thereof as may be necessary, for the purchase, at not more than par and accrued interest, of second Liberty loan bonds to the face amount of $2,700 and for the payment of an amount of interest equivalent to the interest on $2,700 face amount of such bonds from May 15, 1920, to the interest payment date next preceding the delivery of such bonds and the sum of $250, or so much thereof as may be necessary, to be used by the Secretary of the Treasury for the purchase, at not more than par and accrued interest, of third Liberty loan bonds to the face amount of $250 and for the payment of an amount of interest equivalent to the interest of $250 face amount of such third Liberty loan bonds from March 15, 1920, to the interest payment date next preceding the date of delivery of such bonds for the purpose of the relief of the Treasurer of the United States on account of the loss of second Liberty loan coupon bonds Nos. 12603, 12604, 12605, and 378701 in denominations of $500 each, 704008, 704024, 830898, 830922, 2087501, and 2087515 in denominations of $100 each, 1230424 and 1230425 in denominations of $50 each, and third Liberty loan coupon bonds Nos. 333481 and 333482 in denominations of $100 each, and 608191 in the denomination of $50, of the contents of a sealed registered package forwarded to the Treasury Department by the First National Bank of Fairmount, N. Dak., to be exchanged for registered bonds of like denominations, which registered package was lost without fault or negligence of John Burke, former Treasurer of the United States.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. WALSH of Montana. I make the same request with regard to House bill 6524, which is for the same purpose.

The PRESIDING OFFICER. The Secretary will state the title of the bill.

The READING CLERK. A bill (H. R. 6524) to permit the correction of the general account of John Burke, former Treasurer of the United States.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That the proper accounting officers of the Treasury Department are authorized and directed to examine and state an account of the items of unavailable funds as set forth in House Document No. 756, Sixty-sixth Congress, second session, and letter from the Secretary of the Treasury addressed to the Speaker of the House of Representatives, dated January 5, 1921, and to credit the general account of John Burke, former Treasurer of the United States, with the amount thereof: *Provided*, That the credit herein authorized shall be made in such manner as to debit the individual or depositary chargeable therewith upon the books of the Treasury Department: *Provided further*, That upon the recovery or payment of any part of said unavailable funds, the same shall be deposited in the Treasury in such manner as to debit the Treasurer of the United States in his general account and to credit the individual or depositary charged therewith upon the books of the Treasury Department.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EXECUTIVE SESSION.

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 4 o'clock and 40 minutes p. m.), under the order previously made, the Senate took a recess until Monday, May 22, 1922, at 10 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate May 20 (legislative day of April 20), 1922.

ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY.

Arthur H. Geissler, of Oklahoma, to be envoy extraordinary and minister plenipotentiary of the United States of America to Guatemala.

DIRECTOR OF THE WAR FINANCE CORPORATION.

Dwight Davis, of Missouri, to be a director of the War Finance Corporation for a term of four years. (Reappointment, term expired May 17, 1922.)

COLLECTOR OF CUSTOMS.

Joseph L. Crupper, of Virginia, to be collector of customs for customs collection district No. 14, with headquarters at Norfolk, Va., in place of Norman R. Hamilton.

UNITED STATES MARSHALS.

George L. Mallory, of Arkansas, to be United States marshal for the eastern district of Arkansas, vice Andrew Jackson Walls, resigned.

W. H. King, of South Dakota, to be United States marshal for the district of South Dakota, vice William Hickey, whose term will expire June 10, 1922.

Albert W. Harvey, of Vermont, to be United States marshal for the district of Vermont, vice Arthur P. Carpenter, whose term will expire May 22, 1922.

PROMOTIONS IN THE COAST GUARD.

The following-named cadets to be ensigns in the Coast Guard of the United States, to take effect from date of oath:

To be ensigns.

Albert M. Martinson.
Raymond J. Mauerman.
Edward H. Fritzche.
Robert C. Jewell.
Lee H. Baker.
George E. McCabe.
Harley E. Grogan.

The following-named cadet engineers to be ensigns (engineering), to take effect from date of oath:

Martin J. Bergen.
Howard A. Snyder.

These young men have graduated from the Coast Guard Academy and have passed the examination required by law.

APPOINTMENT IN THE OFFICERS' RESERVE CORPS OF THE ARMY.

To be brigadier generals.

Henry Lewis Stimson, colonel, Field Artillery, Officers' Reserve Corps, to date from May 16, 1922.

Edward Caswell Shannon, colonel, Infantry, Officers' Reserve Corps, to date from May 16, 1922.

PROMOTIONS IN THE NAVY.

Naval Constructor John D. Beuret to be chief constructor and chief of the Bureau of Construction and Repair in the Department of the Navy with the rank of rear admiral for a term of four years from the 2d day of July, 1922.

The following-named midshipmen to be ensigns in the Navy from the 3d day of June, 1922:

Francis M. Adams.
Bruce B. Adell.
Cecil C. Adell.
Frank Akers.
Thomas Aldred.
Clifford M. Alvord.
Byron S. Anderson.

POSTMASTERS.

ALABAMA.

Walter B. Ozley to be postmaster at Calera, Ala., in place of H. T. Brown. Incumbent's commission expired July 21, 1921.

CALIFORNIA.

James E. Power to be postmaster at San Francisco, Calif., in place of C. W. Fay, resigned.

Edward D. Mahood to be postmaster at Corte Madera, Calif. Office became presidential April 1, 1922.

Attilio C. Martinelli to be postmaster at Inverness, Calif. Office became presidential April 1, 1922.

COLORADO.

Anna Bogue to be postmaster at Basalt, Colo. Office became presidential October 1, 1921.

GEORGIA.

Marion W. Hudson to be postmaster at Dallas, Ga., in place of B. E. Croker, resigned.

Julius Peacock to be postmaster at Vidalia, Ga., in place of S. P. Darby. Incumbent's commission expired March 21, 1922.

ILLINOIS.

Menno Vandervliet to be postmaster at Danforth, Ill. Office became presidential January 1, 1921.

IOWA.

Homer G. Games to be postmaster at Calamus, Iowa. Office became presidential January 1, 1921.

Raymond W. Ellis to be postmaster at Norwalk, Iowa. Office became presidential April 1, 1921.

Oswell Z. Wellman to be postmaster at Arlington, Iowa, in place of O. R. Hutchison. Incumbent's commission expired January 24, 1922.

KANSAS.

Benson L. Mickel to be postmaster at Soldier, Kans., in place of M. A. Reed. Incumbent's commission expired April 6, 1922.

KENTUCKY.

Leonard J. Hammel to be postmaster at Bonnyman, Ky. Office became presidential April 1, 1922.

LOUISIANA.

Victor E. Green to be postmaster at De Ridder, La., in place of Cora Sharpless, removed.

Charles DeBlieux to be postmaster at Natchitoches, La., in place of Charles DeBlieux. Incumbent's commission expired January 31, 1922.

Edwin H. Biggs to be postmaster at St. Joseph, La., in place of W. W. Drake, removed.

MAINE.

George W. Hopkins to be postmaster at Howland, Me. Office became presidential January 1, 1921.

MARYLAND.

Hattie B. H. Moore to be postmaster at Marydel, Md. Office became presidential April 1, 1921.

MASSACHUSETTS.

Harry E. Gaylord to be postmaster at Hadley, Mass. Office became presidential January 1, 1922.

MICHIGAN.

Selma O'Neill to be postmaster at Rockford, Mich., in place of R. L. Compton, resigned.

Walter H. Nesbitt to be postmaster at Schoolcraft, Mich., in place of O. C. Gingles. Incumbent's commission expired April 19, 1921.

MINNESOTA.

Ernest W. Nobbs to be postmaster at Bellingham, Minn. Office became presidential October 1, 1919.

Jason Weatherhead to be postmaster at Ada, Minn., in place of Jason Weatherhead. Incumbent's commission expired January 24, 1922.

Hans C. Pedersen to be postmaster at Ruthton, Minn., in place of Jay Jackson, resigned.

MISSISSIPPI.

Ira I. Massey to be postmaster at Ethel, Miss., in place of C. T. Sweatt, resigned.

MONTANA.

Dakota L. Martin to be postmaster at Oswego, Mont. Office became presidential April 1, 1922.

Burr A. Davison to be postmaster at Roundup, Mont., in place of C. E. Davison, resigned.

NEBRASKA.

Carroll C. Colbert to be postmaster at Wauneta, Nebr., in place of Jennie Frazell. Incumbent's commission expires May 25, 1922.

NEW JERSEY.

Selina L. Caruth to be postmaster at East Paterson, N. J. Office became presidential January 1, 1922.

William J. Caswell to be postmaster at Washington, N. J., in place of J. B. Cornish, jr., resigned.

NEW YORK.

M. Elizabeth Corey to be postmaster at Cutchogue, N. Y. Office became presidential October 1, 1920.

Frank D. Gardner to be postmaster at De Ruyter, N. Y., in place of G. B. Burdick, resigned.

John C. Jubin to be postmaster at Lake Placid Club, N. Y., in place of J. C. Jubin. Incumbent's commission expired May 9, 1922.

John F. Joslin to be postmaster at Voorheesville, N. Y., in place of E. D. Joslin. Incumbent's commission expired January 28, 1920.

OHIO.

Clara J. Mitchell to be postmaster at Mount Pleasant, Ohio. Office became presidential July 1, 1921.

Leonidas A. Smith to be postmaster at Ridgeway, Ohio. Office became presidential April 1, 1921.

Edgar L. Taylor to be postmaster at Crooksville, Ohio, in place of J. E. Taylor. Incumbent's commission expired January 31, 1922.

PENNSYLVANIA.

Donald C. Mapel to be postmaster at Greensboro, Pa. Office became presidential April 1, 1922.

Fred W. Patterson to be postmaster at Lattimer Mines, Pa. Office became presidential April 1, 1922.

Enoch A. Raush to be postmaster at Auburn, Pa., in place of J. H. Fahl. Incumbent's commission expired March 27, 1922.

Duff Sawyer to be postmaster at Glen Campbell, Pa., in place of W. H. McQuilken. Incumbent's commission expired February 4, 1922.

SOUTH DAKOTA.

James T. Leahy to be postmaster at Fedora, S. Dak. Office became presidential April 1, 1922.

UTAH.

Clark Allred to be postmaster at Delta, Utah, in place of J. A. Faust, deceased.

A. Morinda Lundberg to be postmaster at Sandy, Utah, in place of A. R. Larson. Incumbent's commission expired January 5, 1920.

WASHINGTON.

Paul E. Wise to be postmaster at Buena, Wash. Office became presidential April 1, 1922.

WEST VIRGINIA.

Mayo M. King to be postmaster at Coalwood, W. Va., in place of G. A. Mason, resigned.

WISCONSIN.

Richard E. Krause to be postmaster at Sobieski, Wis. Office became presidential April 1, 1922.

Charles V. Walker to be postmaster at Bruce, Wis., in place of J. H. Moller. Incumbent's commission expired January 24, 1922.

CONFIRMATIONS.

Executive nominations confirmed by the Senate May 20 (legislative day of April 20), 1922.

SUPERINTENDENT OF LIBRARY BUILDING AND GROUNDS.

Mrs. Harriet DeK. Woods to be Superintendent of Library Building and Grounds.

MEMBER OF THE CALIFORNIA DÉBRIS COMMISSION.

Edward D. Ardery to be member of the California Débris Commission.

PROMOTIONS IN THE ARMY.

TO BE COLONELS, ADJUTANT GENERAL'S DEPARTMENT.

Archibald Campbell.
Albert Eugene Saxton.
John Parsons Wade.
Russell Creamer Landgon.
Frederick Worthington Lewis.
Harry Herbert Tebbetts.

TO BE LIEUTENANT COLONELS.

William Albert Kent.
John Overton Steger.
William Gaither Murchison.

TO BE MAJORS.

Clark Lynn.
Irving Joseph Phillipson.
Richard Rembert Pickering.
Sherburne Whipple.
Thomas Hixon Lowe.
Byard Sneed.
Frank Keet Ross.
Dupont Bayard Lyon.

POSTMASTERS.

ILLINOIS.

Anna M. Peters, Sandoval.

INDIANA.

Ira N. Compton, Hamlet.
Percie M. Bridenthrall, Leesburg.
Frank B. Husted, Liberty.
Moody I. Massena, Medora.
Chester M. Davis, St. Paul.
Edith A. Wetzler, Sunman.

KANSAS.

Minnie F. Miller, Barnard.

MAINE.

Willis H. Allen, Columbia Falls.

MICHIGAN.

Grace A. Grinnell, Centerville.
Elmer L. Dalton, Leland.

NEW YORK.

Ella L. Winch, Lakewood.
Edmund E. Bandy, St. Regis Falls.

OHIO.

Karl K. Witte, Elmore.

SOUTH CAROLINA.

Henry N. Folk, Bamberg.
Hugh C. Finklea, Latta.

TEXAS.

Hazel B. Thomas, Gause.
James F. Rodgers, Harlingen.

VIRGINIA.

William R. Sparks, Clinchco.
Bertha Thompson, Ferrum.
William R. Moose, Glasgow.
Robert V. Richardson, Hampton.
Jesse R. Skinner, Kenbridge.
Maud Duffy, Stonega.

WITHDRAWAL.

Executive nomination withdrawn from the Senate May 20 (legislative day of April 20), 1922.

MEMBER OF THE FEDERAL TRADE COMMISSION.

George W. Upton, of Ohio, to be a member of the Federal Trade Commission, which was sent to the Senate on December 12, 1921.

REJECTION.

Executive nomination rejected by the Senate May 20 (legislative day of April 20), 1922.

POSTMASTER.

Leon K. Dail to be postmaster at Cherokee, in the State of Oklahoma.

HOUSE OF REPRESENTATIVES.

SATURDAY, *May 20, 1922.*

The House met at 12 o'clock noon and was called to order by the Speaker pro tempore, Mr. WALSH.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O God, our heavenly Father, Thou art unapproachable, yet easy of access. We come to Thee in the name of Him who is the divinest expression of our humanity and the perfect ideal of the races of men. Consider us, O Lord. Make difficulties our opportunities and the lowliest duties our highest privileges. Give us that charity that scatters round the gleanings of forbearance and hides the misery of human weakness. O ballast our understanding with Thy faultless wisdom. Permit us to walk in happiness; make sorrow a stranger to our souls and let Thy love radiate in all our homes. In Thy holy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had passed without amendment the bill (H. R. 11152) to authorize the Bear Mountain Hudson River Bridge Co. to construct and maintain a bridge across the Hudson River near the village of Peekskill, State of New York.

The message also announced that the Senate had passed without amendment the bill (H. R. 9951) to amend section 22 of an act approved February 14, 1920, entitled "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes," for the fiscal year ending June 30, 1921.

ENROLLED BILLS SIGNED.

Mr. RICKETTS, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles, when the Speaker signed the same:

H. R. 11645. An act making an appropriation to enable the Department of Justice to investigate and prosecute war frauds; and

H. R. 2193. An act to amend the act entitled "An act to prohibit the importation and use of opium for other than medicinal purposes," approved February 9, 1909, as amended.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 1162. An act declaring Lake George, Yazoo County, Miss., to be a nonnavigable stream.

EXTENSION OF REMARKS.

Mr. GOODYKOONTZ. I ask unanimous consent to extend my remarks on House Resolutions 323 and 324.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia? [After a pause.] The Chair hears none.

Mr. ARENTZ. Mr. Speaker, I ask unanimous consent to extend my remarks on the Smith-McNary bill.

The SPEAKER pro tempore. The gentleman from Nevada asks unanimous consent to extend his remarks on the Smith-McNary bill. Is there objection? [After a pause.] The Chair hears none.

The extension of remarks referred to are here printed in full as follows:

Mr. ARENTZ. Mr. Speaker, I desire to speak briefly on the need for a broader reclamation law than now exists on our statute books for the development of the arid lands of the West, with particular reference to my own State of Nevada.

The best possible argument in favor of the continuance and enlargement of the Government plan to make land available for settlement is afforded by the splendid record of the United States Reclamation Service since its organization in 1902. During the 20 years the service has been in operation much has been accomplished in reclamation of arid lands and in increasing food supply and national wealth.

Twenty-six projects have been undertaken in 16 different States, and several of them have been completed. Nearly 2,000,000 acres of land have been placed under permanent water supply, and nearly 1,000,000 additional acres are soon to be supplied with water from storage reservoirs. Forty thousand families have established homes on these lands and are happy and prosperous. Cities and towns have sprung up on these projects and new national wealth created amounts to about $600,000,000, nearly five times the amount expended by the Government in reclamation work. The reclamation fund, which is represented by receipts from sales of public lands, leases, and repayment charges, is far inadequate. Nearly $50,000,000 is required to complete projects now under way, and $100,000,000 to construct new projects which have been approved.

There was much opposition to the irrigation law of 1902, the operation of which has proved the wisdom of its enactment. The opponent in the committee, in a minority report to the House, declared among other things that—

> the scheme was unwise and improvident; if workable, it would add millions of acres of productive land to the national possessions, which would diminish the value of farm lands throughout the Union; it would open up new areas in the far West to compete with production on farms in the South, East, and West. No sane man who desires promoting the growth and prosperity of our whole country would consent to the placing of a great sum of money at the disposal of one man. In the mad scramble for the fund corruption would run riot. The Secretary of the Interior has not the time to see to the honest distribution and application of the money, and the whole affair would necessarily be left to the management of irresponsible subordinates. The bill is unconstitutional, as Congress has no power to provide for the irrigation of the public lands. The plan of turning operations of projects over to the water users is impracticable and dangerous.

How manifestly untrue were these predictions is known to all who understand ever so little about the workings of this reclamation law or anyone who has seen the proof in the form of wonderful irrigation tracts placed under water by the assistance of our Federal Government under this law. On the contrary, the prediction of Hon. Thomas B. Reed, the able Speaker of the House of Representatives, in a speech delivered at Pittsburgh in 1894, has been more than fulfilled:

> Mighty has been our past; our resources have just been touched upon, and there is wealth beyond the Mississippi which in the not distant future will astonish even the dwellers on the shores of Lake Michigan. From the time my eyes first rested on the great uncultivated plains which lie between the Mississippi and the Pacific Ocean my waking dreams have been filled with visions of incalculable wealth. The touch of living water will bring life to those voiceless deserts. Their wealth can only produce wealth; man, single and alone, might as well try to subdue the Himalayas as cope with these wastes; but the hand of united and associated man is already reaching forth to grasp the great result.
>
> The same power which serves millions on the Mississippi can be utilized to make the desert blossom with the homes of men for whom, and for all of us, the now blighted soil will bring forth fruit of the Garden of Eden.

Mr. Speaker, many people who have not investigated the importance to the whole country of reclaiming the waste lands appear to regard the question as a local one and believe the only people benefited are those who make homes on the land or those living in the section of the country where the land is reclaimed. As a matter of fact, every section of the country is benefited by land reclamation. Every acre of waste land placed under cultivation breeds a market for merchandise, building material, staple food products, clothing, and every other kind of a manufactured article which generally comes from the central and eastern sections of the country.

The adoption of a broad and comprehensive plan to reclaim waste lands of the country would go far toward giving work to those out of employment in constructive work on projects or by reason of the need of labor on account of the increased demand for commodities manufactured in industrial centers.

There has been no disposition in the West to rely wholly upon the Federal Government for funds with which to reclaim land Fifteen million of acres of arid land have been reclaimed in the public land States, of which the amount the Federal Government has reclaimed less than one-fifth. In the last 10 years, according to the official census, the amount of arid land reclaimed by private enterprise is in excess of 3,000,000 acres.

What shall be our national policy from now on? Shall we rely upon the betterment of land now under plow or reclaim virgin sections? Is there not grave danger in departing from a policy which has been so successfully pursued during the past 100 years? In looking over the industrial statistics of our country we find that products of farms have been a wonderful factor in the creation of national wealth. This was well stated by the Secretary of the Department of Agriculture in his report of 1912, wherein he said:

> During the last 16 years the wealth produced, production on farms, according to the census items, reaches the grand total of more than $105,000,000,000. This stream of wealth has poured out from the farmers' horn of plenty and in 16 years has equaled about three-fourths of the present national wealth.

Some farmers seem to be happy in the thought that when farms shall not yield all the food the Nation consumes daily in the nature of things they will receive more for their products. The fallacy of this idea has been demonstrated several times in the history of the world. Through its adoption Grecian husbandry failed and the glory of the State departed. Its perfect absurdity was demonstrated in Italy when Rome became the mistress of the world. The Romans insisted that they must have cheap food. The farmers of Italy did not produce it. Rome went abroad for her supplies, and agriculture fell into decay.

Is it not wise to add to the number of our farms and by degrees increase the productivity of the old ones, to the end that at all times there shall be a surplus of farm products as well as a surplus of manufactured articles to enter into our foreign trade? There is no necessity of changing from the old order of things that there may be a separate or many lines for export.

There are to-day under plow in the United States in the neighborhood of 400,000,000 acres of land. There are yet susceptible of reclamation some 20,000,000 acres of arid and semiarid land, 80,000,000 acres of farm land, and 200,000,000 acres of cut-over land, or a total of 300,000,000 acres. The areas of the arid and semiarid lands are very inviting in character. They have never been leeched of their plant-life element. They readily give up their properties to vegetation. They lack only an ingredient to a perfect agricultural soil—they are deficient in nitrogen. This, however, can be readily supplied by the growing of legumes.

Land which is now waste can not be put into a state of productivity without exciting activity in a multitude of places. Even to build an irrigation or drainage ditch, a dike, or reservoir means the utilization of manufactured articles gathered from a great radius; and every agricultural community under present conditions draws from the manufacturing centers large quantities of products essential to the life and well-being of the farmer.

Former President Roosevelt has said:

> If there is one lesson taught by history, it is that the permanent greatness of any State must ultimately depend more upon the character of its country population than upon anything else. No growth of cities, no growth in wealth, can make up for a loss in either the number or character of the farming population.

The family is the corner stone of civilization, and on the farm the family forms a strong unit, stronger than anywhere else. James J. Hill once said:

> It is as clear as any future event can be that the farm is the only hope of our national salvation.

Abraham Lincoln, in his address to Wisconsin farmers, said:

> Let us hope, brother, that by the best cultivation of the physical world beneath and around us and the intellectual and moral world within us we shall secure an individual, social, and political prosperity and happiness whose courage shall be onward and upward, and which while the earth endures shall not pass away.

Mr. Speaker, we have inherited from the World War many grave problems. At the present hour the number out of employment is between 3,000,000 and 4,000,000, many of whom are ex-service men. There is no economy in unemployment. Four million men out of useful employment means a tremendous national loss. If there is any way of restoring these men to useful pursuits, it should be done. Putting them to work on internal improvements, particularly in reclamation of waste lands, will excite activity to a wonderful degree. It will cost our people as a whole less to furnish employment to these men than to support them in idleness. There is no possible way in which the lands to be reclaimed can be made to immediately produce crops to increase the surplus of the farm products already within our country.

We should not be unduly alarmed over the present surplus of farm products in the United States. As has been well said by Dr. E. B. Ball, director of scientific work of the United States Department of Agriculture:

> If some one possessed a magic wand that would restore the world to normal conditions, we would suddenly be confronted with the fact that there is no overproduction; that what the world is suffering from is underconsumption. There is not enough food in the world at present to provide for normal consumption. If buying power could be restored to-morrow, the surpluses would almost instantly disappear.

AREA OF STATE, INDUSTRIES, AND MINERAL WEALTH.

The State which I have the honor to represent in this body comprises between 110,000 and 111,000 square miles—a territory, if you please, almost two and one-third times the area of the State of New York. Of this tremendous expanse approximately 92 per cent is Government owned or controlled and 8 per cent is privately owned. The principal industries of Nevada are mining, live-stock raising, and agriculture. Nevada is a vast storehouse of mineral resources. Within the confines of our State are to be found almost every metal and mineral used in the arts and sciences. We are proud of the mineral production of our mines. The most valuable of all our undeveloped resources is the vast acreage of now unproductive land. In the development and settlement of our land would be the establishment of tens of thousands of homes, and hand in hand with the cultivation of the soil would proceed the development of our natural mineral resources.

DAMS AND RESERVOIRS.

The question of water storage and water development is uppermost in the thoughts of my people. Water storage contemplates the construction of reservoirs on the rivers within our State to catch the flood waters and the construction of dams in canyons and watercourses which have a heavy spring runoff, but which, for the greater part of the year, are dry. We need reservoirs constructed at the headwaters of the Truckee and the Carson—to mention two of the most important rivers in the western portion of our State—and several dams built along the meandering course of the Humboldt River, which has an estimated length of more than 600 miles. Innumerable places for the construction of dams to catch run-off are to be found also in Lincoln and Clark Counties, at the extreme south end of Nevada, and in northern Elko and Humboldt Counties, near the Idaho line.

DEVELOPMENT OF ARTESIAN FLOW.

In the Interior Department appropriation bill an appropriation of $25,000 was made for prospecting for water over the arid region by means of drills. No more useful expenditure of money could be made by our Federal Government than in drilling test wells in the numerous north and south valleys in the State of Nevada, in which the land is level, deep, and fertile and susceptible to development of tens of thousands of acres of land upon which thousands of families could make permanent homes. Through development of artesian water in Clark County, Nev., adjacent to the town of Las Vegas, an agricultural community of first importance has sprung into being. We trust that the Interior Department will see fit to expend no small proportion of this $25,000 within the State of Nevada for the development and testing out of artesian flow.

AREA OF PUBLIC LAND.

Since the Government of the United States holds title to 92 per cent of all the lands of the State I represent, I voice the sentiment of my people when I say that the Federal Government should lend assistance in no small way in development of water by reservoirs and wells for reclamation of a portion of this land.

LESS GOVERNMENT IN BUSINESS.

We are opposed to the entrance of the Government in private business, and yet we contend that we are consistent in asking for Federal aid in reclamation and development of arid lands owned by the Government and contained within our State. We believe that so long as the Federal Government owns the lands of the West it should proceed with reasonable diligence to improve its property.

THE SMITH-M'NARY BILL.

There is no legislation pending in Congress of quite so great interest to the arid West as the Smith-McNary bill. As a Member of Congress from an arid State and a member of the Committee on Irrigation of Arid Lands I have taken a keen interest in this bill since its introduction during the present Congress, and have listened with great interest to the hearings upon it, and sincerely trust I may see it enacted into law at an early date.

The credit extension provided for in this bill will serve to broaden the base of our national prosperity and hasten the establishment of irrigation districts, large and small, everywhere throughout the West where water storage is possible and which meets the requirements of Government engineers. After completion of engineering and construction, and the project completed as a unit, it is turned over to the local people, the bonds sold through Government agency to the public, and thus the project separated from the Government in minimum time.

As a revolving fund for reclamation work, Congress is asked in this bill to authorize an advance, over a period of years, of $350,000,000, which is to be appropriated from time to time for projects passed on favorably by the Reclamation Service upon estimates made by the Secretary of the Interior.

DISTRICTS FORMED UNDER STATE LAWS.

The bill contemplates that the Secretary of the Interior shall contract with the reclamation district, organized under State laws, having power to contract with the Government and possessing authority to issue bonds with which to pay for reclamation work, the bonds to be a general charge upon all the land within the district.

PROJECT REPORTED ON BY RECLAMATION SERVICE ENGINEERS.

The Secretary is authorized to investigate the project submitted by the duly authorized district, one-half of the cost of the investigation to be advanced by the district or those interested in the lands of the district, and one-half by the Government, which expenditure is to form a part of the cost of the project.

BONDS ISSUED BY DISTRICT.

If a project is found feasible by the Secretary of the Interior he may agree to construct it. Thereupon bonds are issued by the district, said bonds being deposited with the Federal Farm Loan Board in ample amount to cover the estimated cost of the project, the bonds to bear interest at a rate not exceeding 5 per cent per annum and to run for a period not exceeding 40 years. The bonds deposited with the Federal Farm Loan Board are to be held by the board until the property within the district amounts to twice the value of the outstanding bonds. The bonds are then sold at a private or public sale by the board, and the proceeds used to discharge the contract between the district and the Government. The proceeds of the bonds are returned to the national reclamation fund which the Congress may appropriate over and over again for the construction of other reclamation work which may be recommended to Congress.

The lands owned by private parties in excess of the farm unit are classified as excess land; and these lands, as well as all public lands within the district, may be acquired by ex-service men under a preference right of entry. Ex-service men also are to be given a preference right of employment on all project work.

This pending measure, the Smith-McNary bill, does not modify or interfere with the operation of the irrigation law of 1902, although it involves the general principles of that law. The purpose is that the proposed law shall operate in a broader field than the general reclamation law and provide a plan for rapid reclamation of the waste lands of the country.

President Harding, faithful to his preelection declaration, in his annual message to Congress, strongly urged national aid for reclamation, and lately he restated his position before the farmers' conference. Organized labor is back of this late movement. Those in our position seem to be limited to a class of mere competition; and, strangest of all, competition, not foreign but at home.

THE WORLD-WAR VETERAN WANTS LAND NOW.

Mr. Speaker, I do not want to see more than a reasonable length of time elapse before land will be ready for settlement by the ex-service man. If veterans of the late war are to redeem land for homes some provision must be made for reclaiming same, for there is scarcely a tract of land left of the public domain which would justify a soldier's endeavor to make his home upon it without such provision. Already upward of 200,000 ex-service men have signified a desire to acquire land for homes. Should this bill be enacted into law, and I sincerely trust and hope it may be, and should it operate as your committee believes it will, in a reasonable length of time there will be enough land to accommodate all soldiers who may wish to become agriculturists.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. ROGERS, indefinitely, on account of death in his family.

To Mr. HENRY, for two days, on account of illness in family.

To Mr. COOPER of Ohio, for four days, on account of important business.

ORDER OF BUSINESS.

Mr. MONDELL. Mr. Speaker, I ask unanimous consent to address the House on the matter of procedure.

The SPEAKER pro tempore. The gentleman from Wyoming asks unanimous consent to address the House on the matter of procedure. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Mr. Speaker, the latter part of the week, yesterday and the day before, a number of gentlemen inquired whether the House would be likely to be in session to-day, and, believing a majority of the Members preferred to have the day to catch up with their correspondence and do departmental work that is necessary to be done, I said that I did not expect we would be in session on Saturday. Last evening, however, it was impossible to obtain unanimous consent to adjourn until Monday. In view of that situation, Mr. Speaker, I feel we can only keep faith with the gentlemen who have been obliged to be away from the session to-day by adjourning, and I therefore make the motion that the House adjourn——

Mr. KINCHELOE. Will the gentleman withhold that a moment?

Mr. MONDELL. I will.

Mr. KINCHELOE. On the notice posted in the cloakroom as to the procedure for next week I find that on Wednesday it provides the Agricultural Committee shall have the day, and it also arranges the program as to what bills shall be considered. I want to say to the gentleman that I do not think the Committee on Agriculture arranged that program and the way in which the bills should come, and I was anxious to know who arranged that program.

Mr. MONDELL. My understanding is that the Agricultural Committee asked for three days and that a rule was granted for three days' consideration of measures from that committee, and on inquiry of the committee I was informed that the committee expected to take up those bills.

Mr. KINCHELOE. Well, I want to say that the Agricultural Committee as a committee has not decided on that at all.

Mr. MONDELL. That rests entirely with the committee. What I have done is to give the House the best information I was able to secure.

Mr. KINCHELOE. The reason I was asking is that there are a good many public bills on the calendar from that committee that it seems to me ought to have precedence over some private bills.

Mr. MONDELL. The gentleman will understand that that is not within my province at all. I simply secured the best information obtainable, as I understood, as to what the committee was likely to bring up and gave the House the benefit of that information.

Mr. KINCHELOE. I was anxious to know, because the committee has not taken any action on it at all.

Mr. McFADDEN. Will the gentleman yield there?

Mr. MONDELL. I will.

Mr. McFADDEN. I notice in the program of procedure that the Banking and Currency Committee is to have up three bills on Tuesday. It is my understanding that yesterday we would have had an opportunity to take up the bill H. R. 9527, which was an amendment to permit the succession of the legal existence of national-bank charters. Do I understand that that bill is to be considered on Tuesday along with the other bills?

Mr. MONDELL. At the time the tentative program was made up it was my belief that we would dispose of the bill the gentleman has referred to yesterday. Otherwise, I am not certain that it would not have been better to give the Committee on Banking and Currency another day. My thought was,

after talking with the chairman of the committee, the gentleman from Pennsylvania, that the committee could dispose of two of these bills on Tuesday.

Mr. GARNER. Will the gentleman yield?

Mr. MONDELL. I will.

Mr. GARNER. Will the Committee on Banking and Currency and the Committee on Agriculture get the harmonious support of the organization that the Rivers and Harbors Committee received on yesterday so that we may be able to dispose of all those bills in one day?

Mr. MONDELL. I think so.

Mr. STAFFORD. That is sarcasm that only the gentleman from Texas is capable of.

Mr. DYER. What becomes of the river and harbor bill? When will that come up?

Mr. MONTAGUE. Does the gentleman expect to vote on the river and harbor bill Monday?

Mr. MONDELL. It will be the first business before the House on Monday under the rules.

Mr. MONTAGUE. Does the gentleman expect that the District business will be called immediately subsequent to the disposition of the river and harbor bill?

Mr. MONDELL. Monday is District day; and if the District Committee desires to use the day, it is my desire to assist them in securing the day for the consideration of their business.

Mr. MONTAGUE. If I do not improperly ask, has the gentleman any information as to whether the so-called Ball rent bill will be taken up on Monday by the District Committee?

Mr. MONDELL. That depends entirely upon the action of the District Committee or members of the District Committee having charge of the legislation.

Mr. KING. Mr. Speaker, I ask for the regular order.

Mr. CHALMERS. Will the gentleman from Wyoming yield for a question?

Mr. MONDELL. Yes; I will.

Mr. CHALMERS. I ask if the program as outlined by the leader will stand for Wednesday? I have wired some of my people who are interested in the agricultural bill that it will be taken up on Wednesday. That stands, does it?

Mr. MONDELL. Well, I think it should. Though, if the Banking and Currency Committee should find its program was not as far along as it hopes to get it on Tuesday, the committee may insist on going on on Wednesday. I hope, however, that we can adhere to the program as it is outlined.

CORRECTION.

Mr. HADLEY. Will the gentleman from Wyoming yield?

Mr. MONDELL. I yield.

Mr. HADLEY. Mr. Speaker, in the RECORD of yesterday, on page 7312, in the first of two amendments offered by me, in the left-hand column, the word "Whatcom" appears in the amendment. It should be "Wahkiakum."

The SPEAKER pro tempore. Without objection, the correction will be made in the RECORD and the Journal.

Mr. STAFFORD. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman rise?

Mr. STAFFORD. To interrogate the gentleman from Washington [Mr. HADLEY].

The SPEAKER pro tempore. The gentleman from Washington has not the floor.

Mr. STAFFORD. Mr. Speaker, I ask unanimous consent to proceed for half a minute.

The SPEAKER pro tempore. Does the gentleman from Wyoming [Mr. MONDELL] yield the floor?

Mr. MONDELL. The "gentleman from Wyoming" has yielded the floor.

The SPEAKER pro tempore. The gentleman from Wisconsin asks unanimous consent to proceed for one-half minute. Is there objection? [After a pause.] The Chair hears none.

Mr. STAFFORD. I wish to inquire of the gentleman from Washington whether the amendment that he proposed is correct and in proper form as submitted to the House?

Mr. HADLEY. It is. I introduced the amendment on behalf of my colleague [Mr. JOHNSON].

Mr. STAFFORD. So the amendment adopted by the committee does not need any change?

Mr. HADLEY. It does not.

ADJOURNMENT.

Mr. MONDELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 19 minutes p. m.) the House adjourned until Monday, May 22, 1922, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

614. Under clause 2 of Rule XXIV, a letter from Acting Postmaster General transmitting the claim of Emil L. Flaten, postmaster at Moorhead, Minn., for credit on account of Government property to the value of $16,391.99 lost through the burglary of the post office at Moorhead, Minn., was taken from the Speaker's table and referred to the Committee on Claims.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. BANKHEAD: A bill (H. R. 11721) to secure farm homes for disabled veterans of the World War who have received agricultural training through the United States Veterans' Bureau; to the Committee on Irrigation of Arid Lands.

By Mr. COOPER of Ohio: A bill (H. R. 11722) granting the consent of Congress to the city of Warren, Ohio, to construct, maintain, and operate a dam across the Mahoning River, Ohio; to the Committee on Interstate and Foreign Commerce.

By Mr. JEFFERIS of Nebraska: A bill (H. R. 11723) to authorize and provide for payment of amounts expended in construction of hangars and maintenance of flying fields for use of the Air Mail Service of the Post Office Department; to the Committee on the Post Office and Post Roads.

By Mr. MOORE of Virginia: A bill (H. R. 11724) to amend the first paragraph of section 2 of the budget and accounting act, 1921, approved June 10, 1921; to the Select Committee on the Budget.

Also, concurrent resolution (H. Con. Res. 58) creating a joint committee on the District of Columbia composed of Senators and Representatives, respectively, to which shall be referred all proposed legislation relating to the municipal government of the District of Columbia, and for other purposes; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DUNBAR: A bill (H. R. 11725) granting a pension to Sallie Laswell; to the Committee on Invalid Pensions.

By Mr. HUTCHINSON: A bill (H. R. 11726) granting a pension to Louis Van Dyke Rousseau; to the Committee on Invalid Pensions.

By Mr. SWANK: A bill (H. R. 11727) granting a pension to Nancy E. Adams; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5694. By Mr. CRAMTON: Telegrams from A. C. Fitz and other residents of Lapeer, Mich.; Utica Cooperative Creamery Association, of Utica, Mich.; James J. Brackenberry, of Bad Axe, Mich.; Otto Hecker and other residents of Mount Clemens, Mich.; and letter signed by Peter McKichan and other residents of Bad Axe, Mich., urging the passage of the Voigt bill (H. R. 8086); to the Committee on Agriculture.

5695. Also, letter from William M. McDonald, Grindstone City, Mich., urging the passage of the Voigt bill (H. R. 8086); to the Committee on Agriculture.

5696. Also, resolution of the Presbytery of Flint-Sandusky, Mich., indorsing House bill 9753; to the Committee on the District of Columbia.

5697. Also, resolution of Presbytery of Flint and Sandusky, Mich., indorsing House Joint Resolution 131, proposing a constitutional amendment prohibiting polygamy and polygamous cohabitation in the United States; to the Committee on the Judiciary.

5698. Also, resolution of the Presbytery of Flint and Sandusky, Mich., indorsing Senate Joint Resolution 31, proposing a constitutional amendment authorizing Congress to enact uniform laws on the subject of marriage and divorce; to the Committee on the Judiciary.

5699. By Mr. FULLER: Petition of the Chicago Chapter of the Disabled Emergency Officers of the World War, favoring the Bursum bill (S. 1565) for the retirement of the disabled emergency officers of the World War; to the Committee on Military Affairs.

5700. Also, petition of the Wisconsin Hemp Order, favoring a tariff duty on hemp fiber; to the Committee on Ways and Means.

5701. By Mr. KINKAID: Resolution adopted by the Presbytery of Box Butte, Kimball, Nebr., indorsing House bill 9753; to the Committee on the District of Columbia.

5702. Also, resolutions adopted by the Presbytery of Box Butte, at Kimball, Nebr., indorsing House Joint Resolution 131, relative to polygamy and polygamous marriages in the United States; to the Committee on the Judiciary.

5703. Also, resolutions adopted by the Presbytery of Box Butte, at Kimball, Nebr., indorsing Senate Joint Resolution 31, relaive to regulating the subject of marriage and divorce in the United States; to the Committee on the Judiciary.

5704. By Mr. KISSEL: Petition of National Council of American Importers and Traders (Inc.), New York City, N. Y., relative to the proposed linen rates in the tariff bill; to the Committee on Ways and Means.

5705. Also, petition of the Chamber of Commerce of the City of New York, N. Y., relative to foreign commerce and revenue laws; to the Committee on Ways and Means.

5706. Also, petition of the Laundry Board of Trade, New York City, N. Y., relative to the pending tariff bill; to the Committee on Ways and Means.

5707. By Mr. TOWNER: Petition of Mr. George E. Lang and 14 other citizens of Woodburn, Clark County, Iowa, protesting against the passage of House bill 4388, compulsory Sunday observance for the District of Columbia; to the Committee on the District of Columbia.

SENATE.

MONDAY, *May 22, 1922.*

(*Legislative day of Thursday, April 20, 1922.*)

The Senate met at 10 o'clock a. m., on the expiration of the recess.

Mr. HARRISON. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Frelinghuysen	McLean	Sheppard
Ball	Gooding	McNary	Shortridge
Borah	Hale	Moses	Simmons
Brandegee	Harreld	Myers	Smoot
Calder	Harris	Nelson	Stanley
Capper	Harrison	Newberry	Sterling
Colt	Johnson	Nicholson	Underwood
Cummins	Jones, N. Mex.	Norbeck	Wadsworth
Dial	Jones, Wash.	Norris	Walsh, Mass.
Dillingham	Kellogg	Overman	Warren
Edge	Kendrick	Phipps	Watson, Ga.
Ernst	Keyes	Rawson	Williams
Fletcher	Ladd	Robinson	Willis

Mr. JONES of Washington. I wish to announce that the senior Senator from Kansas [Mr. CURTIS] is necessarily absent on official business.

The PRESIDENT pro tempore. Fifty-two Senators have answered to their names. There is a quorum present.

READJUSTMENT OF ARMY AND NAVY PAY.

Mr. SMOOT. Mr. President, I ask unanimous consent that House bill 7456, the tariff bill, be temporarily laid aside for the consideration of the Army and Navy pay bill.

The PRESIDENT pro tempore. Is there objection?

Mr. UNDERWOOD. What is the request?

The PRESIDENT pro tempore. The Senator from Utah asks unanimous consent to temporarily lay aside the tariff bill.

Mr. UNDERWOOD. For the consideration of the Army and Navy pay bill?

Mr. SMOOT. For the consideration of that bill.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and the tariff bill is temporarily laid aside. The Chair lays before the Senate the so-called Army and Navy pay bill.

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 10972) to readjust the pay and allowances of commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service, which had been reported from the special committee with amendments.

Mr. WADSWORTH. Mr. President, perhaps the Senate will permit me to make a brief preliminary and explanatory statement.

On May 18, 1920, there was approved by the President a bill passed by the Congress providing for certain temporary increases in pay for officers and men of the Army, the Navy, the Marine Corps, the Coast Guard, the Public Health Service, and the Coast and Geodetic Survey. The provisions of that bill, which were temporary in character, expire upon June 30 of this year, about six weeks from date. The bill which provided for that temporary increase also carried a provision directing the formation of a joint committee of the Congress, to be composed of five Members of the Senate and five Members of the House, to be charged with the whole question of investigating the pay and allowances in the six services and to report to the Congress its recommendation in due season. The joint committee was appointed in accordance with the terms of the statute and commenced its work something like six or seven months ago.

The committee commenced with extensive hearings, listening to witnesses from the Army, the Navy, the Marine Corps, the Coast Guard, the Public Health Service, and the Coast and Geodetic Survey. Not only were officers of those services invited to testify, but also enlisted men. A determined effort was made on the part of the committee to acquire thorough knowledge of the problems confronting the services in the matter of pay and allowances.

At the outset the committee, while taking no official action recording its opinion, made up its mind informally that in any bill which it might propose to Congress the aggregate expenditure for pay and allowances should be less than the aggregate expenditure under the terms of the temporary pay bill of May 18, 1920. The hearings had not proceeded to any great extent, Mr. President, before it became entirely clear that the old permanent pay schedules governing the pay and allowances of the officers and men of these services were utterly inadequate, and that it would be utterly impossible for us to revert to those old schedules. This led, of course, to the conclusion that somewhere between the 1908 schedules, as a minimum, and the 1920 temporary schedules, as a maximum, could be found the true and accurate measure of compensation. As a result of our deliberations two bills were reported—one to the House of Representatives and one to the Senate.

The bills reported to the respective Houses were almost identical. The House bill, which is now before the Senate, passed that body several days ago by a very large majority, after a debate extending, I think, nearly a week. It is that bill which is here before us this morning, which has been unanimously reported to the Senate by the Senate special committee. Certain comparatively slight amendments have been suggested; none of them affects the vital principles of the bill.

I think it should be noted at this time that if the pending measure as now reported to the Senate should become law on July 1 next, as is contemplated, the immediate saving to the Government in the matter of pay and allowances for the six services affected will be $15,126,000. I mean by that the saving in the next fiscal year.

There are certain saving clauses in the bill; in fact, there are two of them, which may be explained later, which, as time goes on, and in all probability within five or six years will expire, and when they shall have expired and the whole situation as to pay and allowances then reaches what might be called an even keel and the entire system, without any qualifications or modifications, goes into effect the annual saving thereafter as compared to the present-day costs of these services will be $28,527,000. These savings, Mr. President, it will be seen at a glance are very large, and yet the committee is confident that the pay and allowances provided for under this bill will preserve the morale of the services affected and will provide the personnel, commissioned and enlisted, with a modest competency, and enable them to live, as all Americans expect officers and men of our military services to live, modestly but with self-respect and free from the worry and demoralization which come from debt incurred by an individual in the service of his Government.

I desire to call attention to three or four features of this measure which may be regarded as new; if not new in principle they are new in application. Up to this time the base pay of an officer in the Navy or in the Army or in the Marine Corps has been entirely dependent upon his rank. This bill makes a change in that respect, with the result that the base pay of an officer is determined by a combination of his rank and his length of service. Instead of rank being the only consideration in fixing base pay, we have injected into this proposed law the element of length of service. So instead of setting out rigidly the pay, grade by grade, for the commissioned officers we have set up a pay-period system.

The bill provides for six pay periods. The first pay period is normally the period in which a second lieutenant in the Army, an ensign in the Navy, and the corresponding officers in the other services will find themselves. The second pay period is the normal period for a first lieutenant in the Army, a lieutenant (junior grade) in the Navy, and the corresponding officers in the other services. The third pay period is normal for

a captain in the Army, a lieutenant in the Navy, and the corresponding grades in the other services. The fourth pay period is normal for a major in the Army, a lieutenant commander in the Navy, and the corresponding grades in the other services. The fifth pay period is normal for a lieutenant colonel in the Army, a commander in the Navy, and the corresponding grades in the other services. The sixth and highest pay period is normal for a colonel in the Army, a captain in the Navy, and the corresponding officers in the other services.

General officers—and I mean by that term to include brigadier generals, major generals, the General of the Army, and flag officers of the Navy, including rear admirals (lower half), rear admirals, temporary vice admirals, and admirals—are not included in any of the pay periods. It will be remembered, of course, that promotion to those grades is by selection, while, generally speaking, promotion to all grades up to colonel in the Army and captain in the Navy is, with certain exceptions, by seniority.

The committee as it examined this question became convinced that the Government should be protected financially against the results of abnormally rapid promotion, such as has been going on in the Army during the last few years, and that at the same time the officer should be protected financially against abnormally slow, or what might be called utter stagnation in promotion. We have examined the statistics and records of the Army, the Navy, the Coast Guard, and the other services in the matter of promotion as conditions have existed in the past and the effect upon pay, with the result that we came to the conclusion, as I have already indicated, that we should establish the base pay of officers on a combination of length of service and of rank.

An examination of the bill in its first section will show how the six pay periods are arranged. Let us commence at the bottom, at the first pay period. We find this situation provided for under the terms of the bill: A young man is commissioned as an ensign in the Navy or a second lieutenant in the Army, and under this bill his base pay will be $1,500 a year, as compared with the 1908 schedule of $1,700 a year. It may be, Mr. President, that that young officer may be very rapidly promoted to the grade of first lieutenant in the Army or of lieutenant (junior grade) in the Navy; in fact, it has happened in scores of instances in the last two years that a second lieutenant in the Army spends only two or three weeks in that grade and instantly advances to the grade of first lieutenant and receives accordingly a substantial increase in pay. That rapidity of promotion has extended up through the grades of first lieutenant and captain and has reached even the grade of major. This bill in effect provides that a second lieutenant in the Army or an ensign in the Navy, starting in at the base pay prescribed for the first period, shall not receive an increase in pay until he has served three years. He may even be promoted to the next higher rank, but still his base pay is not to be increased until he has concluded three years of service. On the other hand, if stagnation of promotion should overtake any or all of these services in the future, this bill provides in effect that the young second lieutenant or ensign who serves five years in that grade without promotion shall upon the completion of the five years of service receive the base pay of the next higher grade. That same principle is applied and extends through all six of the pay periods, constituting a balancing of length of service and of rank.

The thing the committee has been searching for as a solution of this problem of pay is a pay schedule and provision for allowances of such a character as that, while it asks the young man entering the service in his very early twenties to be satisfied with a comparatively low pay, nevertheless, the prospects held forth to him for the future are such as to encourage him to remain in the service and to assure him that, as he stays in year after year and his experience ripens and his value to the Government increases, his growing obligations of a financial character, largely due to his domestic relations, will be met by adequate compensation.

I think I am safe in saying, Mr. President, that the pay schedule proposed in this bill represents for the first time a scientific working out of this matter of progressive increase in pay held forth to a young man who comes in the services intent upon making the service which he selects his life career.

Mr. FLETCHER. Mr. President, may I ask the Senator a question?

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Florida?

Mr. WADSWORTH. I yield.

Mr. FLETCHER. May I ask the Senator to state what would be the base pay of the ensign the Senator has named, and the base pay of the second lieutenant in the Army, under the act of 1920? The Senator has given it under the act of 1908, as provided in this bill. The Senator might state what it would be under the act of 1920.

Mr. WADSWORTH. Under the act of 1920 the base pay of a second lieutenant or an ensign was $1,700, and that act gave him a bonus of $420, making a total that he now receives of $2,120.

Now, Mr. President, departing for a moment from the discussion of the pay-period system as provided in this bill, let me refer to another important feature of the bill, the allowances.

It may be recollected by Senators who have taken an interest in this matter that back in 1920, when the Senate passed the temporary pay increase bill, it provided for the payment to officers and to noncommissioned officers in the Army and the Navy of a variable allowance—an allowance which should rise or fall as the cost of living rose or fell in the future. When that bill reached conference the House conferees did not feel like accepting that provision, and so it was dropped out; but this bill contains such a feature. Under the existing law the officers of all these services receive certain allowances under certain circumstances. For example, officers who are not housed in Government quarters but are compelled to rent quarters for themselves and their families are paid by the Government an allowance known as commutation of quarters. In accordance with the officer's rank, he is allowed theoretically a certain number of rooms under existing law. Twelve dollars is the monthly allowance for each room. A second lieutenant or ensign is entitled to two rooms, or $24 a month; a first lieutenant or lieutenant junior grade is entitled to three rooms, or $36 per month; and so on up the list of grades. In addition to that, under present law officers of these services receive allowances for heat and light when they are not housed in Government quarters.

This bill abolishes those three allowances and substitutes one allowance, called the rental allowance; and under the terms of this bill a rental allowance is fixed at $20 per month. The provisions for the rental allowance will be found in section 7, commencing at the bottom of page 9.

Under section 7 officers in the several grades will receive a varying number of these allowances in accordance with their grades, and in accordance also with dependency existing in their families, or the lack of it; but the bill provides that, whereas $20 shall be the allowance for the fiscal year 1923, upon the certificate of the Secretary of Labor showing a general reduction of the cost of rents over the United States the President may thereafter reduce that allowance. He may not increase it. It is fixed as the maximum; so that if rents over the United States decrease in the years to come, and the expense to which an officer is put in the matter of rentals decreases as the result, the Government is protected, and that element of the officer's allowance may be decreased with no injury to him.

Mr. President, I desire now to call attention to another element in this proposal, which is recited in section 6 of the bill. It is called and termed in this bill a subsistence allowance. Personally, I believe that is a misnomer, for this allowance is not intended to be—and in fact could not be—used as an agency for the purchase of subsistence by an officer. It is really a straightout addition to the base pay itself. It is used in this bill as a variable allowance or a variable element in the pay. The value of this allowance is to be 60 cents per day. That 60 cents is merely an addition to the base pay of the officer. All officers in all the services receive one or more of these allowances; and the provision also has this effect—that the 60 cents, while it is the maximum for the year 1920, may likewise be reduced by the President if the Secretary of Labor, by certificate, informs him that the cost of food over the United States has decreased.

Thus we have injected into this bill two elements, each of them variable in character, the effect being that should the cost of living, as reflected in rent costs and food costs, decrease after the fiscal year 1923, the Government will spend less money in the payment of its officers, and the officers themselves will not suffer by reason of that decrease.

One other matter of importance.

Mr. President, this bill very frankly recognizes family life as the normal existence of men. It recognizes that men with dependents are necessarily subjected to greater expense in living than men without dependents. That is not a new principle either in Government or in private employment. Family allowances have been paid before this in the Army and the Navy, and commutation of quarters was paid all through the war to help the families of officers who went into the field, either in the Navy or in the Army. The laws of our Government upon more than one occasion—in fact, upon several occasions—have

recognized this situation. Indeed, the act of May 18, 1920, provided that the members of an officer's family should be transported over the railroads free of charge when the officer himself, the head of the family, was ordered to change station permanently. Family allowances have been paid to enlisted men in the upper grades. So that, as I say, the Government in years gone by, and in fact very recently, has recognized this condition.

This bill, Mr. President, recognizes it. It is estimated that somewhere between 70 and 90 per cent of the officers in these services are married or have a dependent mother, and those officers are taken as the standard upon which compensation is based. They receive the full payment of allowances in their respective pay periods. The officers who have no dependents are in the excepted class, and their allowances—subsistence allowances and rental allowances—are somewhat less. We feel very earnestly that by this arrangement we have actually equalized the comforts and advantages of all the personnel, and that when the thing actually works out a group of men in a post or in a navy yard or on a battleship, most of them having dependents, a few of them having no dependents, will be able to meet the battle of life in the financial sense on an equality. The married man with little children will get a little bit more pay than the bachelor; but when one comes to consider the additional expense to which he is put, and how, after all is said and done, the family is the unit of the State, and that it is the duty of the State and the Government to protect the family, we believe that the family man with dependents should be placed in a position where he need not worry unduly as to how he is going to meet his bills and keep out of debt.

Mr. President, this matter has been submitted to hundreds and hundreds of people in these services. Questionnaires have been sent to thousands of officers, married and single. Thus far not one complaint has reached the committee against this proposal. It must be conceded by all who have studied it, and who are familiar with the peculiar circumstances surrounding life in the military services, that this provision is in the interest of justice and in the interest, therefore, of contentment and high morale in the services.

I desire to call attention to one or two facts which the committee unearthed in its hearings. The general public has a very inaccurate conception of the lives led by Navy officers and Army officers and noncommissioned officers in the Army and chief petty officers and the higher rated men in the Navy, but especially as to commissioned officers. The idea prevails that they live a very comfortable existence. In nearly every instance they appear well dressed. They speak very little about their financial situations and the public think that they must be pretty handsomely paid, and live pretty comfortable lives in their households. The fact is that even under the existing temporary pay these men live, financially speaking, most modestly. In fact, it is astounding how some of them get along at all.

Upon the suggestion of the joint committee, questionnaires were sent out to a large number of officers in the Army, asking them to answer certain questions as to their domestic situations, and while these figures are confined to Army officers, they may be applied with absolute accuracy to naval officers and officers in the Coast Guard and some of these other services.

For instance, questionnaires were sent to all the officers at Camp Dix, Camp Meade, Camp Jackson, Camp Benning, Camp Travis, Camp Lewis, Camp Grant, Fort Sill, the Presidio at San Francisco, and the coast defenses of Chesapeake Bay. Forty-seven colonels answered the questionnaire from those camps, and we find that of the 47 colonels only 22 could afford to employ a servant, with the present base pay, longevity pay, and all the allowances. Fifty-seven lieutenant colonels answered the questionnaire, and of the 57 only 21 could afford to employ a servant. Three hundred and two majors answered the questionnaire, and of that number only 125 could afford to employ a servant. Those are the three highest grades in the Army below that of general officer.

Mr. President, I venture to say that you and I never had any idea that that was the condition until we made this investigation. In other words, we have not realized that the wife of the Army officer, even in the higher grades, in much more than half the cases has been doing all the housework. Of course, if we go down the grades, we find the percentage employing servants less and less.

Six hundred and ninety-two captains reported on that questionnaire, and of them only 147 could employ a servant, and among the lieutenants, gathered in the one group, 390 replied, and of them only 51 could employ servants. In other words, of the colonels reporting 47 per cent employed a servant, 37 per cent of lieutenant colonels employed a servant, and so on down, 41 per cent of the majors, 21 per cent of the captains, and 13 per cent of the lieutenants.

I invite the attention of the Senate to the condition at Camp Lewis, in the State of Washington. One hundred and seventy-one married officers reported on this questionnaire at that camp, and of the 171 married officers only 6 could employ a servant. Over at Camp Dix, in New Jersey, 20 officers out of 130 married officers had servants. At Camp Grant there were 171 married officers, and only 15 had servants in the house.

Some people have suggested that we go back to the 1908 pay schedules. If we should do so, these men could not live on their pay. In the judgment of this committee the Army woman has reached the limit of sacrifice. In the great majority of cases, while she puts up a brave appearance and keeps a stiff upper lip, when she attends the simple functions which obtain at an Army post, or, correspondingly, the Navy woman, when she attends the simple functions at the navy yard or aboard the battleship when it drops into port, she has had to struggle and struggle to make both ends meet; and if I make any plea of a special character, I make it on behalf of the Army and Navy women. They can not bear any heavier burdens than they are bearing to-day.

I could call attention to some of the testimony given to the committee by officers and enlisted men of the service. I think it is well for the public to know about these things, because there is so much misconception. I have before me the testimony of a young married officer stationed at one of the big camps, Camp Meade, which camp is within easy distance of Baltimore and Washington. His wife does all the housework. He has not been able to purchase a dress for her since he came into the service and married.

All the clothing she has is clothing which she owned before she married. It is a touching little story of the devotion of a wife and the genius that many women have of making both ends meet. She has made over her gowns time and again in order to present a creditable appearance when she attends a little reception at the commanding officer's house and meets the other ladies of the post.

The officer himself, in two years' service at Camp Meade, has not been able to leave the camp to visit Washington or Baltimore except upon three occasions. He and his wife are just scraping along; they are cheerful; they are brave about it. He tells us all about it. There are hundreds of others in like position.

Indeed, Mr. President, they do lead very modest lives financially. They work very hard to get along. The bill which we have reported in certain instances makes slight increases in pay, largely to meet the condition of dependency. In other instances, in the lowest grade, for example, in the grade of ensign in the Navy and second lieutenant in the Army, when it is not expected that the young man shall have undertaken heavy domestic obligations, the pay is somewhat reduced. But the whole thing is arranged so that these young men, when they come into the service, may enjoy a reasonable prospect of increase in pay, ability to marry, to raise children, to clothe them, to feed them, and send them out into the world at least with as good prospects as their fathers had when they went into the Navy or the Army.

This subject is one which has been close to the hearts of the five Senators who have investigated it, and one might continue for a considerable period discussing the psychology of pay and allowances, setting forth the situation in greater detail.

I refer for a moment to the enlisted men. We find existing among the upper grades of enlisted men exactly the same conditions which exist among the commissioned officers. The master sergeants, the technical sergeants, and the staff sergeants in the Army, and the chief petty officers in the Navy, are the highest in rank among the enlisted men. Nearly all of them are men of long service. Their services to the Government are invaluable. They are the backbone of the enlisted strength, of course. Large numbers of them are married, as they should be, and have families, as should be the case. They are making the service in which they are engaged their life profession just as truly as the officer makes it his life profession, the only difference being that the noncommissioned officer in the Army or the chief petty officer in the Navy reenlists every so often. But when he gets up the scale in his service he generally makes up his mind that he is going to stay there the rest of his life. We increase their pay in this bill.

We give them assurance that they, too, can support a family in at least decent comfort, and some of the testimony given to the committee by some of these splendid soldiers and sailors is almost pathetic in its character, indicating, as it does, how desperately they strive to get on. Time and time again Senators and Members of the House who served on this joint committee said to these young men, and to these middle-aged men,

too, in the Army or the Navy, "Why do you stay in? If you have such a hard time financially, why do you not get out?" In nearly every instance they simply look you in the eye and say, "We like the Army," "we like the Navy." Some of the jackies who testified to us told us that even at the expense of the hardship and the deprivation they liked their buddies; that when one boy got into some trouble or other, the others all came to his assistance. That is the spirit of the Navy. If a man falls overboard, three or four men dive into the ocean to save him. It is that spirit which holds men year after year in the Army or the Navy. The public does not understand it, and I feel the Congress does not understand it very thoroughly, but that is very largely why they stay. They like it. It is difficult to describe it. It is a state of mind. This bill takes care of them. While it takes care of these men who have dependents, or who are expected to have dependents, it does reduce the pay of the men at the lowest grade when they first come into the service, but provides for a very rapid increase after they have passed through that first or lowest grade. I am speaking now of the enlisted men.

Mr. JONES of Washington. Mr. President——

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Washington?

Mr. WADSWORTH. I yield.

Mr. JONES of Washington. I called the Senator's attention to a telegram a day or two ago with reference to the condition of National Guard officers who were in the National Guard and then were taken into the service as emergency officers and served during the war and who have since become members of the Regular Army. I have a letter relating to the same subject, from which I wish to read just a sentence to the Senator, and then I would like his explanation of the situation as disclosed by the bill. I confess I know very little about military matters, but I want to get the Senator's statement with reference to the situation.

Mr. FLETCHER. That refers to section 4 of the bill, which the committee report to strike out.

Mr. WADSWORTH. Yes.

Mr. JONES of Washington. I will just read this sentence:

> This bill as now written allows no constructive service whatever to officers who went in the Army from the National Guard after service as emergency officers during the war.

I think that sentence, as I understand it, states the situation as this correspondent gives it. I notice that section 4 on page 8 of the bill as it passed the House provided for some credit for this service and the committee has striken it out.

Mr. WADSWORTH. When that is reached I am going to make a statement, and an amendment will be offered in the nature of a compromise, and I think it will be entirely satisfactory to the officers affected.

Mr. JONES of Washington. The Senator will take care of that a little later?

Mr. WADSWORTH. Oh, yes.

Mr. NEW. I have an amendment which I shall offer.

Mr. JONES of Washington. Very well.

Mr. WADSWORTH. I ask unanimous consent that the formal reading of the bill may be dispensed with and the bill read for action on the committee amendments.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The Assistant Secretary proceeded to read the bill.

The first amendment of the special committee was, on page 3, in line 25, after the word "service," to insert a comma and the words "except those whose pay is limited by law to this grade," so as to make the paragraph read:

> The pay of the fourth period shall be paid to lieutenant colonels of the Army, commanders of the Navy, and officers of corresponding grade who are not entitled to the pay of the fifth or sixth period; to majors of the Army, lieutenant commanders of the Navy, and officers of corresponding grade who have completed 14 years' service, or whose first appointment in the permanent service was in a grade above that corresponding to second lieutenant in the Army, or who were appointed to the Regular Army under the provisions of the first sentence of said section 24; to captains of the Army, lieutenants of the Navy, and officers of corresponding grade who have completed 17 years' service, except those whose pay is limited by law to this grade; and to lieutenants of the Staff Corps of the Navy, and lieutenants and lieutenants (junior grade) of the line and Engineer Corps of the Coast Guard whose total commissioned service equals that of lieutenant commanders of the line of the Navy drawing the pay of this period.

The amendment was agreed to.

The next amendment was, on page 5, in line 22, after the numerals "5750," to strike out the proviso in the following words:

> *Provided*, That nothing in this section or in any other section of this bill shall authorize the retired pay for a colonel in the Army, captain in the Navy, or corresponding grade, to exceed $3,750 per annum; of a lieutenant colonel in the Army, commander in the Navy, or corresponding grade, to exceed $3,375 per annum; of a major in the Army, lieutenant commander in the Navy, or corresponding grade, or of any officer below the grade of major in the Army, or lieutenant commander in the Navy, or corresponding grade, to exceed $3,000 per annum.

The amendment was agreed to.

The Assistant Secretary continued the reading of the bill to line 14 on page 6, the last paragraph read being as follows:

> For officers hereafter appointed no service shall be counted for purposes of pay except active commissioned service under a Federal appointment and commissioned service in the National Guard when called out by order of the President. For officers now in the service all service which is now counted in computing longevity pay, and service as a contract surgeon serving full time, shall be included in the computation.

Mr. WADSWORTH. Mr. President, allow me to call the attention of the Senator from Washington [Mr. JONES] to this situation: On page 8, line 11, is found section 4 as passed by the House. That is the section which was to give 50 per cent credit to Regular Army officers for that service which they performed as officers of the Organized Militia or the National Guard prior to their coming into the Regular Army. The committee struck out that provision because it believed that it was open to certain serious objections and abuse.

Section 4 as passed by the House would permit 50 per cent credit in the matter of computing longevity pay for service, for example, performed years and years ago as an officer in the State militia before the Federal Government exercised any jurisdiction over the militia. Of course, as everyone knows, in those ancient days the term "Organized Militia" was loose and all-inclusive. It would include and cover the staffs of governors, mostly confined to colonels who wore long white plumes and never performed any military service at all, ancient and honorable organizations of one kind and another which met once a year for a banquet, but were included in the loose phrase "Organized Militia." The committee did not think that we should go that far back and give credit in the matter of longevity pay to people in the Army or Navy who happened years and years ago to have been members of such organizations.

Now, the suggestion has been made since that the proposed credit for service performed as officers in the National Guard or Organized Militia be confined to credit for that service performed since the passage of the so-called Dick law. The passage of the Dick law inaugurated a systematic reorganization of the so-called Organized Militia. It provided for the detail of inspector instructors from the Regular service, Federal recognition of the units and of the officers, examination and investigation of their efficiency, accounting for the Government property loaned to them, and various regulatory measures of that kind.

Dating from the passage of the Dick law, later called the National Guard under provisions of the national defense act of 1916, service in the Organized Militia or the National Guard became a serious military undertaking. After consultation with a great many people who have taken an interest in this amendment, the suggestion has been made that we grant this credit at the rate of 50 per cent in computing longevity pay for the service performed as commissioned officers in the Organized Militia or National Guard since January 21, 1903, and at the same time give similar credit to officers who served in the Naval Militia.

Mr. NEW. Mr. President, I offer the following amendment.

Mr. WADSWORTH. The amendment offered by the Senator from Indiana should be inserted at the end of line 12, on page 6. That is the proper place in the bill for such an amendment.

The PRESIDENT pro tempore. The amendment offered by the Senator from Indiana will be stated.

The READING CLERK. On page 6, line 12, after the word "pay," insert:

> and 50 per cent of all commissioned service as an officer of the Organized Militia between January 21, 1903, and July 1, 1916, and as an officer of the National Guard, Naval Militia, or Naval Volunteers since January 21, 1916.

Mr. SMOOT. Mr. President, I wish to have some explanation of the proposed amendment. What is it going to cost and what does it really mean?

Mr. FLETCHER. It takes the place of the amendment of the committee. If this amendment is agreed to, then the committee proposes to strike out section 4 of the bill.

Mr. WADSWORTH. It takes the place of that provision. It is less than the House provision. It grants credit, for the purpose of computing longevity pay, for that service performed since the National Guard became a serious military undertaking; in other words, since the passage of the Dick Act; otherwise there would be no limit to the longevity proposition.

Mr. JONES of Washington. As I understand, if that provision goes in then an officer who served as an officer in the

Organized Militia since 1903 and then entered the National Guard in 1916 and is now in the Regular Army would be allowed 50 per cent credit for his service in the militia or National Guard in computing longevity pay.

Mr. WADSWORTH. Yes. It has nothing to do with promotion or base pay or allowances, but just the longevity pay.

Mr. JONES of Washington. Does the House provision affect promotions?

Mr. WADSWORTH. It does not.

Mr. JONES of Washington. So there will be no provision in the bill under which these officers would get any credit in connection with their promotion?

Mr. WADSWORTH. No.

Mr. JONES of Washington. For instance, Colonel Inglis was in our National Guard and in the militia, I think, probably prior to 1903; at any rate, I am sure since 1903. He served all through the World War, going over as one of the first officers of the National Guard from the State of Washington, and is now, I think, a major in the Regular Army. He would get credit in longevity pay, at any rate, for 50 per cent of that service in the National Guard and in the militia, but what would be his status in the way of promotion? His case is typical of several other officers from the State of Washington. What would be their status in the matter of promotion under this bill?

Mr. WADSWORTH. That is an entirely different problem. It is taken care of in the national defense act. This bill does not seek to legislate in any way as to promotions. The special committee had no authority over that subject.

Mr. JONES of Washington. This proposed legislation simply has reference to pay?

Mr. WADSWORTH. It relates to pay only.

Mr. JONES of Washington. Then I think I understand the situation.

Mr. SMOOT. I wish to ask the Senator from New York, when a member of the militia served during the years mentioned in the amendment, was there any understanding that he should receive longevity pay?

Mr. WADSWORTH. No. When he started in years ago, of course, there was no intimate relation between the National Guard and the Regular service as there is to-day.

Mr. SMOOT. It is now proposed to go back and give him that credit?

Mr. WADSWORTH. It gives him 50 per cent credit.

Mr. SMOOT. Why should he have that?

Mr. WADSWORTH. Just one moment. It gives him 50 per cent credit for the years which he spent as a commissioned officer in the National Guard training under Federal supervision of the strictest kind and making himself potentially a Federal soldier subject to call from the President on a moment's notice.

Mr. SMOOT. But when he rendered that service there was no law to give him longevity pay?

Mr. WADSWORTH. There was not when he came into the Regular Army.

Mr. SMOOT. Why go back now and pick that up?

Mr. WADSWORTH. Because we think it is just.

Mr. SMOOT. Mr. President, I fear there will be no end to this. I can not see where it is going to lead us. It is now proposed to give 50 per cent credit, and we shall have a bill here in a little while providing for the granting of the other 50 per cent credit.

Mr. WADSWORTH. There is nothing new in this principle. Let me recite some facts to the Senator. I am sure he has not studied it. Congress itself passed an act just prior to the World War or at the beginning of the World War providing, in effect, that when the National Guard was taken into the Federal service and sent to France officers thereof became officers of the Army in every sense of the word.

Mr. SMOOT. Nobody objected to that.

Mr. WADSWORTH. Wait a moment. The Senator from Utah is objecting to the very same thing right now.

Mr. SMOOT. No——

Mr. WADSWORTH. Just a moment. When those officers were taken into the Federal service automatically and put upon the Federal pay roll they received credit in the matter of longevity pay for all the time they had served as National Guard officers prior to the war. This proposes to do that same thing, except it cuts it in half and gives 50 per cent credit instead of 100 per cent.

Mr. SMOOT. If it were right then, and they are in exactly the same condition, why should they not receive 100 per cent now? Why should they not all be treated alike?

Mr. WADSWORTH. They are treated all alike. That 100 per cent credit in computing longevity pay was only during their active service during the war; it was based on their entire commissioned service in the National Guard prior to the war. Now, this bill provides that a regular officer who was formerly a National Guard officer shall in the matter of longevity pay get full credit for all the time he served as a National Guard officer in the field under a call by the President. That has always been provided. We now propose to allow him 50 per cent credit for the remainder of the time he served as a National Guard officer when not under the call of the President. That is the difference. Now, the Senator appears to want it raised to 100 per cent and the expenditure on that account doubled.

Mr. SMOOT. No; I do not. The question I raise is, Should they be given any credit for the time they served in the National Guard before any action was taken by Congress to give them the status of officers of the Regular Army? Some officers seem to be sitting up at night planning some way to get other credits to increase their longevity pay and to increase their commutation of quarters. I do not know how far it is going. Since the officers are being taken care of, will we go so far as to include every member of the National Guard who served in the forces of the United States? Under this bill I am wondering whether that will not be the next move which will be made.

Mr. WADSWORTH. Does the Senator refer to officers?

Mr. SMOOT. Not merely to officers, but every enlisted man who has served in the National Guard.

Mr. BURSUM. Mr. President, will the Senator yield?

Mr. SMOOT. We can not tell where it will lead. We seem to be going ahead piling up credits for longevity pay and commutation of quarters. I can not see any limit.

Mr. BURSUM. Mr. President, I submit that the amendment in behalf of former National Guard or Organized Militia officers is simply a partial equalization of those officers who have been commissioned in the Regular service with other officers of the Regular Establishment.

Mr. SMOOT. Certainly; it is to give them an increase in salary; we know that; that is all it is for.

Mr. BURSUM. Stripping the matter of all surplus argument, the whole proposition gives a slight increase to the officers of the Army. That is necessary and essential, and, while that is being done, we ought to try to equalize all elements, so as to include 300 or 400 officers who have gone into the Regular Army from the National Guard.

Mr. SMOOT. The bill would not be here unless it was for the purpose of providing an increase in salary.

Mr. STANLEY. Mr. President——

The PRESIDENT pro tempore. The Senator from Kentucky.

Mr. STANLEY. To discriminate in this manner against the officers of the National Guard would, in my opinion, be a rank injustice. As the chairman of the committee has clearly pointed out, the officers who came into the Regular service and became officers of the Regular Army from the National Guard took their places with the West Pointers, and without exception have attained their present rank by efficiency and distinguished service of the highest character to their country in time of national peril. Were I called upon to select a small body of men more deserving, either in civil or military walks of life, they could not be found.

In addition to that, Mr. President, as the chairman of the committee has vividly pictured, the officers of the Army and Navy, lieutenants, captains, and colonels, are to-day living upon a lower plane; their pay is less; they are able to enjoy less, not of the luxuries, but of the comforts of life, than ever before in the history of the service. The pay is not exorbitant to any of them; and to discriminate between them by giving to the man who has attained distinction by virtue of appointment to West Point one pay, and to the man who attained it by virtue of his love of the service and his devotion to it, and the slow hard road he had to travel from subaltern to an officer, another pay, would be absolutely indefensible. I can not too heartily commend the amendment offered by the Senator from Indiana.

The PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from Indiana.

The amendment was agreed to.

The PRESIDENT pro tempore. The Secretary will proceed with the reading of the bill.

Mr. WADSWORTH. Mr. President, as we proceed with the reading of the bill I desire to offer a few corrective amendments which in no sense change the meaning of the act, but merely clarify the intention of the bill itself. On page 6, line 7, I move to strike out the word "hereafter" and to insert after the word "appointed" the words "on and after July 1, 1922," so that it will read:

For officers appointed on and after July 1, 1922—

And so forth.

That, Mr. President, is merely to make it entirely clear when this act shall take effect. If we leave in the word "hereafter" it will take effect immediately upon its passage and complicate the administrative problem.

The PRESIDENT pro tempore. The amendment proposed by the Senator from New York will be stated.

The READING CLERK. On page 6, line 7, after the word "officers," it is proposed to strike out the word "hereafter" and after the word "appointed" in the same line to insert the words "on and after July 1, 1922."

The PRESIDENT pro tempore. Without objection, the amendment is agreed to.

Mr. WADSWORTH. On line 11, of the same page, I move to strike out the word "now," and after the word "service" to insert the words "on July 1, 1922," so that it will read:

For officers in the service on July 1, 1922.

The PRESIDENT pro tempore. Without objection, the amendment is agreed to.

Mr. WADSWORTH. Mr. President, there is a misprint in the committee amendment on the bottom of page 3. I presume it will be necessary to reconsider the vote whereby that amendment was agreed to in order to make the correction.

The PRESIDENT pro tempore. Without objection, the vote whereby the committee amendment at the bottom of page 3 was agreed to will be reconsidered. The Chair hears no objection.

Mr. WADSWORTH. In the committee amendment on page 3, line 25, as it is printed, the word "pay" should have been the word "promotion." It should have read "except those whose promotion is limited by law to this grade." I move that the word "pay" be stricken out and the word "promotion" substituted therefor.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The reading of the bill was resumed. The next amendment was, in section 3, on page 8, line 2, after the word "act," to strike out "or in the National Guard"; and, in line 3, after the numerals "1916," to insert a comma and the words "or in the National Guard," so as to make the section read:

SEC. 3. That when officers of the National Guard or of the reserve forces of any of the services mentioned in the title of this act are authorized by law to receive Federal pay, those serving in grades corresponding to those of colonel, lieutenant colonel, major, captain, first lieutenant, and second lieutenant of the Army shall receive the pay of the sixth, fifth, fourth, third, second, and first periods, respectively. In computing the increase of pay for each period of three years' service, such officers shall be credited with full time for all periods during which they have held commissions as officers of any of the services mentioned in the title of this act or in the Organized Militia prior to July 1, 1916, or in the National Guard, or in the Naval Militia, or in the National Naval Volunteers, or in the Naval Reserve Force or Marine Corps Reserve Force, when confirmed in grade and qualified for all general service, with full time for all periods during which they have performed active duty under reserve commissions, and with one-half time for all other periods during which they have held reserve commissions.

The PRESIDENT pro tempore. Without objection, the amendment is agreed to.

The next amendment of the Committee on Military Affairs was, on page 8, after line 10, to strike out the following:

SEC. 4. That all persons who have entered the Regular Army as commissioned officers shall be entitled to compute 50 per cent of their commissioned service in the National Guard and Organized Militia, whether in State or Federal service, or both, for longevity pay.

The PRESIDENT pro tempore. Without objection, the amendment is agreed to.

Mr. WADSWORTH. Mr. President, on page 15 it is necessary to offer an amendment in order to straighten out an administrative difficulty. It has no effect on the amounts.

The PRESIDENT pro tempore. The amendment will be stated.

The READING CLERK. On page 15, line 1, after the numerals "$99," it is proposed to insert the following:

That the Secretary of the Navy is authorized to fix the pay grade for the various ratings of enlisted men of the Navy, and the Secretary of the Treasury is authorized to fix the pay grade for the various ratings of enlisted men of the Coast Guard.

The PRESIDENT pro tempore. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WADSWORTH. On line 7, the word "hereafter" should come out.

The PRESIDENT pro tempore. The amendment will be stated.

The READING CLERK. On page 15, line 7, it is proposed to strike out the word "hereafter."

Mr. FLETCHER. Mr. President, before proceeding to that, I do not know that I quite understand the amendment in line 1. Does it give the Secretary of the Navy and the Secretary of the Treasury the authority to fix the pay?

Mr. WADSWORTH. No, Mr. President; it does not directly. Under a decision of the Comptroller General, which was made only on April 27 last, a curious situation has arisen. The practice has been for many, many years to permit the Secretary of the Navy to classify the ratings in the Navy, which is a rather complicated task. There are scores and scores and scores of ratings. In this bill we do not pay by rating at all; we pay by grade; and under a decision of the Comptroller General in which he says that the act of June 4, 1920, vests in the Secretary of the Navy authority to establish new ratings or change old ones within such classes of ratings, but does not confer authority to establish new classes of ratings, it is necessary to allow the Secretary of the Navy to take firemen, first class, and firemen, second class, and put them in the sixth or fifth or fourth pay grade, as has been the custom for some time past. If that is not done, first-class firemen, second-class firemen, and many, many other ratings in the Navy of the most skilled mechanics will all have to drop down, and you will smash your whole pay schedule. It makes no difference from the present situation.

Mr. FLETCHER. It does not really affect the amount of pay at all, as I understand, but it simply enables the executive officer, the Secretary of the Navy in this instance, to specify the ratings of the different officers?

Mr. WADSWORTH. To specify where a rating goes in the matter of grade.

Mr. FLETCHER. I think that is all right.

Mr. BORAH. Mr. President, the Senator from New York made a statement this morning in regard to the objects and purposes and effects of this bill. I was compelled to be in the Judiciary Committee, and heard only the opening sentence. I want to ask a question or two, so that I may vote intelligently.

What is the effect of the bill as to increasing the pay over, I believe, the act of 1908? I think that is the basis.

Mr. WADSWORTH. It increases it over the act of 1908, and decreases it under the act of 1920.

Mr. BORAH. To what extent will the sum total be increased over that of 1908?

Mr. WADSWORTH. The bill contains two saving clauses which I shall have to explain in order to make myself clear. Those saving clauses protect the enlisted man from any reduction in pay during the period of his present enlistment. In other words, we have a contract with him when he enlists. He is to get so much. We protect him against any reduction. It is the same way with officers; we protect the officer by another saving clause from being reduced in his pay below the pay which he would receive under the schedule of 1908. If those two saving clauses were eliminated, and the bill passed without them, according to my recollection of the figures there would be only about a million dollars difference in the aggregate between the 1908 pay and this.

Mr. SMOOT. But you have not eliminated those two clauses.

Mr. WADSWORTH. Of course, we have not eliminated those two clauses, and it would be a dishonest thing if we did.

Mr. SMOOT. But suppose you did not?

Mr. WADSWORTH. The Senator from Idaho was asking me to compare the 1908 schedule with this proposed one. I am making the closest comparison I can. In the aggregate, this bill will save in the fiscal year 1923 $15,000,000, as compared to the present pay schedules. After those saving clauses are absorbed, which will take a few years, the annual saving thereafter will be $28,000,000.

Mr. BORAH. That sounds good to the Senator from Idaho. When does the present pay contract end?

Mr. WADSWORTH. On June 30.

The PRESIDENT pro tempore. The question is on the amendment offered by the Senator from New York, which will be stated.

The READING CLERK. On page 15, line 7, it is proposed to strike out the word "hereafter."

The amendment was agreed to.

The READING CLERK. On line 20, page 15, the same amendment is proposed.

The amendment was agreed to.

The READING CLERK. On page 17, line 5——

Mr. WADSWORTH. I ask that the word "hereafter" be stricken out there.

The READING CLERK. In line 5, page 17, it is proposed to strike out the word "hereafter."

The amendment was agreed to.

The READING CLERK. On page 19, line 6, it is proposed to strike out "second" and insert "first," so as to read:

Nurses shall be entitled to the same allowance for subsistence as is authorized in section 5 of this act for officers receiving the pay of the first period—

And so forth.

Mr. FLETCHER. Mr. President, regarding that amendment, I believe I am correct in stating that the joint committee reported the bill as it would be with the Senate amendment adopted.

Mr. WADSWORTH. It did.

Mr. FLETCHER. In other words, the House bill as reported by the joint committee there provided for the nurses receiving the pay of the first period in line 6 and the pay of the first period in line 9; but an amendment was offered in the House which changed the word "first" to "second" in each of those instances, and it was adopted there. The committee now proposes to go back to the joint committee bill; and, if these amendments are adopted, there is where the pay would be fixed.

I believe I am right—the chairman will correct me if I am wrong—in saying that the joint committee made very liberal provision for nurses. They increased their pay so as to put them somewhat on an equality with the nurses of the Public Health Service and with the nurses engaged in civil life. The increase of pay of nurses was quite liberal, we thought; and if this provision as changed by the House should be agreed to, and the committee amendment here should be rejected, that pay would be considerably further increased. We hardly thought that would be quite the thing to do. I think, therefore, that this amendment ought to be agreed to.

Mr. SMOOT. Do I understand the Senator to say that the nurses of the Public Health Service are allowed——

Mr. FLETCHER. They are not included in this bill at all, but in fixing this pay we have had in mind what was being paid in other services.

Mr. WADSWORTH. The nurses of the Public Health Service are not in this bill.

Mr. FLETCHER. They are not in this bill at all.

Mr. SMOOT. The Senator from Florida spoke of the nurses in the Public Health Service.

Mr. WADSWORTH. No; he spoke of the nurses in the Army and the Navy.

Mr. SMOOT. The Public Health Service gave their nurses longevity pay, and gave them commutation of quarters; and the head nurse there—not under the law; there is no law for it, but it was done until Congress's attention was called to it—was paid as high as thirty-four hundred and eighty-odd dollars a year. If this bill has anything in it putting nurses upon the retired list, and giving them longevity pay and commutation of quarters, I want to object now to its further consideration.

Mr. WADSWORTH. I invite the Senator from Utah to examine the bill. There is nothing of the kind in it.

Mr. SMOOT. I will say to the Senator from New York that I have not had any time to do that. I wish I had. I have only had about five hours' sleep a night, and I have not been able to examine it.

Mr. WADSWORTH. I can assure the Senator that he can examine the bill from now until doomsday, and he can not find anything like that in it.

Mr. SMOOT. The Senator from Florida referred to the nurses in the Public Health Service.

Mr. WADSWORTH. The nurses in the Army and the Navy; not the Public Health Service.

Mr. SMOOT. No; the Senator referred to the nurses in the Public Health Service.

Mr. FLETCHER. I said that in fixing this pay the committee had examined the pay that was being given in the Public Health Service and in private life by way of trying to arrive at a just basis of pay for the Army and Navy nurses—not that they were included here at all, but that we investigated the whole question of pay of nurses, both in civil life and in the Public Health Service and everywhere else so as to endeavor to deal fairly with the Army and Navy nurses. That is what I intended to say.

Mr. SMOOT. The nurses in all of the other departments always come to the Appropriations Committee and say, "We want the same rate that the Army and the Navy nurses have," because they have the highest pay that there is.

Mr. WADSWORTH. The Senator is greatly mistaken. They get the lowest pay that exists.

Mr. SMOOT. That is exactly what has been reported in the past.

Mr. WADSWORTH. The Army and Navy nurses are the lowest-paid nurses in America, even under this bill.

Mr. FLETCHER. Under this bill they have to serve for three years at $840 a year.

Mr. SMOOT. I am not objecting to what they are paid here without commutation of quarters or longevity pay or retirement privileges, but I am objecting to those things being applied to nurses as was for a time practiced in the Public Health Service and would have been to-day if objection had not been raised to it. Not only nurses but ordinary clerks down at the Public Health Service were granted longevity pay, commutation of quarters, and retirement privileges. There was not any law for it. They just did it, that is all.

Mr. FLETCHER. The Senator will agree to the committee amendment here, I take it, because it goes back to the bill as it was originally agreed on by the joint committee and which we thought amply provided for the nurses. If the House provision remained, in case of dependents they would get additional allowances. We will change that, if we agree to the committee amendment.

The amendment was agreed to.

The reading of the bill was continued.

The next amendment of the committee was, on page 19, line 9, before the word "period," to strike out the word "second" and to insert in lieu thereof the word "first," so as to read:

And to the same allowance for rental of quarters as is authorized in section 6 of this act for officers receiving the pay of the first period.

The amendment was agreed to.

The next amendment of the committee was, in section 16, page 20, line 12, after the word "repealed," to insert a comma and the words "effective June 30, 1922," so as to make the section read:

SEC. 16. That existing laws authorizing increase of pay for foreign service and commutation of quarters, heat, and light are hereby repealed, effective June 30, 1922.

Mr. WADSWORTH. That committee amendment should be perfected by changing "June 30" to read "July 1."

The PRESIDENT pro tempore. The Secretary will state the amendment to the amendment.

The READING CLERK. In lieu of the committee amendment the Senator from New York moves that the words "June 30" be stricken out and in lieu thereof "July 1" inserted, so as to read "effective July 1, 1922."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The next amendment was, on page 21, line 15, after the word "promotion," to insert a colon and the following proviso:

Provided, That officers and former officers of the Philippine Scouts who were placed on the retired list prior to June 4, 1920, shall, upon the passage of this act, be entitled to promotion on the retired list for active duty heretofore performed subsequent to retirement, in accordance with the provisions of section 127a of the act of June 3, 1916, as amended by the act of June 4, 1920, and to the same pay and benefits received by other officers of the Army of like grade and length of service on the retired list.

Mr. WADSWORTH. In order to make it perfectly clear just when this proviso, if adopted, shall take effect, I move that, on line 17, the words "upon the passage of this act" shall be stricken out. At the end of the bill an amendment will be offered to the effect that all the provisions of the bill shall take effect on July 1.

Mr. SMOOT. The effect of that would be, of course, to allow them to draw the increased pay they are drawing now until the expiration of the present law.

Mr. WADSWORTH. No; nothing of the sort.

Mr. SMOOT. If we pass this bill and it becomes an act, then the pay would take effect on the passage of the act.

Mr. WADSWORTH. I thought the Senator referred to the Philippine Scouts.

Mr. SMOOT. No; I understood the Senator to move to strike out the words "upon the passage of this act," and to state that he would move an amendment at the end of the bill to make all the provisions of the bill take effect on July 1.

Mr. WADSWORTH. I said that.

Mr. SMOOT. The object of that is, of course, to allow them to draw their increased pay up until June 30, according to the present law.

Mr. WADSWORTH. The first sentence in the bill, page 1, reads as follows: "That beginning July 1, 1922, for the purpose of computing the annual pay of the commissioned officers," and so forth, the following things shall be done in the matter of base pay. From time to time in drafting the bill we struck these side pockets, as it were, and we wanted to get rid of them, but inadvertently, instead of saying "commencing July 1, 1922, these things shall cease to exist," we made it provide that "hereafter" they shall cease to exist. The word "hereafter," of course, would make it mean that they should cease to exist the day the President signs this act. The result would be that portions of this act would go into effect before July 1, and the rest of them on July 1, and the administrative difficulties in the Navy Department and the War Department would be immense.

Mr. SMOOT. I see that what the Senator says is correct, but I do not see why it should be added at the end when the bill starts out in the way it does.

Mr. WADSWORTH. Because some of these things are administrative in character, whereas the first section is legislative in character, as to only one element, the pay.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. WADSWORTH. In line with the amendment I proposed before, I move to amend on page 21, line 23, at the end of the line, by striking out the word "hereafter," and on line 24 beginning the word "retired" with a capital letter.

The amendment was agreed to.

The next amendment of the committee was, on page 21, line 25, before the words "Geodetic Survey," to insert the words "Coast and."

The amendment was agreed to.

The reading of the bill was continued to line 13 on page 22.

Mr. WADSWORTH. On page 22, lines 12 and 13, I move to strike out the words "June 20" and to insert in lieu thereof the words "July 1," so as to read:

All laws and parts of laws authorizing extra pay for qualification in the use of arms or instruments, or for holding rated positions, except as otherwise specifically provided herein, are hereby repealed, to take effect July 1, 1922.

The amendment was agreed to.

Mr. WADSWORTH. On page 22, line 15, after the word "shall," I move to strike out the word "hereafter," so as to make the section read:

SEC. 20. That cadets at the Military Academy and cadets and cadet engineers of the Coast Guard shall receive the same pay and allowances as are now or may hereafter be provided by law for midshipmen in the Navy.

The next amendment was, on page 23, line 11, after the word "Armies" and the comma, to insert the words "the enlisted men of," so as to make the section read:

SEC. 22. That nothing in this act shall operate to change in any way existing laws, or regulations made in pursuance of law, governing pay and allowances of the General of the Armies, the enlisted men of the Philippine Scouts, Marine Band, Naval Academy Band, Indian scouts, or flying cadets; nor the allowances in kind for rations, quarters, heat, and light for enlisted men; nor allowances in kind for quarters, heat, and light for officers and warrant officers; nor allowances for private mounts for officers; nor transportation in kind for officers and warrant officers and enlisted men and their dependents; nor transportation and packing allowances for baggage or household effects of officers and warrant officers and enlisted men; nor additional pay for aides; nor extra pay to enlisted men serving as stenographic reporters, or employed as cooks or messmen, or mail clerks, or assistant mail clerks, or engaged in submarine diving or service on submarines; nor money allowances granted to enlisted men on account of awards of medals or decorations expressly authorized by Congress.

The amendment was agreed to.

Mr. WADSWORTH. I desire to offer a substitute for section 23, merely a clarifying substitute.

The PRESIDENT pro tempore. The Secretary will state the substitute.

The READING CLERK. On page 24, strike out lines 1, 2, and 3, and insert in lieu thereof:

That the provisions of this act shall be effective beginning July 1, 1922, and all laws or parts of laws which are inconsistent herewith, or in conflict with the provisions hereof, are hereby repealed as of that date.

The amendment was agreed to.

Mr. WADSWORTH. Now I make the usual motion, that the Secretary be authorized to renumber the sections so that they shall be numbered consecutively, the renumbering to commence after section 3.

The PRESIDENT pro tempore. Without objection, that will be the order of the Senate. The bill is in Committee of the Whole and open to further amendment.

Mr. BORAH. Mr. President, I regret I was not present this morning when the bill was taken up; otherwise I would not delay its consideration by asking questions.

As I understand the effect of the bill, it is to increase the pay of the persons covered by the bill to the extent of about a million and some odd dollars in excess of what the pay would be upon the basis of 1908.

Mr. WADSWORTH. The net increase would be in the neighborhood of a million dollars as compared with the present permanent schedules. Not all the permanent schedules date back to 1908. There were some permanent schedules enacted in 1917, and some I think in 1916.

Mr. BORAH. But the Senator estimates a saving of some $15,000,000 upon the basis of the present pay?

Mr. WADSWORTH. As compared with the present pay, and with these services maintained at their present strength.

Mr. BORAH. That pay ends on June 30?

Mr. WADSWORTH. It does,

Mr. BORAH. Then the real effect of the bill is to increase the obligations of the Government about a million dollars in excess of what they would be after the 30th of June?

Mr. WADSWORTH. Yes. The reason, in turn, for that is that these men can not live on the pay of 1908. It simply can not be done.

Mr. FLETCHER. If the Senator from Idaho had heard the witnesses, or would take the trouble to read the hearings, he would agree that the testimony was overwhelming to the effect that the officers and men can not live under the pay of 1908, at the present cost of living. The pay of 1908 was wholly inadequate.

Mr. BORAH. I can demonstrate to an absolute certainty that a Senator can not live on his salary. There is no doubt about that.

Mr. OVERMAN. We will all agree to that.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the House had passed a bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, in which it requested the concurrence of the Senate.

PETITIONS AND MEMORIALS.

The PRESIDENT pro tempore laid before the Senate a resolution of the National Association of Builders' Exchanges, favoring an amendment to the Constitution giving Congress authority to tax incomes derived from State, county, and municipal bonds upon exactly the same basis as incomes derived from other sources so as to encourage investment in private construction, which was referred to the Committee on the Judiciary.

Mr. CAPPER presented a resolution adopted by the American Legion posts and auxiliary units of the sixth congressional district, at Hays, Kans., favoring the prompt passage of the so-called soldiers' bonus bill, which was referred to the Committee on Finance.

Mr. WILLIS. I present resolutions relative to the situation in Russia adopted at a regular meeting of the Cuyahoga County Council, American Legion, Department of Ohio, at its headquarters in Cleveland, May 17, 1922. I ask that the resolutions be referred to the Committee on Foreign Relations and printed in the RECORD.

There being no objection, the resolutions were referred to the Committee on Foreign Relations and ordered to be printed in the RECORD, as follows:

Whereas it appears that the Government of the United States of America has been asked to participate in a conference of nations at Genoa, Italy, to which conference representatives of the Soviet Government of Russia were invited; and

Whereas Charles E. Hughes, Secretary of State for the United States of America, has declined on behalf of the United States of America to participate in such conference, and has based such refusal in part upon the unwillingness of the United States of America to enter into a conference to which the soviets of Russia are a party; and

Whereas the Government of France has participated in such conference, but has refused to consider questions with the soviets of Russia, unless such soviets recognize to some degree at least the principles upon which democracy and civilization are founded; and

Whereas it appears from such conference and a treaty concluded thereat between the soviets of Russia and the German Government that the principles for which the Allies fought in the World War, of freedom, democracy, and civilization are threatened; and

Whereas the American Legion is primarily interested in the maintenance of free institutions of government, in rights of property, and in the principles upon which civilization is founded: Now, therefore, be it

Resolved, That the council of the American Legion of Cleveland and Cuyahoga County, Ohio, hereby approves and commends the stand taken by Secretary Hughes in declining to enter into a conference with the soviets of Russia until such soviets can approach such conference with clean hands; and be it further

Resolved, That the attitude of France, our late ally in the World War, in standing steadfastly for the principles of freedom, democracy, and civilization against the despotism established and enforced by the soviets of Russia is approved and commended, and that we deplore the evident propaganda now being circulated tending to isolate France; and be it further

Resolved, That the action of the French Government in maintaining an army to defend the principles of freedom and civilization, for which the members of the American Legion fought, be commended and approved; and be it further

Resolved, That the council of the American Legion for Cleveland and Cuyahoga County, Ohio, respectfully represents to the Government of the United States of America that any recognition of the soviets of Russia, or any attempt to establish trade relations as a Government with such soviets, would be a direct blow at the principles of freedom, democracy, and civilization, upon which the Government of the United States of America is founded, and that the attitude of France in maintaining a force to defend against a threatened combination of the German Government and such soviets of Russia and in endeavoring to

make secure the victory won by the allied Governments should be sustained by the Government of the United States of America; and be it further

Resolved, That the American Legion, Department of Ohio, and the national executive committee of the American Legion be requested to take such steps as may be advisable to place the attitude of the American Legion, as indicated by these resolutions, before the people of the United States and the world; and be it further

Resolved, That copies of this resolution be directed to the President of the United States; the Secretary of State; the Senators from Ohio; the Representatives in Congress from the districts comprised in Cuyahoga County; the national commander the American Legion; the commander American Legion, Department of Ohio; the ambassador from France to the United States; and to Paris Post, No. 1, American Legion.

Official:

L. P. WOLFFORD,
Secretary Cuyahoga County Council,
American Legion, Department of Ohio.

Mr. WILLIS presented the petition of Miss Minna Dorn and sundry other citizens of Cincinnati, Ohio, praying that only a moderate duty on kid gloves be imposed in the pending tariff bill, which was referred to the Committee on Finance.

Mr. NEWBERRY presented petitions of sundry citizens of Owosso, Corunna, Oakley, Chapin, Flushing, Flint, North Star, Ashley, Chesaning, Burton, Carland, Bennington, Laingsburg, Fairgrove, Caro, Vassar, Sebewaing, Owendale, Vernon, and Durand, all in the State of Michigan, praying for the imposition in the pending tariff bill of a duty of $2 per 100 pounds on Cuban sugar, which were referred to the Committee on Finance.

Mr. CALDER presented resolutions adopted by the Presbyteries of Delaware, Presbyterian Church, at Bovina Center, New York, favoring amendments to the Constitution prohibiting polygamy and providing for uniform marriage and divorce laws, which were referred to the Committee on the Judiciary.

He also presented a resolution adopted by the Presbytery of Delaware, at Bovina Center, New York, favoring the enactment of legislation providing for Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. TOWNSEND presented resolutions adopted by the Presbyteries of Flint, Presbyterian Church, at Sandusky, Mich., favoring amendments to the Constitution prohibiting polygamy and providing for uniform marriage and divorce laws, which were referred to the Committee on the Judiciary.

He also presented a resolution adopted by the Presbytery of Flint, at Sandusky, Mich., favoring the enactment of legislation providing for Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented the petition of William Withers and sundry other citizens of Charlevoix, Mich., praying for the imposition in the pending tariff bill of a duty of $2 per 100 pounds on Cuban sugar, which was referred to the Committee on Finance.

He also presented resolutions adopted by the Army and Navy Association of Saginaw, Mich., protesting against proposed reductions in the military and naval forces of the United States, which were referred to the Committee on Military Affairs.

REPORT OF THE COMMITTEE ON THE JUDICIARY.

Mr. NELSON, from the Committee on the Judiciary, to which was referred the bill (S. 3614) relating to the official bond of the United States marshal for the southern judicial district of the State of New York, reported it without amendment and submitted a report (No. 721) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HALE:

A bill (S. 3631) for the relief of Thomas F. Donnelly (with an accompanying paper); to the Committee on Military Affairs.

By Mr. CALDER:

A bill (S. 3632) to amend section 128 of the Judicial Code relating to appeals in admiralty cases; to the Committee on the Judiciary.

By Mr. WILLIS:

A bill (S. 3633) to authorize the coinage of a 50-cent piece in commemoration of the one hundredth anniversary of the birth of the late President Rutherford Birchard Hayes at Delaware, in the State of Ohio; to the Committee on Banking and Currency.

TARIFF BILL AMENDMENT.

Mr. HARRELD submitted an amendment intended to be proposed by him to House bill 7456, the tariff bill, which was ordered to lie on the table and to be printed.

HOUSE BILL REFERRED.

The bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, was read twice by its title and referred to the Committee on Commerce.

THE TARIFF.

Mr. SMOOT. Mr. President, I ask that the Senate resume the consideration of House bill 7456, the tariff bill.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. FLETCHER. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	Elkins	Ladd	Rawson
Ball	Ernst	Lodge	Robinson
Borah	Fletcher	McLean	Sheppard
Brandegee	France	McNary	Simmons
Broussard	Frelinghuysen	Moses	Smoot
Bursum	Glass	Nelson	Stanley
Calder	Gooding	New	Sterling
Capper	Hale	Newberry	Sutherland
Caraway	Harreld	Nicholson	Townsend
Colt	Harris	Oddie	Underwood
Culberson	Harrison	Overman	Wadsworth
Cummins	Hitchcock	Page	Walsh, Mass.
Curtis	Jones, Wash.	Phipps	Warren
Dial	Kellogg	Pittman	Watson, Ga.
Edge	Kendrick	Ransdell	Willis

Mr. LADD. I was requested to announce that the Senator from Nebraska [Mr. NORRIS], the Senator from South Dakota [Mr. NORBECK], and the Senator from Alabama [Mr. HEFLIN] are engaged in a hearing before the Committee on Agriculture and Forestry.

The PRESIDENT pro tempore. Sixty Senators having answered to their names, there is a quorum present.

Mr. SMOOT. Mr. President, there have been about 22 items passed over in Schedule 1. I ask that we now return to the consideration of those items.

The first is paragraph 8, antimony salt. It was understood that at any time we took up paragraph 8, affecting antimony salt, we should consider paragraph 376, which relates to antimony metal. Therefore, I ask that in connection with paragraph 8 we first consider paragraph 376.

The PRESIDENT pro tempore. Is there objection to the request proposed by the Senator from Utah? The Chair hears none, and it is so ordered. The Secretary will state the amendment of the committee in paragraph 376.

The ASSISTANT SECRETARY. Paragraph 376 is found on page 85 of the bill, line 3, where the committee proposes to strike out "1½" and insert "2," so as to read:

PAR. 376. Antimony, as regulus or metal, 2 cents per pound.

Mr. SMOOT. There was a great deal of time taken up in the discussion of these items when paragraph 8 was first read. I do not know whether it is desired to have all of that discussion repeated at this time or not.

Mr. SIMMONS. I wish to say that the junior Senator from Utah [Mr. KING], who has prepared himself to discuss this paragraph and also the paragraph relating to dyestuffs, returned to the city this morning, and came to the Senate, but had to go home because he is very ill. I ask the Senator from Utah if he will not, on account of the absence of the junior Senator from Utah [Mr. KING] because of illness, allow these two matters to go over?

Mr. SMOOT. The Senator from New Mexico [Mr. JONES] is interested in this paragraph and discussed the question when the matter was up before. That Senator is now present, and I suppose he will have no objection to taking up the items.

Mr. JONES of New Mexico. I did not understand the Senator's request.

Mr. SMOOT. I am not sure whether the Senator from New Mexico was in the Chamber or not when I brought the matter up, but when we discussed paragraph 8, oxide of antimony, it was then agreed to pass it over, and that when called up again we would first consider paragraph 376, which is the metal antimony. I now ask that we shall take up paragraph 376 for consideration and decision, and then recur to paragraph 8. Paragraph 376 is metal and liquated antimony.

Mr. SIMMONS. I did not know the Senator from New Mexico was assisting in the presentation of that paragraph. I would like right now, if the Senator from Utah has no objection, to have it understood that the dyestuffs matter shall be passed over until the junior Senator from Utah returns.

Mr. SMOOT. I will take that up with the Senator later.

The PRESIDENT pro tempore. The Secretary will report the pending amendment.

The ASSISTANT SECRETARY. On page 85, line 3, the committee proposes to strike out "1½" and insert in lieu thereof "2," so that that part of the paragraph will read:

Antimony, as regulus or metal, 2 cents per pound.

Mr. JONES of New Mexico. Mr. President, I do not like to assume the burden of trying to present the situation regarding these various items. Will not the Senator from Utah explain the situation regarding the antimony metal, so the Senate may understand just what it is doing?

Mr. SMOOT. I will say to the Senator from New Mexico that he discussed this question very fully when the item was before the Senate for consideration at a previous time. Antimony ore, as the Senator no doubt knows, is on the free list. The House gave 1½ cents per pound as compensatory duty from the ore to the metal. The liquated antimony was also on the free list in the bill as passed by the House, but was transferred by the Senate committee from the free list to the dutiable list at three-fourths cent per pound.

The liquated antimony, of course, is the ore itself treated simply by melting and obtaining by heat the content of the ore in a concentrated form. The committee decided that it was hardly fair to the manufacturer of liquated antimony in this country to allow the product of liquated antimony to come in free of duty when the ore had to pay the same rate from China to this country as the liquated antimony itself. I think the liquate is about 70 to 80 per cent of the pure product. That is about the situation and that is the action taken by the committee.

Mr. JONES of New Mexico. Mr. President, the antimony industry, including the oxide, is one which deserves a great deal more attention than it has been receiving. The ore is not found in this country in any commercial or dependable quantity.

Mr. SMOOT. I will say to the Senator that China produces about all the antimony ore.

Mr. JONES of New Mexico. The Senator is correct about that. China is also engaged in producing the ore and smelting the metal. We never attempted anything of that sort in this country until during the war. The other manufactures were built up to a large extent during the war, and, to my mind, it is just a case of trying to impose high duties here to keep up an industry which can not be kept up in peace times. We have to import the ore anyway. It is true there is antimony lead that is saved by the smelters of the country in the smelting of lead, but this is an industry which, it seems to me, ought not to be put up on stilts, where the bill undertakes to put it.

The information is that it is a precarious industry and the prices must be held up very much higher than they are now if the industry of smelting the ores or producing the oxides is to be maintained in this country. In China they have the ore. There are about 700,000 acres of land which are filled with the ore. Mining is a cheap process in China and the smelting of the ore is also a cheap process there. Antimony is a metal that is used in a great many of the industries, in the making of type, and various other commodities such as electrotype and stereotype. The domestic production is a precarious business.

I think the committee ought to consider seriously just what has been done under the item. It is not going to result in keeping up an industry in this country, but it will have the effect of putting up the prices enormously. In all seriousness, it seems to me that the committee itself ought to consider the matter. I do not want to take up time in discussing a matter of this kind.

I feel as to other items in the bill of a similar nature that I have taken up a great deal more time than I should have; but the committee proposes an enormous increase in these duties, and I do not think that it is justified.

Mr. SMOOT. I simply wish to say to the Senator at this point that antimony metal is selling at the lowest price that has ever been known.

Mr. JONES of New Mexico. Yes; the Senator is right about that. That is why I say that this country can not build up an industry of smelting the ores, and there is no use of trying to do so. So why have that duty on the antimony as regulus or metal?

Mr. SMOOT. The industry has been built up, I will say to the Senator.

Mr. JONES of New Mexico. But it is only a war industry.

Mr. SMOOT. Of course the war greatly stimulated the industry in the United States, but it has now grown until we have sufficient facilities to smelt all of the ore which is shipped into this country. That is why the ore itself is on the free list, and it is proposed to place on the liquidated antimony a duty of three-fourths of 1 per cent and on the regulus or metal a duty of 2 cents a pound.

Mr. HITCHCOCK. I should like to ask the Senator from Utah whether the increase in the rate in paragraph 376 on the antimony metal is what makes necessary the increase in antimony oxide in paragraph 8, which occurs early in the bill?

Mr. SMOOT. Yes, I will say to the Senator. The compensatory duty would have to be added to the antimony oxide.

Mr. HITCHCOCK. That is, the increase in the rate on raw material makes necessary the increase in the duty on the oxide?

Mr. SMOOT. Not the increase in the duty on the raw material.

Mr. HITCHCOCK. What does the Senator call it if it is not raw material?

Mr. SMOOT. The raw material is the ore, and that comes in free. Paragraph 376 deals with the regulus or metal itself. I have explained what liquated antimony is. That is the material resulting after ore is dug from the ground in China and subjected to heat. It is not pure metal, but, as I have said, is called liquated antimony, and upon that we put three-fourths of a cent a pound, and then the differential between that and the smelted product is 1½ cents. It is all based, of course, upon free ore. Then whatever differences there are between that and the oxide are taken care of in the duty on the oxide.

Mr. HITCHCOCK. Antimony is under the present law subjected to a duty of 10 per cent.

Mr. SMOOT. That is the regulus.

Mr. HITCHCOCK. And that is increased to 2 cents a pound, which is an increase of about three times.

Mr. SMOOT. Yes; but when the present law passed Congress, I will say to the Senator, there was hardly an industry in the United States manufacturing this product. This is a new industry in the United States which was built up because of the World War.

Mr. HITCHCOCK. But I am asking the Senator as to what increase there is? We have nothing to show us how much the increase is when the change is made from an ad valorem duty to a specific duty; but, as I figure it out here in a hurry, it seems to me as though the committee have taken a 10 per cent ad valorem duty and by making it a specific duty have increased the rate three times, so that the duty will be about 30 per cent on the present value.

Mr. SMOOT. The pre-war price was 8 cents.

Mr. HITCHCOCK. The committee has trebled the tariff upon an article which is in the first stage of manufacture, and that makes it necessary to increase the tariff under paragraph 8, which covers the commodity in a higher degree of production. Now, how much does the committee increase the duty on antimony oxide?

Mr. SMOOT. The Senator will see that the proposed duty on antimony oxide is 1½ cents a pound and 25 per cent ad valorem.

Mr. HITCHCOCK. How much is that? What is the ad valorem equivalent? We are not able to find from anything which is presented here what the increase amounts to without difficult figuring.

Mr. SMOOT. The present price of the oxide runs from 7 cents to 8 cents a pound, and the rate is increased from what the House provided, about 10 per cent.

Mr. HITCHCOCK. I am asking about what the present law is. The committee has increased the House rate—and how much has the House rate increased the existing law?

Mr. SMOOT. The duty under the present law is 25 per cent.

Mr. HITCHCOCK. The House increased that, and the bill as reported by the Senate committee has increased the rate over the House rate.

Mr. SMOOT. The House provided a duty of 2 cents a pound. The Senate committee reduced that to 1½ cents a pound and allowed the same ad valorem afforded by present law of 25 per cent. So that the increase of the duty on antimony amounts to 1½ cents a pound. We have increased the antimony, or regulus metal, from 10 per cent to 2 cents, or just about the same as the 1½ cents differential.

Mr. HITCHCOCK. Then the committee has retained the rate of the present law of 25 per cent ad valorem, and in addition has put on a tariff of 1½ cents per pound?

Mr. SMOOT. We have added 1½ cents per pound.

Mr. HITCHCOCK. How much does that increase the ad valorem?

Mr. SMOOT. A little less than 20 per cent.

Mr. HITCHCOCK. That makes the duty, then, 45 per cent?

Mr. SMOOT. Yes; in round numbers.

Mr. HITCHCOCK. As against the present 25 per cent ad valorem?

Mr. SMOOT. As against the present 25 per cent ad valorem; but we have also added, I will say to the Senator, 1½ cents upon antimony regulus, and that makes the difference.

Mr. HITCHCOCK. I understand that; but, in my opinion, that makes it worse. In other words, the committee have given one pair of stilts in one paragraph; then they add another pair of stilts because of the increase in the first paragraph.

Mr. SMOOT. I think they are on the same ladder.

Mr. HITCHCOCK. The result is that the ultimate consumer has to pay a 45 per cent tax instead of a 25 per cent tax.

Mr. SMOOT. That is about the way it will be, I will say to the Senator.

Mr. JONES of New Mexico. The information is that there is no use in trying to protect the development of the ore in this country, and that there is an economic waste in bringing the ore here for the purpose of smelting it when it is being smelted in China and the cost of smelting it there is so very much less than it is in this country. It is a new industry just being built up, and there is no particular investment in it which it is hoped to retain in it. The proposed duty will enormously increase the price of the commodity, and I do not believe it is going to do any good except possibly enable a few concerns now to continue precarious existence for a while. Unless the price is kept up enormously they will not be able to survive. All the information is to that effect. The proposed duty will increase the cost of this commodity to the users of oxides of antimony in various lines. I should like to have the record show that, in my judgment, this whole scheme of handling the metal and the oxides is not justified by the situation. I do not want to take up time any further objecting to it or discussing it.

The PRESIDING OFFICER (Mr. MOSES in the chair). The question is on the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. In paragraph 376, on page 85, line 4, after the word "per," it is proposed to strike out "pound" and insert "pound; needle or liquated antimony, three-fourths of 1 cent per pound."

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the amendment passed over, being the amendment on page 4, paragraph 8.

Mr. FRELINGHUYSEN. Mr. President, that amendment was passed over, at the request of the Senator from New Mexico, until paragraph 376 was reached. Paragraph 376 having been acted upon, we return to paragraph 8.

The ASSISTANT SECRETARY. On page 4, line 23, paragraph 8, after the word "tartrate," it is proposed to strike out "5" and insert "6," so as to read:

Tartar emetic or potassium-antimony tartrate, 6 cents per pound.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

The ASSISTANT SECRETARY. The next amendment is, in the same paragraph, on page 4, line 24, after the word "antimony," to insert the words "salts and."

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. JONES of New Mexico. Mr. President, I do not want it to appear that the amendment is agreed to without objection in the case of any of these rates.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

The ASSISTANT SECRETARY. In the same paragraph, on page 5, line 1, after the words "provided for," it is proposed to insert a comma and the words "1 cent per pound and."

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee.

Mr. SIMMONS. Mr. President, I understood the Senator from New Mexico to say that he did not desire to agree to the changes in these rates.

Mr. JONES of New Mexico. I do not want it to appear that the amendments are agreed to without objection. I want a vote on them.

Mr. SIMMONS. The Senator from New Mexico has no amendment to propose?

Mr. JONES of New Mexico. I have no amendment to offer.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment passed over.

The ASSISTANT SECRETARY. The next paragraph passed over is paragraph 16, on page 6.

Mr. SMOOT. Mr. President, in connection with that paragraph, I ask that the Senate first consider paragraph 383, having reference to the duty on quicksilver.

The PRESIDING OFFICER. Without objection, paragraph 383 will be considered.

The ASSISTANT SECRETARY. On page 87, paragraph 383, in line 1, after the word "quicksilver," it is proposed to strike out "35" and to insert "25," so as to read:

PAR. 383. Quicksilver, 25 cents per pound.

Mr. JONES of New Mexico. Mr. President, I understand the Senator from Nevada [Mr. PITTMAN] is interested in paragraph 383.

Mr. SMOOT. Does the Senator from Nevada desire to offer an amendment to increase the rate?

Mr. JONES of New Mexico. I do not know. I simply understand he is interested in it. I do not know what he desires to do.

The PRESIDING OFFICER. Is it desired that paragraph 383, as well as paragraph 16, shall be passed over?

Mr. JONES of New Mexico. I have sent for the Senator from Nevada. I do not know what he wants to do in connection with the paragraph.

The PRESIDING OFFICER. The Chair is also of the opinion that the two Senators from California are interested in this paragraph.

Mr. SMOOT. They are interested in the paragraph.

Mr. JONES of New Mexico. I suggest the absence of a quorum.

Mr. SMOOT. If the Senator will withhold his suggestion, I will ask that the paragraph be passed over temporarily and take up the next paragraph, so that the Senator from Nevada and the Senators from California may be notified.

Mr. JONES of New Mexico. Very well, I withdraw the suggestion.

The PRESIDING OFFICER. Paragraph 16 and paragraph 383 will be passed over in accordance with that understanding. The Secretary will state the next amendment passed over.

The ASSISTANT SECRETARY. The next paragraph passed over is paragraph 24, on page 8, where the committee proposes, on line 9, to strike out "25" and insert "35," so as to make the paragraph read:

Chloral hydrate, terpin hydrate, thymol, urea, and glycerophosphoric acid, and salts and compounds of glycerophosphoric acid, 35 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee.

Mr. JONES of New Mexico. Mr. President, I am advised that the articles in this paragraph are under the embargo. Would it not be advisable, therefore, to let the paragraph go over until the embargo provisions are dealt with?

Mr. SMOOT. I will say to the Senator that the rate really would be the same whether the embargo goes into effect or not.

Mr. JONES of New Mexico. The situation of the items in this paragraph is no different from the situation of the items in the next paragraph.

Mr. SMOOT. In my opinion it is; but if the embargo provisions were stricken from the bill the committee would not want to change these rates. I think, if the Senator has looked up the item, he will find that the 35 per cent rate is a very moderate rate on these items. In fact, I am afraid that if we pass it over to-day two or three Senators who are interested in the matter will ask to have it reconsidered and have the rate raised to about 60 per cent.

Mr. JONES of New Mexico. I have no special interest in it myself, but I had understood that it would go along with paragraph 25.

Mr. SMOOT. No; that is entirely a different thing. This is a product that has nothing whatever to do with the intermediates or with the dyestuff itself. I mean they have always been treated by themselves, and the present law provides a rate of 25 per cent.

Mr. JONES of New Mexico. Yes, I know; but will the Senator tell us why the committee raised the duty from 25 to 35 per cent?

Mr. SMOOT. I will say to the Senator that this is not a coal-tar product.

Mr. JONES of New Mexico. It seems to me there should be some explanation as to why that duty was raised.

Mr. SMOOT. The Senator knows that we have tried to have all of the salts and compounds made dutiable at a uniform rate of 25 per cent ad valorem; but glycerophosphoric acid and the other acids falling under paragraph 24 are very much more difficult to manufacture, and it is considerably more costly to do it, and the 10 per cent was added for that reason, as one other of the salts or compounds carried a duty of 35 per cent,

and I think the same differential that we have here is also in the present law. If the Senator will remember, in the present law most of the salts and compounds are dutiable at 15 per cent, but in the case of this particular item the Senator will find that the existing law provides for a rate of duty of 25 per cent, or a differential of 10 per cent.

The reason of that I have already stated, and it applies here just the same as it did at the time that the Underwood law was passed. What I am fearful of is that there will be a request that the 35 per cent be increased, and therefore I hope the amendment of the committee will be agreed to now.

Mr. JONES of New Mexico. I am advised that the pre-war price of chloral hydrate was 22 cents a pound, and that the present price is from 75 to 78 cents a pound.

Mr. SIMMONS. Ninety-two cents.

Mr. SMOOT. That is true, Mr. President, and that is exactly when they put the American manufacturer out of business entirely. There was not a single pound of it manufactured in the United States, and when that happened a very large industry was closed down in the United States.

Mr. SIMMONS. Mr. President, I do not understand the statement of the Senator from Utah, in view of the statement made in the survey furnished the committee by the Tariff Commission.

Mr. SMOOT. I am speaking now of chloral hydrate.

Mr. SIMMONS. So am I. This survey says that during nine months of 1921 there was imported only $1,758 worth of this material, and that the unit value of the foreign product was 92 cents; that is, the foreign value of it.

Mr. SMOOT. That was in 1920?

Mr. SIMMONS. No; this was in 1921.

Mr. SMOOT. After the emergency tariff bill was passed this item fell under the embargo provision, as I have already stated. I said that when the price was 22 cents, as the Senator said—under the embargo, as has just been stated, it was 92 cents—but when chloral hydrate in the United States was 22 cents, as the Senator said, all the concerns manufacturing chloral hydrate in the United States were closed.

Mr. SIMMONS. There seems to have been imported during the fiscal year 1918 only 1,032 pounds, valued at $746, and the price of the foreign article then was 72 cents. In 1921 the imports slightly increased, and the price also increased.

Mr. SMOOT. If the Senator will yield, I will simply call attention to the report that was made by the Tariff Commission in the survey.

Mr. SIMMONS. I was reading from that report.

Mr. SMOOT. But I do not think the Senator has before him the report to which I have reference. The Tariff Commission says:

> The chloral hydrate industry originated and was developed in Germany. The needs of the United States were supplied by German manufacturers up to about 1892, when Herf & Frerichs Chemical Co., of St. Louis, undertook the manufacture of this product from tax-paid alcohol. The manufacture was discontinued several years later, owing to the impossibility of competing with the foreign product manufactured from tax-free alcohol. For several years thereafter the United States again depended entirely on Germany for supplies of this product. In 1908 the Monsanto Chemical Works, of St. Louis, undertook to manufacture chloral hydrate, since denatured alcohol had at that time become available in this country for technical purposes.
>
> In 1908 the price of chloral hydrate in this country was 90 cents per pound duty paid (import duty of 55 cents per pound, as a chemical in the preparation of which alcohol was used).
>
> As the above American manufacturer increased his production of chloral hydrate, the price dropped, and finally reached about 50 cents per pound in 1913, at which price it was, of course, impossible to import chloral hydrate under the prevailing duty. Merck & Co. established a plant in this country and started operations in 1912 and, owing to this competition, the price dropped to about 45 cents per pound, which was then considered below the cost price in this country.
>
> After the passage of the Simmons bill, reducing the tariff rate on chloral hydrate to 25 per cent ad valorem, a price fight ensued with European manufacturers, who were importing the product at between 20 and 30 cents, so that one of the American plants stopped operations and subsequently dismantled the plant.

That was the Monsanto Chemical Works, of St. Louis. Now they are asking here for a rate that will allow them to open their plant. This 35 per cent ad valorem will not do it, I am quite sure, if their statements are correct.

Mr. SIMMONS. But the point I am making is that, with the practical embargo upon this product, it still comes in. It came in in 1921.

Mr. SMOOT. That was before May, 1921, when the embargo went into effect.

Mr. SIMMONS. I do not know whether it was or not. It says "nine months of 1921."

Mr. SMOOT. There was an embargo. The embargo was enacted into law in May, 1921.

Mr. SIMMONS. It was coming in under the present law, then, before May, 1921. Is that the point the Senator is making?

Mr. SMOOT. That is, the imports of 1921 came into this country before the passage of the embargo, before May.

Mr. SIMMONS. Exactly. Now then, in 1921, before the embargo was passed, according to the Senator, 1,905 pounds of this stuff came in, valued at $1,758.

Mr. SMOOT. That is right.

Mr. SIMMONS. And sold for 92 cents a pound, under the present law.

Mr. SMOOT. That is right.

Mr. SIMMONS. I understood the Senator to say a little while ago that the domestic article was selling for 65 cents; so that before the embargo, and while the present law was in effect in 1921—that is, before May, 1921—it was coming in and paying the duty and selling in this market for 92 cents a pound, while the domestic product was selling under those circumstances at only 65 cents a pound.

Mr. SMOOT. No; the Senator is mistaken there.

Mr. SIMMONS. I understood the Senator to say that. I was accepting the Senator's statement as to that.

Mr. SMOOT. No; the Senator said that the price to-day was 75 cents a pound. That is quite different from a year ago.

Mr. SIMMONS. Yes; but when it was coming in under the present law, before you had the embargo, it sold for 92 cents. The Senator has just said that the importations to which I referred as coming in during the last nine months of the fiscal year 1921 came in before the embargo. The embargo was in May, and the Senator is right; nine months of that fiscal year had expired before the embargo; but while that was happening, before the embargo, this material brought in here and paying the duty of the present law sold for 92 cents, and it is now selling in the domestic market for only 75 cents.

Mr. SMOOT. Mr. President, I can point out to the Senator item after item in this schedule that is not selling for one-half what it sold for in the beginning of 1921 or 1920. The demand for it has ceased; the price has declined; the cost of producing it has declined; and a reduction in price is the natural result.

Mr. FRELINGHUYSEN. Mr. President, prior to the war the chloral hydrate industry was absolutely controlled by Germany, and all imports were from Germany. There was an ad valorem duty of 25 per cent. The product sold as high as $2.10 a pound during the war. To-day Germany can manufacture chloral hydrate at 19 cents a pound. It costs from 45 to 55 cents per pound to manufacture it in the United States. Those concerns which were manufacturing chloral hydrate asked the committee for 35 cents a pound—not 35 per cent ad valorem, but 35 cents a pound—to protect the industry. We increased the Underwood rate 10 per cent and gave them a 35 per cent ad valorem duty. That is not, in my opinion, high enough, but it was that which the committee fixed. Germany has an advantage of 103 per cent over the American manufacturer, making no allowance for freight. Now, the question is whether we want to protect the industry here or whether we want to make the tariff so low that this product will come in from Germany. There was an effort made, prior to the war, to produce it in this country under the 25 per cent ad valorem provided in the Underwood law, and it was not successful. That is not high enough to protect the American industry.

Mr. JONES of New Mexico. If what the Senator from New Jersey has said is true, that rate is not anywhere near high enough.

Mr. FRELINGHUYSEN. The Senator is quite right, it is not high enough, but the presidential power authorized under this bill undoubtedly will help them.

Mr. JONES of New Mexico. I do not know whether that is going to be adopted or not, but it seems to me it is inadvisable to bring in a rate deliberately, knowing that it is not high enough to protect the industry, and depend upon the President to fix a rate which will be high enough.

Mr. FRELINGHUYSEN. I will accept an amendment, if the Senator wishes to increase it to 45 per cent.

Mr. JONES of New Mexico. I understand that, but I wanted to try to discover the logic of the reasoning of the Senator from New Jersey. If this duty is fixed without any rhyme or reason for it, I shall have nothing further to say.

Mr. FRELINGHUYSEN. Mr. President, the information I gave the Senator was furnished by the Senator from Missouri [Mr. SPENCER] on Saturday, and it showed that Germany can land it here at 19 cents per pound.

Mr. JONES of New Mexico. The only point is that if you are aiming to build up the industry in this country, the thing to do is to find out whether the facts as reported are true or not, and if you are going to do it, do it right. I think the Senator will realize that there is no use going ahead with a thing of this sort.

Mr. SMOOT. The committee fixed a rate under which they thought the manufacturers could get along.

Mr. JONES of New Mexico. But the evidence seems to be to the contrary. The Senator from New Jersey has just told us that it costs twice as much to produce it in this country as in Germany.

Mr. SMOOT. The committee thought 35 per cent was sufficient.

Mr. JONES of New Mexico. But I have been trying to discover the logic of the Senate committee's thinking on the subject. I know this is only one case of many.

Mr. SMOOT. I have no doubt that this is as low a rate, comparatively, as there is in the bill. As I said to the Senator before, all the salts and compounds of these metals we have tried to keep at 25 per cent, but with this, as with one of the other paragraphs, it was impossible to do it and still allow the industry to live. Your own law makes the differential between the salts of this metal and the salts of the other metals.

Mr. JONES of New Mexico. I do not want to take any personal offense at the reference to what the Senator calls "your own law," as applied to me.

Mr. SMOOT. I will modify it by saying "the existing law."

Mr. JONES of New Mexico. I think that is very much the more appropriate term. I did not have the honor of participating in the making of the existing law. But I have heretofore suggested that, regardless of what the existing law is, or what the Payne-Aldrich law was, these duties should be levied now according to the existing conditions, and I do not think what appears in any other law is any standard or measurement for existing conditions. It may have been all right when that law was passed, but the situation may be entirely changed now.

Mr. SIMMONS. When the Senator from New Jersey told us a little while ago that before the war it was selling at something over $2 a pound, he was mistaken.

Mr. FRELINGHUYSEN. I said that at the start of the war the price increased to $2 a pound.

Mr. SIMMONS. During the war?

Mr. FRELINGHUYSEN. No; at the start of the war.

Mr. JONES of New Mexico. That was after the German supply had been cut off.

Mr. SIMMONS. I understood the Senator to say a little while ago that before the war, when Germany had control of this market absolutely, we were not producing any, and it was selling at something over $2 a pound.

Mr. FRELINGHUYSEN. No; I said at the start of the war. I was reading from the testimony.

Mr. SIMMONS. I have here the statistics of the imports and the duties from 1908 to 1918. In 1908 the foreign product was selling, unit value of quantity, at 90 cents a pound, and in 1914 it was selling at 37 cents a pound. In 1915 it was selling at 22 cents at pound; in 1916 it went up to $2 a pound, and in 1918 it went back to 72 cents a pound. During nine months of 1921 it went up to 92 cents a pound. That was the embargo period.

Mr. FRELINGHUYSEN. This is the history. Prior to the act of 1913, there was a duty of 55 cents per pound, and in the Underwood law it was lowered to 25 per cent advalorem, "under which rate the Germans shipped in immense quantities at prices considerably below our cost of manufacture." Prior to that time we had an industry in this country which was manufacturing chloral hydrate. I am reading from the brief of the Monsanto Chemical Works, St. Louis, in relation to this product:

> We, not being able to compete, were compelled to discontinue its manufacture and dismantled our plant.
>
> The American market was then again supplied by the Germans, who very materially advanced their price soon after our plant had been dismantled.
>
> When the war shut off the German supplies we erected a new plant and recommenced the manufacture of chloral hydrate, and will continue if given the rate we are requesting.

That is the situation in regard to this product. They have asked for a higher duty, but the committee raised the ad valorem duty under the Underwood law 10 per cent, under which duty the American industry, previous to the war, was not able to compete.

Mr. JONES of New Mexico. Mr. President, I may state that one reason for the failure of that concern back in 1908 was the fact that it was trying to make this product out of tax-paid alcohol.

Mr. SMOOT. Not when they were driven out of business.

Mr. JONES of New Mexico. They did not make it out of denatured alcohol, as they could do now, without having to pay a revenue tax on it.

Mr. SMOOT. That was in 1892.

Mr. JONES of New Mexico. I think we have developed the foundation for the committee's guess here, and it may go to a vote.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the committee.

The amendment was agreed to.

Mr. SMOOT. Mr. President, the next paragraph to be taken up would be paragraph 16, relating to calomel. I ask the Senator from California if he would like at this time to take up paragraph 383, relating to quicksilver, and dispose of it. That ought to be disposed of before we pass upon calomel, in paragraph 16, as it is the basic raw product from which calomel is made.

Mr. SHORTRIDGE. I suggest to the Senator having the bill in charge that I would like very much to take this matter up considerably later in the day, or to-morrow morning. I would like very much to have such an arrangement made.

Mr. SMOOT. I understand the Senator from California has a very important appointment to keep within about 30 minutes, and for that reason I will ask that it go over. But I wish the Senator would be here later this afternoon, and let us take up the item and dispose of it.

Mr. SHORTRIDGE. If it is possible, I will do so. I wish to make some observations in regard to this important item, and perhaps in respect of others, and I shall endeavor to call up the matter later this afternoon.

Mr. SMOOT. Mr. President, I understand that the junior Senator from Utah [Mr. KING], who was compelled to go to his home on account of illness, is interested in paragraphs 25 and 26; and, as I am informed, he has had those paragraphs in his charge for consideration on the floor of the Senate. I hope we will be able to take those paragraphs up to-morrow; but, on account of the illness of the junior Senator from Utah, I shall have to ask that they may go over at this time.

Mr. FRELINGHUYSEN. Mr. President, my State is deeply interested in paragraphs 25 and 26, relating to coal-tar products. There are at the present time 55 independent dye industries in New Jersey, who are anxiously awaiting the action of Congress on this question of their tariff policy. I should like very much to know when it is to be taken up, and I should like to have a definite date fixed, so that I can be here.

Mr. SMOOT. I hope to have the paragraphs taken up to-morrow morning.

The PRESIDENT pro tempore. The Senator from Utah asks unanimous consent that paragraph 25 be taken up to-morrow morning.

Mr. HITCHCOCCK. I suggest that if any attention is to be paid to the desire of the junior Senator from Utah to be here, it is a little previous to fix to-morrow morning.

Mr. SMOOT. Then fix day after to-morrow.

Mr. HITCHCOCK. He ought to be allowed a day or two to recover, if he is on the sick list.

Mr. FRELINGHUYSEN. I should like to have a definite date fixed.

Mr. SMOOT. Set it for Wednesday, then.

The PRESIDENT pro tempore. The Senator from Utah requests that this paragraph be taken up Wednesday morning. Is there objection? The Chair hears no objection, and it is so ordered. The Secretary will state the next amendment passed over.

Mr. SMOOT. Paragraph 29a is the next, relating to vulcanized fiber.

The PRESIDENT pro tempore. It will be read.

The READING CLERK. On page 1€, after line 8, the committee propose to insert:

> PAR. 29a. Compounds of cellulose, known as vulcanized or hard fiber, made wholly or in chief value of cellulose, 35 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Frelinghuysen	McLean	Rawson
Ball	Glass	McNary	Sheppard
Borah	Harris	Moses	Shields
Brandegee	Harrison	Nelson	Shortridge
Broussard	Heflin	New	Simmons
Bursum	Hitchcock	Newberry	Smoot
Capper	Jones, N. Mex.	Nicholson	Townsend
Colt	Jones, Wash.	Norbeck	Underwood
Cummins	Kellogg	Oddie	Walsh, Mass.
Curtis	Kendrick	Overman	Walsh, Mont.
Dial	Keyes	Page	Warren
Elkins	Lenroot	Phipps	Watson, Ga.
Ernst	Lodge	Pittman	Willis

The PRESIDENT pro tempore. Fifty-two Senators have answered to their names. There is a quorum present. The question is upon the amendment of the committee, which the Secretary will report.

The READING CLERK. On page 16, after line 8, insert the following:

PAR. 29a. Compounds of cellulose, known as vulcanized or hard fiber, made wholly or in chief value of cellulose, 35 per cent ad valorem.

Mr. WALSH of Massachusetts. In paragraph 29a for the first time a special duty is levied on vulcanized or hard fiber. The rate fixed is 35 per cent ad valorem. Little is known in a statistical way of this product. It has never before been referred to in any tariff bill. I have not been able to obtain any disinterested statistics. The Tariff Commission have little information, and I have not been able to obtain any figures as to the extent to which the product is being imported into this country. I do know from the brief which has been filed by the petitioners requesting a duty that there is expressed much fear of serious competition from Germany and other European countries. In their brief, which is the only evidence we have—the brief of those manufacturers who have petitioned for the tariff—they allege a great discrepancy of price between the German-made product of vulcanized fiber and the American-made product. I assume that is the reason why the Finance Committee has levied such an exceedingly high rate upon this particular product. It seems to me that we can not form any fair judgment without some evidence being presented indicating the extent to which this product is being imported. Under the circumstances it is a mere guess as to what duty to levy.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from Massachusetts yield to the Senator from Utah?

Mr. WALSH of Massachusetts. I yield to the Senator from Utah.

Mr. SMOOT. That is impossible, because there are no statistics kept of this product, which fell in the basket clause as a manufactured article and carries a rate of 25 per cent under the existing law. I will say that we wanted to take this out of the paragraph in which it had been included, because under the wording of the paragraph above as it passed the House it would have fallen within the basket clause. There are two reasons why this item was separated and made into paragraph 29a. House paragraph 29 would have included compounds of celluloid and would have carried the rate of the compound, which is an exceedingly high rate, namely, 60 per cent. The other reason why we put this item in a separate paragraph was for statistical purposes. Hereafter we will know just the amount of the product imported into this country.

There is exceedingly sharp competition to-day between Germany and the manufacturers in this country, not perhaps upon slabs and upon the large articles, but if the Senator will look at the brief which he is now holding in his hand he will find a great number of articles manufactured to-day which are little parts used in small cogs and all forms of necessary articles for smaller machinery. The greater part of the cost of producing these small articles is the labor, as the Senator can well see from the brief which he now has in his hand. The parties manufacturing this material in the United States are fearful that we have fixed the rate—35 per cent—altogether too low. That is what they are fearful of to-day. The Finance Committee reduced the rate from 60 per cent on the American valuation to 35 per cent on the foreign valuation.

Mr. WALSH of Massachusetts. I must admit that the brief filed by the petitioners makes out a strong case for protection. It is unfortunate that we have absolutely no information from any other source—from either the importers or the European manufacturers—as to the extent or cost of production abroad of this manufactured article.

Mr. SMOOT. It will never happen again, I will say to the Senator. If we make a separate paragraph of it, then we will know hereafter just what imports fall under the paragraph.

Mr. WALSH of Massachusetts. It occurs to me that the rate is too high. I am inclined to think in view of the policy of the committee that a protective rate ought to be given to this product, but it seems to me that 35 per cent on a commodity about which we know so little is too high. We have not a single figure of any kind to show whether there has been any volume of importations of this vulcanized fiber.

Mr. BALL. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from Delaware.

Mr. BALL. The manufacture of hard fiber has been limited to a few States. All of the hard fiber was made within the United States up to a few years ago, about three years ago, except a small amount which was made in England. Germany was the principal recipient of the exports from this country. The largest fiber plants were located in Delaware. In fact, up until two years ago we made 80 per cent of the fiber of the world. Now I think there are five or six States which have plants. Germany imported the plates of fiber from this country, manufactured in her plants the small products which are made from that fiber and shipped them back to this country and undersold our people here. They have been doing it right along. Germany has now converted four of her largest war plants into fiber plants. She is now only making fiber of a certain thickness, one-quarter of an inch thick and less, but she is making that fiber and quoting prices on it here which are less than the actual cost in this country of making the paper which goes into the fiber. Germany is quoting a price here of 8 cents per pound. It has always cost 17 cents a pound to make the fiber in this country. Of course that difference results largely from the difference in the wage scale and the exchange value of money in the two countries. The principal element of cost in fiber making is labor. There has been very little German fiber imported into this country up to this time because her plants are of recent construction, and it takes two years or more to complete the process for making the thicker fiber.

Mr. WALSH of Massachusetts. I suppose that is the reason why we have no statistics as to foreign importation.

Mr. BALL. That is the reason why we have no statistics. There is no question as to the result if ample protection is not given to this material. Germany will not only crowd us out of the foreign market but will capture our own domestic market. We can not compete with Germany at present without some protection.

This is an industry that is comparatively in its infancy. They make almost everything, especially in the line of insulating materials, and its products are generally of a very fine nature, requiring a great deal of labor. Germany to-day has placed an embargo on all fiber made in the United States. We can not now ship into Germany a pound of fiber under one-fourth inch thickness. Above that thickness we can do so, because Germany has not yet equipped her plants to make the thicker grades of fiber. England has placed an embargo against all German fiber. England to-day has a number of fiber plants. Japan has two large fiber plants. But unless reasonable protection is given to the industry in our country it will simply be crowded out of existence by foreign competition.

Mr. WALSH of Massachusetts. I can add nothing further. We are absolutely devoid of any disinterested information in regard to importations and in regard to the extent to which the domestic producer is embarrassed or handicapped by the importation of foreign products. I wish to repeat, however, that the brief of the American manufacturers does make out a case for the need of some form of protection, assuming that we adopt the policy of giving protection to industries of this kind.

It seems to me, until we have more information, that the rate of 35 per cent is high. I will again ask the Senator from Utah if he does not think that rate is too high under all the circumstances and in view of the fact that we must accept the statements of the very much-biased petitioners. Why should we fix such a high rate, when the evidence even of those petitioning shows that the foreign production is of very recent development?

Mr. SMOOT. No; I will say frankly to the Senator from Massachusetts that on this and similar items I think it is a little too low. On the larger items in sheets I think it is ample, although there are others who think it is not.

Mr. WALSH of Massachusetts. I notice the largest part of the business is in sheets, rather than in the small parts or tubes.

Mr. SMOOT. In my opinion there is not an industry provided for in the bill that needs 35 per cent protection any worse than does this industry. That is my firm belief, I will say to the Senator, though there are some items on which I myself think the rates of duty are too high.

Mr. WALSH of Massachusetts. As I recall, there was no testimony given and no information was furnished other than that contained in the brief which was filed with the committee.

Mr. SMOOT. I will say to the Senator that the reason for that is because this commodity was expected to fall in paragraph 29 and to bear a duty of 40 cents a pound and 60 per cent ad valorem. Of course, no one would then appear and ask that that be changed, but as soon as the bill was made public and it was seen that the item had been taken out of paragraph 29 and inserted in a new paragraph, paragraph 29a, and a duty of only 35 per cent given, then those interested stated they could not live under that rate, but I rather think they can live

under the rate of 35 per cent, I will say to the Senator, although it will be very close, indeed.

Mr. WALSH of Massachusetts. I have nothing further to add. The rate fixed is based on no definite information. It is a mere guess.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee inserting paragraph 29a on page 16.

The amendment was agreed to.

Mr. SMOOT. The next amendment passed over is paragraph 33a.

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. On page 18, after line 2, it is proposed to insert:

PAR. 33a. Cyanide: Potassium cyanide, sodium cyanide, all cyanide salts and cyanide mixtures, combinations, and compounds containing cyanide, not specially provided for, 10 per cent ad valorem.

Mr. ODDIE. Mr. President, I ask that that paragraph may go over for a short time, for the reason that there are a number of Senators, who are absent just now, who desire to be heard on the questions which it involves.

Mr. SMOOT. When will the Senator from Nevada say that the paragraph may be taken up?

Mr. ODDIE. In the course of a few days.

Mr. SMOOT. A few days is rather an indefinite length of time. This paragraph has been passed over time and time again, and we should like to get through with the chemical schedule.

Mr. ODDIE. I do not like to delay matters, but I feel that this paragraph is of much importance, and a number of Senators have asked me to request that it go over for a short time. Therefore, I should be very much pleased if the Senator from Utah would consent to the merely temporary delay.

Mr. SMOOT. I presume we shall have to let the paragraph go over.

The PRESIDING OFFICER. The Senator from Nevada [Mr. ODDIE] asks unanimous consent that paragraph 33a may be passed over. Is there objection? The Chair hears none, and it is so ordered.

Mr. SMOOT. The next paragraph passed over was paragraph 36.

The PRESIDING OFFICER. The paragraph passed over will be stated.

The READING CLERK. On page 18, paragraph 36, relative to extracts, dyeing, and tanning, was passed over at the request of the senior Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. SMOOT. Mr. President, my attention has been called to the fact that the Senator from Wisconsin [Mr. LA FOLLETTE] before leaving the city stated that he was interested in this paragraph and that he wished it to go over until his return. I had for the moment forgotten his request. The Senator from Wisconsin has not yet returned to the city, so I ask that the paragraph may go over.

The PRESIDING OFFICER. Without objection, paragraph 36 will be passed over.

The next amendment passed over will be stated.

The READING CLERK. The next amendment passed over, at the request of the Senator from Massachusetts [Mr. LODGE], is on page 19, after line 9, to strike out paragraph 39, as follows:

PAR. 39. Gelatin, glue, and glue size, 20 per cent ad valorem and 1½ cents per pound; manufactures, wholly or in chief value of gelatin; casein glue; isinglass, and other fish sounds, cleaned, split, or otherwise prepared, and agar agar, 25 per cent ad valorem.

And in lieu thereof to insert:

PAR. 39. Edible gelatin, valued at less than 40 cents per pound, 20 per cent ad valorem and 7 cents per pound; valued at 40 cents or more per pound, 20 per cent ad valorem and 15 cents per pound; gelatin, glue, glue size, and fish glue not specially provided for, valued at less than 40 cents per pound, 25 per cent ad valorem and 1½ cents per pound; valued at 40 cents or more per pound, 20 per cent ad valorem and 15 cents per pound; casein glue, agar agar, isinglass and other fish sounds, cleaned, split, or otherwise prepared; and manufactures, wholly or in chief value of gelatin, glue, or glue size, 25 per cent ad valorem; and ossein, 10 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. JONES of New Mexico. Mr. President, I understood that that paragraph went over at the request of the Senator from Massachusetts [Mr. LODGE].

Mr. SMOOT. Yes; I understood the Senator from Massachusetts desired to say something with relation to one provision of the paragraph, but I now learn that he is willing to allow the paragraph to be passed as proposed to be amended by the committee.

Mr. JONES of New Mexico. I have received a number of protests against the items in this paragraph, and I think we had better to get into the RECORD just what this proposed legislation means. It involves a very large industry. It includes edible gelatin, which, I suppose, goes into practically all of the households of the country. The industry for some reason is not all one-sided by any means. We import considerable of these commodities, and we export a great deal of them. I have some briefs on the subject which are very informing. There has been a most earnest protest made against the increase in these duties. To begin with, I believe we ought to have read some very important data upon this subject. I have before me a brief on the different items which are contained in the paragraph. I have also an article here really written in the nature of a brief, which was published as an editorial in the Journal of Commerce. I do not know, however, that anything which may be offered here is going to change the action of the committee at all.

Mr. SMOOT. Has the Senator from New Mexico the date of the editorial of which he speaks?

Mr. JONES of New Mexico. Yes. It is dated September 30, 1921.

Mr. SMOOT. I thought that was the editorial, and if the Senator will read the editorial and compare it with the bill he will see that whoever wrote the editorial did not have the bill before him and was not advised as to the rates fixed in the bill. Whoever wrote the editorial, in the parlance of the street, got it "all balled up." I am quite sure the Senator from New Mexico will so admit if he will read the editorial and compare it with the paragraph now under consideration. However, I have no objection, of course, to the editorial going into the RECORD.

Mr. JONES of New Mexico. It covers the paragraph item by item, and I think Senators who are to vote upon the matter really ought to have before them just what has been said in the brief, which is not long, although it will take a little while to read it. The editorial is simply included in the brief prepared by gentlemen who understand the subject. I will ask that the Secretary may read the brief, and I trust he will read it with a view of having those of us who are present listen to it and understand what is being read.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The reading clerk read as follows:

NEW YORK, *January 21, 1922.*

DEAR SIR: When discussion of the permanent tariff comes up shortly I beg you to bear in mind the following regarding glue and gelatin, embraced in schedule No. 1.

These facts and statements are based upon sound economic principles and worthy of your earnest consideration.

I. The two big factors entering into the cost of manufacturing both glue and gelatin are coal and labor. Coal is much higher in cost in Europe than here, while labor is quite as high at the present time, excluding Germany, which country—statements to the contrary notwithstanding—is not and can not export to the United States 3 per cent of the consumption.

II. As to raw material, which is the third factor in cost—this country produces enormous quantities and at no higher cost than Europe. Incidentally, foreign raw material enters this country free of all duty.

III. By far the greatest proportion of raw material comes to the United States from South and Central America, India, and Australia, and this is also taken by Europe at the same prices we pay. A moderate amount of the cheapest hide fleshings are exported here by Europe and a similar amount of bone stock, which the foreigner is far more skillful in preparing for use than our makers.

IV. Selling prices of glue and gelatin in the United States are greater than in any other producing country, and these higher prices are driving consumers to the use of substitutes.

V. All importations consist largely of goods of special and desirable types, which are not made in this country.

VI. Glue and gelatin are of many different kinds and meet many special requirements of the consumer. When the European makers of them are more skillful than American makers, they contribute to the efficiency and economy of our domestic industries which use glue and gelatin as their raw material.

VII. It is very significant that the confectionery, ice cream, and jelly powder trades, that consume 90 per cent of all food gelatin, prefer imported goods and are on record at Washington as opposed to high-tariff rates. Raw glue stock produced in the United States is in enormous quantities, as is the production of both glue and gelatin, in comparison with raw material and finished product imported.

VIII. Actually the effect of a lower tariff would be to lead to a much-needed improvement in methods of American manufacture and in all ways contribute to the industrial prosperity of the Nation.

IX. Thus, from any angle, there is no truthful argument that the glue manufacturers of this country can set forth as a reason why tariff rates should be increased. On the contrary, the enormous profits they have made leaves the question open as to whether the tariff could not actually be reduced and in the interest of the ultimate consumer.

X. In addition to the above, please to bear in mind that the total imports of both glue and gelatin are not over 5 per cent of the total consumption in the United States, and any serious effort made by glue manufacturers of this country to raise the tariff could only be prompted by selfish and unfair motives.

XI. In the case of my goods, which are imported from Holland, it should be borne in mind that the balance of trade is tremendously against Holland, since their exports to this country are very small, while their imports of cotton, agricultural machinery, tobacco, etc., are enormous. It would thus be the very height of folly to shut out

the small importations from Holland, if, indeed, we desire to eventually more stabilize the balance of trade between the two countries.

XII. It is highly important for you to note that the cost of coal in Holland was exactly 2.53 times higher June 21, 1921, as against pre-war cost; and, by the same token, the cost of Dutch labor June 21, 1921, was exactly 3.3 times higher than pre-war cost. This is highly significant, and actually, so far as Dutch gelatin is concerned, the rates could be lowered without menacing American production of similar material.

XIII. The writer has been engaged in manufacturing, jobbing, and importing for many years, and considers the facts in his possession indisputable. Fortunately, we now have a Tariff Commission functioning, and I assume if the schedule embracing this material comes under discussion the facts will be secured from the commission and thus be brought to light; but if the following editorial in the Journal of Commerce of September 30, 1921, be true, there are no facts to be had through that agency. The editorial in question is quoted below:

[Editorial from the Journal of Commerce, New York City, September 30, 1921.]

AN AMAZING TARIFF SITUATION.

Quite as a matter of course and without the slightest comment or indication of anything unusual the Associated Press sends out a dispatch printed in the newspapers of September 29, under date of September 28, as follows:

"Steps were taken by the Treasury to-day toward gathering production costs and other data from American manufacturers for use of the Senate Finance Committee in framing ad valorem duties in the tariff law. Secretary Mellon and James B. Reynolds, former secretary of the Republican National Committee, who has been named director of the investigation, met with more than 40 manufacturers and trade representatives to discuss methods of obtaining the information required."

Publications of the evening before carried the announcement that President Harding had accepted the resignation of the chairman of the Tariff Commission.

James B. Reynolds, who is referred to in the dispatch above quoted, was some years ago an Assistant Secretary of the Treasury in charge of customs under the Taft administration. Later he became a member of the old Tariff Board and eventually was one of the officers of the Republican National Committee. Now he becomes the "director" of an "investigation" designed to ascertain "costs of manufacture." This is precisely the work that has been supposed by an unobservant public to have been intrusted by law to the Tariff Commission, which has been maintained at large expense for years past. The Tariff Commission has included representatives of both parties, but there has been a strong impression that practically all of its members were sound protectionists.

While the measure was in the House of Representatives there was constant reference to the work of the tariff organization and representatives of that board were in constant communication with the Ways and Means Committee. Still later members of the board went before the Senate Finance Committee and there gave expression to very conflicting views, or so they were reported. Now it is stated that some $100,000 is to be spent in putting into the field a force of about 50 men, who in the next two months are to prepare a report for the committee. It is "whispered" by some that the report "may" yet come in sufficiently soon to permit some action before the end of the present session of Congress.

Clearly the Tariff Commission is practially "out of business" so far as real influence is concerned. Either the material it has gathered is not satisfactory, or, what is more likely, the politicians want some material of their own sort to support ex parte conclusions. Otherwise why should they engage a member of the Republican National Committee to do the job of collecting it?

Why does not this "director" work under the direction of the Tariff Commission? Or why does he not become a member of that body itself? There is something here that needs pretty careful explanation prior to the completion of the proposed work. Has the new director the power to administer oaths to witnesses, and does he intend to do so, or is the work of the corps of 50 men to be merely that of accepting such data as are voluntarily furnished by manufacturers? Chairman Underwood seems to have been the only head of the Ways and Means Committee who insisted on testimony under oath, and that plan of interrogation has seldom or never been pursued in administrative inquiries.

The period of Tariff Commission agitation and of "scientific tariff" discussion seems to have clearly ended. The subject is practically never referred to to-day in Congress or among national politicians. "Progressives" who used to spend much of their time in wordy speeches about "comparative costs of production" rarely refer to the topic at present. It is a worn-out political issue. Instead, the mask has been dropped and it is now plainly avowed that tariff duties are wanted that will shut out the goods of other countries; especially "German" goods or any others that are likely to be imported in considerable quantities. An impossible plan of "valuation" designed to aid price-fixing combinations of domestic producers and to shut out the goods of any nation that may have special advantages for producing merchandise, is proposed. Hasty "investigations," under the direction of a political figure, are planned. All this is strongly reminiscent of the latter days of the Aldrich régime—indeed, closely corresponds to the modes of action then followed. Will the business community accept this way of repeating history? Will the politicians take the risk of the repetition of some subsequent history?

XIV. Incidentally, in passing, the testimony of the National Association of Glue and Gelatine Manufacturers, given before the Finance Committee January 7 and August 15, 1921, is contrary to the facts and deliberately misleading.

First. In comparison with wages, "Fifty cents an hour on this side, as against 6 to 8 cents an hour in Europe," is a sheer misstatement. My works in Delft, Holland, pay 1 guilder, or 40 cents, per hour, while labor on this side since November, 1920, for corresponding work runs at the same rate, and all signs point to American labor in glue and gelatin factories declining rapidly.

Secondly. The statement that "Germans are now making agreements in all the producing countries to control prices" is pure imagination. The fact is Germany is not making enough glue and gelatin to take care of her own domestic requirements, and it will doubtless be years before they can export to other countries of Europe, let alone to this side.

Thirdly. The statement that "Germany's production at the present time is 37 per cent" is absolutely false, if by that is meant that they produce 37 per cent of the glue manufactured in Europe. They are not producing 10 per cent.

XV. Taken from any angle, my dear sir, the alleged statements set forth by Messrs. George Upton and Albert G. Jacobs, representing the National Association of Glue and Gelatine Manufacturers, will not bear the light of facts that any committee or commission can ascertain from official sources. You may be interested to know in this connection that Mr. Jacobs is president of the Keystone Glue Co., Williamsport, Pa., a concern controlled by the Central Leather Co., which concern in turn is alleged to be controlled by Armour & Co., Chicago, and that this is a fact susceptible of proof, I think there is no question.

XVI. Thus it is evident that the interests demanding revision upward are the packers and their allies, who, directly or indirectly, control the glue and gelatin business of this country.

XVII. Importations of glue and gelatin are and for many years will be a mere drop in the bucket as against domestic production, and if there be danger from a protective standpoint it is a future hazard of a very remote type. If there was a time when America had anything to fear from foreign competition, that time has passed. I can not believe that American producers, who in most respects are the most effective in the world, can have any dread of competition when they view the fact that their country has come through the great struggle of the last few years, relatively speaking, untouched, while their principal competitors are, in varying degree, sadly stricken and laboring under adverse conditions, from which they will not recover for many years.

XVIII. Revaluation: It is utterly impossible to assess duty fairly upon American valuation of the product, since practically all imported gelatin and most imported glues have no prototypes in goods of domestic production; thus there can be no fair source of information or basis to work from. Surely importers of gelatin should not be forced to have their goods valued by American packers and their allies. One might as well have the packers set the compensation for one's office force; it would be equally reasonable and just.

Again, careful research just completed by the New York University bureau of business research shows that the American valuation clause of the Fordney tariff bill is condemned by virtually all American economists. They believe that this clause is based on an unsound conception of foreign trade, and that the United States, now being a creditor Nation, will be seriously injured if it becomes law. The bureau has sent out a questionnaire to economists. The questions were all directed to the effects of the "American-valuation" provision of the bill. They were framed to avoid bias. Over 300 questionnaires were sent out. Of this number, 71 brought replies—a little over 20 per cent. These replies represent 23 States, 8 of which are in the Central West. No difference is apparent in the judgment of economists in the various sections. The poll on the several questions submitted is as follows:

Decrease imports: Yes, 69; no, 1.
Decrease exports: Yes, 68; no, 1.
Decrease revenue: Yes, 46; no, 5.
Increase depression: Yes, 58; no, 1.
Increase unemployment: Yes, 54; no, 2.
Increase cost of living: Yes, 67; no, 4.
Increase uncertainty: Yes, 56; no, 4.

XIX. There are only three ways in which Europe can meet her part of her indebtedness, namely, by the establishment of private credits, by the shipment of gold or commodities. It is difficult for Europe to discover the requisite securities as a basis for the necessary credits. Europe is not in a position at the present time to send us the amount of gold which would be needed, and we could not view further large imports of gold into this country without concern. The result, to say the least, would be a larger disarrangement of international exchange and disturbance of international trade.

If we wish to have Europe settle her debts, governmental or commercial, we must be prepared to buy from her, and if we wish to assist Europe and ourselves by the export either of food or raw materials or finished products, we must be prepared to welcome commodities which we need, and which Europe will be prepared, with no little pain, to send us.

Clearly, this is no time for the erection here of high trade barriers. It would strike a blow at the large and successful efforts which have been made by many of our great industries to place themselves on an export basis. It would stand in the way of the normal readjustment of business conditions throughout the world, which is as vital to the welfare of this country as to that of all other nations.

On December 9, 1921, the Dominion of New Zealand, which had not made a general revision of her tariff for 13 years, put through a reprisal bill aimed at the United States. That this bill is designed to prevent the use of American-made goods in New Zealand is obvious by the fact that it provides special inducements for the importation of goods from all the British dominions, including Canada, while putting obstacles in the way of American products.

New Zealand has spoken. Other nations will speak in their turn. Chairman Lasker wants the taxpayer to turn over a subsidy of hundreds of millions of dollars of American money to American shipowners and operators in order to guarantee them a profit on their operation of American vessels sailing without cargoes. The American tariff wall, which tells the American worker that it is protecting him, is actually destroying him by destroying foreign markets for the product of his labor. How can he go on making things for people who refuse to buy them and who pass laws designed for the purpose of making it impossible for them to be sold or shipped in empty vessels carrying the subsidized American flag?

The United States has a duty to itself as well as to the world, and it can discharge this duty by widening, not by contracting, its world markets.

XX. The advanced rates suggested by the packers and their allies at Washington, January 7 and again August 15, 1921, have a peculiar interest. In practically every case they exceed those established under the Payne-Aldrich Act, in which the principle of protection reached its high water mark, and the enactment of which was followed by an effective exhibition of protest on the part of the majority of the American people. I do not believe the sober judgment of the masses of the people of the Nation, or even the special class whose interests are immediately affected by this measure, will sanction a return, especially in view of conditions which lend even less justification for such action, to a policy of legislation for selfish interests which will foster monopoly and increase the disposition to look upon the Government as an instrument for private gain instead of an instrument for the promotion of the general wellbeing.

Such a policy is antagonistic to the fundamental principle of equal and exact justice to all, and can only serve to revive the feeling of irri-

tation on the part of the great masses of people and cause lack of confidence in the motives of rulers and the results of government.

I believe the above information to be absolutely true and in line with the most modern interpretation of economic principles in light of conditions prevailing, and I place these pertinent facts before you in the hope that they will prove helpful and receive due consideration.

Very truly yours,

HAROLD A. SINCLAIR.

THE RUSSIAN SITUATION.

Mr. BORAH. Mr. President, I want to put an article in the RECORD. I take a very few moments to call attention to its purport. This is an article by Frank A. Vanderlip, a gentleman whom we all know as an experienced banker and distinguished financier. He went to Genoa prior to the convening of the Genoa conference, with a view of studying the economic and financial conditions of Europe, and observing the work of the conference. Since the adjournment of the conference he has written this article as a review. It is well worth the study and consideration of all who are interested in the affairs of Europe, and particularly those who are interested as to what should be the course of this Government with reference to Russia. I call attention to a paragraph or two in the article which read:

The London experts' report laid down a fantastically impossible program of demands on Russia. Those demands included liquidation of the past Russian obligations and recognition of all financial engagements heretofore entered into by all the authorities of Russia—local, provincial, or on account of public-utility undertakings.

It proposed to impose on Russia the liability of all actual direct losses arising from breach of contract or otherwise suffered by nationals of other powers due to negligence of the soviet government or its predecessors.

It proposed to set up a mixed arbitral tribunal to determine questions relating to debts, contracts, and losses. It proposed to establish a Russian debt commission, nominated by the powers, which would have authority to issue new Russian bonds to holders of the existing State and other bonds and allocate to the service of this commission new specific taxes and royalties.

It proposed to control collection of such revenues, deal with the proceeds, and arrange the return of property formerly owned by nationals of the powers.

The London experts further proposed to reorganize the Russian judicial system on a system of judicial protection for foreigners as complete as that established in China.

It will be observed, Mr. President, that this statement, if it be correct, and I have no doubt it is, would have reduced Russia to a condition not dissimilar to that of Haiti at the present time, under the military rule of the United States. It proposed to establish a commission for the purpose of taking charge of its debts, of collecting its revenue, of reestablishing its judicial system, and practically administering the affairs of Russia. Of course, for Russia to have considered that seriously would have been to surrender the sovereignty of Russia wholly and completely. It would have amounted to a dismemberment of Russia. It would have turned the national wealth of Russia over to those so anxious to seize it.

Mr. Vanderlip further says:

The Russian delegates had to reckon with the domestic political situation. Politically, it was impossible for them to return to Moscow burdened with the acknowledgment of a 20,000,000,000 gold ruble debt, committed in a still semicommunistic order of society to return and protect the holdings of foreign investors, and committed to such abdication of national sovereignty in respect to their courts as the London conference proposed.

Logically, the Russians had a valid claim to offset the debts it was proposed to force them to recognize. If the soviet government was declared to be the continuous legitimate successor of the czarist government, and therefore bound to acknowledge the czarist debts, it was also the legitimate, continuous successor of that government in the fullest political sense and had the right to claim damages from the powers which had never declared war against it, but had furnished a vast amount of aid in credits, war munitions, and food to the enemies of the soviet government on every border.

The logic of this attitude was waved aside by the powers. The Russian's financial necessities were so extreme and pressing that Russia's representatives were prepared to forego their logic, acknowledge the old debts, and compensate for, if not restore, property to foreign nationals, provided in return they were granted credits.

To return loaded, not only with obligations, but with their hands empty of credits, was politically impossible.

I am going to have the entire article put in the RECORD, Mr. President, but I hope the terms which were submitted to Russia, and the propositions which were made to her, will be studied and considered by those who care to know why the Genoa conference has failed, and why they were unable to do business with Russia. These plans were indefensible. Either those who proposed them did not want them accepted, or if they hoped for acceptance, then it was in the further hope of destroying Russia. She would have been exploited unto death. It would have overthrown the Russian Government as it now exists, and would have left none in its place, except such suzerainty or government as the allied powers might have been fit to set up.

I ask to have the entire article printed in the RECORD in 8-point type.

There being no objection, the article was ordered to be printed in the RECORD, in 8-point type, as follows:

VANDERLIP REVIEWS GENOA; SEES UNITED STATES STAND ON RUSSIA AS PUSHING LOGIC TOO FAR—SAYS CONFERENCE IGNORED THE FIRST ESSENTIALS TO EUROPE'S ECONOMIC REHABILITATION, NOTABLY THE ADJUSTMENT OF WAR INDEMNITIES, YET MEETING WAS NOT A COMPLETE FAILURE—"BEST BRAINS OF EUROPE" MET MATCH IN BOLSHEVISTS—LIKENS OUR ATTITUDE TOWARD SOVIET TO THAT OF SURGEON WHO, DETERMINED TO CURE A TUMOR, LETS PATIENT DIE OF TYPHOID—LLOYD-GEORGE "PATRONIZING" TO SMALL NATIONS.

[By Frank A. Vanderlip.]

[Copyright (New York World) by Press Publishing Co., 1922. Special cable dispatch to the World.]

GENOA, May 20.—The time has come for a review of what has happened at Genoa and, what is more important still, to make a survey of the present position of Europe and attempt some forecast of the possible methods of coping with the situation as Genoa left it.

The verdict upon the Genoa conference will vary according to one's temperament, explanations, and outlook.

Whoever expected that out of Genoa would come a fundamental step toward economic reconstruction of Europe will be disappointed. It would be wrong, however, to declare Genoa has been altogether a failure.

As a matter of fact, it has been a preliminary coming to real grips with the problem of Europe, and in that sense shows results of great importance.

UNITED STATES STAND ON RUSSIA LOGICAL, BUT IS IT PUSHING LOGIC TOO FAR?

Genoa was foredoomed to failure so far as fundamental actual accomplishment is concerned.

The Cannes basis for the Genoa agenda prohibited discussion of reparations, disarmament, or intergovernmental debts. Discussion of those subjects is an absolute prerequisite to the real adjustment of the present European problems.

Premier Lloyd-George knew that perfectly well, but the attitude of France was implacable—opposed to a thoroughgoing discussion of Europe's problems. Premier Briand fell because, under Mr. Lloyd-George's charm, he agreed to anything approaching a thoroughgoing discussion.

Premier Poincare represented a more reactionary attitude than Monsieur Briand. Monsieur Poincare opposed the Genoa conference and placed France in an attitude of obstruction to the true policy of economic reconstruction. He refused to attend the Genoa conference, and, thus left, the French delegation was obliged to rely on telegraphic instructions.

NOT WELL THOUGHT OUT.

They received as many as 60 telegrams daily from Paris, and at no time have been free agents such as must compose a true conference.

The conference convened at Genoa without a well-thought-out program. An attempt at such a program was made at the London conference of experts, and the report of the London experts was the basis of action for Genoa.

That report occupied itself with four fields: The reestablishment of political relations between the European powers and Russia; the working out of financial, economic, and transportation provisions, all looking toward the general economic rehabilitation.

The London experts' report laid down a fantastically impossible program of demands on Russia. Those demands included liquidation of the past Russian obligations, recognition of all financial engagements heretofore entered into by all the authorities of Russia, local, provincial, or on account of public-utility undertakings.

SOME OF ITS PROPOSALS.

It proposed to impose on Russia the liability of all actual direct losses arising from breach of contract or otherwise suffered by nationals of other powers due to negligence of the soviet government or its predecessors.

It proposed to set up a mixed arbitral tribunal to determine questions relating to debts, contracts, and losses. It proposed to establish a Russian debt commission, nominated by the powers, which would have authority to issue new Russian bonds to holders of the existing state and other bonds, and allocate to the service of this commission new specific taxes and royalties.

It is proposed to control collection of such revenues, deal with the proceeds, and arrange the return of property formerly owned by nationals of the powers.

The London experts further proposed to reorganize the Russian judicial system on a system of judicial protection for foreigners as complete as that established in China.

RUSSIAN QUESTION THE HUB.

Thus the Russian question became the center of the Genoa conference. The "best brains of Europe" devised a scheme to be imposed on Russia.

The "best brains of Europe" fully met their match politically in the Russian delegates.

Russia was mad, but proved sincere in her madness. The powers were disunited, insincere, uncertain. The Russians proved to be preeminent logicians but bad diplomats. Logically, they had the best of the argument at every turn. Diplomatically, they were helplessly gripped by realities.

Russia is in a state of extreme economic disorganization. Its economic life can be saved and its health restored within a reasonable period only if the capitalistic world grants huge credits, temporarily feeds the famished people, rehabilitates the broken-down transportation system, supplies a huge nation with tools and manufactured articles, and gives the beginning to a stabilized currency system in place of the present bottomless morass of paper money.

HAD A LOGICAL CLAIM.

The Russian delegates had to reckon with the domestic political situation. Politically it was impossible for them to return to Moscow burdened with the acknowledgment of a 20,000,000,000 gold ruble debt, committed in a still semicommunistic order of society to return and protect the holdings of foreign investors, and committed to such abdication of national sovereignty in respect to their courts as the London conference proposed.

Logically the Russians had a valid claim to offset the debts it was proposed to force them to recognize. If the soviet government was declared to be the continuous legitimate successor of the czarist government, and therefore bound to acknowledge the czarist debts, it was also the legitimate, continuous successor of that government in the fullest political sense and had the right to claim damages from the powers which had never declared war against it but had furnished a vast amount of aid in credits, war munitions, and food to the enemies of the soviet government on every border.

ALLIED FRONT NOT UNITED.

The logic of this attitude was waived aside by the powers. The Russian's financial necessities were so extreme and pressing that Russia's representatives were prepared to forego their logic, acknowledge the old debts, and compensate for, if not restore, property to foreign nationals, provided in return they were granted credits.

To return loaded, not only with obligations but with their hands empty of credits, was politically impossible. The powers saw this, but found great difficulty in uncovering conceivable sources of credits in anything like the huge amounts that the broken-down economic situation of Russia demanded.

All through the negotiations the powers failed to present a united front.

England was working for the economic reconstruction of Russia at almost any sacrifice of political aloofness. Belgium stood for literal return of property formerly belonging to her nationals and refused to discuss compensation in lieu of actual return.

CRISES WERE PRECIPITATED.

France wanted acknowledgment of the old debts, but was prepared to give nothing in return, and finally cast in her lot with Belgium against England, demanding literal restoration of property to foreign nationals.

The conference became a continuous series of crises—crises not only between Russia and the powers but between the powers themselves. The Franco-British entente was endangered and left sadly strained. The conference was almost wrecked by the wholly unexpected conclusion of a treaty between Russia and Germany, secretly consummated in the very heart of the conference.

Mr. Lloyd-George met these crises with consummate tact and grim determination to hold the conference together. French determination to sacrifice none of her logical and abstract rights to contribute to the solution, either of the Russian question or any of the problems of reconstruction, made the task of the British Premier one of the greatest of his life.

SURPRISES ALMOST HOURLY.

There were surprise explosions of political bombs almost hourly. By a miracle of management on the part of Mr. Lloyd-George, aided at every turn by the policy of conciliation and good sense on the part of Italy, the succession of crises was passed.

The settlement of the Russian question has been no settlement at all, but merely a reference to them. The direct successors of the Genoa conference are the two Hague commissions, one composed of representatives of the powers, with the exception of Germany, appointed not at the conference but by the individual governments; the other, including representatives of the soviet republics. They are to meet at The Hague to attempt to find some common basis of action.

At the opening of the conference, Mr. Lloyd-George denominated the gathering not as an economic conference but as a peace conference. He had drawn in alarming terms a picture of peaceless Europe with unfixed frontiers from the Baltic to the Black Sea, every mile fraught with possible danger.

BENES SAW DIFFICULTIES.

He came to Genoa with the belief that the conference would be a failure unless something was done, even of a temporary character, giving insurance against the breaking out of hostilities.

He had in mind a simple 10-year pact of nonaggression in which every nation of Europe would unite in agreeing to recognize existing frontiers and not to invade its neighbors during the life of the pact.

This would have been a little less effective than article 10 of the League of Nations covenant but more practical, as it would embrace Germany and Russia.

The clear-sighted youthful Premier of Czechoslovakia, Dr. Edouard Benes, looking beneath the surface to the realities, saw that such a pact was impracticable. He declared frontiers that were only battle fronts could not be guaranteed, that the prerequisite of a nonaggression pact must be a British-French alliance, guaranteeing France against aggression by Germany.

KILLED NONAGGRESSION PACT.

He pointed out that a pact merely guaranteeing against military aggression would leave the door open for diplomatic aggression, that there would be a sabotage of treaties, and he believed, therefore, that Mr. Lloyd-George's simple proposition must be extended to guarantee observance of existing treaties.

He further believed such a pact, to be effective, must contain sanctions permitting defensive military activity.

Dr. Benes's logic killed the 10-year nonaggression pact and incurred the deep displeasure of Mr. Lloyd-George. Dr. Benes's usefulness, which up to that date had been great, thereafter became circumscribed.

The British Premier's attitude toward the smaller powers has at all times been patronizing. They have never been permitted actual full membership in the conference, but had to scurry about, only putting in a shy, momentary appearance here and there as conditions permitted.

PUT OVER TEMPORARY PACT.

Mr. Lloyd-George had himself compared them to a group of chameleons, venturing into the sunlight occasionally but disappearing instantly when a finger was pointed to them, although, as he said, they occasionally get momentary courage to stick out their tongues. The fact that he could conceive such a simile shows his attitude and illustrates the difficulties in full measure at the conference.

Some means for keeping the peace while European statesmen got their breath and prepared to take hold of reconstruction problems earnestly had to be found. With his incomparable adroitness, Mr. Lloyd-George found it.

He put into the agreement for The Hague commissions a temporary pact of peace under which, for a few months, all nations are binding themselves to respect de facto borders and promise to refrain from invasion. This is a scrap of paper, although a very large scrap of paper.

It undoubtedly has moral value and is an achievement for the British premier.

TWO POSITIVE MEASURES.

The foregoing outlines the political accomplishments of the conference. The remainder of its work was done by the financial, economic, and transportation sections. The reports presented are admirable statements of sound principles.

Going back of those reports to the procès verbal of many of the meetings of the various sections, held before they evolved them, one finds an atmosphere of insincerity, a disposition to accept general statements of principle, but at the same time holding reservations as to actually adopting them, which makes the codes formulated hardly worthy of the panegyric of Sir Lamar Worthington-Evans when he compared the financial resolutions to the Justinian Code.

There are two positive measures worked out. One is for holding a conference of central banks in London, and the other for the creation of an international corporation, participated in by seven nations, having an initial capital of £20,000,000 and designed to undertake constructive work in the backward eastern European countries.

SEES BID TO INFLATION IN UNITED STATES.

Both these enterprises have some sound reasons to recommend them. Neither is particularly promising of early results.

The essential part of the central bank program is to induce the United States to cooperate in its discount and gold policy to help Europe regain currency stability.

I have heretofore pointed out the danger of involving the Federal reserve bank, created to hold the reserves of 10,000 banks, in too close relation with European central banks. The European central banks present varying degrees of insolvency and will find great difficulty reaching an effective working entente.

I am convinced our huge gold stock presents a dangerous invitation to inflation in the United States; and diversion of a portion of that gold into a sound plan for helping stabilize European currencies would be not only extremely useful to all parties but tend to avoid the danger of a period of wild inflation in America.

ESSENTIALS NOT TAKEN UP.

The method of cooperation should not be such as to involve in alien entanglements the reserves of the American banking system. There should be considered a plan for creating an institution with a great gold capital, formed for the special purpose of cooperating with European central banks in their effort to stabilize currency.

There is no need of actual exportation of gold to Europe. The gold itself may much better remain in America. All that is necessary is that European central banks be put in a position to clear obligations between themselves through American gold funds, just as the Federal reserve banks clear mutual obligations through the gold fund deposited at Washington.

So much for what happened at Genoa. What is now likely to happen in Europe?

The great problem of economic reconstruction has not been grappled with at Genoa. The conference was prohibited from taking up essentials, through which alone the solution of Europe's difficulties can be reached.

NAMES "ESSENTIALS."

These essentials are, first, readjustment of the German indemnity in a form possible for the German nation to bear.

Second. Reduction of armaments so that by lessening military expenditures there will be some hope of balancing budgets in certain countries, while at the same time by such reduction of military forces the extreme danger of aggressive military policies and ambitious desires of European hegemony will become less dangerous.

Third. Readjustment and definite fixing of boundaries so that the future may promise some practical security. There are now boundaries ethnically, economically, or geographically unsound. It is impossible to draw a map of Europe so as to make true ethnic boundaries. One might as well try to draw a line across a checkerboard which would range all the white squares on one side and all the black squares on the other.

MUST FIND DEBT FORMULA.

Ethnic boundaries being impossible of attainment, there will have to be found some way to reach a measure of economic federation superimposed upon antagonistic ethnic divisions.

Fourth. There is at present in the world a total indebtedness by various Governments to various other Governments aggregating roughly $25,000,000,000. A formula for adjusting these intergovernmental debts into practical, feasible burdens must be found.

Fifth. Having reached the political and economic readjustment mentioned under the preceding heads it will then be necessary to find credits to reconstruct the transportation system of Europe. This will aid in stabilizing currencies and temporarily assist countries short of food supplies to feed themselves until the international exchange of goods has been so resumed as to make it possible for them to balance their foreign trade.

WHAT SHOULD AMERICA DO?

With this summary of aims made clear, the question arises as to what should now be America's rôle. All these aims can not be attained at once.

The most pressing matter is so to adjust the German indemnity as to free Europe from the constant fear of an upset which would be occasioned by a breakdown in German finance or by military invasion by France made in order to compel observance of the impossible terms of the treaty of Versailles.

America is brought into direct conference at the Paris meeting on May 28 of the reparations commission's committee to study the possibilities of an international loan.

There are two proposals in regard to the indemnity. Sir Robert Horne proposed to reduce the indemnity from 132,000,000,000 to 110,000,000,000 gold marks. He would place in a postponed, indefinite category 65,000,000,000, and have Germany fully acknowledge and attempt payment of interest upon 45,000,000,000 gold marks.

THE GERMAN LOAN PROPOSAL.

The Germans believe that is an impossible financial burden to assume immediately. Their counterproposal is to create a bond issue having a lien prior to all other reparations claims, specially secured by the customs, and to pledge the State to run undertakings and taxes on all large-scale industry and landed property.

They propose a loan of 4,000,000,000 gold marks, amortized at 1 per cent per annum, and devoted to the following purposes: 2,500,000,000 handed to the Allies as anticipatory of indemnity and fully covering indemnity payments for four years; 500,000,000 to stabilize exchange; 500,000,000 to meet claims arising out of impounded property of foreign nationals; 500,000,000 to meet earlier demands for service of the loan.

The 2,500,000,000 for anticipated indemnity payments would go to the Allies in the same proportion that the indemnity is now distributed—52 per cent to France. It is a portion of this loan that it is hoped will be placed in America.

AMERICANS TO BE WARY.

American investors will undoubtedly be slow to risk money in this investment unless Germany is placed in a position which makes her financial outlook reasonably promising. This means a more reasonable agreement must be reached regarding future indemnity payments and probably that the enormous domestic debt of Germany must be adjusted, certainly subordinated, to this new loan.

Germany had a pre-war debt of 5,000,000,000 gold marks. The State made subsequent loans of 66,000,000,000 paper marks, incurred a debt of 26,000,000,000 by purchase of the railroads, has 14,000,000,000 in obligations to Federal States and municipalities, and has outstanding 246,000,000,000 discounted treasury notes.

Vast as this sum appears, on the basis of 250 marks to the dollar it amounts to only $1,500,000,000.

If a sensible adjustment of future indemnity claims could be made, a prior lien and special security given the service of the proposed loan, it should be a proper investment in which Americans may participate.

URGES INDEMNITY ADJUSTMENT.

The first "if" is the most significant conjunction in the whole array of European languages. Will France agree to sensible adjustment of indemnities? Furthermore, will she agree in time to prevent financial catastrophe in Germany?

The first act in America's rôle ought to be to throw all the moral force she can on the side of a sane adjustment of indemnity burdens. By that I do not mean abatement of one jot of what it is possible to obtain, but I do mean that blind greediness should not be permitted to wreck Europe.

There are not impressive reasons for hoping France will act sensibly and promptly. Her logical mind, remembering the terrible injuries resting on the lever of the Versailles treaty, demands her pound of flesh.

A settlement must be made quickly to avoid the possibilities of invasion by France and the catastrophic danger of financial collapse of Germany, a collapse involving inability to feed her overindustrialized population.

COOPERATION NEXT NEED.

Slow starvation does not lead to radicalism but merely to physical deterioration. Sudden cessation of food supplied in Germany might lead to any sort of social or political upheaval, and Europe is in a condition quickly to breed contagious microbes.

Adjustment of German reparations, then, may be set down as first in importance in the things involved in America's rôle.

Next in importance is to get Europe into a reasonable spirit of cooperation and mutual adjustment. Personally, I believe this could best be accomplished at Washington by an international conference, which should undertake fundamental discussion of matter embraced in the five points laid down.

Europe desperately needs America's moral help. Left to itself, it is sterile of ideas, impatient of suggested sacrifices, suspicious, antagonistic, selfish. It needs regeneration of spirit.

CAN LOGIC BE PUSHED TOO FAR?

If the good sense and altruism of America could be centered in the direction of an international conference not prohibited from discussing anything that ought to be discussed—a conference that faced realities and forgot in some measure the claims of abstract justice and the deductions of a too severe logic—something worth while might be accomplished. It might be the beginning of the regeneration of Europe.

We now come to the subject of Russia. The American Government, rightfully I think, regards political contact with the communistic soviet government unfeasible until evidence is offered that it has fundamentally improved its character.

America has logically declined to participate in The Hague commission, that commission being a successor of the Genoa conference. Perhaps there is such a thing as pushing logic too far. There occurs to me an illustration parallel to the Russian situation.

F. A. VANDERLIP'S SIMILE.

Suppose an eminent surgeon, called by a sick patient, pronounced the patient suffering from tumor of the brain and decided the proper surgical course was to operate. The family doctor called attention to the patient's temperature of 103 and said the patient was also suffering from typhoid fever, so that the operation on the brain should be delayed until the fever was reduced. The logical surgeon insisted the tumor be operated upon, did so, and cured the patient of the tumor, although he died of typhoid.

Is not the American surgeon logically demanding removal of the brain tumor of the Bolshevist regardless of the danger of the fever of famine?

If we continue to isolate Russia, the famine area, which embraced 15,000,000 persons this year, may encompass 30,000,000 next fall.

Transportation is utterly demoralized. It will be difficult to distribute seed. Farm animals have disappeared. Russia is in the lap of the weather of the gods.

MAY NEED SANITARY CORDON.

Unless the season is miraculously good there will be more famine in Russia next winter than there was this. If we insist on the removal of Bolshevism from the brain of Russia, a logically correct insistence, Russia may die of the famine fever, although it dies cured of Bolshevism.

It may do something worse than die of starvation—it may overflow and contaminate Europe. As things stand, there is likely to be need of a sanitary cordon from the Baltic to the Black Sea. Can such a cordon be drawn tightly enough to keep out the microbe of typhus? Can the frontiers be guarded against a horde of migrating Slavs?

We must think of that when insisting on the complete removal of Bolshevism from the Russian brain before they infringe on our logical policy of nonintercourse.

We are right in demanding a government that merits our confidence before we recognize it. Too logical and complete insistence, however, may mean the death of Russia and the contagious contamination of western Europe.

URGES END TO SMALL LOANS.

The American surgeon will listen to the family physician who would have a little patience with Russia while she is nursed back to sufficient health to stand for the operation on Bolshevism.

There is one thing I am clearly convinced we could stop doing—stop abruptly and completely. That is the making of small loans to European States, cities, railways, and corporations. We should conserve our resources for a really effective effort.

If we will do that we can use those resources to force rearrangement of indemnities, help stabilize currencies, attack comprehensively the problem of demoralized transit facilities and give credit temporarily to feed countries which can not balance their foreign trade until international markets are restored.

Every small loan we make not only invades resources we can more effectively apply later but postpones realization by Europe of the true nature of its situation.

SEES FRANCE AS BOLSHEVIST.

I believe it possible for America to help eastern Europe comprehend the vital need for those countries sinking their prejudices and recognizing their economic unity. Something approximating economic federation is attainable, but attainable only through American help and direction. Europe's problem is economic, it is true, but underneath it is political, and underneath the political, spiritual.

France's effort to get indemnity out of Germany and the cost to get it out at the expense of a wrecked Germany is as foolish as Bolshevism. It is Bolshevism.

Bolshevism seeks to take the existing wealth, neglecting all care and reproductive energy. The reproductive energies of Germany should be saved. Only if they are saved can Germany ever pay a great indemnity. A great indemnity can not be secured by invading the Ruhr or insisting on the letter of the Versailles award. Only by adjusting the indemnity so it will be bearable can any considerable indemnity be secured.

UNITED STATES CAN LEAD MORALLY.

The question remains how Germany can be "bound over to keep the peace." There are those who fear industrial revival will mean war strength, and that it is better to ruin Germany economically than permit her the means of rehabilitation if rehabilitation means eventually military domination.

Such fear is, I believe, exaggerated. Germany lost much of her iron and coal. She is importing coal from England and iron from Newfoundland. The future industrial supremacy of Germany is impossible, except through cooperation with France. The danger of industrial rehabilitation leading to her becoming a military power is not great. The danger of the alternative—of a wrecked Germany—is portentous.

There will be less danger of Germany's living for revenge if she is treated with some fairness than there will be if there is an attempt to dismember and ruin her. Alsace-Lorraine no longer exists as a national ambition. Germany is satisfied to recognize those provinces as lost.

She will never be satisfied with her eastern boundaries as they are laid down. They are breeders of war. They map out the arrears of political instability.

Blind nationalism is the curse fallen on Europe. America can furnish moral leadership that will modify that nationalism. If we will furnish the right sort of moral leadership, we can do much to turn nationalism into rationalism. That is what Europe needs. Helping to attain it is America's rôle.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. LODGE. Mr. President, in regard to the paragraph which is now before the Senate, paragraph 39, page 19, I desire to offer a slight modification to the amendment proposed by the committee. On page 19, line 24, I move to strike out the semicolon and the word "and" and all of line 25 down to the period; that is, to strike out the words "and ossein, 10 per centum ad valorem."

I hope the committee will not object to that modification. It leaves the bill in this particular as it passed the House.

Mr. SMOOT. I hope the amendment to the amendment will be agreed to.

The PRESIDING OFFICER. Without objection, the amendment to the committee amendment will be agreed to.

Mr. JONES of New Mexico. Mr. President, I do not believe this is just the proper way to pass a tariff bill—for one Senator to come in and make a request and no explanation be made to it.

Mr. LODGE. It is in order to amend an amendment.

Mr. JONES of New Mexico. The amendment of the Senator is in order, of course.

Mr. LODGE. If it is in order, why should I not offer it?

Mr. JONES of New Mexico. There is no objection to the Senator offering it.

Mr. LODGE. I have not occupied the floor a great deal.

Mr. JONES of New Mexico. This is a very agreeable way of not only offering an amendment but having it adopted, when nothing has been said as to why the committee should have put it in or why it is being stricken out now.

Mr. LODGE. Is the Senator opposed to leaving this article as it was provided by the House, on the free list?

Mr. JONES of New Mexico. No, Mr. President; but——

Mr. LODGE. If the Senator is not opposed to it, why should he object?

Mr. JONES of New Mexico. I simply wanted to call attention to this very agreeable way of fixing up the tariff bill between Senators.

Mr. SMOOT. If the Senator from New Mexico had offered the amendment the committee would have been glad to accept it, because they agreed to it before. So there is nothing mysterious about it.

Mr. JONES of New Mexico. Nothing has been suggested, in the first place, as to why the committee offered any such amendment, and nothing has been suggested as to why it should now be stricken out.

Mr. LODGE. It seems to me that if the Senator does not object to its being stricken out, but thinks it well that it should be restored to its place on the free list, where it was in the bill as it passed the House, there is no necessity of wasting time to find out what reasons influenced the committee in doing it. We are all agreed that it should go there.

Mr. JONES of New Mexico. I am sure I do not know what induced the committee to put this amendment in to begin with.

Mr. LODGE. It may have been my amiable manner and the fact that I do not talk much on the bill.

Mr. JONES of New Mexico. I just wanted to emphasize the fact that such things are going on here for reasons which are not disclosed. I do not mean to insinuate that it is not a perfectly proper thing to do. On the other hand, I think myself, from all I know of the subject, that it should be on the free list.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended.

Mr. JONES of New Mexico. Mr. President, bearing upon the other items of the paragraph, we have just listened to the reading of a short brief prepared upon this subject by Harold A. Sinclair, and I desire to call attention at this point to a letter which was written by S. Isaac & Co., of New York City, to the Senator from North Dakota [Mr. McCUMBER], the chairman of the committee, bearing upon the same subject. It is dated April 13, 1922, and reads:

OFFICES OF S. ISAACS & CO.,
New York, N. Y., April 13, 1922.

Hon. PORTER J. McCUMBER,
Chairman Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SIR: The signer has just read the rates proposed by your committee on gelatin and glue, Schedule 1, paragraph 39, and is utterly astounded at the rates which you propose levying. Should these rates be levied they will undoubtedly defeat the purpose of your bill, at least in the glue and gelatin line, by absolutely prohibiting all importations of both of these articles.

As an instance we would refer you to two of our former customers, Messrs. Parke, Davis & Co., of Detroit, Mich., the largest manufacturers of pharmaceutical preparations in the world, and Messrs. Eli Lilly & Co., Indianapolis, Ind. Prior to 1915 we sold to these concerns large quantities of edible gelatins for the manufacture of capsules, coated pills, etc., at prices ranging from 36 cents to 38 cents per pound.

During the war, owing to the fact that practically all of the factories which supplied us in France or Belgium were either destroyed or unable to manufacture, the price of similar domestic gelatins was raised by the domestic manufacturer to from $1 to $1.50 per pound to these concerns, and they were compelled to pay these prices up to the present year.

We are inclosing you herewith copy of a letter written by the signer about a year ago, and every statement in this letter can be substantiated beyond question.

During the latter part of last year and the present year the prices of domestic glues and some of the lower grades of gelatins have fallen considerably, owing both to poor business and possibly a desire to influence your committee. It seems unbelievable that your committee should permit themselves to be influenced by the domestic manufacturers to impose such absolutely prohibitive rates, and if you will refer to your schedule you will find that never in the history of the United States have such rates, even under the highest protective tariff, been imposed on glues and gelatins.

The signer, who has been in business during the past 30 years, visits Europe every year and is well posted on foreign prices for these articles. Owing to the high prices existing abroad for all raw materials entering into the manufacture of glues and gelatins it is practically impossible for the foreign manufacturer to secure his raw materials certainly not lower and in many instances not as low as the American manufacturer of these articles.

As you probably are aware, the present rate on gelatins and glues costing over 25 cents per pound is 25 per cent, costing under 25 cents per pound the rate is 15 per cent, and on glues costing under 10 cents per pound the rate is 1 cent per pound.

While there is a possibility that owing to unsettled conditions abroad it may be necessary that we shall have a somewhat higher protection, the writer is firmly convinced that if you put a rate of over 25 per cent on glues and gelatins costing, say, over 15 cents per pound, you will, beyond question, prohibit the importation, and on glues costing, say, under 15 cents per pound, a duty of 15 per cent would certainly prove adequate to supply all the protection necessary and at the same time permit importation of this article.

As per my letter of January 15, 1921, to the chairman of the Ways and Means Committee, the glue and gelatin business of the United States is to-day practically in the hands of the packers and their affiliated concerns, the United States Leather Co., the Central Leather Co., the American Agricultural Chemical Co., and the American Glue Co.

You also are probably unaware that practically every one of the concerns enumerated above are in a position to secure the raw materials entering into the manufacture of glues and gelatins from their affiliated companies.

While I firmly believe that the rates existing under the present Underwood tariff bill are more than sufficient, in practically every instance, to give adequate protection to American industry, I am also convinced that if the other rates in your bill are proportionately the same as the proposed glue and gelatin rates, in the coming election—although I am a "lifelong Republican"—the Republican Party will unquestionably be swept out of office.

Assuring you of my sincere appreciation of your consideration, I am,
Yours truly,

S. ISAACS, Esq.,
By ALFRED F. ISLAN,
Member of Firm.

The same concern has written some other letters regarding this matter, inclosing another short brief upon the subject, and commenting upon the testimony of one Mr. George Upton, who appeared before the committee at the hearings. Before referring to that testimony, which I shall do at no great length, I desire to read the comments of this party regarding that testimony and his discussion in a very short way of the facts in the case. This communication is dated May, 1922, a very recent communication, and reads:

In spite of contrary comments and heated criticism, I firmly believe that the gentlemen who formulated the proposed tariff schedules were, as their chairman, Senator McCUMBER, said, animated by a desire "to lay the foundation for an era of nation-wide prosperity, to restore the buying power of the consumer, to protect the American producer, and carefully guard the interests of the great consuming public."

The molding of a nation's progress and prosperity is a great privilege, and one which I am sure no true servant of our Government would wittingly abuse; but I fear that in many instances the proposed rates are based on exaggerated and adroitly selected statements by commercial interests whose sole purpose is to create monopoly and exploit the "great consuming public."

Paragraph 39, schedule 1, of the proposed tariff act is a glaring instance of arbitrary rates which are the direct result of suggestions and misinformation presented before the Senate Finance Committee by Mr. George Upton, representing the National Association of Glue and Gelatine Manufacturers.

The following incontrovertible facts will not only refute Mr. Upton's statements before the Senate Finance Committee last August but will, I hope, prove conclusively that the rates on edible gelatin, as set forth in paragraph 39 of Schedule 1, are absolutely unreasonable and contrary to our Government's principle of equal and exact justice to all:

1. The Republican Party is pledged to write the tariff upon a basis of costs here and abroad, and not otherwise.

An attempt has been made, through the discussion of the bill thus far, to leave the impression that that was the principle which actuated the proponents of the bill in the Senate. I think we have discovered on many occasions that there were no facts or circumstances which would enable them to write duties upon any such basis, that they had to resort to many substitutes and to many subterfuges and unconvincing circumstances, in many cases resulting in mere guesses as to what the rate should be. At any rate, they have tried to do that in regard to some of the items. One would think that when facts are presented which would enable them to take those factors into consideration, the committee would at least give some heed to them when they are presented in such a very strong manner.

This writer proceeds:

The actual factors of cost in manufacturing edible gelatin are labor, coal, chemicals, and raw materials.

The writer then takes up these items. He says that the cost of labor is not over 20 per cent of the total cost. There is no evidence in the record that I have been able to find which states anything to the contrary that 20 per cent is the total labor cost. If there is any evidence to the contrary I have been unable to find it and would be very glad to be advised of it.

Coal: Cost of coal lower in the United States than in Europe.

That is a fact, as I am advised other than through this communication. Coal is one of the very essential costs of the production of this commodity and is cheaper in the United States than in Europe.

As to chemicals, he says:

Cost of sulphuric, muriatic acid, and peroxide of hydrogen lower in the United States than in Europe. Sulphuric acid, which is the chief ingredient from which muriatic acid is made, is available in the United States to-day at $10 per ton, as against a price in Holland of $12.64 per ton; thus it is infinitely cheaper in the United States than in Europe.

As to the raw material, he says:

Raw material for manufacturing edible gelatin costs the same the world over, and there is no duty upon such raw material entering the United States.

There are the four factors which enter into the cost of this commodity. As to labor there is an admitted advantage which amounts to 20 per cent of the total cost of the product in the foreign country. Of course, the labor over there costs something; just how much we are not advised, but it costs something. The whole item of labor here is only 20 per cent of the cost of the commodity itself. The item of coal enters into the cost of production, and we find that coal is cheaper in the United States than abroad. The chemicals which enter into the production are cheaper here than over there. As to the raw materials, there is no duty on the importation of the raw materials into the United States, and they come to the American market in competition with the world.

So, if a bill is to be framed upon the basis of the cost of production here and abroad, it seems to me that no one is able to justify the rates which are fixed in this paragraph. There is only one item as to which there is an advantage to the foreign producer, and that is the item of labor. That item constitutes only 20 per cent of the cost of the commodity. If it is admitted that the labor cost there is one-half what it is here, or one-fourth what it is here, these rates can not be justified, because the rates which have been fixed are 40 per cent not only upon the labor but the raw materials of all kinds, the coal, the chemicals, the raw products which are used. The rate is 40 per cent on the profits which the foreign producer might make. If these statements are at all true, if they approach the real situation, the duties can not be justified.

Mr. President, we have had some light thrown upon the methods of preparing the bill. This amendment which is prepared by the committee is substantially in accord with the suggestion and the request of the witness Upton, who has been so severely criticized in the communications which I have read and by the brief which was read from the desk.

Now, let us look at some of the other things which are furnished to us by the Tariff Commission. I have other communications regarding the matter, all to the same effect, but I shall not take the time to read them. I have here a statement of the imports prior to the war in 1914. The imports are a mere fraction of the production in this country—that is, under existing law and prior to the war. Since the war the imports have amounted to a mere nominal sum. They have not approached the imports which were coming in during 1914. Since the war we have been exporting these commodities to the rest of the world, and, of course, in competition with the world. I do not believe I will encumber the RECORD by reading all of the figures. The amount of imports prior to the war as compared with the production is a mere nominal matter. If the information which I have given is correct, I do not believe these duties can be justified.

I do not see why they should not remain just where they are under existing law. I do not care to discuss the matter any further.

The PRESIDING OFFICER. The question is on the adoption of the committee amendment on page 19 as amended on the motion of the Senator from Massachusetts [Mr. LODGE].

The amendment as amended was agreed to.

Mr. JONES of New Mexico. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from New Mexico suggests the absence of a quorum. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Glass	McCumber	Robinson
Brandegee	Gooding	McLean	Sheppard
Broussard	Hale	McNary	Shortridge
Calder	Harreld	Moses	Simmons
Capper	Harris	Myers	Smoot
Caraway	Harrison	Nelson	Sutherland
Colt	Heflin	New	Townsend
Culberson	Hitchcock	Newberry	Underwood
Cummins	Johnson	Nicholson	Walsh, Mont.
Curtis	Jones, N. Mex.	Norris	Warren
Dial	Jones, Wash.	Oddie	Watson, Ga.
Edge	Keyes	Overman	Williams
Ernst	Ladd	Page	Willis
Fletcher	Lenroot	Phipps	
Frelinghuysen	Lodge	Pittman	

Mr. HARRISON. I desire to state that the Senator from Wyoming [Mr. KENDRICK] is detained from the Senate on official business.

The PRESIDENT pro tempore. Fifty-eight Senators have answered to their names. A quorum is present.

Mr. SMOOT. Mr. President, on account of the illness of a number of Senators, and in pursuance of an agreement which was made between the Senator from North Carolina [Mr. SIMMONS] and the chairman of the Committee on Finance, the Senator from North Dakota [Mr. MCCUMBER], relative to the paragraphs covering extracted and expressed oils and vegetable oils, I shall have to ask unanimous consent that the remainder of Schedule 1 be passed over until to-morrow morning.

I now ask, Mr. President, that the Senate take up paragraph 202, the tile schedule, and agree to the two amendments which were not agreed to at the time that the senior Senator from Ohio [Mr. POMERENE] asked that those amendments be passed over.

The Senator from Ohio asked that the amendments referring to red or brown tile be passed over, thinking that the amendment of the committee inserting the words "red or brown" had some effect upon the industry to which his attention had been called. On the following day the senior Senator from Ohio informed the Senate that the committee amendment was exactly what he desired, that he had no further objection to its consideration, and expressed the hope that it would be adopted.

The PRESIDENT pro tempore. Is there objection to the request of the senior Senator from Utah? The Chair hears none and the amendment of the committee referred to will be stated.

The READING CLERK. On page 31, paragraph 202, in line 23, following the word "tiles," it is proposed to insert "red or brown, measuring seven-eighths of an inch or over in thickness."

The PRESIDENT pro tempore. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The PRESIDENT pro tempore. The Secretary will state the next amendment in paragraph 202.

The READING CLERK. On page 32, lines 9 and 10, the Committee on Finance proposes to strike out the words "brown in color, 3 cents per square foot, but not less than 20" and to insert "brown and measuring seven-eighths of an inch or over in thickness, 5 cents per square foot, but not less than 30."

The PRESIDENT pro tempore. The question is on agreeing to the amendment.

Mr. JONES of New Mexico. Mr. President, I merely wish to call attention to the fact that in that case the committee have made the duty even higher than anyone has asked for. The testimony shows that even interested parties did not ask for so large a duty.

Mr. SHEPPARD. In the Senate committee amendment I move to strike out the words "5 cents per square foot."

The PRESIDENT pro tempore. The amendment proposed by the Senator from Texas will be stated.

The READING CLERK. On page 32, line 11, in the amendment of the committee, it is proposed to strike out the words "5 cents per square foot."

Mr. SHEPPARD. I move to insert in lieu thereof "20 per cent ad valorem." I do not know whether or not that amendment may be offered at this time, because a part of the amendment is the text of the bill as it came from the other House.

Mr. SMOOT. The first amendment offered by the Senator from Texas is in order.

Mr. SHEPPARD. I wish to say that I shall at the proper time offer an amendment reducing the rate from 30 per cent to 20 per cent. In the meantime, however, I move that the words "5 cents per square foot" be stricken out.

Mr. ROBINSON. If the Senator from Texas desires to do so, he may offer his amendment now because of the peculiar language of the committee amendment. The committee have proposed an amendment inserting the words "brown, and measuring seven-eighths of an inch or over in thickness, 5 cents per square foot, but not less than 30." The Senator may move to insert in lieu thereof any language which he desires.

Mr. UNDERWOOD. Mr. President, it seems to me that the Senator from Arkansas is clearly right; that although the wording of the Senate committee amendment does not propose to strike out the numeral "30" it changes the entire sentence, and the sentence is here before us.

Mr. ROBINSON. Yes.

Mr. UNDERWOOD. And undoubtedly the Senator from Texas is entitled to offer his amendment now if he desires to do so.

Mr. ROBINSON. I think there is no doubt about it.

Mr. SMOOT. I think the Senators from Alabama and Arkansas are wrong. The 30 per cent ad valorem rate was put in in the other House. The only change that has been made by the Senate committee is to increase the limitation of 3 cents per square foot to 5 cents per square foot.

Mr. UNDERWOOD. Yes; the committee change the specifications and bring in the subject matter. Of course, if the Senator from Utah wants to delay this bill, that is another matter.

If you want to expedite the passage of this bill, I have not understood and do not understand to-day why the committee in charge of it ever asked unanimous consent to dispose of the Senate committee amendments first and then have the Senate go back and take up all the amendments and consider the bill all over again. If we were expediting this bill we would read it paragraph by paragraph and dispose of the paragraph in all its features when we got to it, as the Senate rules require; but, of course, if you insist on passing on the mere language of the Senate committee amendments and then at a later date force the Senate to go back and consider the paragraph again and debate the whole paragraph over again you are just doing double work.

Mr. ROBINSON. Mr. President——

Mr. SMOOT. I want to say to the Senator from Texas [Mr. SHEPPARD] that I was wrong in saying that the 30 per cent was put in by the House. That is an amendment of the 20 per cent, and the Senator can offer any amendment to it that he desires.

Mr. ROBINSON. That was my proposal. That was what I stated in the beginning.

Mr. SMOOT. I will say to the Senator that when I first looked at it I thought that was the provision put in by the House, but it was not. It was an amendment to the House text, and, of course, the Senator can offer any amendment to it that he desires.

Mr. ROBINSON. That is what I stated.

The PRESIDENT pro tempore. The Chair is of the opinion that the amendment proposed by the Senator from Texas is in order.

Mr. SHEPPARD. It was very easy to be misled, because all the language was not in italics, and that caused the misunderstanding.

The PRESIDENT pro tempore. If agreed to, the amendment of the Senator from Texas would leave the duty upon the article mentioned at 20 per cent ad valorem.

Mr. SHEPPARD. I ask for the yeas and nays upon my amendment. I want to say that this phase of the industry has made decided progress under the present Democratic rate of 20 per cent, and I can see no reason for the increase. I therefore ask for the yeas and nays.

The yeas and nays were ordered.

Mr. FRELINGHUYSEN. Mr. President, may the amendment of the Senator from Texas be stated?

The PRESIDENT pro tempore. The amendment to the amendment will be stated.

The READING CLERK. The Senator from Texas [Mr. SHEPPARD] proposes, on page 32, lines 11 and 12, to strike out "5 cents per square foot, but not less than 30," and to insert in lieu thereof "20," so as to read "20 per cent ad valorem."

Mr. HITCHCOCK. Mr. President, before the vote is taken I should like to have somebody who proposes this increase in rate explain why it is proposed. Like every one of the other schedules here, we have existing law, and no effort whatever is made to show why the increase is asked. Is there not any reason? This is an effort to increase the cost of building. Now, why is it made?

Mr. SUTHERLAND. Mr. President, the fact is that until the war we were not manufacturing quarry tiles in this country to any appreciable extent—in fact, practically not at all. During the war seven factories started up to supply the demand of our builders for this class of material. Heretofore it had practically all been imported from Wales and other parts of Great Britain. About 75 per cent of the cost of this material is labor. Since the war closed, and since trading is becoming more and more normal, they are beginning now to ship over to this country these quarry tiles. If that is continued, all of these plants which were started up during the war will have to be closed down. The question is with reference to this item, just as it is with reference to a great many other items, whether you are going to have that class of material manufactured in this country by American workingmen, or whether you are going to have it manufactured in Wales or other countries by foreign workingmen. In order to have it done by American workingmen paid a fair wage and under American standards of living, we must have a reasonable per cent of protection; and the rate proposed in the bill is thought to be very reasonable, though it is less than was wanted by those who are engaged in the industry. They asked for 6 cents per square foot and not less than 40 per cent ad valorem.

Mr. HITCHCOCK. Can the Senator state what the production in this country is?

Mr. SUTHERLAND. It amounts to several hundred thousand dollars per annum, and several millions of dollars have been invested in the industry since the war began.

Mr. HITCHCOCK. This duty is figured on square feet. Can the Senator state what number of square feet are made in this country?

Mr. SUTHERLAND. I have not those figures, Mr. President.

Mr. HITCHCOCK. On what basis does the Senator state that the importation is threatening the destruction of the existing industries?

Mr. SUTHERLAND. The figures of the importations in this book show that the importations from the other side are increasing, and those who are in the business and are watching the importations closely state that they are largely increasing; and they come in competition with this class of material, particularly on the eastern seaboard.

Mr. HITCHCOCK. Will the Senator give the figures? I know that the manufacturers claim that, but I should like to have him give the figures of importations.

Mr. SUTHERLAND. If the Senator has the figures there——

Mr. HITCHCOCK. It is up to the Senator. Here you are asking for an increase in the price of a necessary building article, and I say the importations are negligible.

Mr. SHEPPARD. I will say to the Senator that the whole importations under this paragraph of all kinds of tile and tiling are only about $85,000. The exports are about a million dollars during the last year for which we have the figures.

Mr. SUTHERLAND. The imports in 1914 were valued at $111,000. These goods were not manufactured at all in this country, as I understand, prior to about 1908, and the industry started up in a very limited way in factories in which this was a side issue. There are now one or two factories which are engaged entirely in this industry. Their entire output is limited to these quarry tiles. The figures given in the Summary of Tariff Information, on page 259, at the top of the page, show in 1918 importations of $28,220; in 1919, $22,290; in 1920, $46,994; and for nine months of 1921, $30,879. So you can see that the importations are increasing. They were more than twice as much in 1920 as they were in 1919.

Mr. NORRIS. Mr. President, I should like to ask the Senator if he can give the figures as to the amount of consumption, how much of this article is used here?

Mr. SUTHERLAND. Apparently those figures are not available.

Mr. NORRIS. I should think that $30,000 in the case of an article of this kind would be very small. If that is all the importation there is, it does not seem to indicate very serious competition.

Mr. SUTHERLAND. There is not any very large amount invested. I think altogether about a million and a half dollars has been invested in this industry since the war. There is not a tremendous sum of money invested; the consumption does not run into the millions of dollars; but it is just as vital to their business to be protected from foreign competition to this extent as it is for any other industry which was started up and which can only be continued if a reasonable degree of protection can be given. It is very vital to these people and to the people of this country.

Mr. NORRIS. Naturally they want to have a protective duty on their product; but to my mind the evidence is lacking to show what the Senator asserts to be a fact; that is, that these men will have to shut down. What I fear is that they are asking for protection upon a war basis. That is one of the dangers, it seems to me, that is in this bill in so many places. They probably base their calculations on a war basis, which I think we all ought to concede is not a fair basis upon which to base our calculations.

Mr. SUTHERLAND. The Senator knows that it was impossible to base this bill upon anything but the conditions that now exist as the result of the war. We expect that we will have to remodel this bill some day or other to agree with conditions that exist later.

Mr. UNDERWOOD. Mr. President, will the Senator allow me to ask him a question? What is the amount of ocean freight on these tiles per square foot? The basis of the tariff is fixed on square feet, and I should like to know what the ocean freights amount to.

Mr. FRELINGHUYSEN. I have that estimate. I think it is 3 cents per square foot. I understand that that is the freight, insurance, and customs expenses.

Mr. UNDERWOOD. Mr. President, it seems to me that the duty carried in this paragraph is entirely too high. Of course I am not one of those who respond to the proposition, advanced here all the time, that because of war conditions and the advancement of industry during the war we must meet it by putting up higher tariffs.

The first really high tariff that was levied in this country was after the War of 1812, largely relating to the iron and steel business. During the embargo that existed during the War of 1812, due to the fact that the merchant vessels were run off of the seas and there was no carriage, the iron and steel industry developed in America, and then those who had been making enormous profits during the war wanted those profits guaranteed against competition and insisted on the tariff that was written a year or two later. That lifted the industry on stilts, put it in an artificial position, and it took years and years for it to get out of that artificial position and come to a point where it could face the entire world, as it does to-day.

I do not object to some tariff being levied at the customhouse. I believe in a revenue tariff, and it may be that some tariff should be levied on these articles, but in this case it must be remembered that there is practically an embargo against foreign importation. I did not know what the rate was myself, and therefore I asked the question. The Senator from New Jersey [Mr. FRELINGHUYSEN], a member of the committee, informs us that the ocean freight and charges amount to 3 cents a square foot. I had the idea that it was pretty high, because I know that this is a heavy material, difficult of handling, and takes up a great deal of space.

I recall when the present tariff law was written and chicken fencing wire was put on the free list a great cry came up that

that was going to destroy this industry, but an investigation had been made in which it was shown that this chicken wire when rolled up has great bulk. It occupies a very large space in the vessel, takes up a great deal of cargo space, although it weighs but little, and therefore there was a heavy rate of freight on it, very much greater than there was on ordinary iron and steel products, and the freight rate itself was an embargo which prevented importations. When this commodity lands at the port it has to pay the domestic railroad freight to get back into the interior, to all competitive markets except those at the seaport, and the ocean freight rates alone, according to the statement of the Senator from New Jersey, amount to 3 cents a square foot.

I am satisfied that that in itself is a very great embargo if the Senator is correct in his figures, and I assume he is. I knew it must be a heavy rate.

Mr. FRELINGHUYSEN. I have in my hand some information from the association of tile manufacturers in the United States. It gives the foreign value, the freight, insurance, customs duty, and expenses for all tile, and it is uniform on every item. If I have the Senate's permission, I will put that in the RECORD at this point.

Mr. UNDERWOOD. I do not care to have it inserted in the RECORD in my speech, but the Senator can put it in when I am through.

Mr. FRELINGHUYSEN. Very well; I withhold it for the present.

Mr. UNDERWOOD. I have no doubt that the Senator is correct in reference to the freight rates. Three cents a square foot is a very large charge on any commodity, and unless there are extraordinary charges on a common commodity like tile it seems to me 3 cents a square foot would equalize all differences in charges; but the motion of the Senator from Texas is merely to reduce the rate suggested by the committee by about a third. They say not to exceed 30 per cent ad valorem, and he proposes to reduce it to 20 per cent ad valorem.

Mr. SHEPPARD. I say to the Senator that that was the rate allowed by the House. After careful hearing the House committee decided that 20 per cent ad valorem would be a proper minimum.

Mr. UNDERWOOD. I think the proposal of the Senator from Texas in reference to this item is certainly very reasonable.

The PRESIDENT pro tempore. The Senator from Texas has asked for the yeas and nays.

Mr. SHEPPARD. Mr. President, a question was asked a few moments ago as to what the total production under this paragraph was. The value of the total production for all tiles and tiling in 1920 was over $10,000,000. The exports were valued at a million dollars; the total imports at only about $85,000. Those figures speak for themselves. As to the particular kind of tiling under consideration, it may be said that the total production is about $1,000,000 per annum and that imports have a yearly value of about $30,000.

Mr. SUTHERLAND. My impression is that the figures quoted by the Senator from Texas relate to all tiles, and not to the so-called quarry tiles which are under immediate consideration.

Mr. SHEPPARD. The figures quoted by the Senator from West Virginia relate to all kinds of quarry tiles, so called, and do not refer specifically to this red or brown article, which is, in fact, an exceptional article, produced practically exclusively abroad, and not made to any great extent in America at all.

Mr. ROBINSON. Will the Senator from West Virginia yield for a question?

Mr. SUTHERLAND. Certainly.

Mr. ROBINSON. The Senator has challenged the accuracy of the figures quoted by the Senator from Texas respecting exports and imports. What is the amount of importation of this class of tile?

Mr. SUTHERLAND. I read the figures relating only to quarry tile. I have not the figures of production. It has been very difficult to get those figures, because all kinds of tile are lumped together in one set of figures, as a rule, not separating the so-called quarry tiles which are now under discussion. That is the reason why I suggested to the Senator that these figures probably included all the different kinds of tiling, and did not refer merely to quarry tiles.

Mr. ROBINSON. The correct figures as to the quarry tiles alone, of course, would be less than for all classes of tiles.

Mr. SUTHERLAND. Yes; they would be very much less. I think the Senator's figures were too high.

Mr. ROBINSON. What is the total value of all importations of tile of all classes?

Mr. SUTHERLAND. I placed in the RECORD awhile ago the figures showing the importations of quarry tile for the years 1918 to 1921, inclusive.

Mr. ROBINSON. What is the average value of the importations?

Mr. SUTHERLAND. In 1918 there were $28,220 worth imported; in 1919 there were $22,290 worth imported.

Mr. ROBINSON. That is a very small amount, is it not?

Mr. SUTHERLAND. In 1920 there were $46,094 worth imported.

Mr. ROBINSON. How do the importations of quarry tile compare with the exportations of the same commodity?

Mr. SUTHERLAND. There are practically none exported from this country.

Mr. ROBINSON. The importations are small?

Mr. SUTHERLAND. The importations are not large, but growing.

Mr. FRELINGHUYSEN. Mr. President, you can not take the whole tile production in this country and base your opposition upon that. As I understand this situation, the quarry tiles are special tiles, which are utilized for building purposes in mantle facings, wainscoting, bathrooms, and for floors. That, in comparison with the general tile industry of the country, is a very small portion of the entire industry. I think in my State there are several of these tile factories. There are a number in West Virginia, in Pennsylvania, and in Ohio, which have, as a part of their industry, the manufacture of this special class of goods. The question is not what the extent of the production is; the question is, How shall we properly and fairly protect it against foreign competition? That is the question, and upon that question we ask, What is the differential between the prices of the imported article and the American manufacturing costs?

The information I have is that the foreign values of these tiles average about 15.2 cents. That is the foreign invoice selling price. Added to that is the 3 cents for the freight, insurance, and customs, making the cost at the dock in this country 18.2 cents, which, plus 5 cents duty, makes the actual foreign selling price in the United States 23.2 cents. The comparable tiles of domestic manufacture costs 40 cents per square foot. Therefore you have the difference between 23.2 cents, under the Underwood tariff law, and 40 cents, the domestic price.

On another similar article you have the foreign value of 18.2 cents; with the Underwood rate added, 26.2 cents. The comparable domestic cost is 40 cents.

Then you have the cheaper tile, 11.4 cents. The foreign selling price in the United States is 19.4 cents. These are all based on invoices. The comparable American article is 25 cents.

On another item the foreign selling price in the United States is 31 cents, as against 57.5 cents for the comparable tile of domestic manufacture.

I know nothing about the production or the imports beyond the fact that this is for 1921, and in 1921 I think the importations were $30,000 for nine months. But the question which the committee and the Senate have to decide is the difference between the American selling price and the landing price of the imported article, and upon that the tariff is fixed.

Mr. SHEPPARD. Mr. President, did the Senator give the American selling price of the red or brown quarry tile?

Mr. FRELINGHUYSEN. It is 11.4 cents.

Mr. SHEPPARD. That is the foreign price?

Mr. FRELINGHUYSEN. Nineteen and four-tenths cents, plus the present tariff.

Mr. SHEPPARD. That is the American price?

Mr. FRELINGHUYSEN. That is the landing price of the foreign article in the United States, and comparable tile of domestic manufacture costs 25 cents.

Mr. HITCHCOCK. The Senator is not able to state the figures as to the production in this country?

Mr. FRELINGHUYSEN. Of these tiles?

Mr. HITCHCOCK. Yes.

Mr. FRELINGHUYSEN. No; but I am informed it is between one and two million dollars in value.

Mr. HITCHCOCK. So we are being ruined by the importation of about $30,000 worth?

Mr. FRELINGHUYSEN. Mr. President, I do not think that is the question. Everyone knows that this is a tremendous industry in Wales and in England, and in framing a tariff we have to frame it under differentials between the production cost here and abroad.

Mr. HITCHCOCK. If the present tariff were not high enough there would be a large import, would there not?

Mr. FRELINGHUYSEN. I take it that that is the menace.

Mr. HITCHCOCK. But there is not any importation?

Mr. FRELINGHUYSEN. There has been. The Senator is taking the war years. I do not know what the figures were for the period prior to the war.

Mr. HITCHCOCK. We got over the war three or four years ago.

Mr. FRELINGHUYSEN. That theory has been advanced. We are not over the war yet, as far as the industrial situation is concerned. The war still exists, as far as the difference in exchange values, credits, and things of that character are concerned, and we still have competition. The war is on between low foreign labor and standards of living in this country, which we want to protect for the American workingman.

Mr. HITCHCOCK. Yes; the war is on, and under that war we have imported only $30,000 worth, although we manufacture a million dollars' worth a year. Did the Senator say one million or several million?

Mr. FRELINGHUYSEN. I said one million.

Mr. HITCHCOCK. How many institutions are there?

Mr. FRELINGHUYSEN. I can not give the number which are manufacturing this product. I know in my State at the present time there are some 19 tile manufactories. I have the information here:

Quarry tiles are defined as "unglazed, vitrified flooring tiles made from natural clays." There are seven small plants now in the United States making this product. These plants are located all over the United States.

Mr. HITCHCOCK. This is the red or brown quarry tile?

Mr. FRELINGHUYSEN. Yes.

Mr. HITCHCOCK. It is what goes into cheap mantels in moderate-priced houses, and the Senator does not want the American rent payers to have moderate-priced tiles. Is that it?

Mr. FRELINGHUYSEN. Mr. President, I want them to have moderate-priced tiles, but I want them to be furnished by American manufacturers, not Welsh manufacturers or German manufacturers.

Mr. HITCHCOCK. The Senator says that of over a million dollars' worth which we are consuming a year, only $30,000 worth come in from the outside. Does he not want any competition at all?

Mr. FRELINGHUYSEN. Does the Senator want them put on the free list?

Mr. HITCHCOCK. Yes; I would like to have them on the free list. I think it is evident that the tariff is too high already, if only $30,000 worth comes in, but over a million dollars' worth is consumed. I ask the Senator the question, Does he not want any competition from abroad? Does he want an absolute monopoly? Does he want to throttle trade from abroad, and make it impossible for Europe to buy anything from us, as it will be if she is not able to sell anything to us?

Mr. FRELINGHUYSEN. Mr. President, I am perfectly willing to answer that question. I am in favor of the policy of a protective tariff for American industry and American labor. The Senator is a free trader. He wants to purchase all building material abroad, according to the theory advanced in his speeches. He does not want to protect American industry or American labor. I do. I want the American consumer to buy on the American market the products of American industry.

Mr. HITCHCOCK. I want to protect American industry, and I want to protect the man who has to rent a house, and whose rents now are exorbitant. I want to protect the man who is suffering now from the high cost of building as well as the high cost of living.

The Senator says he wants the American industry to have this protection, and yet he admits that the competition from abroad amounts to only 3 per cent. Out of $1,000,000 only $30,000 worth is imported. What degree of competition is the Senator willing to have? I ask him if he wants a monopoly and entirely to shut out foreign trade? He wanted that in cement, he wanted it in wood alcohol, and he wanted it in ink. Does he expect any foreign competition or does he want no competition from abroad?

Mr. FRELINGHUYSEN. I know that unless the American laboring man is protected and has employment he will not have any money to buy houses or building materials. I want the American laborer protected, so that his employment will be insured and assured. The Senator does not seem to care anything about the laboring man. He does not seem to care anything about promoting American industry. He is caring more about the importer and the middleman.

Mr. HITCHCOCK. I notice that the very same industries which are coming to Congress and asking for protection are to-day squeezing down their labor and trying to force them to accept lower wages. I notice that they have not any tender feelings toward their labor when it comes to the payment of wages, and they seem to forget that a very large proportion of the laborers' wages goes for rent. It has been developed here that there is a deliberate conspiracy on the part of those who produce the building materials of the country to keep up the high cost of living. That has been revealed by the investigation in New York, and Mr. Untermyer, in charge of it, has appealed to Congress to permit foreign competition to come in and help to regulate the monopoly, which is now making the cost of building a very serious problem in the United States.

This is not an enormous item, but it amounts to a few million dollars; the Senator from New Jersey says $1,000,000, but he objects even to a 3 per cent competition from abroad. Where would he put it? I ask him if he wants monopoly for the American manufacturer, and if he does not provide for monopoly what percentage is he willing to concede for the purpose of regulating these charges? Can the Senator answer that? Can he say with what degree of competition he will be satisfied if 3 per cent is too large?

Mr. FRELINGHUYSEN. I have stated time and again that my theory of a protective tariff is the difference in the conversion cost here and abroad, and that I would be perfectly willing to have the settled tariff policy, the fundamental policy, of this country based upon that theory. I think all our tariffs are practically estimates. The average life of all the tariffs that have ever been written has not been more than four years. I should like to see a scientific tariff if we could arrive at it. But at the present time in writing a tariff bill, as was done when the Underwood law was framed, the principal estimates that were made were built upon the theory of the difference in the selling price here and abroad. Upon that differential the tariff was fixed upon this item, and the figures before the committee proved conclusively that upon that basis it is a fair and reasonable duty. It will not bar entirely foreign importations. If there is any special article that people would like to utilize in building they can import it. Therefore, on the difference in the figures which I have put in the RECORD, this duty is justified and warranted.

I am told that the profits of the importers of tiling amount to 50 per cent, or 15 cents or more per square foot. Much of the costly imported tiles used by architects, because of the pleasing color, are very much sought after in building, and the importers add 50 per cent. I know in the china and earthenware items the importers figure 50, 60, and 75 per cent profit.

As I said before, and some of the Senators on the other side seemed very hilarious when I made the statement, their theory is to relieve the importer of this duty and protect the importer rather than American industry and the American laborer. That is where the whole tariff policy advocated by the Senator from Nebraska fails. It does not relieve the American laborer, the American working man, the American housebuilder. It simply helps the importer to charge high profits for the importations of building materials and china and pottery where we have to meet so much competition from Europe, particularly from England and Germany.

Mr. HITCHCOCK. Then the importers, by charging exorbitant profits upon their imports, impose a sort of tariff against the imports In other words, the Senator's argument is that the importers are able to compete with local concerns because the local concerns are charging the high prices. He is indicting the American manufacturer himself. He is charging that the American manufacturer of tile is keeping the price so high that the importer can pay the tariff and compete with him and charge an equally high price.

It is quite impossible for the importer to charge any greater price than the market will stand. If he is making an exorbitant profit, it is because the manufacturer is setting the level for him. The way to bring that down is to reduce the tariff? Even the present tariff duty must be excessive if we only import 3 per cent of a certain product into the United States.

As I have said, the importation is almost negligible. The Senator still has not answered my question. What degree of competition from abroad is he willing to permit? Does he insist upon a monopoly? If he will not tolerate 3 per cent of competition, what degree of competition will he permit? He does not answer whether he insists upon a monopoly, and yet he objects to 3 per cent of imports—$30,000 worth of imports to compete with over a million dollars of American products.

I wish to refer to the Senator's statement that this tariff is put on for the purpose of compensating the American manufacturer for the difference in the cost of labor in the United States and abroad. I do not see how a Senator can make a statement of that sort with a straight face. Going through the tariff schedules, one can find hundreds—and I have no doubt thousands—of cases in which the tariff is higher than the whole cost of manufacture or the whole cost of labor in this country. The Senator says it is only to compensate for the difference in

the cost of labor in Europe and in the United States. Yet there are many cases, as has been shown heretofore, in which the total cost of labor in the United States in producing a given article is not as much as the tariff which the Senator and his colleagues propose to impose on the American people.

Taking the schedules on an average, it is easy to see what the labor cost is in a given schedule or in a given article, or in all the articles in the schedule. In many cases the tariff imposed is actually greater than the whole cost of the labor; yet the Senator stands here and says it is to compensate the American manufacturer for the difference in the cost of labor. As a matter of fact, what it is for is to enable the favored American manufacturer to maintain his present prices. It is to enable him in some cases to increase his prices. It is for the purpose of freeing him entirely from foreign competition. He even begrudges 3 per cent of competition on certain articles.

On Saturday some Senators denounced the foreign banking interests and the importers, as the Senator from New Jersey has done to-day, for desiring to reduce the cost of the tariff for the purpose of their own profits. Senators have denounced the importers because they have appeared before the committee and sought to reduce tariffs or to keep them down. I wonder if Senators have looked at the other side of the picture. Do they know that there are millions of people in this country who are complaining to-day of the high cost of living, complaining of the prices which the retail merchants charge them at the stores in the United States? If the Senator will go out among the people he will find that the general popular complaint is that the retail stores are charging too much already for the things they are compelled to buy, and the fear in the minds of the American people is that by putting up these tariffs we are going to increase the prices of goods sold in the stores to the people.

Last Saturday the retail trade subdivision of the Lincoln Chamber of Commerce of Lincoln, Nebr., had a meeting. They considered the so-called Fordney tariff bill, and after a general discussion the following resolutions were adopted, and I ask the Senator from New Jersey to listen to them. Besides having a good many manufacturers in his State, he has some retail merchants. He had better think of them once in a while. Besides that, he has in his State millions of people who are buying goods of the retail merchants there. Here is what the Retail Merchants' Association of Lincoln, Nebr., resolved, and I have no doubt that merchants and retailers in other cities of the United States would adopt similar resolutions if they considered the subject:

Whereas the retail dealers of the city of Lincoln are unalterably opposed to unnecessary advances in the prices of commodities; and

Whereas higher prices will react unfavorably against the retailer; and

Whereas the proposed tariff bill under consideration in the United States Senate will inevitably cause an unnecessary increase in prices, due to the large increase in the tariff rates on nearly all classes of commodities: Therefore be it

Resolved, That the retail trade promotion subdivision of the Lincoln Chamber of Commerce, at a special meeting called for the purpose of considering the effects of a high tariff, request the board of directors of the Lincoln Chamber of Commerce to convey to the Representatives and Senators from Nebraska this resolution opposing the enactment of the proposed tariff bill now under consideration.

I tell the Senator from New Jersey that that resolution expresses the public opinion of the big Republican city of Lincoln, Nebr. It expresses the opinion of the retail merchants all over the United States, regardless of party. They are afraid of any act of Congress which is going to compel them to increase to their customers the price of goods which they are selling. They know that the inevitable consequence is going to be an uproar of complaint. I warn the Senator from New Jersey that in his efforts to promote the profits of the manufacturers in his State he is going to bring down upon his head the wrath of the people who will be compelled to pay these prices and the wrath of those who are going to be compelled to pay the rents due to the combination of a high tariff and a conspiracy of those who control the building materials.

The people of the United States who have now been under the stress of a depression for nearly two years are tired of having their pockets picked by excessive prices. They want to see those prices come down. They are coming down somewhat. They will come down more if let alone, but when the Congress of the United States deliberately goes to work to increase the cost of almost every article of consumption in the United States, the people who are burdened with the high cost of living at the present time are going to pay the penalty. I think if the Senator investigates among his people he will find that this expressed discontent of the merchants in Lincoln, Nebr., will be the expressed discontent of merchants all over the country, because it will antagonize their customers and injure their business.

Mr. SHEPPARD. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. UNDERWOOD. Mr. President, before the vote is taken I wish to recapitulate for a moment. This is one of the important commodities which, as the Senator from Nebraska [Mr. HITCHCOCK] has stated, which go into the cheaper homes of the American people to beautify them and to make them comfortable. We have the line very clearly drawn in this item as to where we stand. I have no hope of convincing the Senator from New Jersey [Mr. FRELINGHUYSEN], because he construes a protective tariff bill—though he has not said so in so many words—as being a tariff that excludes competition from abroad and gives a monopoly to the American producer; but his figures as to this item clearly show the Senate what is being done in this case.

There is no use in calling Democrats free traders so far as this item is concerned, for the proposal of the Senator from Texas [Mr. SHEPPARD] to reduce this 30 per cent rate to a 20 per cent rate is a very modest and moderate reduction.

Now, let us analyze this proposition just for a moment before we vote. The Senator from New Jersey is a member of the Finance Committee and helped write this bill. A large portion of this commodity is produced in his State; tiles are manufactured in his State; he is supposed to know what he is talking about; and I have no doubt that his advice and suggestions carried the greater weight in the Committee on Finance in increasing the House rate to the extent proposed. It is admitted in this case by those in charge of the bill that the domestic production is $1,000,000 a year—I think it is greater than that; but, at any rate, we will accept that statement—while imports are only $30,000. As has been said before, 3 per cent competition from abroad can not ruin any industry.

The Senator from New Jersey has stated—and he has read the figures; he has been very candid, very kind to us in giving us a clear expression of the situation—that the American price is something like 25 cents per square foot. Mark you, that is the American wholesale price, which, of course, includes the profit of the manufacturers, and it may be an intermediate profit, before it gets to the wholesale dealer. Then he gives us what the import price is, including cost of freight and other charges. He then says that the tariff rate of 5 cents a square foot was levied to equalize the condition between the wholesale selling price and the cost of importation at the customhouse. He has not included on the import side any profit, although he says the importers get a large profit; but in making his comparison of the wholesale selling price he has of necessity included the manufacturer's profit; and he wants an average rate that will not only equal the cost of laying the goods down in this country without any profit but he wants it to be high enough to equal the cost of production here, together with the wholesale profit of the American manufacturer.

What does that mean? It can mean but one thing: That if we adopt his suggestion—and he has written this rate, of course—we are adopting a policy that we are going to exclude importations of this article from coming into the country. That is the issue in this case. The Senator and his colleagues can not hide behind the wall and say that we are proposing to do something radical by the amendment of the Senator from Texas; that we are rushing to free trade; but the Senator from New Jersey is insisting on writing a tariff rate whereby the imported article will be charged a sufficient rate of duty to equalize the cost of production here and the profits before we will allow the importer to get a cent of profit; which means a prohibitive tariff wall; it means exclusion. We are going to have a record vote; here is the issue, and I wish to see how the parties in this Chamber divide on the question.

Mr. SUTHERLAND. Mr. President, I will say in reply to the Senator from Alabama that he is certainly mistaken in saying that these tiles go exclusively into the poorer class of houses. The imported article sells in this country at from about 36 to 38 cents per square foot. This class of tiling goes into the expensive class of houses, and into the buildings, business and otherwise, which are finished up in a more or less pretentious and decorative manner. They do not, I repeat, go into the poorer class of houses.

In order to show that the result of the imposition of this duty, considered from the standpoint of a revenue measure, need not shut off importations, if that is what the Senator from Alabama is frightened about, I will quote some official figures.

Mr. UNDERWOOD. Mr. President, the Senator from West Virginia [Mr. SUTHERLAND] and the Senator from New Jersey do not agree in their figures. The Senator from New Jersey, who is temporarily in charge of the bill, gave an itemized account of the price of these tiles—it was read from the desk and will be in the RECORD in the morning—in which it was stated that the cost of materials amounted to 19 or 20 cents.

The Senator from West Virginia is now bolstering up his figures by showing that the cost of these tiles is 38 cents.

Mr. SUTHERLAND. That is the selling price.

Mr. UNDERWOOD. The Senator from New Jersey gave an itemized statement.

Mr. SUTHERLAND. The Senator from Alabama is mistaken. I referred to the selling price in this country.

Mr. UNDERWOOD. The Senator from New Jersey also stated that the American selling price was 25 cents. Now, if there are any tiles coming in at the price which the Senator from West Virginia names, and if we are making them and selling them at 25 cents at a profit, there certainly can not be any danger to the American manufacturer.

I think the Senator from West Virginia has merely selected some instance where tiling has sold extraordinarily high. Of course, I know that in certain instances tiling is quite expensive, but I think the Senator from New Jersey made the issue on the average kind of tile. I do not mean for the cabin, for there is no tile used in the cabin; but I mean for that class of American citizens who are fairly well to do and who want some decoration about their homes.

Mr. SUTHERLAND. The class of tiling that is particularly under consideration is one particular kind called quarry tiles.

The so-called Reynolds report gives reliable figures of comparatively recent date as to the value of importations in United States currency, the landing charges, insurance, and so forth, and the selling price of the foreign article in the United States, together with the selling price of the domestic article reported to be comparable. There are five different invoices listed. The first is of Welsh quarries or quarry tiles, 6 by 6 by 1 inch, best red. The foreign value of the imported article in that case is 17.6 cents; the landing charges, including freight, insurance, and so forth, amount to 6¼ cents; the rate of duty under the present law is 20 per cent, amounting to 3½ cents; the overhead and profit on landed cost, including duty, is 10.37 cents; and the selling price of the foreign article in the United States is 37½ cents per square foot. The selling price of the domestic article reported comparable is 22 cents a square foot.

Mr. UNDERWOOD. Now, will the Senator tell me how thick that tile is? Does the document show how thick it is?

Mr. SUTHERLAND. The document from which I am reading indicates they are 1 inch thick.

Mr. UNDERWOOD. Then those tiles are not embraced in this paragraph. I fear the Senator has not read the bill carefully. The paragraph refers to tiles measuring seven-eighths of an inch thick, while the tiles the Senator has been discussing are 1 inch thick. That is just what I thought. The Senator was referring to a tile that is not included in the clause about which we are talking.

Mr. SUTHERLAND. If the Senator will read the clause, he will see that it says, "measuring seven-eighths of an inch or over in thickness." That includes, of course, tiles that are an inch thick, or one-eighth of an inch over seven-eighths of an inch.

Mr. UNDERWOOD. I think the Senator is correct about that; I was mistaken.

Mr. NEW. Mr. President——

Mr. SUTHERLAND. I beg the Senator's pardon, but I have not finished. There are five other invoices listed, taken from actual imports. The next item covers red tiles 6 by 6 by 1 inch, the foreign value of which in United States currency is 12.6 cents; landing charges, 4.4 cents; duty at 20 per cent ad valorem, 2½ cents; overhead profit on landed costs, including duty, 16½ cents; and selling price of the foreign article in the United States, 36 cents. It will be noted that the foreign value in United States currency is 12.6 cents, while the selling price in this country was 36 cents per square foot. In other words, the article sold in this country for three times what it cost on the other side to obtain the article.

In the case of the next invoice listed the foreign value is 13 cents, while the foreign selling price in this market of the article, plus the additional charges for freight, duty, overhead expenses, and so forth, is 36 cents, while the comparable American article sells for 22 cents. The other invoices listed show a range of foreign value of 13 cents to 17.6 cents and selling prices of 36 cents to 37½ cents.

I will call the Senator's attention to the fact that there is an article included in this list which costs 5 cents more on the other side than for the other items, and yet it sells on this side at an addition of only 1¾ cents; that is, the increase to the consumer on this side is 1¾ cents. So the 5 cents may be added to all of these articles without a cent's worth of increase in price to the consumer, and the Government will get the additional revenue.

Mr. UNDERWOOD. If I understand the Senator, he has been quoting figures to prove that the foreign article compared with the American article is selling for a higher price than the American article. Did I understand the Senator correctly?

Mr. SUTHERLAND. That is largely true, because the articles go into the more expensive type of dwellings and are purchased because of considerations of taste regarding color, and so forth. Many people prefer to buy a foreign article for their homes rather than buy an American article even of the same or better value.

Mr. UNDERWOOD. Mr. President, of course we can not prohibit the American people from buying what they please unless they buy whisky or opium; but certainly for the tiling or decoration of their houses we are not going to send them to jail for buying an article which they want. To say that the American manufacturer is in danger and that we must levy this tariff rate because the comparable foreign article sells in this market at a considerably higher price than the American article is certainly a new argument to me as to why we should establish this prohibitive tariff.

Mr. NEW. Mr. President, I am compelled to leave the Chamber in about 30 minutes. For two or three days I have been seeking an opportunity to present an emergency matter for the consideration of the Senate. It is a matter which, I hope, will not encounter much opposition or prolonged debate. It refers to the increase of the taxes in the Philippines, with a view, of course, to increasing Philippine revenues. It is intended to meet a very real and pressing emergency there; and I have asked the chairman of the Finance Committee, in charge of the bill, if he would consent to the temporary laying aside of this bill in order that the measure to which I refer may be presented, at least to the point where we may see if it is apt to encounter much debate.

Mr. NORRIS. Mr. President, I should like to ask the Senator if he will not permit us to vote. I think we are ready. A roll call has been ordered, and if we lay aside this item and take it up again we shall have another debate on it. Everybody is ready to vote on it.

Mr. NEW. If we are ready for a vote, I shall, of course, defer my request.

Mr. UNDERWOOD. Mr. President, I concur with what the Senator from Nebraska has said. I suggest to the Senator from Indiana that we have about finished the debate on this item, and I think we had better vote on it, and not after an hour of debate on something else come back here and debate it over again.

Mr. NEW. If we are to vote on it, I withhold the request.

Mr. NORRIS. Let us vote.

The PRESIDENT pro tempore. The question is on the amendment of the Senator from Texas [Mr. SHEPPARD] to the amendment of the committee, on which the yeas and nays have been requested and ordered. The Secretary will call the roll.

Mr. WALSH of Massachusetts. May we have the amendment stated?

The PRESIDENT pro tempore. The amendment will be stated.

The READING CLERK. On page 32, lines 11 and 12, it is proposed to strike out "5 cents per square foot, but not less than 30," and to insert in lieu thereof "20."

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. DIAL (when his name was called). I am paired with the Senator from Missouri [Mr. SPENCER]. Being unable to secure a transfer, I shall have to withhold my vote. If at liberty to vote, I should vote "yea."

Mr. GLASS (when his name was called). I transfer my general pair with the senior Senator from Vermont [Mr. DILLINGHAM] to the junior Senator from Rhode Island [Mr. GERRY], and will vote. I vote "yea."

Mr. JONES of New Mexico (when his name was called). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED], and will vote. I vote "yea."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee. [Mr. MCKELLAR] to the junior Senator from Pennsylvania [Mr. PEPPER], I vote "nay."

Mr. WATSON of Georgia (when his name was called). I have a general pair with the junior Senator from Arizona [Mr. CAMERON], which I transfer to the senior Senator from Tennessee [Mr. SHIELDS], and will vote. I vote "yea."

Mr. WILLIAMS (when his name was called). I have a pair with the Senator from Indiana [Mr. WATSON]. Being ignorant of how he would vote, I must withhold my vote. If the Senator from Indiana were present, I should vote "yea."

Mr. WILLIS (when his name was called). I am paired for the week with my colleague, the senior Senator from Ohio [Mr. POMERENE]. I transfer that pair to the junior Senator from Delaware [Mr. DU PONT] and will vote. I vote "nay."

The roll call was concluded.

Mr. EDGE. I transfer my pair with the senior Senator from Oklahoma [Mr. OWEN] to the junior Senator from Oregon [Mr. STANFIELD] and will vote. I vote "nay."

Mr. STERLING. I transfer my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Maryland [Mr. WELLER] and will vote. I vote "nay."

Mr. COLT. Transferring my pair with the junior Senator from Florida [Mr. TRAMMELL] to the senior Senator from Pennsylvania [Mr. CROW], I vote "nay."

Mr. McCUMBER (after having voted in the negative). I transfer my general pair with the junior Senator from Utah [Mr. KING] to the junior Senator from Washington [Mr. POINDEXTER] and will allow my vote to stand.

Mr. JONES of Washington. The senior Senator from Virginia [Mr. SWANSON] is necessarily away, and I have agreed to pair with him for the day. Therefore I withhold my vote.

Mr. DIAL. I transfer my pair with the Senator from Missouri [Mr. SPENCER] to the Senator from Texas [Mr. CULBERSON] and will vote. I vote "yea."

Mr. HARRIS (after having voted in the affirmative). I transfer my pair with the Senator from New York [Mr. CALDER] to the Senator from Arizona [Mr. ASHURST] and will let my vote stand.

The result was announced—yeas 24, nays 36, as follows:

YEAS—24.

Borah	Harris	Newberry	Simmons
Caraway	Harrison	Norris	Stanley
Cummins	Heflin	Overman	Underwood
Dial	Hitchcock	Pittman	Walsh, Mass.
Fletcher	Jones, N. Mex.	Robinson	Walsh, Mont.
Glass	Myers	Sheppard	Watson, Ga.

NAYS—36.

Brandegee	Frelinghuysen	McCumber	Phipps
Bursum	Gooding	McLean	Rawson
Capper	Hale	McNary	Shortridge
Colt	Johnson	Moses	Smoot
Curtis	Kendrick	Nelson	Sterling
Edge	Keyes	New	Sutherland
Elkins	Ladd	Norbeck	Townsend
Ernst	Lenroot	Oddie	Warren
France	Lodge	Page	Willis

NOT VOTING—36.

Ashurst	Fernald	McKinley	Smith
Ball	Gerry	Nicholson	Spencer
Broussard	Harreld	Owen	Stanfield
Calder	Jones, Wash.	Pepper	Swanson
Cameron	Kellogg	Poindexter	Trammell
Crow	King	Pomerene	Wadsworth.
Culberson	La Follette	Ransdell	Watson, Ind.
Dillingham	McCormick	Reed	Weller
du Pont	McKellar	Shields	Williams

So Mr. SHEPPARD's amendment to the amendment of the committee was rejected.

The PRESIDENT pro tempore. The question now is upon agreeing to the committee amendment.

The amendment of the committee was agreed to.

ISSUE OF BONDS BY THE PHILIPPINE GOVERNMENT.

Mr. NEW. Mr. President, I now renew my request for the present consideration of House bill 10442, with the understanding reached with the chairman of the Finance Committee that I shall have to withdraw it if it gives rise to any very prolonged discussion.

Mr. ROBINSON. Mr. President, I have no objection to proceeding to the consideration of the bill. Being a member of the committee which considered and reported it, I have some familiarity with its provisions and purposes, and I will say to the Senator from Indiana that it will require a little time to discuss it. In my opinion, no great period will be consumed in the discussion of the bill, but it will be necessary to state the changes which the bill makes in existing law and the reasons for them.

Mr. NEW. I take it for granted, of course, Mr. President, that it will require at least a statement of the purposes of the bill, and, possibly, some questions may be asked; but I assume it will not take any considerable length of time. The facts are that by the provisions of this bill the Philippine Government is authorized to levy a tax up to 10 per cent of the total assessable value of the Philippine Islands, which are estimated at $740,000,000.

Mr. ROBINSON. Will the Senator permit an interruption?

Mr. NEW. Certainly.

Mr. ROBINSON. I do not think the Senator states the provisions of the bill correctly. I noticed in his statement, made prior to the last vote, that he said the same thing which he now repeats, namely, that it authorizes the tax up to 10 per cent. The Senator may have in his mind what the bill actually does, but the bill makes two changes in existing law, if the Senator will permit me to express my understanding of it.

Mr. NEW. I will be very glad to have the Senator do so.

Mr. ROBINSON. First, under the provisions of the law passed by Congress and approved July 21, 1921, there is a limitation of $30,000,000 on the amount of bonds which may be issued by the Philippine government, not taking into consideration friar-land bonds and certain other bonds of that government. There is a limitation in the existing law of 7 per cent of the taxable value of the property of the Provinces and municipalities on the amount of bonds which may be issued by them.

This bill expands the maximum authorization for the Philippine government to 10 per cent of the taxable value of the property of the government and expands the amount of bonds which may be issued by the city of Manila from 7 per cent to 10 per cent of the taxable property in the city of Manila.

The act of 1921, to which I have already referred, was intended to do what this bill does—afford financial relief from an emergent condition there as represented by both the American and the Philippine authorities. But it seems that General Wood and others who have studied the subject have concluded that that act did not go far enough. It extended the limitation on the amount of bonds which might be issued by the Philippine government from approximately $15,000,000 to $30,000,000, not taking into account the classes of bonds which are excepted and which I have mentioned heretofore, and this provision more than doubles the limitation now prescribed by law on the amount of bonds which the Philippine government may issue.

The legislation is urged by the Philippine government. The Philippine Legislature passed a concurrent resolution requesting Congress to expand these limitations, particularly those relating to the Philippine government, and the purpose of that, as set forth by General Wood, was to reimburse the United States for certain sums loaned, to reimburse certain funds for irrigation and other public works of a permanent character, and provide a currency reserve and a gold reserve.

The actual amount of bonds which may be issued by the Philippine government if this bill becomes a law, not excluding the Friar-land bonds and $10,000,000 in other bonds which are excepted from the limitations of the act, will be about $70,000,000. Is not that correct?

Mr. NEW. About $72,000,000.

Mr. ROBINSON. And the limitation now on the city of Manila is about $6,750,000. So that the maximum amount of bonds which Manila may issue if this bill passes will be about $12,000,000.

The relationship which this will bear to taxable values will still be comparatively small, and my investigation of the subject, in so far as I have been able to go into it, convinces me that the legislation is necessary.

Mr. NEW. Mr. President, I thank the Senator from Arkansas for the very admirable and accurate statement he has made of the purposes of the bill. As far as I had an opportunity to go, I think I stated the matter about as he did, up to the point where I left off.

Mr. ROBINSON. If the Senator will pardon me, the only statement he made which I think is not accurate is that the bill authorizes taxation up to 10 per cent of the value of the property, which I think is misleading. It authorizes a bonded indebtedness not to exceed 10 per cent of the taxable value.

Mr. NEW. If I was inaccurate or unfortunate in the manner in which I stated it I am sorry. Anyway, any doubt as to just what is meant is cleared up by what the Senator from Arkansas has said. In the consideration of the bill before the committee the committee offered an amendment which it thought was advisable at the time.

The PRESIDENT pro tempore. The Chair desires to remind the Senator from Indiana that the bill is not now before the Senate. The Senator from Indiana asks unanimous consent that the tariff bill be temporarily laid aside, and that House bill 10442 be taken up, with the understanding that upon the request of the chairman of the Finance Committee the consideration of the tariff bill may be resumed.

Mr. UNDERWOOD. Mr. President, just one moment. I am not willing to have bills taken up with any such understanding. There will be no difficulty about this bill, or other bills, as there was none this morning, but when the Senate takes up a bill and lays it aside temporarily, I do not propose to agree to unanimous consent that one Senator can withdraw the pending bill at his own pleasure and inject something else. We can either attend to business according to the rules or not. I do not think the consideration of this bill will take five minutes. If the Senator from Indiana will ask unanimous consent to lay aside the tariff bill and to take up his bill, I shall have no objection.

The PRESIDENT pro tempore. The Chair stated the request of the Senator from Indiana as he understood it.

Mr. UNDERWOOD. I ask the Senator from Indiana to modify his request so as to ask unanimous consent that the tariff bill be laid aside for the immediate consideration of House bill 10442; and if he does that, there will be no objection.

Mr. NEW. That is all right.

Mr. McCUMBER. I stated to the Senator from Alabama the other day that he would be given due notice if the Senator in charge of the tariff bill should agree to take up any other bill. That notice has not been given in this case, because the Senator from Indiana spoke to me just a moment ago and I stated to him that I would have no objection, provided we could get an immediate vote. Of course, that will give an opportunity to the Senator from Alabama or to anyone else to object on the ground that the notice which they were entitled to receive had not been given.

I appreciate the fact that with a bill like the tariff bill, which will require months to pass through the Senate, it will be necessary from time to time to waive the right of holding that bill constantly before the Senate and to yield for other bills which are important and which will not require extended debate. I shall try to accommodate Senators and try to give the notice requisite of the desire to take up those important bills. But I want to have it understood that if I ask that the tariff bill may be temporarily laid aside I can call it up again if what seems to me to be an unreasonable debate follows.

Mr. UNDERWOOD. Of course I know, and the Senator from North Dakota knows, that there are bills which must come up, but a single objection on this side will force any such bill to go to the calendar. When that is done, the Senator presenting the bill can move to take it off the calendar.

I am not going to agree to any understanding that when we let bills come up by unanimous consent one Senator can regulate the time of their consideration. There is no objection in this case. We have no desire to filibuster. If the Senator is willing to trust the Senate to take the bill up in the ordinary way, very well, we will take it up in that way. If he is not the bill can not be considered because I shall object.

Mr. McCUMBER. I will agree to that, with the assurance of the Senator from Indiana that extended debate will in all probability not follow. Of course, if it did, I would have to move to lay it aside and resume the consideration of the tariff bill.

Mr. UNDERWOOD. My remarks are not made specially in reference to this bill, but I do not want to have a precedent established. If we are going to lay the tariff bill aside, let us lay it aside temporarily in the usual way, and then, if the Senator from Indiana wants to take up his bill, I have no objection. I am satisfied it will be passed in five minutes. The Senator from Arkansas, who represents our side in the matter, has already said there is no objection to it. If the Senator from Indiana wants to take it up in that way, it is all right; but I do not want a precedent set that you can take up other legislation on terms. It is your legislation. You are responsible for it, and if you take it up, you take it up by our consent. You can not put terms on us as to how you are going to take it up. You must take it up in the usual way. I am not going to permit any precedent to be laid down here for terms in the taking up of bills you want to pass. You may ask unanimous consent to lay the tariff bill aside. My objection is not as to this bill, because it could have been passed in the time we have been discussing it.

The PRESIDENT pro tempore. Does the Senator from Indiana modify his request for unanimous consent?

Mr. NEW. I do. Is House bill 10442 now before the Senate?

The PRESIDENT pro tempore. It is not before the Senate. The Senator from Indiana asks unanimous consent that the tariff bill be temporarily laid aside and that the Senate proceed immediately to the consideration of House bill 10442. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 10442) to amend an act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for these islands," approved August 29, 1916, as amended by an act to amend said act approved July 21, 1921, which had been reported from the Committee on Territories and Insular Possessions with an amendment, to add a paragraph at the end of the bill, so as to make the bill read:

Be it enacted, etc., That the act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for these islands," approved August 29, 1916, as amended by an act entitled "An act to amend an act entitled 'An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for these islands,'" approved July 21, 1921, be further amended as follows:

That the proviso of section 11 of said act as amended be, and the same is hereby, further amended to read as follows:

"*Provided, however,* That the entire indebtedness of the Philippine government created by the authority conferred herein, exclusive of those obligations known as friar land bonds, shall not exceed at any one time 10 per cent of the aggregate tax valuation of its property, nor that of the city of Manila 10 per cent of the aggregate tax valuation of its property, nor that of any Province or municipality, a sum in excess of 7 per cent of the aggregate tax valuation of its property at any one time. In computing the indebtedness of the Philippine government, bonds not to exceed $10,000,000 in amount, issued by that government, secured by an equivalent amount of bonds issued by the Provinces or municipalities thereof, shall not be counted."

That for the purpose set forth in section 6 of the act approved March 2, 1903, entitled "An act to establish a standard of value and to provide for a coinage system in the Philippine Islands," the government of the Philippine Islands may issue temporary certificates of indebtedness under the conditions therein provided, but the amount of such certificates outstanding at one time shall not, after January 1, 1923, exceed $5,000,000.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

Mr. NEW. Mr. President, with reference to the amendment, at the time the bill was considered the committee inserted that amendment. Since that step was taken I have received the following cablegram from General Wood. It is addressed to the Secretary of War and by him transmitted to me as chairman of the committee. It is dated Manila, May 19, 1922:

Power to issue $20,000,000 certificates of indebtedness—

Which is the provision of the present law—

is a vital essential to our revised currency system. Permanent gold standard fund was fixed at an otherwise too low minimum, in view of this privilege. It is also a powerful potential force, strengthening the system. Proceeds can be used for no other purpose than to meet a temporary large adverse balance of trade, and are invariably repaid in gold in New York by normal trade movements.

Request you to use every effort to defeat proposed amendment. Herrick can give valuable assistance.

WOOD.

In view of that request of the Governor General and after full consultation with the members of the committee I ask that the Senate disagree to the committee amendment.

Mr. UNDERWOOD. May I ask the Senator from Indiana if the Senator from Arkansas [Mr. ROBINSON] understands the situation?

Mr. NEW. Yes, fully. I have had full conference with the Senator from Arkansas with reference to the matter, and he agrees absolutely with the course I am pursuing.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was rejected.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THE TARIFF.

The Senate as in Committee of the Whole resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. I ask that we may return to paragraph 204 on page 32. In lines 21 and 22, after the word "including," I move to strike out the words "weight of barrel or package" and to insert in lieu thereof the words "the weight of the container." That should have been changed in the original to correspond with the last clause of the paragraph.

The PRESIDENT pro tempore. The amendment will be stated.

The READING CLERK. On page 32, line 21, after the words "including," strike out the words "weight of barrel or package" and insert in lieu thereof the words "the weight of the container," so as to read:

Lime, not specially provided for, 10 cents per 100 pounds, including the weight of the container.

The amendment was agreed to.

LETTERS TO AND FROM THOMAS B. FELDER.

Mr. CARAWAY. Mr. President, I ask unanimous consent to have printed in the RECORD two letters that appear in to-day's News, one written by Seely to Thomas B. Felder, care Towne, Bailey, Felder & Thompson, Woodward Building, Washington, D. C., and bearing date October 18, 1917, and the other letter written by Thomas B. Felder to Leon O. Bailey, Hanover National Bank Building, New York City. These letters deal with the procuring of the commutation of sentence of Charles W. Morse. One is a letter written by Seely to Mr. Felder, commiserating with him because Morse had not paid his fee according to contract.

The other is a letter written by Thomas B. Felder to the gentleman whose name I mentioned, explaining the entire transaction of the procuring of the commutation of sentence. It

goes further than that. It tells that he understood that after the commutation had been granted, the then Attorney General, Mr. Wickersham, learned that fraud had been practiced upon the Government in procuring the commutation, and that it was the understanding of Felder that the Government had evidence that each time before Morse should be examined by the board of doctors to determine whether he was afflicted with Bright's disease, some kind of chemical was given Morse to make his kidneys bleed, and thereby deceive the doctors.

The letter goes further than that and says the reason Daugherty and Felder did not sue Morse when he failed to pay them the fee he had promised was because they, Daugherty and Felder, were afraid the then Attorney General, Mr. Wickersham, through President Taft, would set aside the commutation. He further says it would be very hurtful and embarrassing to him and to Mr. Daugherty, and that they had had all the notoriety in connection with this Morse case that they could stand. Further, also, they feared the President would revoke the commutation of Morse for the fraud practiced in forcing it.

Felder says more than that, and the significance of one article in the contract with Morse becomes apparent. In the contract with Morse, which was put in the RECORD Saturday and which Felder said on Sunday was genuine, they made Morse contract that he would submit absolutely to their suggestions; that he would acquiesce in whatever suggestion they might make.

I presume, in anticipation of the fact that they were to have him apparently almost die of Bright's disease, they thus made him agree that if they wanted him to be sick he would be sick.

That is apparently the significant reason for putting in that clause. This view is strengthened by the further fact that Felder said in the letter, which I may have unanimous consent to include in the RECORD—as it contains 6,000 words, I do not want to take the time of the Senate to read it—that when they agreed to get Morse a pardon or commutation for $25,000, they failed at first. He and Daugherty then went to the penitentiary and told Morse that they had failed. However, they said the President had stated or the Attorney General—I do not recall which, but the letter will show—that just before his term expired they might come back again and there might be a different result.

When they told Morse that he was very much disturbed. He said:

> If you will get me out of here, I will give you $100,000.

He made that promise, as Felder said, in the presence of a witness. In addition to that, he added a rather vague expression, "And I will make you both rich." Felder says:

> As we talked I thought I noticed that Morse was not looking as strong as he did the first time I had seen him.

So they went to the office of Dr. Fowler, who had been the physician at the penitentiary when Morse came, and asked him what Morse's condition was when he came. Fowler looked at his record and said:

> My examination when he was first admitted convinced me that he had incipient Bright's disease, and that it was a progressive kind, and with mental anxiety his condition would be aggravated.

With this "cue"—and the language is Felder's—Daugherty and Felder came immediately to Washington and saw Taft and Wickersham, the Attorney General. They got from them a promise that if an examination should show that the life of Morse was endangered by confinement he would be released. They returned to Atlanta and got a board of doctors, who examined Morse but did not find anything wrong with him or anything serious. Then they got a board of Army doctors and had Morse examined. Those doctors "found" he had Bright's disease and was in a very "precarious condition."

Just after that occurs the rather significant statement that Felder made in 1917, when he wrote this letter, that—

> We understood the department has since got hold of evidence that each time before Morse was examined by this board of experts that he took either soapsuds or some kind of chemicals that made his kidneys bleed, and therefore fooled the experts.

Here is another significant circumstance: Felder here says that as soon as he heard that the department had gathered this evidence after Morse had been released he communicated with Mr. Daugherty, and Mr. Daugherty and he met the sons of Morse at the Willard Hotel in Washington. The sons agreed to pay an additional fee if they—Daugherty and Felder—would keep the department from setting aside the commutation; that he and Daugherty went to the Attorney General, that they also went to the President, to persuade them, and I think possibly did finally; that since the commutation had been made the President had no power to revoke it or modify it; that it was a final transaction. He said the Attorney General wanted him to furnish a brief, and he—Felder—went to Atlanta and worked a week and prepared a brief. He then came back and submitted it to the Attorney General, Mr. Wickersham, and Mr. Wickersham said:

> Well, if I decide to do anything in this matter, I will let you know.

Felder says:

> We were not unmindful of the damaging evidence the department had gathered showing that the commutation was granted by a fraudulent showing of Morse's condition.

Now, there is something else interesting about that. Felder in his letter to me said they hired Daugherty because he was such a fine lawyer. Here is what, in 1917, he said was the reason he got Daugherty:

> I read the record, studied the case thoroughly, got in touch with Mr. H. M. Daugherty, of Columbus, Ohio, who stood as close to the President as any other lawyer or citizen of the United States.

That is the reason why Daugherty got into the Morse case, not because he was a lawyer of such great ability, but because he possessed the confidence of the President of the United States. Now, Mr. President, Daugherty came into that case——

Mr. STANLEY. Mr. President, will the Senator yield?

Mr. CARAWAY. I yield.

Mr. STANLEY. Did this man Felder make the statement that Daugherty was one of the greatest lawyers in the United States and then encumber the record with statements as to his truth and veracity?

Mr. CARAWAY. Well, I do not think he ever testified to his veracity.

Mr. President, here is something else to which I call attention: Taft in 1914 told the truth when he said that this case was one that shook his confidence in expert opinion. Taft knew that he had been imposed upon. The Attorney General knew he had been imposed upon. The Attorney General was preparing to have the commutation of sentence revoked, but Felder and Daugherty came here and persuaded him not to do it. Here is the thing I complain of, Mr. President. Daugherty came into this case not because it needed a lawyer—it needed a doctor, Doctor Fowler. Daugherty came into the case because he had the confidence of the President of the United States. He abused that confidence; he and Felder got this man's sentence commuted. After the fraud was discovered they came back and engaged in argument, and submitted briefs to keep the President from righting a wrong. If Mr. Daugherty was a friend to the President as the President was a friend to Mr. Daugherty, if Mr. Daugherty had not had anything to do with this fraud, if he had only learned of it after it had been perpetrated, he would have been the first man to go to Mr. Taft and say, "Mr. President, I induced you to pardon Morse under the belief that he was afflicted with a fatal malady. I have discovered that he practiced a fraud on you and me. If there is any way for you to right this wrong, do it. I wash my hands of it right here." But instead of doing that they—Felder and Daugherty—engaged for an additional fee to prevent the Attorney General from asking that the President set aside the commutation of sentence.

If they were not parties to this fraud in its original perpetration, they made themselves parties to it by coming immediately to Washington and persuading the Attorney General not to ask the President to set aside the commutation and to right a wrong that had been committed; they were accomplices after the fact. But the cruel part about that whole thing is that Wickersham wrote a letter in 1915—and Mr. Taft did, too—both with mental reservations, pretending that no fraud had been practiced. Mr. Wickersham was quoted yesterday as giving out another interview in which he said it is all right; that the commutation was granted because of the state of Morse's health. He does not tell the country that he discovered while he was yet Attorney General that the commutation had been procured by fraud, although here is Felder's letter written in 1917 saying that it was and that the Attorney General had evidence of that fact. The cruel part about this last interview of Wickersham's is this, Mr. President: Mr. Wickersham says he never heard of Felder. Yet Mr. Felder says he is the one who did so much, and he wrote me that it was he, and not Daugherty, who got results, and whatever was wrong he did it, or if any credit should be given for it he is the man to whom it should be given. In his letter published to-day he says that he wrote the brief and made the oral argument; and yet Mr. Wickersham was so unkind yesterday as to say:

> I don't recall that I ever heard that Col. Thomas B. Felder was interested in the case. I never heard his name mentioned in it until recently.

Oh, the ingratitude of that statement, stripping from Colonel Felder the halo that has surrounded Felder all these days, that he was the man who did it!

Now, I want to show by Felder what an absolutely untruthful statement that is; of course, granting that Felder can tell the truth. Here is what Felder says in a modest way.

Explaining that he got mad at last, and he did not care if they sued Morse, that they had all the notoriety they felt they were likely to get, he says:

In addition to this I have heard whisperings and rumors to the effect that Morse had said things which reflect upon Mr. Daugherty and myself, such as that we "butted into the case," and that we rendered him no beneficial service; that we were "trying to blackmail him." I can not believe that he could have given utterance to any such expressions, because he knows, as do every member of his family—

I am not responsible for the grammar, Mr. President—

that these statements are false. He knows that we were approached by Hon. Fred L. Seely, who represented him, and that our contract was made as a result of negotiations with Mr. Seely. He knows, his family know, Mr. Bennett, who was then and is now the editor in chief of the Washington Post, knows that his release was secured by and through the efforts of Hon. H. M. Daugherty and myself and by no other individual, corporation, or group of individuals, living or dead, on the earth or beneath it, standing on their heads or on their heels, sitting up or lying down.

No other kind of lying is barred.

We have richly earned all that Morse agreed to pay, viz, the expenses, the $25,000, and whatever else is involved in his assurance, "I will make you both rich"—

Whatever he might have meant by that vague, uncertain term.

If I had time to go into it—and I do not want to delay the tariff bill—I could show you that after they had failed they came here to Washington and got in touch with Col. John R. McLean. That he called up his editor, Mr. Bennett; Mr. Bennett then went to the Attorney General's office and got Wickersham. From there the two went to see Mr. Taft. Then Mr. McLean got in touch with Mr. Taft on the telephone, and, after a prolonged conversation, Bennett came back with the commutation and handed it to them. He wanted it to be so plain that posterity would know how he was wrapped up in this case and how intertwined were his and Mr. Daugherty's activities, so for that purpose he set down here in a 6,000-word letter the whole history of the case—fraud and all.

He does say that neither he nor Mr. Daugherty were ever suspected of having any knowledge of this fraud at the time it was perpetrated, but he brags about the fact and demands the fee, that after it was ascertained that a fraud had been perpetrated they immediately got in touch with the Attorney General and through him kept the President from righting the wrong. Thus they made themselves a party to it by condoning and helping to carry out the aims of the conspiracy and protected the man who had gotten his commutation by fraud. They persuaded the Attorney General that the President had no legal right to revoke the commutation of sentence. They helped thus finally to consummate the fraud.

Mr. Felder said in his interview yesterday—and I am always amused by what he says, because it is picturesque—that I did not have any sense. He said no criminal would be big enough fool to hire me to get him out of the penitentiary. I will say, Mr. President, that no criminal ever did hire me to get him out of the penitentiary. My activities were on the other side; I put a good many better men than Mr. Felder in the penitentiary, but got none of them out. I am not criticizing; I am just talking about him.

Mr. President, this is an interesting letter, and rather than take the time of the Senate I will ask unanimous consent that it may be printed in the RECORD.

The PRESIDENT pro tempore. Is there objection?

Mr. MOSES. Mr. President, I have no intention of objecting to the request for unanimous consent for which the Senator has asked, for I know the Senator from Arkansas can proceed to read the 6,000 words into the RECORD.

Mr. CARAWAY. And he will.

Mr. MOSES. And, as the Senator says, he will do so. I think, however, the Senator has yielded the floor.

Mr. CARAWAY. Sir?

Mr. MOSES. In view, however, if the Senator has yielded the floor——

Mr. CARAWAY. I have not; and I am not going to yield it until my request is either granted or objected to.

Mr. MOSES. As I said before, Mr. President, I do not intend to object to the request for unanimous consent.

Mr. CARAWAY. Then let the unanimous consent be granted, and I will yield the floor.

Mr. MOSES. But will the Senator permit me to offer a few opinions?

Mr. CARAWAY. Certainly; I beg the Senator's pardon.

Mr. MOSES. I will say to the Senator that I shall not object, but, reserving the right to object, I merely wish to state, Mr. President, that my opinion is that the searching of ancient files and the use of bad grammar either in criticism or by quotation have nothing whatever to do with the real merits of this case. It is my opinion that the whole performance on the other side of the Chamber in this matter has not proceeded because the participants in it cared a rap about Morse or about Scaife or about Felder or much about Daugherty; but they are interested, as I believe, Mr. President, in another Attorney General of the United States, who served under the previous administration.

Mr. CARAWAY. Just a moment, Mr. President.

Mr. MOSES. The Senator yielded to me.

Mr. CARAWAY. No; I have the floor.

Mr. MOSES. Very well; if the Senator wants to proceed, I shall wait.

Mr. CARAWAY. I want to say that if that is an intimation that I have an interest in any other Attorney General, the Senator is absolutely not correct.

Mr. MOSES. So far as the Senator from Arkansas is concerned, I accept his statement, but there are those connected with the subject, Mr. President, who are furnishing the documents, who are searching the files, who, in my opinion, do have that interest and who know perfectly well that what the present Attorney General of the United States is now doing in connection with the Morse case and in connection with the other case which has been cited here—namely, the Bosch Magneto case—will seriously embarrass the former Attorney General of the United States in one case and a former Secretary of the Treasury in another, and that they are likely to find their records seriously impugned if the present Attorney General and the Department of Justice are permitted to go forward with their contemplated proceedings. In my judgment, Mr. President, this whole performance is gotten up in order to furnish a smoke screen to hide the misdemeanors of Democratic Cabinet officers who served under the last administration.

Mr. CARAWAY. Mr. President, I wish the Senator before he takes his seat would say who he thinks furnishes this information and where it comes from.

Mr. MOSES. I have no idea who furnishes it or where it comes from, but I know it must come out of somebody's private letter files, to which access can be had only by the men to whom the letters were written or somebody who was privy to the matter in the first instance.

Mr. CARAWAY. It is very courageous, Mr. President, to charge some one with wrongdoing and say you do not know who it is acting and have not even the remotest idea. It takes a lot of courage to do that.

I want to say that I do not care what the Attorney General of the United States intends to do. If the former Attorney General was as bad as this Attorney General, he ought to be prosecuted, and I am perfectly willing that it should happen. If the former Secretary of the Treasury is guilty of any wrongdoing, I want him prosecuted. I do not care who it is; I am not like the Senator from New Hampshire and the present Attorney General. I am not after Republicans as they say they are after Democrats. I have not any interest at all in who is going to be prosecuted or who is not, but I should like to say that if I did have any interest in it, instead of abusing the Attorney General I would go to see him, because I rather imagine we would get on better.

The Senator from New Hampshire knows how this matter arose. I have heard the statement over and over again that Attorney General Daugherty had received $25,000 for getting Morse out of the penitentiary, and I happened incidentally to mention that in discussing another matter. The Senator from Indiana [Mr. WATSON] immediately rose and told me that he knew, from personal conversation with the Attorney General, that the Attorney General had nothing to do with it. That left me embarrassed, and it became necessary, then, so far as I could, to find out if I had wrongfully accused the Attorney General and had charged him with an offense of which he was not guilty. I felt thus embarrassed because I know the Attorney General had told the Senator from Indiana that he did not have anything to do with it, or Mr. WATSON would not have so stated it. I know also he told another Republican Senator on this floor that he had nothing to do with the Morse case, or else that other Republican Senator joked with me when he told me that the Attorney General had told him he did not have a thing to do with this case. So I was curious to find the facts, and I find that he did have. Why did Mr. Daugherty deny it? I know now why he denied it, because I know that this evidence of Felder's, if believed by a jury, would convict both of them of a conspiracy to practice a fraud upon the Government. That little aside remark, that neither of them did know anything about the fraud at the time it was practiced, does not convince anybody. Felder it was who conceived the idea that Morse had something wrong with him, and Fowler was the doctor. They sought to confirm that impression.

In this connection, while I am talking about it, the same man Fowler was driven out, as I understand, from the depart-

ment because of some connection with the matter, but one of the first official acts of the present Attorney General was to make him, Fowler, the man who helped them to show that Morse had Bright's disease very bad when he did not, was to put Fowler back in his position as physician at the penitentiary at Atlanta, and he occupies that place to-day.

Whether Fowler said, "You know I helped you to put up a fraud on the Government, and you have to reward me or I will talk," or whether it was thought he would be a useful man at some other time, I do not know; but I do know that immediately after the Attorney General got into office he put Fowler back, and I know, if Felder is to be believed when he is talking against interest, that they knew Morse was released under a fraudulent representation of his condition, and everybody else now knows it. Taft knew it in 1914 when he wrote his little jeremiad. In bitterness he said that this Morse case—he did not use the name, but everybody knows the case he meant—shook his confidence in expert opinion. He knew that he had been wronged and imposed upon by his friend. We know it. Let me repeat that after they found out, if they did not know in advance, after the Attorney General had told them of the evidence, Felder says that "Daugherty and he were not unmindful of the evidence they had showing this fraud. We persuaded him not to act," and that afterwards they were afraid to sue Morse for their fee, for fear this fraud might come again to public notice.

It is a long letter, and it is an interesting letter.

The PRESIDENT pro tempore. Without objection, the communication will be printed in the RECORD.

The matter referred to is as follows:

WASHINGTON, D. C., *October 12, 1917.*

Hon. LEON O. BAILEY,
Hanover National Bank Building, New York, N. Y.

MY DEAR SIR: I am in receipt of your favor of recent date advising me that Mr. Grafton Johnson had turned over to you for collection or adjustment $25,000 of common and preferred stock in the Morse Securities Co., which I gave to him a year ago as collateral security for a loan which I obtained. You ask me to acquaint you with the facts of this transaction before you take the matter up with Mr. Morse and to tell you why interest upon these stocks has not been paid and why they were transferred to him.

To "begin at the beginning," permit me to say that after Charles W. Morse was sent to the penitentiary in Atlanta, Ga., under a 15-year sentence, and after his attorneys and family had exhausted every resource that they possessed or ingenuity could suggest, Hon. Fred L. Seely, the then editor and proprietor of the Atlanta Georgian, who had, as I understand it, a benevolent and charitable interest in the fate of Mr. Morse, and who had been for some years theretofore a client of mine, came to my office and stated to me that I had convinced him of my resourcefulness and my capacity to "do things," and while the Morse situation seemed hopeless, because the President had refused on the best showing that could be made either commutation or pardon, yet he desired me to examine thoroughly the record, and if, in my judgment, anything could be done, he would cause me to be employed in the case and would see that I was substantially compensated for services rendered in proportion to their value to Mr. Morse.

I read the record, studied the case thoroughly, got in touch with Mr. H. M. Daugherty, of Columbus, Ohio, who stood as close to the President as any other lawyer or citizen of the United States, interested him in the case, agreeing to divide with him any compensation that I might receive. We took the matter up with the Attorney General and with the President stating to them that the record disclosed that in refusing to extend Executive clemency reasons were given which were not borne out by the record and we requested that the case be reopened. We were informed by the President and the Attorney General that the act of the President rendered the matter a "closed incident" for the present; but if we would bring the matter to their attention again just before the term of office of the President expired in March, 1913, the matter would be reopened and perhaps a different action taken in respect thereto.

This decision was communicated by Mr. H. M. Daugherty and myself to Mr. Morse, who had agreed to pay $6,000 cash to cover expenses (this sum was paid), and $25,000, conditional upon our obtaining his release from the penitentiary. When this result was reported to Mr. Morse, he stated to us in the presence of the penitentiary guard that if we would renew our efforts to obtain his release he would pay us, in addition to the amount agreed upon, the sum of $100,000, and exclaimed, "Gentlemen, I will make you both rich if you will get me out of here."

At this consultative conference with Morse, I thought that I had discovered in him a very marked physical deterioration since the last conference I had with him, so after leaving the penitentiary I called upon Dr. A. L. Fowler at his office in the Candler Building (this doctor having been the prison physician at the date of the inception of Morse in the penitentiary) and asked him to inform me as to the state of Morse's health at the date of his inception in the penitentiary and thereafter during his incumbency as prison physician. Dr. Fowler referred to his reports and advised me that his initial examination disclosed casts in his urine which denoted incipient Bright's disease; that this disease was progressive; that the mental condition exercised a powerful influence over the physical and accelerated its ravages; and that he entertained no doubt that if Morse was left in the penitentiary for any considerable length of time that this disease would progress rapidly and result in his death.

With this cue, Mr. Daugherty and myself took up the matter de novo, We returned to Washington, discussed this phase of the case with the Attorney General and with the President. We received an intimation that if a physical examination of Morse by experts verified our suspicions that his continued incarceration would prove fatal, he would be released. A board of medical examiners was appointed at our request, an examination was made, and the three physicians reported that Morse's condition was not serious. Thereafter a board of military doctors was appointed who conducted an examination and thereafter reported that his condition was serious. The application for pardon or clemency "hung fire" several weeks. Pending developments, Morse was removed from the penitentiary to the hospital at Fort McPherson. During all of those weeks Mr. Daugherty and myself spent practically all of our time in New York, Cincinnati, and Washington working upon the case.

The day before the pardon was granted and as we were hourly expecting it some very unfavorable developments occurred resulting from undesirable newspaper publicity, and we requested those responsible for it to desist until things "quieted down." We had been expecting for a week or 10 days to get the order for Morse's release. It did not come; so on the day the release was granted we called at the office of Hon. John R. McLean, a warm personal friend of Mr. Daugherty's and an acquaintance of mine; also a friend of both the President and the Attorney General. Mr. McLean took the matter up actively. He called the editor in chief of the Washington Post, Mr. Bennett, over the phone, sent his automobile for him and had him brought to his office, where we had a long conference, going thoroughly over the situation. As a result thereof Mr. Bennett was dispatched to the office of the Attorney General, where he was joined by Attorney General Wickersham, and the twain called at the White House, and after a protracted conversation between the President and Mr. McLean over telephone, Mr. Bennett returned to the office of Mr. John R. McLean and delivered to us the order discharging Charles W. Morse, and the same was by us transmitted to the head official of the Atlanta Penitentiary.

A few days thereafter I called upon Mr. Morse for a settlement of his obligation. He seemed to be profoundly grateful and expressed his deep appreciation for what he was pleased to characterize our "splendid efforts in his behalf," stating that as soon as he returned to New York he would send us a check for $25,000, and would very shortly thereafter pay the $100,000; and acknowledged that he had said he "would make us rich," and this he proposed to do.

A few days thereafter he went to New York and instead of sending check for $25,000, or any other amount, he sailed for Europe for an indefinite leave of absence. As soon as I read in the press that Morse had gone to Europe without making any reference to his obligation to us, I immediately communicated with his son, Harry Morse, who had apparently directed his father's affairs, requesting an explanation. I received a very prompt reply to my letter stating that the condition of his father's health was such as to require his immediate departure for some mineral spring in Europe; that his condition was such as to preclude his transacting any business before his departure, but he knew his father would effect a settlement with us upon his return to the States. Immediately after Morse's departure for Europe there appeared in the press of the country numerous sensational articles to the effect that there was nothing the matter with Morse's health; that his release from the Federal penitentiary had been secured by fraud, and officials were urged to take immediate steps to have him remanded to the penitentiary.

An investigation was instituted, and Mr. Daughtery and myself, as Morse's counsel, were advised that steps would likely be taken to have Morse remanded to the penitentiary to serve the balance of his sentence. His son, Harry Morse, requested Mr. Daughtery and myself to meet him and his brothers in Washington for a conference. We met him and his brother, who then resided in Baltimore, at the Willard Hotel. We conferred at length in relation to the matter, and a decision was reached that we should get in touch immediately with the Department of Justice and forestall, if possible, any efforts to carry out the threat. We made an appointment with the Attorney General; discussed the matter with him at length. We took the position in this conference that an Executive order having been signed and promulgated commuting the sentence of the said Morse, that it was not within the power of the Executive to either change, modify, or revoke the same. That if said order had been obtained by fraudulent means and artful practices and the department desired to test this question, that it would be necessary to take Morse into custody and submit the question to a jury whose exclusive province it was to pass upon the issue of fact.

We were requested to submit a brief upon this subject. I returned to Atlanta and devoted several days to the preparation of an exhaustive brief upon the subject; returned to Washington and submitted the same to the Attorney General. In addition to this, while in Atlanta, I obtained additional evidence going to show that Morse was, in fact, suffering with Bright's disease.

In this last-mentioned conference with the Attorney General he indicated that no immediate steps would be taken, and that if later any action looking to Morse's return to the penitentiary was taken that we would be duly advised. We have never been reimbursed for the expenses incurred in connection with the services rendered as above set forth, and no effort of any kind or character has been made to compensate us for these, although we were assured by the Morse brothers at the Willard Hotel that these expenses and a reasonable fee would be promptly forthcoming.

Some weeks or months elapsed before Mr. Morse returned to America. When we received information through the columns of the press, and not from him, that he had returned I made several efforts to arrange a conference with him in New York. I finally arranged for a meeting, advised Hon. H. M. Daugherty, and we met pursuant to the appointment at his office in the city of New York. He stated on this occasion that he had no money or property that he could convert into money with which he could compensate us; that he deeply appreciated our tireless but successful efforts in his behalf, and that it was his desire to do something then for us which would enable us to obtain some funds immediately, and that as soon as he could "get on his feet" he could be depended upon to do the right thing.

He exhibited to us certain stocks in the Morse Securities Co., stating that they were owned by his sister, Miss Jennie Morse, who, upon his representation that he was very anxious to pay or secure us, had consented to allow him to use these stocks. I told him that we could not utilize the stocks unless they were valuable, and if valuable it seemed to us that he could raise the money on them as well or better than we could. He stated that the stocks had no market value but an actual value of par; that they would undoubtedly pay 6 per cent dividend, as I now remember, and perhaps more; that the stocks were undoubtedly worth par and it would only be a short space of time before par could be realized for the stocks, and as soon as it could be he would redeem the stocks. Indeed, he thought he would be able to redeem them within a very short time with the proceeds of the sale of some livery stable property that he either owned or was interested in and which was then in the hands of some real estate agent who was negotiating the sale of the property.

On this occasion Mr. Daugherty complained very bitterly of our treatment by Morse, became very angry and left the office before the negotiations were conducted. After he left Mr. Morse requested me to take the

stocks up to the McAlpin Hotel, where we were stopping, and to urge Mr. Daugherty to take a different view of the matter; to either accept the stocks in payment of our $25,000 demand or as collateral security to be redeemed by him at a very early date, stating that he would come by the McAlpin during the afternoon on his way home. I left his office about noon, went to the McAlpin, lunched with Mr. Daugherty and explained the circumstances to him. He positively and emphatically declined to take the stocks, either in payment or as collateral security, although I urged him to do so, stating that I had confidence in Morse's integrity and faith in his purpose to make good his numerous promises.

About 4 o'clock that afternoon Mr. Morse and his son, Harry, appeared and came to my room; Mr. Daugherty came in. An animated discussion followed in which Mr. Daugherty denounced Morse in unmeasured terms, declining emphatically to accept the stocks tendered either as collateral or payment. In this humor he left the room, and after some further discussion with Mr. Morse he asked me to hold the stocks until he could make some other arrangement in respect to them. I told him that I could not use the stocks, but he left the room and left them on my dresser; and when I left the city that night for my home, in Atlanta, Ga., I took the stocks along in my valise.

During the years that have intervened I have had some correspondence with Mr. Morse about these stocks. I have had two or three conferences with him about his obligation to us. He has never in writing or orally claimed or asserted that these stocks were given to us as payment of his obligation. He has always reaffirmed his promises to pay us and renewed his assurances to satisfy us in every particular when he got able to do it.

In the year 1914, just after war was declared in Europe, I called upon Mr. Morse in New York and urged him to do something for us, stating that I had bought a good deal of property, owed a good many notes that were maturing, and that I needed the money. In this conference he stated to me that he was "getting on his feet" and didn't think it would be very long before he could take care of his obligation to us. A little later on I found it necessary to raise a little money, so I hypothecated these securities with Mr. Grafton Johnson, the present holder, for this purpose.

In conclusion permit me to state that I have not been more aggressive in my efforts to force Morse to pay his obligations to us for the sole and simple reason that I have always felt apprehensive that if we brought suit or agitated the matter that immediate steps would be taken by the Department of Justice to secure an annulment of the Executive order and the reutrn of Morse to the penitentiary. I have not been unmindful of the damaging evidence secured by the Department of Justice in the prosecution of its investigations to ascertain whether or not a fraud had been perpetrated upon the Government by Morse in his efforts to obtain his freedom; and while I knew that if a fraud had been perpetrated that Hon. H. M. Daugherty and myself were not only not connected therewith but were not even suspected of being connected therewith, but that the disclosure and publicity would be disagreeable if not embarrassing to everybody concerned.

We were informed that the department was in possession of evidence going to show that after physicians were appointed to examine Morse and before they appeared on the scene that soap suds or chemicals or something would be taken by him to produce hemorrhage of the kidneys, and that as soon as the examination was over that the patient would recuperate rapidly. As I have stated, we have not brought suit or insituted any proceedings in the matter because both Mr. Daugherty and myself felt that we had had all the notoriety and newspaper publicity that we should in reason have in connection with this transaction. As a matter of fact, during the years that have intervened I have had frequent intimations that this matter would be reopened and I have always promptly taken steps to stop it. I have recently heard a well-authenticated rumor that steps are likely to be taken at any moment to have the matter investigated; that certain interests in New York were demanding that this be done.

I have made up my mind to use no further efforts to prevent it, having reached the conclusion that the investigation will not hurt but will help Mr. Daugherty and myself. So if the bringing of a suit by you to collect these securities will have the effect of precipitating matters, why, so far as I am concerned, they will just have to come. In a recent conference with Mr. Daugherty and myself we agreed that the fullest investigation will conclusively demonstrate that if fraud was committed we had no connection with it.

When we were employed by Hon. Fred L. Seely to represent Morse in this case, his situation was utterly hopeless. His family, friends, and lawyers had exhausted every effort to secure a favorable consideration of his case. If Hon H. M. Daugherty and myself had not been employed he would have been to-day in his grave or in the penitentiary serving his sentence. Through our efforts he was released. We were promised substantial compensation. We have never received it.

In addition to this I have heard whisperings and rumors to the effect that Morse had said things which reflect upon Mr. Daugherty and myself, such as that we "butted into the case" and that we rendered him no beneficial service; that we were "trying to blackmail him." I can not believe that he could have given utterance to any such expressions because he knows, as does every member of his family, that these statements are false. He knows that we were approached by Hon. Fred L. Seely, who represented him, and that our contract was made as a result of negotiations with Mr. Seely. He knows, his family know, Mr. Bennett, who was then and is now the editor in chief of the Washington Post, knows that his release was secured by and through the efforts of Hon. H. M. Daugherty and myself, and by no other individual, corporation, or group of individuals, living or dead, on the earth or beneath it, standing on their heads or on their heels, sitting up, or lying down. We have richly earned all that Morse agreed to pay, viz, the expenses, the $25,000, the $100,000, and whatever is involved in his assurance, "I will make you both rich." I don't want him to "make us both rich." I don't want the $100,000 he agreed to pay, but I do want the $25,000 that he contracted in writing to pay for securing his release from the penitentiary, and I do want compensation for services rendered him by engagement of his son, Harry Morse, for coming to Washington and presenting to the Department of Justice, through a brief filed and by oral argument, reasons why he should not be remanded to the penitentiary, and I propose to have this and have it at a very early date.

I have written at length so that you as attorney for Mr. Grafton Johnson, who holds these "soap wrapper" securities, which were represented to us as being worth par, may know all the facts.

I am mailing a copy of this letter to Charles W. Morse, at Pier 32, New York, and to Mr. Harry Morse, whose address I do not know but at the same address, copy to Hon. H. M. Daugherty, and a copy to Hon. F. L. Seely. I am not mailing a copy to Mr. Bennett, of the Washington Post, because I have recently gone over the matter with him and he confirms my statements in respect to what happened within his knowledge both in letter and in spirit.

If I can be of further service to you, command me. I beg to remain,

Yours very truly,

T. B. FELDER.

OCTOBER 18, 1917.

Mr. THOMAS B. FELDER,
Towne, Bailey, Felder-Thompson,
Woodward Building, Washington, D. C.

DEAR MR. FELDER: I have just received your letter of the 18th and carefully read the copy of the one to Mr. Bailey, and can only say that every statement in your letter with which I am familiar is substantially correct.

You know, of course, that I had no connection with, or knowledge of, what transpired after Mr. Morse left the prison.

To be specific: After Mr. Morse had tried every possible avenue of relief, I suggested to him that he employ you, explaining to him that your firm had been my attorneys for a number of years and that I believed you had unusual ability to assist him. Upon his request I took you to the United States Penitentiary and was present at your conference with him.

You are aware, of course, that I visited Mr. Morse for a long period at least once a week, and when his health broke down, I was there sometimes as often as every day. So I was familiar with his condition and there is no question but that he was not far from the end of his rope, nor has there ever been any question in my mind but that he would have died in a few more weeks. I did not know Mr. Morse previous to his going to prison, and was asked to visit him by a New York World correspondent who came down with him on the train. I made no effort to secure his release until I saw that his health was nearly gone. I made no appeal to the President nor to anyone with any political connections. It was my belief that if Mr. Morse deserved release, it should come through legal channels, and my activity in securing you was perfectly natural and businesslike, because you had been my attorney, and I believed he needed additional legal assistance.

I have never given expression to my feelings over Mr. Morse's failure to pay this debt, and I would dislike extremely to have to be brought into any controversy. As you know, I have seen very little of you since Mr. Morse's release—in fact, I have seen much more of Mr. Morse than I have of you, but if necessary I am prepared to testify at any moment that it is my belief Mr. Morse owes his liberation and his life to your's and Mr. Daugherty's efforts, and it is very unjust that you gentlemen should have been kept out of your remuneration.

You are well aware that my interest in Mr. Morse was purely a philanthropic one. I spent a lot of time and not a little expense in my endeavors to help him while his term lasted, but I have never permitted any remuneration of any kind.

I trust Mr. Morse will pay you, but after so long a time am frank to say that if he doesn't you should compel it, if possible.

Very sincerely yours,

F. L. SEELY.

Notations on left-hand margin: "Mailed the original to Leon O. Bailey, attorney at law, New York—T. B. FELDER."

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDENT pro tempore. The Secretary will state the next amendment of the committee.

The next amendment was, on page 32, line 23, after the word "including," to strike out "weight of barrel or package," and to insert "the weight of the container," so as to make the paragraph read:

PAR. 204. Limestone (not suitable for use as monumental or building stone), crude or crushed but not pulverized, 5 cents per 100 pounds; lime, not specially provided for, 10 cents per 100 pounds, including weight of barrel or package; hydrated lime, 12 cents per 100 pounds, including the weight of the container.

The amendment was agreed to.

The next amendment was, at the top of page 33, to insert:

PAR. 204a. Crude magnesite, five-sixteenths of 1 cent per pound; caustic calcined magnesite, five-eighths of 1 cent per pound; dead burned and grain magnesite, not suitable for manufacture into oxychloride cements, four-tenths of 1 cent per pound.

Mr. McCUMBER. I ask that the amendment go over on account of the sickness of one of the Senators who desires to be present when it is discussed.

The PRESIDENT pro tempore. Without objection, the amendment will be passed over.

The next amendment was, on page 33, line 7, before the word "ground," to strike out "if"; in line 9, after the word "including," to insert "the"; in the same line, after the words "weight of," to strike out "barrel or package" and to insert "the container"; in line 10, before the word "other," to strike out "or" and insert "and"; in line 11, before the word "valued," to strike out "if"; in line 12, before the word "valued," to strike out "if"; in line 13, before the word "valued," to strike out "if"; and in line 14, before the word "valued," to strike out "if," so as to make the paragraph read:

PAR. 205. Plaster rock or gypsum, crude, 25 cents per ton; ground or calcined, $1.40 per ton; white nonstaining Portland cement, 8 cents per 100 pounds, including the weight of the container; Keene's cement and other cement of which gypsum is the component material of chief value, valued at $14 per ton or less, $3.50 per ton; valued above $14 and not above $20 per ton, $5 per ton; valued above $20 and not above $40 per ton, $10 per ton; valued above $40 per ton, $14 per ton.

The amendment was agreed to.

The next amendment was, on page 33, line 16, before the word "of," to strike out "two-tenths" and to insert "one-tenth," so as to read:

Pumice stone, unmanufactured, valued at $15 or less per ton, one-tenth of 1 cent per pound.

Mr. HITCHCOCK. Mr. President, I should like to ask the Senator how that affects the present law? I understand that the present law is 5 per cent.

Mr. McCUMBER. Five per cent ad valorem.

Mr. HITCHCOCK. What does one-tenth of 1 cent per pound figure ad valorem?

Mr. McCUMBER. The present valuation, I think, is about $14 per ton. I am not certain of that. I shall have to look it up.

Mr. HITCHCOCK. As I have computed it roughly, it appears to be 20 per cent. The present law is 5 per cent, and the proposed specific duty would be 20 per cent.

Mr. McCUMBER. The imports in 1920 amounted to 10,379 tons, valued at $143,788, or $13.80 per ton. I gave it as about $14 per ton. That is very close to it, and that would be equivalent to about 15 per cent ad valorem.

Mr. HITCHCOCK. This is on pumice stone valued at $15 per ton or less. It is the cheapest sort, is it not? And we do not import any of the cheap sort, as I understand.

Mr. McCUMBER. On the contrary, I understand that the bulk of that which came in was of the cheaper character—that is, under the Payne tariff law, when we had an ad valorem duty.

Mr. HITCHCOCK. My abstract from the Tariff Report is that the imported material comes from the Lipari Islands, Sicily, and is a massive, finely grained, high-priced article, used for special work, while the domestic is much coarser, and is used in making cleansers, like the Dutch Cleanser; and the record of imports shows, as I have it here, that the imported article costs $15 a ton and over, whereas the domestic article is worth only $2 or $3 a ton.

Mr. McCUMBER. Take 1910: The importations of pumice stone, unmanufactured, valued at $15 per ton or less, were 3,967 tons, while that which was valued at over $15 per ton for the same year amounted to only 311 tons. The next year the amount imported valued at less than $15 per ton was 5,351 tons, while that valued at more than $15 per ton was 432 tons; and so all the way through, down to 1914, you will find that the cheaper material—that is, that valued at less than $15 per ton—constituted the bulk of the importations.

Mr. HITCHCOCK. How has it been since that time?

Mr. McCUMBER. Since the Payne law I am informed that they are not separated.

Mr. HITCHCOCK. Am I correct in the figures that the importations were 14,000 tons in 1920, 7,000 tons in 1919, 5,500 tons in 1918, 11,000 tons in 1917, and 11,000 tons in 1916?

Mr. McCUMBER. I will give it to the Senator. In 1918—that is, taking all of them—we imported 1,086 tons; in 1919, 5,234 tons; in 1920, 10,379 tons; and the first nine months of 1921, 1,906 tons. That is the last information that I have from the Tariff Commission's report.

Mr. HITCHCOCK. The Senator's figures show an even smaller importation than I had supposed. The production in this country—the domestic production—seems to run 30,000 or 40,000 tons a year.

Mr. McCUMBER. Yes; and in 1920, for instance, about one-fourth were imported, or about 25 per cent.

Mr. HITCHCOCK. The most of the figures the Senator read indicated quite a good deal below 20 per cent of those figures. I am asking why there is any need to multiply the present tariff three or four times, in view of the comparatively small imports?

Mr. McCUMBER. There is certainly a very heavy increase in the importations, and as they constitute about 20 per cent of the entire product it seemed to me that what is equivalent to about 15 per cent ad valorem was rather a light duty for the purposes of revenue.

Mr. HITCHCOCK. The present duty is only 5 per cent, and yet, under the 5 per cent duty, the imports have amounted only to a fraction of the consumption.

Mr. McCUMBER. But the American price, as compared with the foreign price, evidences such a spread that even the amount we have reported will not nearly make up the difference; but with the hope that there will be at some time in the future considerable reduction in freight rates, we hope that we shall be able to maintain the output in the United States.

Mr. HITCHCOCK. Is it not a fact that we export something like $2,000,000 worth of this article a year?

Mr. McCUMBER. I should have to look that up.

Mr. FRELINGHUYSEN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Nebraska yield to the Senator from New Jersey?

Mr. HITCHCOCK. I yield.

Mr. FRELINGHUYSEN. There are two types of articles under this item. One is the volcanic ash, which is not comparable with the imported pumice stone. The imported pumice stone is a very fine product, all of which is imported. We do not export any of it, and none of it is produced here. That is used for silver polishing and for similar purposes. The volcanic ash sells for from $2 to $4 a ton, while the imported pumice stone sells for from $12 to $18 a ton.

I think this is principally a revenue measure, but the protection is sought by some of the grinders of pumice stone who need a slight protection for that process.

Mr. HITCHCOCK. Now, the Senator has revealed exactly the condition that I realized existed. That is, the American production of this article is worth only from $2 to $4 a ton. The foreign article is the high-priced article, which sells for from $12 to $18 a ton; and yet, under the name of protection, you are increasing the tariff on an article which has not any manufacture in the United States.

Mr. FRELINGHUYSEN. No, Mr. President; that is not true at all.

Mr. HITCHCOCK. I repeat now exactly the condition: Of the cheap article, none is imported, and our producers need no protection for it. Of the high-priced article, none is produced in this country.

Mr. FRELINGHUYSEN. Mr. President, they are asking protection. If you were going to put in a duty representing the difference between the grinding of the pumice and the pumice stone, you would have to have more than one-tenth of a cent per pound. In fact, the House had two-tenths of a cent, which was reduced to one-tenth of a cent by the Senate committee.

Mr. HITCHCOCK. Did I understand the Senator to say that nobody is asking for protection on this article?

Mr. FRELINGHUYSEN. The western miners, in California, I understand, ask for it.

Mr. HITCHCOCK. I understood the Senator to say that none were asking for it; that it was purely a revenue measure.

Mr. FRELINGHUYSEN. I did not say that. The Senator probably knows as much about the Nebraska volcanic ash as we do. It is produced in his State.

Mr. CURTIS. Mr. President, I will state to the Senator that a large quantity of the cheaper article is produced in Kansas and Nebraska.

Mr. HITCHCOCK. Yes; I am aware of that.

Mr. CURTIS. As one member of the committee, I thought that on the finer article coming in we ought to get some revenue; and I, as a member of the committee, voted to put a duty upon this imported article because of the fact that I thought we could derive some duty from it. The Senator will remember that back in 1909 the people of his State and my State asked for a very high duty upon all of this material, because they could not compete with the imported article.

Now, the freight rates are so great that they do not try to compete with the foreign article. Our cheap material, produced in Nebraska and Kansas, is all sold to the manufacturers of Dutch Cleanser, and people like that, and I think on that higher grade article we ought to have a reasonable duty for revenue purposes.

Mr. HITCHCOCK. I think I understand this item. It is represented as a protection for a Nebraska and Kansas product, but the Senator now admits that the Nebraska and Kansas product needs no protection.

Mr. CURTIS. It was not contended before the committee that we needed it. As a matter of fact, I told the committee that, so far as the higher grade is concerned, we do not compete with the foreign article, and we do not ask protection for the product of Kansas and Nebraska.

Mr. HITCHCOCK. They do not need it——

Mr. CURTIS. They do not need it.

Mr. HITCHCOCK. Any more than our wheat or our corn needs it, but it is put on so that they can say to the Nebraska producers that the Republican Congress has given them some protection.

Mr. CURTIS. There will be nothing of the kind told; but I can not agree with the Senator that the farmers do not need a duty upon wheat and corn. We can argue that at some other time. We will tell the Kansas farmers that they are protected in those products.

Mr. HITCHCOCK. This is just a repetition of the duty on wheat and corn. We raise wheat and corn, and we export it in competition with all the world. We manufacture this pumice-stone product in Nebraska and we export two or three million dollars' worth of it in a year. We do not need protection on

pumice stone any more than a cart needs a fifth wheel, but it is put on with the idea of creating out in Nebraska and Kansas the impression that this Congress, which is imposing duties on manufactured articles which actually do increase the price, is also caring for Nebraska interests. We do not want that duty. We do not need that duty. The production of pumice stone in Kansas and Nebraska is able to stand on its own feet and compete with the world. We are able to manufacture this pumice stone, and we are not afraid of competition. We can export it to other countries, and we do not need any protection.

Under the guise of protecting a western industry, a tariff of 5 per cent is increased to something like 20 per cent, and I object to it. We can not be given a gold brick like that for the purpose of developing in the West the support of these protective tariff rates on other articles which we consume, and the price of which is increased by the tariff.

Mr. McCUMBER. Mr. President, when we come to the agricultural schedule I will invite the Senator from Nebraska, who has been throwing gold bricks across the aisle for months, to explain to the Senate or to the North Dakota farmer why it is that since the emergency tariff law was enacted we have been receiving on an average about 31 cents a bushel more than the Winnipeg prices for a like quality of wheat. We have been receiving it day after day and month after month, the Winnipeg being upon the world level of prices, and our average in Minneapolis being about 31 cents above the Winnipeg, when we take into account the difference in the quality of the Winnipeg, as their requirement for No. 1 Manitoba is a little higher than the requirement for No. 1 northern in Minneapolis. We range from 25 to 29 cents a bushel in our favor right along. But that is on another subject. I would rather stick to this subject, and we will take up the duty on agricultural products when we reach those items.

The value of all of the imports of this product in 1920 was $144,000 in round numbers. The value of the American product was $114,000 in round numbers. So we see that we are importing about $30,000 worth more than we are producing in the United States, and, as has been suggested, I think the foreign product will stand a heavier duty than that which was imposed under the Underwood law.

Mr. JONES of Washington. I would like to ask the Senator why it is that the rate fixed by the House on the unmanufactured pumice stone is decreased, while the rate fixed by the House on the manufactured pumice stone is increased?

Mr. McCUMBER. We have tried to consider carefully the difference in the cost of converting the unmanufactured into the manufactured product.

Mr. JONES of Washington. I assumed that the House took that into account, too, but the Senate Finance Committee reduced the House rate on the unmanufactured, and I just wanted to know the reason for increasing the rate on the other.

Mr. McCUMBER. I think the Senator will find there is a decrease in both instances.

Mr. JONES of Washington. You raise the House rate of 26 per cent to 35 per cent ad valorem.

Mr. McCUMBER. But it should be remembered that the House rate is based upon the American valuation.

Mr. JONES of Washington. That is what I wanted to bring out. There is nothing said in the bill about American valuation. I wanted to get the reason.

Mr. McCUMBER. I will look at that when I come to it. My mind is on the other now, and I will have to refresh my memory when I come to the next provision.

Mr. JONES of Washington. It is all in one paragraph, and I did not know about it. I just wanted an explanation of it.

Mr. McCUMBER. I think it is a decrease, nevertheless; but I will take that up when I come to it.

In addition to what I have said, I want to say that on account of the heavy freight rates the California product will be cut out entirely from the eastern market. In other words, we have not given a duty high enough to protect the California product.

Mr. HITCHCOCK. You should not.

Mr. McCUMBER. That may be. We have not.

Mr. HITCHCOCK. This business of doubling freight rates in the United States for the consumers to pay, and then increasing your tariff because of the freight rates, simply results in piling one burden after another on the consumers. Because freight rates have been increased 100 per cent is no excuse for increasing tariff rates.

I understand—and I would like to ask the chairman of the committee if I am right—that the amendment we now have before us proposes to change the present duty of 5 per cent ad valorem on the unmanufactured pumice stone to a specific duty of one-tenth of a cent per pound. Does that apply to the cheap pumice stone?

Mr. McCUMBER. Yes; where the value is $15 and less.

Mr. HITCHCOCK. Does it not follow, then, that the specific duty now amounts to 20 per cent?

Mr. McCUMBER. Taking the American price of the cheaper, I think it would amount to about 15 per cent. I have not computed it accurately.

Mr. HITCHCOCK. The American price is now approximately $2.73.

Mr. McCUMBER. That is the volcanic.

Mr. HITCHCOCK. Yes; that is the American product, and that is the only American product.

Mr. McCUMBER. What was the question?

Mr. HITCHCOCK. I am asking the Senator if the change from the 5 per cent ad valorem to the one-tenth cent specific on this cheap article, unmanufactured pumice stone, is not an increase from 5 per cent to 20 per cent?

Mr. McCUMBER. I said it was an increase, as I have it, of from 5 per cent ad valorem to about 15 per cent ad valorem.

Mr. HITCHCOCK. My arithmetic makes it 20; but even at 15, it is three times as large.

Mr. McCUMBER. Yes; it would be.

Mr. HITCHCOCK. And there are no imports of it. Am I right? There is no foreign competition?

Mr. McCUMBER. Not in the same kind that we produce. There are heavy imports, of course, of a quality under $15 per ton. As I have stated, the imports amounted in one year to about 25 per cent of the entire consumption. There is quite a heavy import of that which is less than $15 per ton; very much heavier than that which is over $15 per ton.

The PRESIDENT pro tempore. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 33, line 17, to strike out "three-tenths" and insert "one-fourth," so as to read, "valued at more than $15 per ton, one-fourth of 1 cent per pound."

The amendment was agreed to.

The next amendment of the committee was, on page 33, line 20, after the word "pumice" to strike out the word "stone" and insert the word "stone" and a comma.

The amendment was agreed to.

The next amendment of the committee was, on page 33, line 21, to strike out "26" and insert in lieu thereof "35," so as to read:

Manufactures of pumice stone, or of which pumice stone is the component material of chief value, not specially provided for, 35 per cent ad valorem.

The amendment was agreed to.

The next amendment of the committee was, on page 34, line 3, to strike out "bauxite or beauxite" and insert in lieu thereof "bauxite," so as to read:

Bauxite, crude, not refined or otherwise advanced in condition in any manner, $1 per ton.

The amendment was agreed to.

The next amendment of the committee was, on page 34, line 7, to strike out "$3 per ton of 2,000 pounds" and to insert in lieu thereof "$3.25 per ton," so as to read:

Fuller's earth * * * wrought or manufactured, $3.25 per ton.

Mr. JONES of New Mexico. Mr. President, this item of fuller's earth is one which I think may well challenge our attention for a few minutes.

Under the present law the duty is $1.50 per ton, equivalent to 16 per cent ad valorem. Under the old Payne-Aldrich law the duty was $3 per ton, equivalent to 33⅓ per cent, and the committee now proposes to make the duty $3.25 per ton, equivalent to 35 per cent ad valorem on the 1908 to 1917 prices and to 27 per cent on the later imports.

I desire to call attention to the fact that prior to the European war—in fact, prior to 1916, reaching back to 1910—the yearly production in the United States was something over 40,000 tons, and the average value during that series of years was $9.71.

I may say that that has continued down to about the present time. During the year 1921 the importations fell off considerably, but from 1908 down the importations have averaged about 15,000 tons a year at a price, prior to the war, on foreign valuation, of $9 per ton, and to that $9 foreign valuation must, of course, be added the cost of transportation, the duty, and the importer's profit on the commodity, and there seems to have been a well-fixed relation between the domestic production and the importations.

The price of the commodity now has gone very high. In March, 1922, the New York price was from $22 to $25 per ton, considerably more than twice the price of that commodity prior to the war; that is, the New York price now is about two and a half times the pre-war price. It does seem to me that this is a

fair illustration of the attempt made by the bill to keep up present prices on all of the commodities regardless of the cost of production either in the United States or abroad.

This commodity is produced in two sections of the country principally, in come of the Southern States and in California. The California production supplies the demand of the Pacific coast and, so far as I am advised, there is no competition there. The production in the Southern States supplies the whole market as far north as New Jersey, but the market in the New England States has been constantly supplied by importations. That is the destination of the imported commodity, just that one section of the United States. The reason why that market is supplied from abroad is doubtless because of the cost of transportation from the mills in the United States to the northeastern section of the United States.

The effect of the tariff will be to keep the prices of the material considerably higher than normally. We have heard much about wanting to get back to normalcy, but this is an attempt to prevent it. It is true the freight rates are high. Is it to be said that we should now levy a tariff which would enable the producers of this material in rather remote sections to pay a high freight bill? This probably could be justified upon that theory, but I submit that we should not undertake any such disarrangement of natural economic conditions at this time, especially when the price is so high as it appears from the market quotations in New York.

The importation has been practically constant during all these years. The Tariff Commission tells us that Great Britain and Germany are normally large producers, but the English product is the only one entering the domestic market to any extent. We have not the ghost of Germany confronting us at this time, and we must consider the situation only as it is in England. We all know that prices there have reached a point higher than they were prior to the war even considering the difference in exchange and the price of labor and other costs which have gotten back to a point higher than the pre-war basis.

The domestic industry occupies a strong position in all the home markets except along the Atlantic seaboard from New Jersey to New England. The domestic material sent here must absorb a heavy rail and water freight, while foreign material can in many cases be shipped direct from England to the consuming plant at a lower cost of transportation.

The statistics are given as to the cost of production in the United States and the average price per ton. From 1911 to 1915 the average price per ton was $9.71, and that kept going up. Since the war is over, it has gone higher than it was during the war. In fact, in 1920, the last date given, it was higher than at any time during the war. In 1920 it reached the point of $19.51, as against the pre-war average for a number of years of $9.71. I would like to know whether the Finance Committee is willing to stand for that sort of thing. Is it willing to levy a duty with the avowed purpose of keeping up such abnormal prices as that, and in view of the fact that the greater section of the United States is supplied by the home production with no danger of competition, no danger of destroying home production so far as it can reasonably extend itself? But we are now asked to increase this duty more than 100 per cent above the present rate and even higher than the Payne-Aldrich rate. That is the situation.

The domestic production in this country is around 40,000 tons per annum, used in all the sections of the country except the New England States. There the market has been supplied with importations. The present price is more than twice what it was prior to the war, and we are putting on the highest duty ever known in order to increase the price of the commodity to the consumers up in the New England States. I am a little surprised that Senators here representing the industries up there do not make some complaint about it. However, that is the situation. Who is asking for this measure I do not know.

But here is what the Tariff Commission says about the importation. I think I have given the percentage of importation higher than it really is, because I observe in the next paragraph the Tariff Commission says:

> Imports amount to about 15 per cent of the domestic production and the material comes through New York and New England ports and is consumed at the refining plants located in that section.

I do not feel that any such duty is justified with prices where they are to-day. The matter is discussed somewhat in detail in the Tariff Commission Survey. I simply want to make it appear what the Finance Committee is recommending and what the Senate will deliberately do if it shall adhere to the rate proposed by the committee.

Mr. President, I move that on line 7, page 34, the numerals $3.25 be stricken out and the numerals $1.50 be inserted in lieu thereof.

The PRESIDING OFFICER (Mr. LADD in the chair). The amendment to the amendment will be stated.

The READING CLERK. On page 34, line 7, strike out of the committee amendment the numerals $3.25 and insert in lieu thereof $1.50.

Mr. McCUMBER. Mr. President, I think I ought to make some little explanation, a very short one, as to the reasons for modifying the House rate and other reasons justifying the rate proposed by the committee.

Under the House bill the duty was levied upon the short ton of 2,000 pounds. As a matter of fact, practically all the foreign countries use the long ton of 2,250 pounds in their importations. It was thought by the experts that it would be better to continue the long-ton valuation rather than the short-ton valuation, as the invoices would all be on the long-ton basis. We merely changed the duty to the equivalent long-ton duty by adding 25 cents per ton.

The rate under the Payne-Aldrich law was $3 per ton, and under the Underwood law $1.50 per ton. The rate now proposed is $3.25 per ton. The Senator from New Mexico called attention to the fact of the enormous increase in the market price after the war and after 1917. The Senator will recall that in 1918 miners' wages were enormously increased, and as the main cost of fuller's earth is the labor cost, that was immediately reflected in the very much higher price of the product in the United States.

I think it will go down undoubtedly to a point very much more near the pre-war point, but at present the importing price, taking the first nine months of 1921, is about $13 per ton, and $3.25 per ton is exactly the equivalent of 25 per cent ad valorem upon the foreign price. The pre-war foreign importation price was about $10 per ton, so the present price increases it only about $3 per ton.

I think, considering the country from which it is imported, where the labor wages more nearly measure up to the labor wages in the United States, the probability is that it will not go below that foreign valuation, and therefore the ad valorem percentage will in all probability be not increased beyond the 25 per cent. I think it will stand the 25 per cent, and that we can get a considerable revenue when we recall the enormous increase in the cost in the United States owing to the increase in miners' wages.

Mr. JONES of New Mexico. Mr. President, I desire to call attention to something that it seems to me is rather significant. The Senator from North Dakota has said that the price in 1921 was $13 per ton.

Mr. McCUMBER. The importing price.

Mr. JONES of New Mexico. Yes. My information on the subject is that in 1920 we imported 15,622 tons and the foreign price was $13 per ton. But for the nine months of 1921 we imported only 5,761 tons and the foreign price was $14 a ton. That does not indicate that there is going to be any great flood of this material into this country. After 1920 the foreign price went up and the importations decreased more than 50 per cent. That is the situation. The $14 foreign price of 1921 is to be compared with the average price of about $9.10 prior to the war. The importations decreased for nine months of 1921, only 5,761 tons coming in, and the foreign price had increased $1.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll and the following Senators answered to their names:

Ashurst	Frelinghuysen	Lenroot	Page
Ball	Glass	Lodge	Pittman
Borah	Gooding	McCumber	Ransdell
Brandegee	Hale	McLean	Rawson
Bursum	Harreld	McNary	Sheppard
Capper	Harris	Moses	Shortridge
Caraway	Harrison	Myers	Simmons
Colt	Heflin	Nelson	Smoot
Curtis	Jones, N. Mex.	Newberry	Townsend
Dial	Jones, Wash.	Nicholson	Walsh, Mass.
Edge	Kellogg	Norbeck	Warren
Ernst	Kendrick	Norris	Williams
Fletcher	Keyes	Oddie	Willis
France	Ladd	Overman	

The PRESIDING OFFICER. Fifty-five Senators having answered to their names, a quorum is present. The question is on the amendment offered by the Senator from New Mexico [Mr. JONES] to the amendment reported by the committee.

Mr. WALSH of Massachusetts. I ask that the amendment be stated.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The READING CLERK. On page 34, line 7, it is proposed to strike out "$3.25" and to insert "$1.50."

The PRESIDING OFFICER. The question is on the amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question recurs on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The next amendment of the Committee on Finance was, on page 34, at the end of line 9, to insert "glass sand, $1.50 per ton."

Mr. JONES of New Mexico. Mr. President, that is a new item, and, so far as I can ascertain, we have been furnished no information regarding it. The item merely says "glass sand." We do not know what quality of the commodity is covered by this duty or anything about it, and I believe that the Senate is entitled to some information on the subject.

Mr. FRELINGHUYSEN. Mr. President, glass sand or silica sand is a product of New Jersey and is also produced elsewhere throughout the country. It has to go through the process of mining and washing and drying, which involves a great deal of labor. This sand is produced for the purpose of the manufacture of glassware, and also for the making of soda silicon. I think there are four or five plants in my State and there are one or two in Pennsylvania which have asked for this duty.

The competition at the present time comes from Belgium. This sand is shipped as ballast at a cost of about 80 cents per ton plus 30 per cent landing charges. On February 22 last a cargo of 2,000 tons of such sand was discharged at Chester, Pa., for $1.10 per ton. The manufacturer who writes me regarding this matter states that his freight alone for silica sand which he supplies at that point is $1.68; that the production costs f. o. b. at the mines or the sand pits where the sand is mined, washed, and cleaned is $1.25 per ton; and that on the eastern seaboard this sand is now being shipped in as ballast from Belgium, which is one of our principal competitors from the standpoint of the glass industry.

The producers have requested a rate of $2 per ton to cover the difference between the domestic production cost and the freight and the landed cost of the foreign article at near-by eastern points on the seaboard—New York and Philadelphia. The statement that I have here is that this sand, cleaned and refined to the glass factory, costs from $4.35 to $5.50 per ton. There was quite a demand for a duty of $2 per ton from the sand miners of my State. There are a great many persons employed in the north and south Jersey sand pits; and with this competition of ballast glass sand coming in from Belgium the committee felt that $1.50 a ton was a fair duty. Heretofore this article has been on the free list and has not been protected, but this competition has never before appeared.

The question of protection, as to whether or not we shall be dependent for sand upon Belgium, which is our largest competitor in the manufacture of glass, is one that is exercising not only the producers of sand in my State and in Pennsylvania, but also the glass manufacturers as well, who do not object to the proposed rate.

Mr. JONES of New Mexico. Mr. President, do I understand from the Senator that this is the first time any such competition has occurred? Will the Senator from New Jersey just give me his attention for a moment?

Mr. FRELINGHUYSEN. Mr. President, I have heard every word the Senator has said, and I paid him as much attention as he paid me when I was explaining the item.

Mr. JONES of New Mexico. I regret very much if I have offended the very agreeable Senator with my most innocent remark. I understood the Senator to make that statement, and I wanted to have it confirmed before I made any comments on it. It is some little distance across the Chamber from where the Senator is sitting over to where I am now standing. I was listening with a good deal of interest to what the Senator had said, and if perchance I have so far departed from the proprieties of the situation as to offend the Senator by asking him an innocent question, I apologize in the most gracious manner.

Mr. FRELINGHUYSEN. Mr. President, possibly we are both a little confused at the noise in the Chamber, and the fact that it is almost impossible to hear the debate. I stated that heretofore the glass sand had been upon the free list and was upon the free list, and that this competition of ballast sand from Belgium was really becoming a very important factor, and within the last few months over 20,000 tons of this sand had been shipped in in this manner, and that the sand cleaners—I think they call themselves clay and sand manufacturing companies—have asked that they be protected against this glass sand that comes in as ballast. I stated that it costs from $2.25 to $2.50 to buy and prepare that sand and put it on the cars—that is quite uniform in every one of these pits located in Pennsylvania and New Jersey—and that the freight to the near-by points from the Pennsylvania factories to New York is about $1.68, or from New York, where a good deal of this Belgian sand has been landed, to the Pennsylvania distributing points, about the same—$1.50 to $1.75. That makes the total cost of the landing of the sand to the consumer $4.50 to $5.50 a ton.

Mr. JONES of New Mexico. What was the price that those concerns near the coast were paying for such sand prior to the war, if the Senator knows?

Mr. FRELINGHUYSEN. I have not that information.

Mr. JONES of New Mexico. May I also ask the Senator at what point the sand is produced which the Senator has been referring to as laboring under this terrible handicap?

Mr. FRELINGHUYSEN. The South River sand is loaded at $2.25 per ton f. o. b. the cars. It is landed in New York at $4.35 per ton. That is the cost of delivering, loading the cars, and shipment to New York. According to the figures that I have for the Bridgeton Sand Co. and the Bristol Sand Co., supplying Chester with this grade of sand, the freight rate alone to Chester, Pa., is $1.68 per net ton, while the ballast sand from Belgium was landed at Chester at $1.10 per net ton.

Mr. JONES of New Mexico. Does that include the profit of the importer?

Mr. FRELINGHUYSEN. I presume the profit is in the ballast. I suppose they carry it for nothing. They probably pay a small price for the sand in Belgium and carry it for nothing, because it forms the ballast of the ship.

Mr. JONES of New Mexico. Mr. President, it does seem to me that we ought to hesitate before putting that article on the dutiable list with the very meager information we have. Here is a commodity that has been on the free list all the time. We have had the Dingley bill, we have had the McKinley bill, we have had the Payne-Aldrich bill, and other bills, and nobody ever suspected that it would be necessary to impose a duty upon glass sand. The glass industry of this country has prospered. It has grown enormously. It has gotten its sand from the United States. There never has been any duty on it; but now some concern away from New York City such a distance that it must pay $1.68 a ton freight on glass sand to get it into New York City is asking a tariff of $1.50 per ton.

I do not know what the Senator's figures mean. Apparently he has not digested them. We do not know just what that 80 or 90 cents a ton or $1.10 a ton, or whatever it is, represents. We do not know whether that is all of the cost which the foreign producer has to pay to enter into this market. We do not know whether it includes the necessary expense or overhead of the importer.

It is evidently a sporadic transaction. In all probability it will not occur again. When we ask as to the cost of the domestic product, we are told that there is no information except as to what their price is upon the New York market.

The idea of digging sand away over in Belgium, getting it to the seashore, getting it loaded on the ship, transporting it across the ocean, paying the landing charge, the transfer charge, the profit of the importer, the profit of the producer back in Belgium—that all that can be done and produce sand and unload it and sell it in the New York market for $1.50 a ton less than it can be produced near by!

Mr. DIAL. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from South Carolina?

Mr. JONES of New Mexico. I do.

Mr. DIAL. All you have to do to load it is just to run your box car up to the sand pit, throw it in, take it to the sidetrack, and unload it.

Mr. JONES of New Mexico. I imagine if it is done on a large scale they would have a steam shovel to do that.

Mr. SMOOT. No; the Senator is mistaken there. I am not much interested in white sand one way or the other, whether it is on the free list or where it ought to be, but the Senator is mistaken there. White sand has to be washed and has to be dried before ever it can be used, and they can not run a box car up like they can the regular silica sand in my part of the country.

Mr. DIAL. I beg the Senator's pardon, he has different sand from what we have down South.

Mr. SMOOT. Yes; we have the same kind of sand that the Senator has in his State.

Mr. DIAL. We do not wash it.

Mr. SMOOT. Oh, they have to wash it before they can use it.

Mr. DIAL. No; I beg the Senator's pardon.

Mr. SMOOT. They do wash it, however. Then, of course, they had better learn how to use it without washing and drying it. The Senator may know how it is done, but no manufacturer does, yet.

Mr. DIAL. Yes; I know how it is done. I know how it is loaded, and I know how it is manufactured. It was my glass. It was my fortune or misfortune to be interested in a glass factory. I had one built, and I operated it; I was president of it for several years. We had the sand shipped in from the lower part of my State, from Blackville, S. C. All we had to do was to run the freight cars up to the bed, pile it in, bring it up, and unload it in our sandhouse. We did not wash it. I believe perhaps we sieved it. and then we would mix up some other little ingredients with it and throw it into the receptacle.

Mr. SMOOT. The Senator makes common window glass, then, in that factory, does he not, or just common glassware?

Mr. DIAL. We did not make window glass; we made bottles—Coca-Cola bottles, and so on, and prescription bottles—but we made a magnificent product. We had a reputation all over the South, and we had more orders than we could supply, and we did not wash that sand.

Mr. SMOOT. We make glass bottles in our State from just the kind of sand the Senator says, and we have mountains of it. All you have to do is to take a steam shovel and put it into the car, as the Senator says; but that is not this white sand.

Mr. DIAL. It takes a little purer silica to make window glass or plate glass than it would to make bottles.

Mr. SMOOT. I am just simply saying that this sand that is mentioned here is washed and dried—the white sand.

Mr. DIAL. I am not taking issue with the Senator on that question; I mean generally. Now, peculiar as it might seem, the sand that goes into the manufacture of this ordinary glass, such as we made bottles of—and they were very beautiful, clear bottles, used not only in the soft-drink business but also for prescription purposes—as I say, curious as it might seem, the sand only amounted to 1 per cent of the cost of the finished bottles; and they have these beds all over the country. They have them in Tennessee, in Georgia, in South Carolina, and I presume in plenty of other parts of the United States. So it does seem to me that we are going a very long way when we want to put a tariff on dirt and on sand over this country. We are certainly becoming a very enfeebled Nation if we can not use a little elbow grease and throw a little sand in a box car without a tariff on it. I do not know to what extent we are going if we do this.

Mr. SMOOT. For the information of the Senator I will state that the kind of sand he is talking about will be found in paragraph 1661, and that is on the free list. It says "stone and sand."

Mr. DIAL. It all ought to be on the free list.

Mr. SMOOT. I am not discussing that. I am discussing the subject the Senator is talking about, and what the Senator is talking about is on the free list under this bill.

Mr. DIAL. I am glad something is on the free list. That is about the first thing I have found yet that is on the free list.

Mr. SMOOT. The Senator has not read the bill, then.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Montana?

Mr. JONES of New Mexico. I yield.

Mr. WALSH of Montana. How does the Senator from Utah reach the conclusion that the sand to which the Senator from South Carolina refers is the sand that is on the free list and not the sand that is referred to in this paragraph? It apparently is adapted to the manufacture of glass. What is glass sand except sand which is adapted to the manufacture of glass, such as the Senator from South Carolina tells about?

Mr. SMOOT. It is sand that is made into glass for the manufacture of bottles and plain window glass. Any kind of sand will do for that. All that is necessary is that it shall contain silica.

Mr. WALSH of Montana. Is not glass sand a sand that is adapted to the manufacture of glass?

Mr. SMOOT. No; this is white sand.

Mr. WALSH of Montana. But it does not say so. It says "glass sand." It does not say "white glass sand."

Mr. SMOOT. I do not say it does say "white glass sand."

Mr. WALSH of Montana. So, how does the Senator reach the conclusion that the sand to which the Senator from South Carolina refers—which might be used for the making of mortar or might be used for many other purposes—is not the sand referred to in this paragraph?

Mr. SMOOT. The commercial designation always counts in tariff bills. Everybody knows what "sand" means.

Mr. WALSH of Montana. That is what I want to know from the Senator. When it says "glass sand," what are we to understand is meant except that it is sand which is adapted to the manufacture of glass, as the Senator from South Carolina said?

Mr. SMOOT. I will say to the Senator that ordinary common sand could not be shipped in from Europe or anywhere else, because it would not pay, even though it came as ballast.

Mr. WALSH of Montana. That is not the question.

Mr. SMOOT. Just a moment. Even though it came as ballast, it could not be shipped, it could not be brought into this country; and it is on the free list. Nobody would bring any other sand in than the white glass sand.

Mr. WALSH of Montana. But suppose somebody does bring in sand such as that to which the Senator from South Carolina refers, such sand as is used in South Carolina for making glass, and it comes here for the making of glass, will not that be subject to this duty?

Mr. SMOOT. It will not come in. It does not come in. The supposition the Senator makes is something which can not happen.

Mr. WALSH of Montana. Why can it not happen?

Mr. SMOOT. Because of the fact that no manufacturer is foolish enough to pay more for sand because it comes from a foreign country, unless it is better than the sand he can get for almost nothing here.

Mr. WALSH of Montana. That is neither here nor there. If it is glass sand, it is subject to this duty.

Mr. SMOOT. Without any duty it will not come in, and therefore with a duty it will not come in.

Mr. WALSH of Montana. All I am seeking is to get a definition of glass sand, so that we shall know to what this refers. I would define glass sand to be sand which is adapted to the manufacture of glass, and apparently they have that in South Carolina.

Mr. SMOOT. They have not any of the white sand in South Carolina.

Mr. WALSH of Montana. I do not undertake to say they have.

Mr. SMOOT. Nobody can afford to import the sand they have in Utah or in South Carolina, even with it on the free list. We could furnish enough of that kind of sand to supply the world.

Mr. DIAL. All kinds of sand can not be used in making glass.

Mr. SMOOT. Certainly not. It takes the very best sand there is to make glassware used for chemical purposes, and that is the only kind that ever will be shipped into this country.

Mr. WALSH of Montana. The Senator knows that it all depends on the constituents in the sand. Much sand contains a very large percentage of iron, the Senator well knows, and that is not adapted to the making of glass. There are other constituents in sand. Glass sand must be very high in silica, and contain relatively small quantities of impurities, or it is not adapted to the making of glass.

Mr. SMOOT. The Senator knows that the sand found in Montana contains iron, and the sand in Utah I know contains traces of iron. You could not afford to buy sand that contains iron for the purpose of making certain kinds of glass, and ship it into this country.

Mr. WALSH of Montana. If the matter before us were perfectly white sand, or sand containing 99 or 99½ per cent silica, then there would be something you could go on, but that is not the kind of sand that is here mentioned. It is "glass sand."

Mr. SMOOT. Glass sand, which is used in the manufacture of the very finest kinds of glass for surgical instruments of the very best kind, has to be perfectly pure.

Mr. DIAL. How about plate glass?

Mr. SMOOT. I think it would be used for finer glass than that. You can buy any amount of sand here for 75 cents a ton, of the kind the Senator from South Carolina has in his State and we have in our State, but you can not get the white sand for less than $2.75 a ton.

Mr. WALSH of Montana. Then the Senator ought to amend this, and instead of saying "glass sand" say "white sand."

Mr. SMOOT. As long as it is "glass sand," the cost of it would prohibit anything from coming in but the best white sand. Nobody could afford to bring it in otherwise.

Mr. JONES of New Mexico. I am very glad the Senator from Utah expresses a lack of interest in this item. So far as he is concerned, it might be on the free list. But it seems to me that instead of justifying it and passing this discussion off, it should arouse interest, because we are doing a rather serious thing here in putting a duty of $1.50 a ton upon glass sand. The Senator from Utah may explain as much as he will about this kind of sand; the language used in the bill applies to all sand which is converted into glass.

Mr. SMOOT. The Senator will find that in paragraph 1661 stone and sand are put on the free list.

Mr. JONES of New Mexico. Yes; I know that.

Mr. SMOOT. Then what will determine the question? The plain designation of it will determine it, and that means that the ordinary kind of sand can not come in. Even with it on the free list you would not get it. Of course, only one kind of sand will fall under this item; that is the white sand.

Mr. JONES of New Mexico. The glass sand has technical names, but one of them is not "glass sand."

Mr. FRELINGHUYSEN. Mr. President, if it is agreeable to the Senator from Utah, in charge of the bill, I am perfectly willing to insert after "glass sand" the words "containing 99 per cent or more of silica." The only desire I have is to protect the glass sand which is prepared and utilized for the purpose of making glass, and if those words will help the situation and specify the sand, I am perfectly willing to insert them.

Mr. JONES of New Mexico. I certainly believe that if we are going to put a duty on glass sand at all, some such limitation should be inserted as that now proposed by the Senator from New Jersey.

Mr. SMOOT. The Senator knows that if it did contain 99 per cent of silica it would have to be prepared and washed.

Mr. FRELINGHUYSEN. Will the Senator accept that amendment?

Mr. SMOOT. I will be glad to accept the amendment.

Mr. HEFLIN. Mr. President, I want to ask the Senator from New Mexico how much of this sand is being imported into the United States now?

Mr. JONES of New Mexico. I understand from the Senator from New Jersey that some came over in ballast recently.

Mr. HEFLIN. How much is being exported? Have we any figures on that?

Mr. JONES of New Mexico. We have no figures on it at all; we have no information about it. We know nothing about the price of it before the war, and we have no intimation as to the amount we used before the war, or that we are using now.

Mr. WALSH of Montana. I want to ask the Senator if there is a compensatory duty on the manufactured glass into which this sand goes?

Mr. SMOOT. There is not.

Mr. JONES of New Mexico. I believe if the Senator from New Jersey will ponder a little, he will conclude to eliminate this item, and let sand remain on the free list.

Mr. FRELINGHUYSEN. Did I understand the Senator from Montana to ask me a question?

Mr. WALSH of Montana. I addressed a question to the Senator from New Mexico, but I should be glad to have an answer from the Senator from New Jersey as to whether he has made provision for a compensatory duty upon the manufactured glass.

Mr. FRELINGHUYSEN. I have not.

Mr. WALSH of Montana. So it would be a burden to that extent upon that industry.

Mr. FRELINGHUYSEN. I do not think so. It would not raise the price any. The Senator knows the reason for this amendment, and I venture to say that if Belgium can continue to ship in this sand at this price it practically means that she can supply the glass factories along the Atlantic seaboard at a price about half the price charged by the American sand pits to supply the factories. Of course, some of these factories have their own sand pits, and the only cost they have is the cost of washing and cleaning this sand, but where there are certain sand pits furnishing glass factories in Philadelphia, Chester, Brooklyn, and Jersey City, the price of the sand, added to the labor, practically amounts to $4.50 a ton. The freight at the present time is $1.50. If this glass sand, prepared and washed, is to be shipped in as ballast from Belgium, it is clearly a competitive product.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the designation of Hon. JOSEPH WALSH, a Representative from the State of Massachusetts, as Speaker pro tempore was approved by the House.

The message also announced that the House had passed the bill (S. 2919) to extend for the period of two years the provisions of Title II of the food control and the District of Columbia rents act, approved October 22, 1919, as amended, with an amendment, in which it requested the concurrence of the Senate.

EXTENSION OF DISTRICT RENTS ACT.

The PRESIDING OFFICER (Mr. LADD) laid before the Senate the amendment of the House of Representatives to the bill (S. 2919) to extend for the period of two years the provisions of Title II of the food control and District of Columbia rents act, approved October 22, 1919, as amended, which was to strike out all after the enacting clause and to insert:

That it is hereby declared that the emergency described in Title II of the food control and the District of Columbia rents act still exists and continues in the District of Columbia, and that the present housing and rental conditions therein require the further extension of the provisions of such title.

SEC. 2. That Title II of the food control and the District of Columbia rents act, as amended, as reenacted, extended, and continued, as hereinafter amended, until the 22d day of May, 1924, notwithstanding the provisions of section 1 of the act entitled "An act to extend for the period of seven months the provisions of Title II of the food control and the District of Columbia rents act, approved October 22, 1919, and for other purposes," approved August 24, 1921.

SEC. 3. That section 101 of the food control and the District of Columbia rents act, as amended, is amended to read as follows:

"SEC. 101. When used in this title, unless the context indicates otherwise—

"(a) The term 'rental property' means any building or part thereof or land appurtenant thereto in the District of Columbia rented or hired, and the service agreed or required by law or by determination of the commission to be furnished in connection therewith; but does not include (1) a garage or warehouse, (2) any other building or part thereof or land appurtenant thereto used by the tenant exclusively for a business purpose other than the subleasing or otherwise subcontracting for use for living accommodations, or (3) any apartment or hotel.

"(b) The term 'person' includes an individual, partnership, association, or corporation.

"(c) The term 'apartment' means any apartment or apartment hotel, or part thereof, in the District of Columbia rented or hired and the land and outbuildings appurtenant thereto, and the service agreed or required by law or by determination of the commission to be furnished in connection therewith.

"(d) The term 'owner' includes a lessor or sublessor, or other person entitled to receive rent or charges for the use or occupancy of any rental property or apartment, or any interest therein, or his agent.

"(e) The term 'tenant' includes a subtenant, lessee, sublessee, or other person not the owner, entitled to the use or occupancy of any rental property or apartment.

"(f) The term 'service' includes the furnishing of light, heat, water, telephone or elevator service, furniture, furnishings, window shades, screens, awnings, storage, kitchen, bath, and laundry facilities and privileges, maid service, janitor service, removal of refuse, making all repairs suited to the type of building or necessitated by ordinary wear and tear, and any other privilege or service connected with the use or occupancy of any rental property or apartment.

"(g) The term 'commission' means the Rent Commission of the District of Columbia."

SEC. 4. That section 102 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 102. (a) A commission is hereby created and established to be known as the Rent Commission of the District of Columbia. After this section, as amended, takes effect, the commission shall be composed of five commissioners, to be appointed by the President, by and with the advice and consent of the Senate; except that the present commissioners in office at the time this section, as amended, takes effect shall continue in office and shall have and exercise all the rights, powers, and duties vested in the commissioners by law until such time as a majority of the five commissioners whose appointment is provided for by this subdivision take office. The term of the five commissioners shall be for the period beginning at the time of taking office and ending May 22, 1924. Any vacancy in the office of any such commissioner shall be filled in the same manner as the original appointment, except that the appointment of the commissioner shall be made only for the unexpired term of the commissioner whom he succeeds.

"(b) In case of a vacancy in the office of one of the present commissioners prior to the time that a majority of the commissioners whose appointment is provided for by subdivision (a) take office a successor to such commissioner may be appointed by the President, by and with the advice and consent of the Senate. The term of such successor shall be for the period beginning at the time of taking office and ending at the time that a majority of the commissioners whose appointment is provided for by subdivision (a) take office.

"(c) No commissioner shall be appointed who is directly or indirectly engaged in, or in any manner interested in or connected with, the real estate or renting business in the District of Columbia.

"(d) All appointments of commissioners made before January 1, 1922, whether or not made in accordance with the law in effect at the time such appointments were made, are hereby validated and confirmed. All acts by or under the authority of the commission made in the administration of this act and all proceedings instituted by or before the commission prior to the time this section, as amended, takes effect shall, for all purposes, be regarded as having the same status as if such appointments had been valid at the time when made.

"(e) The commission shall at the time of its organization and annually thereafter elect a chairman from its membership. The commission may make such rules and regulations as may be necessary to carry this title into effect. All powers and duties of the commission may be exercised by a majority of its members. A vacancy in the commission shall not impair the right of the remaining commissioners to exercise all the powers of the commission. The commission shall have an official seal, which shall be judicially noticed."

SEC. 5. That the last sentence of the first paragraph of section 105 of the food control and the District of Columbia rents act is amended to read as follows:

"Each member of the commission may sign subpœnas, administer oaths and affirmations, summon and examine witnesses, conduct hearings, and receive evidence touching any matter which the commission is authorized to consider or investigate, and the substance of such evidence, when certified to the commission by the member of the commission who heard and received the same and when filed by the commission with the papers pertaining to such matter, may be made the basis of the commission's determination respecting the matter under consideration or investigation."

SEC. 6. That the last paragraph of section 105 of the food control and the District of Columbia rents act is amended to read as follows:

"Such attendance of witnesses and the production of such books, accounts, records, papers, and correspondence may be required from any place in the United States at any designated place of hearing. In case of disobedience to a subpœna or of the contumacy of any witness appearing before the commission, or in case of the failure to file with the commission any plans or other data required by the commission under section 117 of this title, the commission may invoke the aid of the Supreme Court of the District of Columbia or of any district court of the United

States. Such court may thereupon issue an order requiring the person subpœnaed to obey the subpœna or to give evidence touching the matter in question or to file the plans or other data. Any failure to obey such order of the court may be punished by such court as a contempt thereof. No officer or employee of the commission shall, unless authorized by the commission or by a court of competent jurisdiction, make public any information obtained by the commission."

SEC. 7. That section 106 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 106. (a) For the purposes of this title it is declared that all rental property and apartments are affected with a public interest, and that all rents and charges therefor, all service in connection therewith, and all other terms and conditions of the use or occupancy thereof, shall be fair and reasonable; and any unreasonable or unfair provision of a lease or other contract for the use or occupancy of such rental property or apartment, with respect to such rents, charges, service, terms, or conditions is hereby declared to be contrary to public policy. The commission upon its own initiative may, or upon complaint shall, determine whether the rent, charges, service, and other terms or conditions of a lease or other contract for the use or occupancy of any such rental property or apartment are fair and reasonable. Such complaints may be made and filed by or on behalf of any tenant, and by or on behalf of the owner of any rental property or apartment, notwithstanding the existence of a lease or other contract between the tenant and the owner. In fixing and determining the fair and reasonable rents, or charges for any rental property or apartment, the commission shall, in all cases, take into consideration the character and condition of the property and the character of the service, if any, furnished in connection therewith.

"(b) In all such cases the commission shall give notice personally or by registered mail and afford an opportunity to be heard to all parties in interest: *Provided*, That notice given by the commission to an agent for the collection of rents due his principal shall be deemed and held to be good and sufficient notice to the principal. The commission shall promptly hear and determine the issues involved in all complaints submitted to it. All hearings before the commission, or any member of the commission, shall be open to the public. If the commission finds that the existing rents, charges, service, or other terms or conditions of the use or occupancy of any rental property or apartment are unfair and unreasonable, it shall fix and determine the fair and reasonable rents or charges for the rental property or apartment under consideration, and may fix and determine the fair and reasonable service, terms, and conditions of the use or occupancy of the rental property or apartment, and may also order and require the furnishing of such service by the owner as it shall lawfully determine to be fair and reasonable.

"(c) In any suit in any court of the United States or the District of Columbia involving any question arising out of the relation of landlord and tenant with respect to any rental property or apartment, except on appeal from the commission's determination as provided in this title, such court shall determine the rights and duties of the parties in accordance with the determination and regulations of the commission relevant thereto.

"(d) The commission shall file with its determination a finding of the facts on the evidence presented, and upon which its determination is based. Such finding of facts shall set out the following: (1) The fair and reasonable value of the whole property, (2) the allowance for maintenance, repairs, taxes, service, and all other expenses, (3) the separate rentals of the whole property as fixed by the commission, or if not fixed by the commission, then as paid by the tenants, (4) the commission's estimated net return to the owner upon the value as fixed by it, and (5) such other findings of fact as the commission deems proper to submit. Such findings of fact shall constitute a part of the record of the case."

SEC. 8. That section 108 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 108. (a) Unless within 10 days after the filing of the commission's determination any party to the complaint appeals therefrom to the Supreme Court of the District of Columbia in general term, the determination of the commission shall be final and conclusive. The Supreme Court of the District of Columbia in general term is hereby given jurisdiction to hear and determine appeals taken from determinations of the commission, and such appeals shall be given precedence over the other business of the court. At the hearing of such appeals the chief justice of the court shall preside, with at least two of the associate justices thereof, to be designated by the chief justice. In the absence of the chief justice the senior associate justice of the court shall preside, have the powers, and perform the duties of the chief justice.

"(b) If such an appeal is taken from the determination of the commission, the record before the commission or such part thereof as the court may order shall be certified by it to the court and shall constitute the record before the court, and the commission's determination shall not be modified or set aside by the court, except for error of law.

"(c) If any party applies to the court for leave to adduce additional evidence and shows to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceedings before the commission, the court may order such additional evidence to be taken before the commission and to be adduced upon the hearing in such manner and upon such terms and conditions as the court may deem proper. The commission may modify its findings as to the facts, or make new findings, by reason of the additional evidence so taken, and it shall file such modified or new findings, which shall be conclusive, and its recommendations, if any, for the modification or setting aside of its original determination, with the return of such additional evidence.

"(d) In the proceedings before such court on appeal from a determination of the commission, the commission shall appear by its attorney or other representative and submit oral or written arguments to support the findings and the determination of the commission.

"(e) No determination of the commission shall be affirmed, set aside, modified, or otherwise reviewed, or its enforcement in any manner stayed, except upon appeal from such determination as provided by this title."

SEC. 9. That section 109 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 109. (a) The right of a tenant to the use or occupancy of any rental property or apartment, existing at the time this act takes effect, or thereafter acquired, under any lease or other contract for such use or occupancy or under any extension thereof by operation of law, shall, notwithstanding the expiration of the term fixed by such lease or contract, continue at the option of the tenant, subject, however, to any determination or regulation of the commission relevant thereto; and such tenant shall not be evicted or dispossessed so long as he pays the rent and performs the other terms and conditions of the tenancy as fixed by such lease or contract, or, in case such lease or contract is modified by any determination or regulation of the commission, then as fixed by such modified lease or contract.

"(b) All remedies of the owner at law or equity, based on any provision of any such lease or contract to the effect that such lease or contract shall be determined or forfeited if the premises are sold, are hereby suspended so long as this title is in force. Every purchaser shall take conveyance of any rental property or apartment subject to the rights of tenants as provided in this title.

"(c) The rights of the tenant under this title shall be subject to the limitation that the bona fide owner of any rental property or apartment shall, upon giving 30 days' notice in writing, served in the manner provided by section 1223 of the act entitled 'An act to establish a code of laws for the District of Columbia,' approved March 3, 1901, as amended (which notice shall contain a full and correct statement of the facts and circumstances upon which the same is based), have the right to possession thereof, (1) if necessary immediately for actual and bona fide occupancy by himself, or his wife, children, or dependents, or for the making of material repairs or alterations, or for the remodeling or erection of a new building, whether or not to be used for rental purposes by the owner, or for any other purpose inconsistent with the continued use or occupancy of the existing tenant, if such purpose does not involve unfair discrimination aganst such tenant and in favor of any subsequent tenant, or (2) if the tenant commits waste, nuisance, breach of peace, or is otherwise disorderly upon the premises; but in no case shall possession be demanded or obtained by such owner in contravention of the terms of any such lease or contract. After the expiration of the 30 days' period specified in such notice the owner of the rental property or apartment may recover possession thereof in accordance with such act of March 3, 1901, as amended. If there is a dispute between the owner and the tenant as to the accuracy or sufficiency of the statement set forth in such notice, as to the good faith of such demand, or as to the service of notice, the matters in dispute shall be determined by the court in the proceedings for the recovery of possession. Any such dispute pending before the commission upon complaint at the time this section as amended takes effect shall be determined by the court in accordance with the provisions of this section.

"(d) During the period between the service of the notice and the final decision in the proceedings for the recovery of possession the tenant shall pay to the owner rent in accordance with the terms of the lease or other contract for the use or occupancy of the rented property or apartment, or, in case such lease or contract is modified by any determination of the commission, then in accordance with such modified lease or contract. Acceptance of such rent by the owner shall not be held a waiver by him of any right under the provisions of this section or under the terms of the lease or contract. If any tenant fails so to pay rent to the owner during such period, the rights of the tenant under this section shall cease."

SEC. 10. That section 110 of Title II of the food control and the District of Columbia rents act is amended by inserting "(a)" after the section number and by amending the last sentence thereof to read as follows:

"(b) In case of the increase of the rent for the use or occupancy of any rental property or apartment, made by a determination of the commission from which an appeal is taken by the tenant under the provisions of this title, the tenant shall, from time to time during the period between the filing of the determination and the time when the determination becomes final, and in accordance with the terms of the lease or other contract, pay to the commission the amount of the increase and to the owner the remainder of the amount of rent fixed by the determination. In lieu of such payments the tenant may, in the discretion of the commission and at the time of taking the appeal, give bond, approved by the commission, for the payment of the amount of the increase. The disposition of moneys so paid to the commission and the payments under the terms of the bond shall be made in accordance with the determination of the commission as modified by the final decision on appeal. The court shall dismiss the appeal of any tenant who fails to comply with this subdivision.

"(c) In case of a decrease of the rent by any such determination, the tenant shall, from time to time during such period and in accordance with the terms of the lease or other contract, pay to the owner the amount of rent fixed by the determination. The difference, if any, between the amount of rent paid during such period and the amount that would have been payable for such period, under the determination as modified in accordance with the final decision on appeal, may be added in future rent payments or sued for and recovered in an action in the municipal court of the District of Columbia.

"(d) The amendment of this section shall not be held to terminate any right for the recovery of rent in an action in the municipal court of the District of Columbia if such right arose prior to the time that this section as amended takes effect.

"(e) The decision of the Supreme Court of the District of Columbia upon appeal from any determination of the commission shall be final, except that it shall be subject to review by the Supreme Court of the United States upon certiorari to the same extent as cases subject to such review under section 240 of the Judicial Code, if such writ is duly applied for within 30 days after the decision is rendered. The issue of the writ shall not operate as a supersedeas or in any manner stay or postpone the decision of the Supreme Court of the District of Columbia if such decision affirms or modifies the determination of the commission."

SEC. 11. That section 111 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 111. The determination of the commission in a proceeding begun by complaint or upon its own initiative fixing fair and reasonable rents, charges, service, and other terms and conditions of use or occupancy of any rental property or apartment shall constitute the commission's determination of the fairness and reasonableness of such rents, charges, service, terms, or condition for the rental property or apartment affected, and shall remain in full force and effect notwithstanding any change in ownership or tenancy thereof, unless and until the commission modifies or sets aside such determination upon complaint either of the owner or of the tenant."

SEC. 12. That section 112 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 112. (a) If the owner of any rental property or apartment collects any rent or charge therefor in excess of the amount fixed in a determination of the commission made in full force and effect in accordance with the provisions of this title, he shall be liable for and the commission is hereby authorized and directed to commence an action in the municipal court of the District of Columbia to recover double the amount of such excess, together with the costs of the proceeding, which shall include an attorney's fee of $50, to be taxed as part of the costs.

Such actions shall be brought in the municipal court, regardless of the amount to be recovered, and the municipal court is hereby given special jurisdiction to hear and determine all such cases.

"(b) The commission is hereby authorized to bring such actions without the payment of costs, and no bond shall be required in the case of any appeal taken by the commission from any judgment of the municipal court in any such case. Out of any sums received on account of such recovery the commission shall pay over to the tenant the amount of the excess so paid by him and the balance shall be paid into the Treasury of the United States to the credit of the District of Columbia: *Provided*, That if the commission finds that such excess was paid by the tenant voluntarily and with knowledge of the commission's determination, the whole amount of such recovery shall be paid into the Treasury of the United States to the credit of the District of Columbia.

"(c) The commission may compromise any case arising under the section instead of commencing an action in respect thereto, or may compromise such case after an action in respect thereto has been commenced. Whenever any such case is compromised there shall be placed on file in the office of the commission a written opinion of the commission or its attorney stating the reasons for such compromise, the amount of the excess rent or charge for which the owner is liable, and the amount thereof actually paid in accordance with the terms of the compromise."

SEC. 13. That section 113 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 113. (a) If any proceeding before the commission, begun by complaint or on the commission's own initiative, and involving any lease or other contract for the use or occupancy of any rental property or apartment, the commission finds that at any time after the passage of this act, but during the tenancy, the owner has, directly or indirectly, willfully withdrawn from the tenant any service agreed or required by a determination of the commission to be furnished, or has by act, neglect, or omission contrary to such lease or contract or to the law or any ordinance or regulation made in pursuance of law, or of a determination of the commission exposed the tenant, directly or indirectly, to any unsafe or insanitary condition, or imposed upon him any burden, loss, or unusual inconvenience in connection with his use or occupancy of such rental property or apartment, the commission shall determine the sum which in its judgment will fairly and reasonably compensate or reimburse the tenant therefor. In any such proceeding involving a lease or other contract, in which the term specified had not expired at the time the proceeding was begun, the commission shall likewise determine the amount or value of any bonus or other consideration in excess of the rental named in such lease or contract received at any time directly or indirectly by the owner in connection with such lease or contract. The tenant may recover any amount so determined by the commission in an action in the municipal court of the District of Columbia.

"(b) Any person who, after the passage of this amendatory act, willfully fails to furnish the tenants of any rental property or apartment such service (1) as has ordinarily been furnished the tenant of such rental property or apartment prior to such failure, or (2) as is required either expressly or impliedly to be furnished by the lease or other contract for the use or occupancy of the rental property or apartment, or any extension thereof by operation of law, shall, upon conviction, be punished by a fine not exceeding $1,000 or by imprisonment for not more than one year, or by both."

SEC. 14. That section 116 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 116. Any person who with intent to avoid the provisions of this title enters into any agreement or arrangement for the payment of any bonus or other consideration in connection with any lease or other contract for the use or occupancy of any rental property or apartment, or who participates in any fictitious sale or other device or arrangement the purpose of which is to grant or obtain the use or occupancy of any rental property or apartment without subjecting such use or occupancy to the provisions of this title or to the jurisdiction of the commission, shall upon conviction be punished by a fine not exceeding $1,000, or by imprisonment for not exceeding one year, or by both."

SEC. 15. That section 117 of the food control and the District of Columbia rents act is amended to read as follows:

"SEC. 117. (a) The commission shall prescribe standard forms of leases and other contracts for the use or occupancy of any rental property or apartment and shall require their use by the owner thereof. Every such lease or contract entered into after the commission has prescribed and promulgated a form for the tenancy provided by such lease or contract shall be deemed to accord with such standard forms; and any such lease or contract in any proceeding before the commission or in any court of the United States or of the District of Columbia shall be interpreted, applied, and enforced in the same manner as if it were in the form and contained the stipulations of such standard form.

"(b) The owner of an apartment shall file with the commission, but only in such cases as the commission deems necessary, plans and other data in such detail as the commission requires, descriptive of the rooms, accommodations, and service in connection with such apartment, and a schedule of rates and charges therefor. The commission shall, after consideration of such plans, schedules, data, or other information, determine and fix a schedule of fair and reasonable rates and charges for such apartments; and the rates and charges stated in such schedule shall thereafter constitute the fair and reasonable rates and charges for such apartment. The commission's determination in such case shall be made after such notice and hearing and shall have the same force and effect and be subject to appeal in the same manner as a determination of the commission under section 106 of this title."

SEC. 16. That section 118 of the food control and the District of Columbia rents act is amended by adding at the end thereof a new sentence to read as follows: "This section shall not be construed as in any way authorizing the assignment of any lease or the subletting of any rental property or apartment in violation of the terms of the lease or other contract for the use or occupancy of the rental property or apartment, or of such lease or contract as extended by operation of law."

SEC. 17. That subdivision (b) of section 124 of the food control and the District of Columbia rents act, as amended, is amended to read as follows:

"(b) In the case of (1) any proceeding begun under the provisions of section 114 before the termination of this title, or (2) any proceeding on appeal from a determination of the commission begun before the termination of this title, such proceeding may, after such termination, be continued in the same manner with the same effect as if this title had not been terminated, and all powers and duties in respect to such proceedings (including the custody and disposition of moneys paid under section 110) vested in the commission by this title shall for the purposes of such proceedings be vested in the Attorney General."

SEC. 18. The food control and the District of Columbia rents act is amended by adding at the end thereof a new section to read as follows:

"SEC. 125. The commission shall, as soon as practicable after this section takes effect and at least semiannually thereafter, publish its determinations, opinions, rulings, and regulations, all important court and administrative decisions in respect to this act, and such provisions of the law relating to landlords and tenants as the commission deems advisable, together with a cumulative index-digest thereof."

SEC. 19. This act shall take effect upon its passage; except that if its passage occurs after May 21, 1922, it shall be held to have taken effect as of such date.

SEC. 20. That all acts or parts or acts in conflict herewith are, to the extent that they are in such conflict, suspended so long as Title II of the food control and the District of Columbia rents act is in force.

Mr. BALL. Mr. President, will the Senator from Utah yield just a moment?

Mr. SMOOT. Yes; I yield to the Senator.

Mr. BALL. I move——

Mr. SMOOT. I did not yield for that purpose.

Mr. BALL. I ask unanimous consent that the tariff bill be temporarily laid aside to take up the amendment of the House to the District of Columbia rent bill.

Mr. OVERMAN. I think I shall have to object. I find that the amendment which the House has made to the bill is 24 pages long. It is one amendment, but it contains 24 pages. It does not seem to me that we ought to hurry through the 24 pages of amendment without due consideration.

I do not think anybody will be injured by it, because of the retroactive clause in the amendment, which says:

This act shall take effect upon its passage, except that if its passage occurs after the 21st of May, 1922, it shall be held to have taken effect as of such date.

So if it is passed a week from now or two weeks from now, according to this amendment, and if it is constitutional, it will have the same effect, because it has the retroactive feature. It looks to me like this great amendment of 24 pages ought to have consideration by the Senate before we pass it. The House has had the bill for weeks and weeks and then passes it to-day and rushes it over here, and we ought to consider the House substitute before we pass it. I shall object to unanimous consent for that reason.

The PRESIDING OFFICER. Objection is made.

Mr. BALL. Of course, if we fail to concur, the Rent Commission dies at 12 o'clock to-night and the rental control dies with the expiration of the former rent law.

Mr. OVERMAN. Nobody will be hurt, according to the retroactive clause contained in the House amendment.

Mr. BALL. I am very sure that they would be hurt. The tenants are in very great trouble now for fear we will fail to pass the bill. In many apartments notices were sent out Saturday. In one apartment six different tenants received notices that unless they would sign a contract for an advance of from $50 to $90 per month, beginning to-day, their furniture would be put out of their apartments. That is six in one apartment. I could cite any number of them.

The reason why I am so anxious to have the House amendment concurred in to-night is that the amendment as approved by the House does not change the bill as passed by the Senate, with three exceptions, which I will explain briefly.

The first is that the Senate bill provided for two inspectors to be sent out. The House cut that provision out. However, under the original provision of the bill, which is not amended by this amendment, the Rent Commission was authorized to appoint assistants under the civil-service rules. So they are authorized to appoint the inspectors if necessary, but it must be done under the civil-service rules, which is all very proper.

The other important amendment is with reference to hotels, which are eliminated by the House amendment. As passed by the Senate, the Rent Commission was given control over hotels. That provision is eliminated by the House amendment.

The third provision of importance and the only other one of importance—the others being merely changes of minor importance in the wording of the bill—is that it gives the property owner greater rights in getting control of his property. He can get control of his property now for any member of his family to live in or to tear down or to change for any purpose. He can convert his property into business property. He can change it for any reason and get possession. Under the bill as it passed the Senate he could only get control to change for residence purposes or for the purpose of giving it to some member of his family for occupancy.

Those are the only changes made by the House, except in the wording of the bill, and, by those minor changes, the wording is made very much more clear. I am sure that all who read the two bills will agree with me that the bill as it passed the House is more simple and more easily understood.

Unless it is passed to-night we will have no Rent Commission, and we will then have no Rent Commission until the Presi-

dent has a chance to select a new one and the Senate has opportunity to confirm the appointments. If we pass the bill to-night the present commission continues to function until the President can select the commission, and it gives him an opportunity to select its members with care. Certainly the result of the activities of such a commission depends much upon the personnel of the commission. Any Senator who has any interest in or any feeling for the welfare of the tenants of Washington I trust will not object to immediate concurrence in the amendment of the House.

Mr. OVERMAN. I have consideration for the welfare of the tenants of the District. I am not fighting the bill, except that I do not think we should act hurriedly. We ought to pass a constitutional bill, and with this retroactive clause in it, I do not know whether it is constitutional or not until I have had an opportunity to examine it. Why did they incorporate that clause if they did not mean it to take effect?

Mr. BALL. That clause says it shall take effect the day of its passage.

Mr. OVERMAN. It says it shall take effect upon its passage "except"——

Mr. BALL. I will read the section to the Senator.

Mr. OVERMAN. I can read it myself.

Mr. BALL. It says it shall take effect upon its passage——

Mr. OVERMAN. It shall "take effect upon its passage, except that if its passage occurs after May 21, 1922, it shall be held to have taken effect as of such date."

Mr. BALL. But there will be no Rent Commission unless we pass the bill to-day.

Mr. EDGE. That would not prevent, however, the confusion and all the difficulties and trouble involved in the dispossessing of tenants in the meantime. True, it is retroactive and if finally passed they would be established in their rights, but they would have to go through all that serious inconvenience.

Mr. OVERMAN. I do not think, with this provision in it, any landlord would attempt to dispossess any tenant.

Mr. BALL. Does the Senator object to the present consideration of the matter?

Mr. OVERMAN. Yes; I object.

Mr. BALL. Then, Mr. President, I move that the Senate proceed to the consideration of the amendment of the House.

Mr. SMOOT. Mr. President, will the Senator withhold that for the time being? I do not want to disturb the consideration of the tariff bill if it can be helped.

Mr. BALL. It will only take a moment to pass it. There will be no discussion.

Mr. SMOOT. Let us take a little time and see if we can not reach an agreement about it.

Mr. BALL. The Senator from North Carolina has promised that he would not discuss it, but he said he would object to its present consideration.

Mr. SMOOT. I know there will be a quorum call, and I know there are several Senators who want to discuss it.

Mr. BALL. Can the Senator suggest some parliamentary means by which we can accomplish what we desire?

Mr. SMOOT. I suggest that the Senator withhold his motion for the time being and see if we can not come to an agreement without making the motion, because I must vote against it if he makes it, no matter how much I am in favor of his bill.

Mr. OVERMAN. I do not desire to be understood as fighting the rent bill. I am not fighting for any landlord, but it looks to me as though the provision to which I have called attention ought not to be in the bill. I know what the Supreme Court has said about this matter. I do not care for that, but here is a provision which says that if I rent my property to John Smith for three years, at the expiration of the lease I can not get possession of it unless he chooses, but he can hold on indefinitely, although the contract says he shall surrender the property at the end of the three years. That is clearly to me, notwithstanding the decision of the Supreme Court, an unconstitutional provision. There is another provision the Senator did not speak of, section 109, which reads:

> The right of a tenant to the use or occupancy of any rental property or apartment, existing at the time this act takes effect, or thereafter acquired, under any lease or other contract for such use or occupancy or under any extension thereof by operation of law, shall, notwithstanding the expiration of the term fixed by such lease or contract, continue at the option of the tenant.

Mr. BALL. That was a provision in the original bill.

Mr. OVERMAN. Why was it put in here, then?

Mr. BALL. It is merely a change in the wording. It is in the original bill as it passed the Senate.

Mr. OVERMAN. What I want is to consider this amendment of the House in connection with the decision of the Supreme Court and the original act. Then the Senate can do as it pleases, but that is my desire.

Mr. BRANDEGEE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The principal legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Gooding	McLean	Shortridge
Ball	Hale	McNary	Smoot
Borah	Harris	Moses	Stanley
Brandegee	Harrison	Myers	Sterling
Bursum	Heflin	Newberry	Townsend
Capper	Jones, N. Mex.	Nicholson	Underwood
Curtis	Jones, Wash.	Norbeck	Walsh, Mass.
Dial	Kellogg	Oddie	Walsh, Mont.
Edge	Kendrick	Overman	Warren
Ernst	Keyes	Page	Willis
France	Ladd	Phipps	
Frelinghuysen	Lenroot	Rawson	
Glass	Lodge	Sheppard	

The PRESIDING OFFICER. Forty-nine Senators have answered to their names. A quorum is present. The question is on the——

Mr. BALL. I move that the Senate concur in the House amendment to Senate bill 2919.

Mr. SMOOT. Mr. President, I have no objection to the motion.

Mr. UNDERWOOD. Mr. President, I have no objection to the motion, but has the unfinished business been laid aside?

Mr. SMOOT. No; That request was made and there was objection to it. The motion of the Senator from Delaware if agreed to, will displace the unfinished business; but the only method is to agree to the motion of the Senator from Delaware if we desire to consider the House amendment.

Mr. UNDERWOOD. I presume a motion should be made to proceed to the consideration of the bill.

Mr. SMOOT. The question of taking up a conference report is a privileged motion.

Mr. UNDERWOOD. Does the matter come here as a conference report or as a House amendment to the Senate bill?

Mr. SMOOT. The pending motion is to concur in the amendment of the House of Representatives.

Mr. UNDERWOOD. I think that motion is not privileged. We may as well keep the record straight. I intend, however, to vote with the Senator.

Mr. LODGE. It is not privileged, but it is the first motion in order.

Mr. UNDERWOOD. The motion should be to proceed to the consideration of the bill.

Mr. MYERS. Has the unfinished business been temporarily laid aside?

Mr. SMOOT. I will repeat to the Senator from Montana that I asked that that be done and the request was refused. The only way we may now consider the bill is to agree to the motion to proceed to its consideration.

Mr. OVERMAN. Mr. President, I wish to say that I do not propose to practice any dilatory tactics or to filibuster at all. I have said all that I intend to say about the matter, and I shall leave it to the Senate. I am done with it.

Mr. MYERS. The motion of the Senator from Delaware is to concur in the amendment of the House of Representatives to the bill. He first should move to proceed to the consideration of the bill.

Mr. BALL. I move to proceed to the consideration of the amendment of the House of Representatives to Senate bill 2919.

Mr. MOSES. Mr. President, it is perfectly well known that the Senator from Washington [Mr. POINDEXTER], who displayed a great deal of interest in this measure when it was before the Senate at the time of the passage of the bill here, is in the hospital, but expects to be upon the floor of the Senate to-morrow. It is equally well known that that Senator has confided to some Senators, to me certainly, his desire that the bill may not be pressed until he is present, as he will be here to-morrow, because he wishes to examine the amendment made by the House of Representatives to the bill, and he wishes to discuss the measure in its new form. In view of what the Senator from North Carolina [Mr. OVERMAN] has stated about the measure, I can not see why haste should be resorted to, especially with one Senator away who is expected to be here to-morrow. What special harm will be done if this bill does not pass to-night?

Mr. HARRISON. May I ask the Senator from Delaware a question?

Mr. BALL. The harm is that probably for three or four weeks we shall go without a Rent Commission, and during that time many of the present tenants will be turned out of their apartments.

Mr. HARRISON. I desire to ask the Senator from Delaware when the present law will expire?

Mr. BALL. The bill must either pass to-night or we shall not have any Rent Commission at all. It is not worth while for the tenants to have three or four weeks of anxiety looking for a new place in which to live.

Mr. MOSES. Does the Senator from Delaware mean to say that the tenants to whom he refers may be dispossessed between midnight to-night and sunrise to-morrow morning?

Mr. BALL. There are hundreds, and, indeed, I think, thousands of tenants who received a notice to vacate their apartments on Friday last. The real estate people of Washington made up their minds that this bill could not pass by to-night, and they have given the tenants notice that unless they will sign contracts advancing the rent, in many cases one-half, and in some cases 100 per cent, that they would be put out to-night.

Mr. MOSES. Have the dispossession papers been issued? Have the courts lent themselves to this procedure? Have the courts issued process in blank or anything of that sort in order to bring about this wholesale dispossession process between midnight and sunrise?

Mr. BALL. It requires seven days' notice before tenants may be put out, but they had notice to move on Friday last, so that they really have but four more days before their furniture would be put on the street.

Mr. MOSES. I suppose the President could appoint a Rent Commission in three or four days. I do not see any particular harm that could come from the fact that the Rent Commissioners will lose their salaries for a brief period.

Mr. BALL. If the Senator will permit me, it is very important for the future functioning of this bill that we shall have a good commission, and it is particularly important that the President should have time in which to select that commission. In view of the conditions, the President would probably be compelled to appoint a commission almost immediately after the passage of the bill and its signing, but the bill provides that the present commissioners shall continue to function until their successors are appointed. There is every reason why the bill should pass.

I should like very much to accommodate the Senator from Washington, but he told me that he did not intend further to object to the bill. He discussed it thoroughly on the floor of the Senate before its passage.

Mr. MOSES. Oh, yes; he discussed the bill, but he discussed it as it was then before us.

Mr. BALL. There are no amendments that change the character of the bill; I think there have been no changes that the Senator from Washington would not approve, because the bill in its amended form gives the owner of the property greater control over it and it gives him the right to tear down and improve for any purpose. The bill has been made to conform in large part to the very objections of the Senator from Washington when the bill was before the Senate. That is the main change, together with the elimination of hotels from the provisions of the bill. Those are the only two changes.

Mr. MOSES. But here is an amendment to a Senate bill consisting of 24 pages which has not even been read in the Senate, as I understand. Not that I am not wholly willing to take the opinion of the Senator from Delaware with reference to it, and not that I am unwilling to take the opinion of the Senator from Delaware as to the opinion of the Senator from Washington, but, having heard directly from the Senator from Washington as to his desire about the bill, I think, in view of the manner in which his absence occurs, that we ought not to be urging this legislation in the face of a request of that sort from a Senator who has been in the hospital and can not possibly be here to-day, but who may come here to-morrow, though with some disadvantage to himself. Even if the Rent Commission should lose 24 hours' salary I do not think that would be a very regrettable happening.

Mr. BALL. I ask for a vote on my motion.

Mr. MYERS. What is the motion?

The PRESIDING OFFICER. The question is on the motion of the Senator from Delaware that the Senate proceed to the consideration of the amendment of the House of Representatives to Senate bill 2919.

Mr. MYERS. I think that Senators, both those present and those who are absent, should have at least one day in which to study this entirely new bill or substitute; and on that motion I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). Making the same announcement as to the transfer of my pair as heretofore, I vote "yea."

Mr. GLASS (when his name was called). Making the same announcement as on previous votes to-day concerning my pair and its transfer, I vote "yea."

Mr. HALE (when his named was called). I have a general pair with the senior Senator from Tennessee [Mr. SHIELDS]. I am unable to secure a transfer of that pair, and, therefore, can not vote. If permitted to vote, I should vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as to my pair as on the previous vote, I vote "yea."

Mr. JONES of Washington (when his name was called). The senior Senator from Virginia [Mr. SWANSON] is necessarily absent. I have agreed to pair with him for the day. Therefore I must withhold my vote. If at liberty to vote I should vote "yea."

Mr. KELLOGG (when his name was called). I have a general pair with the senior Senator from North Carolina [Mr. SIMMONS]. That Senator being absent, I withhold my vote.

Mr. KENDRICK (when his name was called). I have a general pair with the senior Senator from Illinois [Mr. MCCORMICK], which I transfer to the Senator from Nebraska [Mr. HITCHCOCK], and will vote. I vote "yea."

Mr. McCUMBER (when his name was called). I have a general pair with the junior Senator from Utah [Mr. KING]. Not knowing how he would vote upon this question, I withhold my vote.

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Maryland [Mr. WELLER], I vote "yea."

Mr. WILLIAMS (when his name was called). I have a pair with the Senator from Indiana [Mr. WATSON]. I transfer that pair to the Senator from Tennessee [Mr. SHIELDS] and will vote. I vote "yea."

Mr. WILLIS (when his name was called). I have a pair for the week with my colleague, the senior Senator from Ohio [Mr. POMERENE]. I transfer that pair to the junior Senator from Delaware [Mr. DU PONT] and will vote. I vote "yea."

The roll call was concluded.

Mr. BALL (after having voted in the affirmative). I understand that my pair, the senior Senator from Florida [Mr. FLETCHER], has not voted. I transfer that pair to the senior Senator from Minnesota [Mr. NELSON] and will let my vote stand.

Mr. STANLEY. Has the junior Senator from Kentucky [Mr. ERNST] voted?

The PRESIDING OFFICER. He has not.

Mr. STANLEY. I have a pair with that Senator and withhold my vote.

Mr. HARRIS. I transfer my pair with the Senator from New York [Mr. CALDER] to the Senator from Louisiana [Mr. RANSDELL] and will vote. I vote "yea."

Mr. DIAL. I transfer my pair with the Senator from Missouri [Mr. SPENCER] to the Senator from Texas [Mr. CULBERSON] and will vote. I vote "yea."

Mr. CARAWAY. I have a general pair with the junior Senator from Illinois [Mr. MCKINLEY]. I transfer that pair to the senior Senator from Arizona [Mr. ASHURST] and will vote. I vote "yea."

Mr. CURTIS. I have been requested to announce that the Senator from Indiana [Mr. NEW] is paired with the Senator from Tennessee [Mr. MCKELLAR], and that the Senator from Arizona [Mr. CAMERON] is paired with the Senator from Georgia [Mr. WATSON].

The roll call resulted—yeas 41, nays 7, as follows:

YEAS—41.

Ball	Gooding	Lodge	Sterling
Bursum	Hale	McNary	Townsend
Capper	Harreld	Nicholson	Underwood
Caraway	Harris	Norbeck	Walsh, Mass.
Curtis	Harrison	Oddie	Walsh, Mont.
Dial	Heflin	Page	Warren
Edge	Jones, N. Mex.	Phipps	Williams
Elkins	Kendrick	Pittman	Willis
France	Keyes	Rawson	
Frelinghuysen	Ladd	Shortridge	
Glass	Lenroot	Smoot	

NAYS—7.

Brandegee	Moses	Newberry	Sheppard
Broussard	Myers	Overman	

NOT VOTING—48.

Ashurst	Fletcher	McLean	Simmons
Borah	Gerry	Nelson	Smith
Calder	Hitchcock	New	Spencer
Cameron	Johnson	Norris	Stanfield
Colt	Jones, Wash.	Owen	Stanley
Crow	Kellogg	Pepper	Sutherland
Culberson	King	Poindexter	Swanson
Cummins	La Follette	Pomerene	Trammell
Dillingham	McCormick	Ransdell	Wadsworth
du Pont	McCumber	Reed	Watson, Ga.
Ernst	McKellar	Robinson	Watson, Ind.
Fernald	McKinley	Shields	Weller

The PRESIDING OFFICER. On the motion of the Senator from Delaware, the yeas are 41, the nays are 7. The Senator from Washington [Mr. JONES], the Senator from Minnesota [Mr. KELLOGG], the Senator from North Dakota [Mr. MCCUMBER], and the Senator from Kentucky [Mr. STANLEY] having announced their pairs, a quorum is present, and the motion is agreed to. The amendment of the House is before the Senate.

Mr. BALL. I move that the Senate concur in the House amendment.

Mr. BRANDEGEE. Mr. President, I have no intention of occupying more than a minute, because I have no hope of defeating this measure.

I simply want to reiterate what I said upon the passage of the original bill—that it seems to me that four years after the war, when we could regulate matters of this kind as a war measure, for the Congress of the United States to impose this legislation upon the Capital of the Nation is exceedingly unwise.

I did not think, and I can not think now, in spite of the decision of the Supreme Court, that it is constitutional, although of course I obey their decision and respect it as their opinion; but I can not believe that where two parties make a contract it is constitutional or proper, even under the police power, for one of those who have made the contract to repudiate his contract and to have a commission of the Government make a new contract for the two parties and enforce it.

This legislation is enacted with the intention of ameliorating the conditions here in the Capital by which rents are high and rental property is scarce. I think this legislation will do more to defeat that good intention than anything else that could be done. I can not believe that people who have money to invest will permanently continue to put their money into building houses to rent to people to be managed by third parties.

Being firmly of those opinions, and for those reasons, so very briefly stated, upon which I might enlarge if I had any desire to use up time, I shall be compelled to vote against the motion of the Senator from Delaware.

Mr. MYERS. Mr. President, I shall not engage in an extended argument against this substitute bill, because I do not know in detail what is in it. I only know in a general way. I have had no opportunity to examine it or study it; but, accepting the statement of the Senator from Delaware [Mr. BALL] that it is no worse than the bill that the Senate passed, I shall vote against the pending motion.

I am opposed to this entire class of legislation and all of its kind. I think this measure is vicious, reprehensible, in derogation of the constitutional right of private contract, extremely socialistic, and well-nigh bolshevistic. I think the operations of the Rent Commission and the administration of this law in the last two years have defeated the professed objects of the law. I think this law itself has worked a great hardship on renters, and has made their lot worse in the end than ever before. It has been a great deterrent to building in the city of Washington. As long as such a law as this is on the statute books, I think it will have an extremely deterrent effect on the erection of new buildings, and will make homes and living quarters scarce and dear. The people it professes to benefit will be the worst sufferers.

There may have been some semblance of excuse for such unusual legislation in time of war, when the Nation's life was at stake. While the World War was on I was for anything to win the war; but now that peace has been officially declared and the war has been ended for over three years I think there is no manner of excuse for this legislation. If this legislation is enacted—as I am sure it will be—I do not believe that the District of Columbia will ever see the end of it. I think it will be permanent and on the statute books for all time to come. At the end of two years from now there will be an equal hue and cry for another extension of the law, and I think it will then be reenacted, and the next time it is reenacted it will doubtless be enacted permanently, without any time limit. I think the reenactment of the pending measure means that it will last for all time to come in the District of Columbia. There will be an end of the right of private contract in the District of Columbia. I think this example will be followed in other cities of the United States and by the legislatures of many of the States, and the legislation will doubtless be upheld, and declared constitutional by the courts, because, as much as I respect the courts, I believe it is a fact that even courts in rendering decisions on the constitutionality of acts often give some consideration to public sentiment.

I have heard a former judge, in a speech in this body, say that it is a part of the duty of courts, in passing upon the constitutionality of legislation, to take into consideration public sentiment; and whether it be their duty or not, I believe, to a greater or less extent, it is often done. I think the enactment of this piece of legislation will be the first step in fastening upon our entire country a species of Russian soviet legislation. It is utterly un-American, unfair, inexcusable, indefensible. I deplore it.

I have a statement, issued some time ago by Mr. William E. Shannon, formerly a director of the United States Housing Corporation, and one time connected with the United States Bureau of Housing in the Department of Labor, once an official of the Department of Labor, who is interested in labor and in the rights and welfare of laboring men; a statement in which he points out some of the vicious qualities and some of the bad effects of the law it is now sought to reenact. I shall not take the time of the Senate to read it; I do not want to detain the Senate unnecessarily, because I know the motion of the Senator from Delaware [Mr. BALL] is going to be adopted; but I ask that this statement may be printed in the RECORD as a part of my remarks. It is good material and well worth preserving.

The PRESIDING OFFICER. Is there any objection? If not, it will be inserted in the RECORD. No objection is heard.

The matter referred to is as follows:

THE EFFECT OF TWO AND ONE-HALF YEARS OF RENT-CONTROL LEGISLATION AT WASHINGTON.

(By William E. Shannon, past director in United States Housing Corporation and Manager Real Estate and Commandeering Division, United States Bureau of Housing, Department of Labor.)

By act of Congress the Ball Rent Control Act went into effect at the Nation's Capital October 22, 1919; it expired October 22, 1921, and was extended to May 22, 1922. It is now proposed by Congress to extend same for two more years, and in addition to places of abode to include office buildings and business properties.

The National Association of Real Estate Boards and the realtors of Washington, representing to a large degree the tenant, the home owner, and the landlord, at public hearing before committees of the Senate and the House, protested this legislation, and, as experts, explained to the respective committees of Congress what would happen under rent-control law. Their prediction has come true, although at the time some persons scoffed at the possibility of the law reacting to the injury of the public.

Looking back two and one-half years, we find that there have been more marble halls, mirrored bathrooms, and gilded elevators erected in Washington than ever before in the history of the city, but there has not been one single apartment house erected for the man of moderate means. There has not been one single home erected for the purpose of being rented to the man of small income.

The rent-control law was enacted under the guise of helping the Government employee and keeping the man of moderate means from being "gouged by the grasping landlord." This sounds fine, but as a matter of fact the law has done the Government employees, the private clerical forces, and the laboring classes of the city of Washington a tremendous injury. Literally hundreds of small homes that were renting at from $25 to $45 per month have been taken out of the renting market and sold. In addition to this, the rent law has about eliminated the old-fashioned landlord who took a pride in his property and knew his tenant personally, because this old gentleman, being a self-respecting citizen, objects to being referred to by the members of the legislative body as a "rent profiteer," "rent hog," and "thieving landlord," and in his stead there has arrived the type of landlord who cares little as to what he is called and less for his tenant.

We have witnessed the sight of the Washington Rent Commission soliciting the tenants of a million-dollar apartment house with a view to reducing their rent, but who is soliciting the laborer, the $1,200, $1,500, or $1,800 clerk? Who has helped, or attempted to help, this body of men? Certainly the Ball Act has not helped them, because the results show that for two and one-half years there has been nothing produced for their shelter. And shelter is what houses people, not laws.

Due to the fact that the law did not interfere with their production, we have in Washington to-day numbers of moderately priced houses being built to be sold as homes, but who can point to one house being built for the purpose of being rented? It was only a short time ago when hundreds of such homes were being built and sold to investors for rental purposes. The tenant was happy under these conditions and the investor was satisfied. But what investor to-day is coming to the rescue of the man of small means?

The Congress seems now to be very much concerned about the alley dwellers of the Capital City and it is seriously suggested that bonds be issued for the erection of homes for these persons. If it were not for unwise legislation the alley situation of Washington would have been solved long ago; but if the rent law continues the taxpayers of the country will not only have to look after the alley dwellers of Washington but after their employers as well. If the Ball Act was designed to reduce the American tenant to the level of the European tenant, it is fast accomplishing its purpose.

To-day in Washington, figuratively speaking, to every 1,000 rentable small places of abode there are 1,100 families who want to rent small homes or small apartments. What is going to be the final answer? Do not the powers that be see that so long as the rent law is on the statute books there is going to be no production by private capital of moderate-priced homes for renting purposes? Do I not read between the lines that there may be a group of persons who know the Government will have to produce the homes if this condition keeps up? Do the powers that be want the same conditions in this country as exist in London to-day? The housing condition there has cost the English taxpayers $60,000,000, and is costing the taxpayers $300 per house annually, and the Government collector is often stoned when he attempts to perform his duties.

This picture is not overpainted. There is in this country a strong group of men who believe in "Government control of the home." Is this not a step in that direction—toward Government control of homes and business properties throughout the country? Can it be possible that this dangerously paternalistic legislation may be designed to spread nationally? Study has shown that every city in the United States which enacted rent-control legislation is in just as deplorable condition as to moderate-priced housing as is the National Capital, and many

cities which refused to enact rent-control legislation are well out of the woods as to housing their families.

To be sure, some of our legislators at Washington in case the rent law is discontinued may have to pay, in some apartments, a few dollars more, but what is that compared with the way in which the "man who can not afford" is being crucified because of lack of production of small rentable properties for investment purposes?

The Ball Act has made some realtors who handle gilded mansions wealthy, but this result was discounted when predicted and in the opinion of the "man who knows" would not be the case if the suggestions and recommendations of the realtors had been carried out by the Congress, nor would Washington have the deplorable small-home housing condition under which it is laboring to-day.

If the Ball Act is extended for two years, as is approved by a committee of the United States Senate, which would be its third extension, I predict that strong influence will attempt to have it extended to other cities, and rent control in other cities will be as detrimental to the man on the street and the people of moderate means in those places as it is in Washington, and conditions in Washington will grow worse.

The President of the United States in one of his notable addresses stated "More business in government and less government in business." Certainly the thinking man of the country when he heard this was of the opinion that at last American initiative and productive power would be encouraged. Yet it is the Congress of the United States which says to the man of Washington who owns two houses that he may live in one but can not control the other; to the man who owns a building housing one or more tenants, and wishes to remodel or tear that building down for the purpose of erecting a store or office building, that he can not do so unless he provides an equal number of places of abode, permitting one tenant in such a building to postpone indefinitely the proposed improvements and depriving labor of profitable employment. This is now the law at the Nation's Capital. Is it not time that the home owner and the property owner of the Republic "watch the things that creep in the night"?

The law has never overcome one economic fact: Washington, as well as other rent-controlled cities, has 1,000 places in which to live and 1,100 families to occupy them. This condition will grow worse, all the laws of the land to the contrary notwithstanding, until production has furnished 1,001 places of abode for 1,000 families. Who is to produce these places of abode? The taxpayers of the country or private capital?

Mr. WILLIAMS. Mr. President, I am sorry to differ with two Senators. I appreciate sufficiently the magnitude of the Republican Party and the augustness of being a member of it, and I hesitate very much when I differ with a member of it; but I must take issue with the Senator from Connecticut [Mr. BRANDEGEE] because, strange as it may seem, although we live under a written Constitution, the only legislative body in all America which may legislate upon a given subject matter for a limited territory without any constitutional limitations at all, except the Bill of Rights, is the Congress of the United States when legislating with regard to the District of Columbia.

With regard to the District of Columbia, Congress has all the delegated rights of the Federal Government. It also has all the reserved rights of the States. There is no limitation upon it except the general principles of Magna Charta, embodied in the Bill of Rights, or in the first 10 amendments to the Constitution.

But I am opposed to this legislation for another reason. I do not believe that in the present state of unrest and revolt against civilization, which is going on almost all over the world, led chiefly by the proletariat of Russia, this is a time to forget the obligations of private rights and of private property.

During the war, when this was a war emergency measure, I voted for it upon the ground that it was absolutely necessary to house Federal war and Navy employees and to see to it that they were housed within the appropriations for their payment. I regarded it as a war measure. But the war is over, and whatever may be the constitutional right, this body has no ethical right to interfere with the rights of private property. Either a man has a right to own real estate and to deal with it in ownership or he has not. If he has the right to own it and to deal with it in ownership, then Congress in ordinary peace times has no right to put a limit upon the demand and supply, determining its sale and its rental value, even within the District of Columbia.

As to its constitutional right, meaning by that constitutional prohibition upon its right, there is no constitutional prohibition upon its right at all. It has full State rights, it has full Federal rights, and it has every right that is vested in the Federal Government or could be vested in any government, subject only to the first 10 amendments to the Constitution, which limit all governmental power.

Mr. BRANDEGEE. Mr. President, does the Senator think the Congress of the United States has power to pass a law impairing the obligation of contracts?

Mr. WILLIAMS. No; I do not. Does the Senator mean all over the Union?

Mr. BRANDEGEE. Of course, the Constitution, as the Senator well knows, prevents the States from passing such a law.

Mr. WILLIAMS. Yes; of course it does.

Mr. BRANDEGEE. I did not know but what the Senator thought that might not bind the Congress of the United States.

Mr. WILLIAMS. I misunderstood the Senator, and answered him incorrectly. If the Senator asked me whether the Congress of the United States has a right to have the Federal Government violate the obligations of a contract, I respond yes.

Mr. BRANDEGEE. I am glad to get the opinion of the Senator, but I do not think they have.

Mr. WILLIAMS. I do; because the only prohibition in the Constitution is against a State violating the obligation of a contract.

Mr. BRANDEGEE. I agree with the Senator that that is the only prohibition, but it does seem to me inconceivable that the framers of the Constitution——

Mr. WILLIAMS. Mr. President, there is nothing inherent, there is nothing conceivable, there is nothing inconceivable, there is nothing to be taken for granted about the Constitution of the United States. It grants certain rights to the Federal Government, and it reserved all other rights to the States and to the people.

Mr. BRANDEGEE. It did not grant any power to impair the obligation of contracts.

Mr. WILLIAMS. It did by being a government and by denying that right to the States, the only other government in this land. Of course, the people must be consulted in doing anything, and there is no danger of the people not being consulted, not even in this august body. If there is any question about it, they are consulted too often and not too little. The galleries, even, are listened to too much; but as far as the power of the Federal Government, legally stated, to violate the obligation of a contract is concerned, it has the power as fully as the Government of Great Britain or the Republic of France has it.

The only bodies of a legislative character in America that have it not are the State governments, and the only reason they have it not is because they are prohibited by the Constitution. All sovereignty expressly prohibited to the States must rest somewhere, and it therefore must rest in the States or the people of the States.

Leaving the constitutional question aside, I say that it is a bad thing. It is especially a bad thing at this particular hour and day of the world's history to set the example in the United States of America of saying to owners of private property, "You shall not manage your own property your own way, provided only in managing it that you shall not trespass upon the constitutional and chartered and inherent rights of other citizens of the United States."

I own no property in the District of Columbia. I had better sense than to continue to own it. I foresaw this bill and various other things and sold out. I had sense enough to do it. But to say to a man who owns 60 acres of land in Mississippi, "You shall not under any circumstances at the termination of your lease raise your rent upon the tenant" is a thing which the State of Mississippi might do, but it is not the thing which the Federal Government could do. The Federal Government can say it, constitutionally and legally, in the District of Columbia, but I say it ought not to say it, because it is bad ethics and it is bad morals; moreover, it is bad policy.

The eternal law of supply and demand controls prices, and it controls prices of homes and houses and rentals as much as it controls the price of a dancer's dancing or an opera singer's singing. It all depends on how many dances there are, and how many people want to see the dance; how many singers there are, and how many people want to hear the song; how many homes there are, and how many people want to rent them or buy them.

It may result in hard lines for a little while. The law of supply and demand always does result in hard lines for a little while, but if you undertake to set it aside, then you set aside the very law of economics which operates for the cure of the evil, because if you hold out to a man who is going to build, and who is going to build for the purpose of renting and for the purpose of leasing, a high reward, he will build, and little by little the selfishness of human nature by furnishing a full supply of house room will overcome the hardships of the law of demand and supply; but if you undertake to defy the law of demand and supply, then the selfishness of human nature never comes into operation to cure the scarcity. If you are going to run society upon that basis, you had better go to the plan and ideas of bolshevist Russia. You had better confiscate private property and say to everybody, "You have no right, because you are in the District of Columbia, and in the District of Columbia we have full power—State rights and Federal rights, both."

There is no doubt you have the power to do it, but I doubt not that the Government of Russia has the legal power to confiscate there all the private property in Russia. Our forefathers thought so much of vested rights that they said that the State should never violate the obligations of a contract.

I think the Senator from Connecticut is wrong in thinking that we have no constitutional right to do what is proposed in

this bill. I think Senators who vote upon the theory that we have no ethical or moral right to do it, are right. In the great cause of self-defense in a great war you have a right to do almost anything. You have a right then to take all I have for the public defense. You have a right to take more than that, to take me, and to put me in as cannon fodder and make a willing or an unwilling sacrifice of me. You have the right to do that; but the right a people have under the Constitution in war times is one thing but a different one from the right that people have under the Constitution in peace times. Public defense is a distinct war power—aye, a necessity.

I hate these Washington profiteers—apartment-house owners, boarding-house keepers, all the balance of them; "realtors," as they call themselves, real-estate men. By the way, I wonder where and how they got that word "realtor"? I never saw it in the dictionary. I hate the whole game of profiteering. I hate it with all my heart; but even a profiteer has his property rights, and one of his property rights is to hold his property at his own price, whether for sale or for rent, unless you go to the root of the dispute and deny property rights. If so you balk civilization and progress, for civilization is but the accumulated fruit of man's labor in accomplishing progress.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the House.

Mr. MYERS. I ask for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. DIAL (when his name was called). Making the same announcement of my pair as I did on the former vote, I vote "yea."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. HARRIS (when his name was called). Making the same announcement as before, I vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as on the previous vote as to the transfer of my pair, I vote "yea."

Mr. KELLOGG (when his name was called). I have a general pair with the Senator from North Carolina [Mr. SIMMONS]. In his absence, not knowing how he would vote on this question, I withhold my vote.

Mr. KENDRICK (when his name was called). I have a general pair with the Senator from Maine [Mr. FERNALD]. I transfer that pair to the senior Senator from Missouri [Mr. REED] and vote "yea."

Mr. McCUMBER (when his name was called). I again announce my general pair with the junior Senator from Utah [Mr. KING]. Not knowing how he would vote on this question, I withhold my vote.

Mr. OVERMAN (when Mr. SIMMONS's name was called). I wish to announce that my colleague is unavoidably absent. He is paired with the junior Senator from Minnesota [Mr. KELLOGG].

Mr. STERLING (when his name was called). Making the same announcement of my pair and its transfer as on the previous vote, I vote "yea."

Mr. WILLIAMS (when his name was called). I have a pair with the senior Senator from Indiana [Mr. WATSON]. I transfer that pair to the senior Senator from Tennessee [Mr. SHIELDS] and vote "nay."

Mr. WILLIS (when his name was called). I am paired for the week with my colleague, the senior Senator from Ohio [Mr. POMERENE]. I am advised, however, that upon this question he would vote as I intend to vote, and therefore I feel at liberty to vote. I vote "yea."

Mr. BALL (after having voted in the affirmative). Making the same announcement with reference to my pair and its transfer as on the previous vote, I allow my vote to stand.

Mr. DIAL. I have a pair with the Senator from Missouri [Mr. SPENCER], which I transfer to the Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. EDGE. I am paired with the senior Senator from Oklahoma [Mr. OWEN]. Not being informed how he would vote on this question, I withhold my vote.

Mr. JONES of Washington. As I have previously announced, I am paired for the day with the Senator from Virginia [Mr. SWANSON]. I find, however, that I can transfer that pair to the senior Senator from Pennsylvania [Mr. CROW], which I do, and vote "yea."

Mr. GLASS (after having voted in the affirmative). I have a general pair with the senior Senator from Vermont [Mr. DILLINGHAM], which I transfer to the Senator from Rhode Island [Mr. GERRY], and will allow my vote to stand.

Mr. SUTHERLAND (after having voted in the affirmative). I have a general pair with the senior Senator from Arkansas [Mr. ROBINSON], which I transfer to the junior Senator from Delaware [Mr. DU PONT], and allow my vote to stand.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL]; and

The Senator from Illinois [Mr. McKINLEY] with the Senator from Arkansas [Mr. CARAWAY].

The result was announced—yeas 35, nays 16, as follows:

YEAS—35.

Ball	Harris	Lodge	Sterling
Bursum	Harrison	McNary	Sutherland
Capper	Heflin	Nicholson	Townsend
Curtis	Jones, N. Mex.	Norbeck	Underwood
Dial	Jones, Wash.	Page	Walsh, Mass.
Elkins	Kendrick	Phipps	Walsh, Mont.
Glass	Keyes	Pittman	Warren
Gooding	Ladd	Rawson	Willis
Hale	Lenroot	Smoot	

NAYS—16.

Borah	France	Myers	Sheppard
Brandegee	Frelinghuysen	Newberry	Shortridge
Broussard	Harreld	Oddie	Wadsworth
Ernst	Moses	Overman	Williams

NOT VOTING—45.

Ashurst	Fletcher	Nelson	Smith
Calder	Gerry	New	Spencer
Cameron	Hitchcock	Norris	Stanfield
Caraway	Johnson	Owen	Stanley
Colt	Kellogg	Pepper	Swanson
Crow	King	Poindexter	Trammell
Culberson	La Follette	Pomerene	Watson, Ga.
Cummins	McCormick	Ransdell	Watson, Ind.
Dillingham	McCumber	Reed	Weller
du Pont	McKellar	Robinson	
Edge	McKinley	Shields	
Fernald	McLean	Simmons	

So the amendment of the House was concurred in.

LETTER FROM H. L. SCAIFE.

Mr. CARAWAY. I ask unanimous consent to have printed in the RECORD a letter written to me by H. L. Scaife, simply calling attention to the fact that I was mistaken about his being discharged from the service.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

5419 FORTY-FIRST STREET NW.,
Washington, D. C., May 22, 1922.

Hon. THADDEUS H. CARAWAY,
United States Senator, Washington, D. C.

MY DEAR SENATOR: In your speech in the Senate on Saturday the statement was made that I was discharged from the Department of Justice by the Attorney General. This is a mistake, and as I know you are far from doing the Attorney General the slightest injustice I am sure you will take pleasure in having the record corrected.

The facts are that I was appointed to continue the investigation which was begun by Judge Hughes, and voluntarily resigned as a protest against obstructions placed in the way of investigations which involved powerful interests and influential politicians who were being caught in the meshes of the law. On April 11 Representative WOODRUFF inserted in the CONGRESSIONAL RECORD the letter with which I transmitted certain memoranda for the information of Congress, from which the following is quoted:

"The conditions under which the Department of Justice is handicapped are of long standing. On April 6, 1922, as a protest against these conditions I voluntarily tendered my resignation. After tendering my resignation I was asked if I would accept other employment in the department, which I refused. The only alternatives are to tolerate these conditions or expose them. The American Government shall function, and the matter is of sufficient importance to call it to the attention of Congress."

In order to keep the record straight, attention is called to the following letter, dated April 10, which I received from the Attorney General:

"I have your letter of the 6th instant, in which you tender your resignation as special agent, Bureau of Investigation, Department of Justice, to take effect at the close of business April 6, 1922, and same is hereby accepted as tendered."

The statement that I was discharged by the Attorney General has been widely published. The error is easily accounted for by the fact that several men in the department who stood for clean government and an honest investigation were suspended or discharged both before and after I handed in my resignation. The suspension or discharge of these men can only be construed as attempts to obstruct justice by officials sworn to uphold the law and who now desire to proceed as they have heretofore done unless the Woodruff-Johnson resolution is passed by the House.

If there is no congressional investigation, there is no hope that the Department of Justice, as now constituted, will function. Before a congressional investigation empowered to compel the production of existing evidence the truth will be made known, and the men who are obstructing an honest investigation in the Department of Justice and in Congress will be driven to their proper niches in history.

Very truly yours,

H. L. SCAIFE.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the Speaker pro tempore of the House had signed the following enrolled bills, and they were thereupon signed by the President pro tempore:

S. 2919. An act to extend for the period of two years the provisions of Title II of the food control and the District of Columbia rents act, approved October 22, 1919, as amended;

H. R. 9951. An act to amend section 22 of an act approved February 14, 1920, entitled "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes," for the fiscal year ending June 30, 1921;

H. R. 10329. An act making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for other purposes; and

H. R. 11152. An act to authorize the Bear Mountain Hudson River Bridge Co. to construct and maintain a bridge across the Hudson River near the village of Peekskill, State of New York.

THE TARIFF.

Mr. McCUMBER. Mr. President, I move that the Senate proceed to the consideration of House bill 7456, the tariff bill.

The motion was agreed to, and the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER (Mr. LADD in the chair). The next amendment will be stated.

The ASSISTANT SECRETARY. On page 34, line 9, after the words "per ton" and after the semicolon insert "glass sand, $1.50 per ton" and a semicolon.

Mr. FRELINGHUYSEN. I offer the following amendment to the committee amendment.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. On page 34, line 10, after the word "sand" insert the words "containing 99 per cent or more of silica."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from New Jersey to the amendment of the committee.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended.

Mr. JONES of New Mexico. Mr. President, this is an important amendment. It is the first time that the Congress has attempted to tax sand. Nature has blessed this country with an abundance of this material. It goes into the manufacture of many of the essentials of life. It goes into the manufacture of over $100,000,000 worth of glass.

Mr. DIAL. Mr. President——

Mr. JONES of New Mexico. I yield to the Senator from South Carolina.

Mr. DIAL. I would suggest to the Senator the impracticability of the amendment. I do not see how it is practical to tell whether sand contains 99 per cent of silica or not.

Mr. SMOOT. That is very easy to ascertain.
